THE NUCLEAR NURSING CURRICULUM

Curriculum hours—Clinical laboratory period, 8 weeks

	Lecture	Laboratory [1]
Clinical radioisotope theory	112	89
Nursing seminars	8	
Critiques	2	
Disaster management procedures	44	10
Total hours	266	99

[1] Field trips pertinent to the applicable course subject are credited to laboratory hours.

Grant total:	
Lecture hours	333
Laboratory hours	212

The nuclear nursing course

Admission requirements: (1) Registered professional nurse, (2) baccalaureate degree, (3) optimum background—basic sciences.

Duration of course: Four months.

Presentation of course: Annually.

Mission within the hospital framework: To prepare registered professional nurses to function on all hospital levels.

1. Nursing service administrator.
2. Division supervisor.
3. Staff nurse.
4. Nurse educator.
5. Clinical radioisotope laboratory nurse.

SUMMARY

1. Twentieth century medical and nuclear technology demands specialized nursing preparation if competent nursing care is to be administered.

2. On the job training, seminars, and other short courses are helpful but inadequate.

3. A specialized educational program can prepare the nurse to become a more capable health team member when responsibilities are fulfilled with knowledge and understanding.

4. A course in nuclear nursing similar to the curriculum outlined should be the prerogative of higher education. This presentation should be incorporated into the basic college curriculum.

RADIOISOTOPE TECHNICIAN COURSE

With respect to the training of radioisotope technicians at the U.S. Naval Medical School, the past 4 years have marked the development and formalization of a course of instruction, designed to educate enlisted personnel in the application of radioactive isotopes to the problems of medical diagnosis, therapy, and research.

This development has been predicated on the belief that a firm working knowledge of basic mathematics, the fundamentals of the basic sciences, and the opportunity to perform the latest procedures with the various equipments, will produce individuals who can form the nucleus of a well trained, medically oriented, group of people, able to contribute intelligently to the critical scientific developments of the nuclear age.

Minimal prerequisites for radioisotope technician students

GCT plus ARI score of 110. High school graduate. Volunteer. Have 24 months' obligated service at the beginning of course or agree to extend for required length of time. Hold rate of HN, HM3, HM2, or HM1.

Instruction time for each phase of course

	Hours of instruction	
	Lecture	Laboratory
Mathematics	90	
General chemistry	50	100
Health physics	20	20
Radiation physics	60	70
Clinical laboratory procedures	40	350
Review and examination	40	
Subtotal	300	540
Total hours actual instruction	840	

Curriculum

Mathematics: Slide rule, including logarithms; review of elementary algebra; use of appropriate tables and graphical analysis; calculating machines.

General Chemistry: Constituents and classification of matter, basic particles, atoms, molecules, etc.; basic chemical laws, processes, and energy relationships; preparation and standardization of solutions; chemical calculations; laboratory apparatus—selection, use, care.

Health Physics: Use and care of various survey instruments, general laboratory procedures, elements of personnel protection and dosimetry, storage and disposal of radioactive waste materials.

Radiation Physics: Naturally occurring and artificial radioisotopes and series; radioactive processes and units of radioactivity; measurements of radioactivity: instrumentation and related laboratory procedures, calculations and statistical considerations; principles of X-ray and reactor technology.

Clinical Radioisotope Procedures: Foundations of isotope diagnosis and therapy, biology, introduction to physiology and biochemistry, biological effects of nuclear radiations, and the like; preparation, standardization, and administration of isotopes; collection, handling, storage, and analysis of specimens.

Clinical Radioisotope Procedures: Specific determinations and related calculations—blood volumes, thyroid function studies, scanning techniques, erythrokinetic studies, special studies, including total body water, fat studies, cardiac output, and the like; preparation of therapeutic doses of various isotopes; preparation of clinical data and charts, related clerical procedures.

South Dakota Farmers Favor Farm Price Support Program

EXTENSION OF REMARKS

OF

HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 8, 1959

Mr. McGOVERN. Mr. Speaker, the farm people of South Dakota have indicated overwhelmingly in a recent poll that they favor a workable system of price supports and production controls. Most of the farmers realize that they are confronted with economic disaster if we continue the trend toward lower farm prices while costs of operation are rising.

An excellent analysis of the South Dakota poll has been made by the Daniel F. Rice Co. of Chicago. I am including, under unanimous consent at this point in the RECORD, the July 7 commodity letter of this company.

COMMODITY LETTER OF JULY 7, 1959

In our letter of March 26, 1959, we called attention to a poll of farmer opinion about agricultural price supports that was completely loaded to get agreement with the editorial opinion of the publication conducting the poll. This was the poll that purported to show that 78 percent of farmers favored the immediate or gradual elimination of all farm price and income support.

We branded the poll as nonsense. Now we have proof to back up our position. A poll was conducted by three newspapers in South Dakota without any accompanying editorializing. The vote for different kinds of plans was as follows:

	Percent
The present program of flexible supports	5.7
A system of direct payments to compensate farmers for the difference between the market price and a fair price. (This plan would be accompanied by production controls)	22.6
Price supports fixed at 90 percent of parity with strict bushel and pound quotas instead of the present acreage approach	24.5
90 percent of parity with no specific crop restrictions but a reduction of 15 percent of each farmer's historical acreage base	18.9
No Federal crop controls of any kind and no price supports of any kind	28.3

From this tabulation it is perfectly clear that 71.7 percent of farmers want a workable system of supports and controls. Sixty-six percent favored higher price supports and stricter controls than the present programs provide.

The difference in results between the recent poll and the previously cited poll is not a matter of geography. The earlier poll showed only 36 percent favoring high supports and production payments in South Dakota. The results are very different when the bias is taken out.

In our letter of March 26, we said that if farmers were given an opportunity to do so they would overwhelmingly say, "I think the Government has a responsibility to see that farmers get a fair share of the national income; that the best way to get a fair income is to adjust production to the market size just as industry does." The South Dakota poll proves that we were exactly right.

In the South Dakota poll, farmers were specifically asked whether they favored stricter controls and higher supports or less control and lower supports. A majority favored stricter controls and high supports. Farmers know that the price of higher supports is production control and are willing to pay the price.

Farmers voted overwhelmingly to get the Government out of the grain business.

Twenty-one percent favored a deeper involvement of Government in the storage, merchandising and handling of grain and 79 percent favored withdrawal from this type of operation. Farmers are clearly aware of the damage that the badly run programs of the USDA are doing to their prices and want this merchandising competition stopped.

Farmers were asked, "Do you believe that farmland retirement, either under the soil bank or some similar program, should be employed as a means of controlling production of farm commodities?" Thirty-six percent voted "yes" and 64 percent voted "no." The soil bank was recognized as a failure and farmers do not approve of failure. Farmers clearly recognize that programs have to have some teeth in them.

Farmers were asked to rate Ezra Benson as Secretary of Agriculture. The results were as follows:

	Percent
Excellent	11
Good	8
Fair	32
Poor	49

This result was obtained in traditionally Republican South Dakota.

Three main conclusions must be reached from this poll:

1. Current price support programs are unsatisfactory.

2. The present Secretary of Agriculture is disapproved of by the people that he is supposed to represent.

3. Farmers believe that they are entitled to fair prices and incomes and are willing to accept the governmental restriction necessary to get them.

This mandate to the Congress should be perfectly clear. Present programs are not satisfactory when judged by farm prices and income and by the surplus problem. Farmers understand and want a sound, workable program. The Congress is doing nothing about getting one for them. We are watching the spectacle of another session of Congress roll by without any agricultural accomplishment.

In exasperation and frustration we again ask, "Why? Why? Why?"

DANIEL F. RICE & CO.

Wrapping Our Flag Around Communists

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 8, 1959

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Albert E. Reitzel, former General Counsel of the Immigration and Naturalization Service, which appears in the January 1959 issue of the Daughters of the American Revolution magazine.

In this article Mr. Reitzel masterfully depicts the need for congressional action establishing statutory standards for the denial of passport facilities to American citizens associated with the international Communist conspiracy. In June 1958 the Supreme Court declared in two 5–4 decisions that the Secretary of State had neither the constitutional nor the congressional mandate to deny passports to American citizens based on Communist Party activity. In the absence of congressional action, the effect of these two fateful decisions is to provide the Communists with a pipeline for the person-to-person exchange of ideas and information between Communists in the United States and party functionaries located throughout the rest of the world.

I am personally appalled at the failure of Congress to act so as to cure this defect in our security system. I commend this excellent article to the attention of my colleagues in the hope that it will bring home the urgent need for legislative action in the passport field. I urge the committee to give prompt consideration to S. 2095 which I have introduced to correct this situation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WRAPPING OUR FLAG AROUND COMMUNISTS

(By Albert E. Reitzel)

It is difficult to accept the fact that the 85th Congress, 2d session, adjourned without passing any law, which would prohibit the issuing of passports to American citizens who refuse to make affidavits as to present or past membership in the Communist Party. On June 16, 1958, two decisions of the U.S. Supreme Court held that the Secretary of State has no authority to refuse to issue passports in such cases. All this has happened in the face of a law of Congress of 1954 which declares that the Communist Party of the United States, which claims to be a political party, is in fact an active part "of a conspiracy to overthrow the Government of the United States." More than a month before Congress adjourned in August 1958, the Secretary of State urged the passage of a law to give him authority to refuse to issue passports in such cases; but Congress failed to do so. The result of these decisions is that the Secretary of State is required to issue passports to American citizens even though there may be evidence of communistic affiliations.

At the present time the Passport Division is operating under the continued existence of the national emergency declared by Presidential proclamation during the Korean war (1950). The regulation prohibits any citizen without a passport, with some exceptions not in point here, to go or attempt to go from the United States during a national emergency, or in time of war, to any country outside of this hemisphere. The special law prescribes a severe penalty on any citizen who violates the regulation. The passport does more than say that the person named in it is a citizen of the United States. In the passport the Secretary of State requests "all to whom it may concern to permit safely and freely to pass, and in case of need, to give all lawful aid and protection to" the citizen. This request from the Secretary of State clearly shows under international practice an intention of our Government to extend reasonable protection to the citizen. At any time passports are considered so much convenient proof of the name and citizenship of the owner that transportation lines generally require American citizens to have U.S. passports for trips between the United States and countries overseas.

The decisions of the Supreme Court on June 16, 1958, in the suit of Weldon Dayton against Secretary Dulles and the suit of Rockwell Kent and Walter Briehl against Secretary Dulles compelled the Secretary of State to issue passports to them. In each case the opinion of the majority of the Court was by Justice Douglas, Chief Justice Warren, and Justices Frankfurter, Black, and Brennan concurring. The dissenting opinion insists that Secretary Dulles had authority to deny the passports. It was by Justice Clark, joined by Justices Burton, Harlan, and Whitaker, and applied to both cases. In short, five of the Judges decided the two cases in favor of Dayton, Kent, and Briehl, and four Judges were in favor of Secretary Dulles. Every patriotic citizen should strive to understand these two 5-to-4 decisions and their menace to our safety just as they are being studied and used by citizens to obtain passports for trips abroad to aid the Communist movement.

In the Dayton case the opinion of the majority of the Court states that Congress had not authorized the Secretary of State to deny a passport to Dayton on the ground that its issuance "would be contrary to the national interest." The opinion includes a copy of the decision by Secretary Dulles in which he had refused to issue the passport. Mr. Dulles said: "I have reason to believe, on the balance of all the evidence, that the applicant is going abroad to engage in activities which will advance the Communist movement for the purpose, knowingly and willfully, of advancing that movement." That view is amply supported by facts stated by the Secretary in that copy.

In the case of Kent and Briehl, the opinion of the majority of the Court was in their favor for three reasons: A passport is necessary to travel abroad; the right to travel is a part of the "liberty" of which a citizen cannot be deprived except by a law of Congress; and Congress has not authorized the Secretary of State to withhold a passport from a citizen who refused to submit an affidavit as to his past or present membership in the Communist Party.

Kent had been informed by the Director of the Passport Office that the issuance of a passport was precluded on two grounds: (1) That he was a Communist and (2) that he had had a consistent and prolonged adherence to the Communist Party line; and that before a passport could be issued, it would be necessary for him to furnish an affidavit as to present or past membership in the Communist Party. Briehl, after his application for a passport had been temporarily denied because of allegations as to his Communist activities, had been informed by the Passport Office of the State Department that it would be necessary for him to file such an affidavit. Both refused to furnish such an affidavit. The refusal was described in the opinion of the majority of the Court as a "refusal to be subjected to inquiry into their beliefs and associations." It must have been forgotten by the majority of the Court that a law of Congress of 1950 and one of 1954 make clear that membership in the Communist Party means more than having beliefs and associations. The 1950 law states that "the nature and control of the Communist movement itself, present a clear and present danger to the existence of free American institutions"; and the 1954 law says that the Communist Party of the United States, which claims to be a political party, is in fact an active part of a conspiracy to overthrow the Government of the United States. These two statements had been cited in the brief in the Supreme Court on behalf of Secretary Dulles.

The regulations of the Secretary of State, which had required the passports to be denied, are consistent with a law of Congress of 1926 and were issued by Presidential proclamations which are within the terms of a law of Congress of 1952. The law of 1926 declares that the Secretary of State may grant and issue passports "under such rules as the President shall designate and prescribe for and on behalf of the United States." The law of 1952 declares that "While the United States is at war or during the existence of any national emergency proclaimed by the President it shall be unlawful for any citizen of the United States to depart from or enter, or attempt to depart from or enter, the United States unless he bears a valid passport." The law prescribes a serious penalty

for a violation. That law merely repeated a law of Congress of 1918 as to requirement of passports in time of war and a law of Congress of 1941 as that requirement during a national emergency. The view of the majority of the Court was that at the time this 1952 law was passed by Congress it intended only to authorize denial of passports in two classes of cases; they are cases involving questions of citizenship or criminal or unlawful conduct. None of these matters, the opinion said, were involved in these cases.

The dissenting opinion of Justice Clark, joined by three other Justices of the Supreme Court, insists that the law of Congress of 1952 had authorized denial of passports in these cases. That opinion is based on these points: At the time that law was passed by Congress there was in effect a Presidential proclamation declaring a national emergency caused by the Korean conflict, and that proclamation is still in effect. The travel restrictions of that law were put into effect by a proclamation of the President in 1953. The proclamation pointed out that it did not revoke any regulations "heretofore issued relating to the departure of persons from, or their entry into the United States."

Among the regulations were those under which passports were denied to Dayton, Kent, and Briehl; and those regulations had been issued to be effective August 22, 1952, which was before the date on which the 1952 law came into effect though after the passage of that law. Thus, the dissenting opinion asserts, Congress by the 1952 law has approved "whatever use of his discretion the Secretary had made prior to" that law. Hence, the opinion describes as "nonsense" the statement in the opinion of the majority of the Court that the Secretary's wartime exercise of his discretion, while admittedly more restrictive, is not relevant to the practice which Congress can be said to have approved. The statement in the opinion of the majority of the Court that the Secretary's denial of passports in peacetime extended only to two kinds of cases, those involving allegiance and those involving criminal activity, is described in the dissenting opinion as "contrary to fact." In support of that view, the dissenting opinion states that the peacetime practice of the State Department indisputably included denial of passports for reasons of national security. That statement is proved by excerpts in the Report of the Commission on Government Security from documents of the State Department. The excerpts are quoted in the dissenting opinion and show these facts: Shortly after the 1917 Russian revolution, the State Department "became aware of the scope and danger of the worldwide revolutionary movement and the attendant purpose to overthrow all existing governments, including our own." From that time until 1950 the practice of the State Department as to denying passports to Communist sympathizers was not consistent. However, beginning with September 1950 the Department consistently denied passports to American citizens with Communist affiliations, after it was pointed out "that the Internal Security Act of 1950 clearly showed the desire of Congress that no Communists should be issued passports of this Government." The State Department's legal adviser "agreed that it was the duty of the State Department to refuse passports to all Communists, including journalists."

In January 1958, several months before the above decisions of the Supreme Court, Congressman WALTER, of Pennsylvania, introduced a bill, H.R. 9937, in Congress to authorize the Secretary of State to deny passports. Some of the provisions of the bill were broad enough to authorize denial in such cases as those of Dayton, Kent, and Briehl. Many of the provisions are based on recommendations made in the Report of the Commission on Government Security which was sent to Congress and the President on June 21, 1957. The Chairman of the Commission was Mr. Lloyd Wright, formerly president of the American Bar Association. On the day after the two decisions were handed down by the Supreme Court, Congressman WALTER introduced H.R. 12989, a bill to permit the Secretary of State to deny passports to Communist sympathizers.

The President sent a message to Congress on July 7, 1958, referring to the two decisions of the Supreme Court and urgently requesting legislation to authorize denial of passports where their possesion would seriously impair the conduct of the foreign relations of the United States or would be inimical to the security of the United States. He said the lack of that power is exposing us every day and week to great danger. The following day, Senator GREEN, chairman of the Senate Committee on Foreign Relations, introduced S. 4110 at the request of the Secretary of State. S. 4410 (same as H.R. 13318 introduced by Congressman KEATING, a member of the House Foreign Affairs Committee) was written by the State and Justice Departments; these bills had practically the same provisions as those introduced previously by Congressman WALTER.

At this time Secretary Dulles sent a letter to the Vice President of the United States as the Presiding Officer of the Senate and to the Speaker of the House of Representatives. The letter said: "The international Communist movement seeks everywhere to thwart U.S. foreign policy. The issuance of U.S. passports to supporters of that movement facilitates their travel to and in foreign countries. It clothes them when abroad with all the dignity and protection that our Government affords. Surely our Government should be in a position to deny passports to such persons."

Mr. Robert D. Murphy, Deputy Under Secretary of State, included the following points in his argument before the Senate Foreign Relations Committee on July 16, 1958: The legislation proposed in S. 4110 is based on the existence of a national emergency. The international Communist movement eagerly seeks the use of the citizens of the free countries wherever possible. Contacts with such citizens are necessary and travel by them is essential. Party conferences in many countries and meetings of a host of front organizations throughout the world are an essential part of the movement. Those who attend meetings of the front organizations may be ardent Communists; others may be innocent persons who lend themselves, their prestige and facilities to the development of contacts and operations so necessary to the international Communist movement. Laws to prevent Communist couriers and agents from going abroad would deal the Communist movement a very serious blow, just as the McCarran-Walter law of Congress has in prohibiting the travel of Communist aliens into this country. Even the Magna Carta recognized the obligations of a government to exercise some control over the issuance of passports in time of war and national emergency. The need for action by Congress is urgent. Since the two decisions of the Supreme Court passports have had to be issued by the State Department to 60-odd applicants with proved records of Communist activities; thus, they are in a position to travel abroad and aid the international Communist movement. Seventy more applications of people of this sort are pending in the State Department. Many more such applications must be expected. Mr. Murphy assured Congress that under this bill the State Department will not be in a position to deny passports to persons whose sole activities abroad would be to voice their own opinions and even to criticize our foreign policy, if they be so inclined. He said that the executive branch of our Government is convinced that our national security is threatened by the free issuance of passports to American supporters of the international Communist movement who wish to travel abroad. Without congressional authority, he said, such passports cannot be denied, and Congress is being requested to give that authority on an urgent basis. He stressed that our national security requires no less.

Doubtless, it was in view of the present open gate to citizens with Communist affiliations to go on visits to foreign lands that Attorney General Rogers, in July 1958, urged Congress to amend our laws against spying to include violations against the United States by our citizens while in foreign countries. Such an amendment was passed by the House of Representatives but failed to be voted on in the Senate.

On August 8, 1958, after hearing a number of witnesses, the matter of new legislation to give authority to deny passports to Communists and Communist sympathizers was shelved by the Senate Committee on Foreign Relations. On August 13 a bill, H.R. 13760, introduced in the House of Representatives by Congressman SELDEN, of Alabama, states that Congress finds that the activities of the international Communist movement constitutes a clear, present, and continuing danger to the security of the United States. The bill would give authority to the Secretary of State to deny passports to persons knowingly engaged in activities intended to further the international Communist movement. The bill would require that no person be denied a passport on that ground except after opportunity for a hearing and that a denial of a passport on that ground shall be subject to be canceled in the district courts of the United States, whenever the denial is contrary to law. The bill was approved on August 23, 1958, by the House of Representatives by a voice vote. The bill is without effect because no action in favor of that or any other bill relating to denial of passports was taken by the Senate committee.

We are in these critical times with an international Communist conspiracy against us that causes our Government to draft every year thousands of men from their homes and chosen pursuits to serve in our Armed Forces anywhere in the world. The Secretary of State has been left in a straitjacket of law that requires him to issue passports to citizens with Communist associations to make visits anywhere abroad, thus free to aid the conspiracy. Verily, the Stars and Stripes are being wrapped around them. This danger to our country is all due to the two 5 to 4 unconvincing decisions of the Supreme Court and to the incredible, and terrifying failure of the Senate Committee on Foreign Relations to give the Senate a chance to vote on and approve any of the bills.

Employment Patterns

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

Mr. MOORE. Mr. Speaker, with the consent of the House, I would like to take this opportunity to disabuse the minds of our colleagues that my native State of West Virginia is a rural slum of 25,000 square miles.

While it has been true that we have suffered trade reverses in our basic soft-

coal-mining industry, it is true that our economy is progressing along the broad and splendid path of an eventual prosperity.

West Virginia needs all of the help it can receive, but, as our State's motto reads, "Montani Semper Liberi"—Mountaineers Are Always Free—we can always help ourselves, individually and collectively. This we intend to do.

We, as a State of the Union, have been subjected to publicity tending to relegate us to the status of a poor relation. I should like, therefore, to insert in the Appendix of the RECORD a portion of the latest publication of the Chesapeake & Potomac Telephone Co. which authoritatively shows that our economic recovery is slow but sure.

PATTERNS OF FACTORY EMPLOYMENT IN WEST VIRGINIA

More factories is often suggested as the remedy for unemployment as well as a source of tax revenues, particularly in West Virginia where mine employment has been halved since 1948. Mechanization of the mines has caused layoffs involving one-eighth of the State's workers.

The creation of jobs by West Virginia's new factories, especially in the Ohio Valley where electric power, aluminum, chemicals and steel manufactures predominate, has not overcome the elimination of jobs in other manufacturing sectors. Factory employment declined 10,000 between 1948 and 1957. Another 8,000 factory workers were laid off in 1958, and by May 1959 only 5,000 had been rehired.

What has happened? The loss of jobs because of factory mechanization and the decreased demand for some products has more than offset the creation of jobs. While chemical plants added 3,100 jobs, pottery, glass and textile plants lost 8,400. Steel, even with greatly increased capacity and output, has managed to maintain its 1948 employment level.

Employment in another group of industries—lumber, furniture, metal fabricators and machinery—declined by 5,400. Partly offsetting this decline was the gain of 1,100 jobs in clothing mills, printing establishments, newspaper publishing, petroleum and coal products.

What is a factory job? A shift in the distribution of jobs has occurred within the factory. The proportion of employees on the "assembly line" has decreased while the proportion of "white collar" jobs has increased. The assembly line, with more efficient methods and equipment, produced 50 percent more goods with 2.5 percent less workers between 1947 and 1956.

Meanwhile, West Virginia office, laboratory and outside workers in manufacturing increased by one-half. More scientists, engineers and technicians are required for research and development activities and automation. More salesmen, clerks and managers are also needed to handle a greater variety of products.

White collar workers in factories were hired at about the same rate in the country as a whole as in West Virginia—i.e., increased by one-half since 1947. Also, the proportion of "assembly line" workers to total factory employees decreased. However, the number of factory workers in the country as a whole has increased slightly while the number in West Virginia declined. This is illustrated in the table which shows percentage changes between 1947 and 1958.

[In percent]

	Factory	Mining	Other	Total
United States	+1.2	−23.5	+26.1	+16.3
West Virginia	−13.8	−53.9	+16.6	−8.3

The distribution of nonfarm employment in the State is getting closer to the national pattern every day. Due to the greater impact of mining losses on West Virginia employment, the relative importance of manufacturing stayed the same, i.e., 25 percent of the State's workers. In all United States of America, manufacturing employment relative to total employment declined from 35 to 31 percent.

Retired Military Officers

EXTENSION OF REMARKS

OF

HON. CARL VINSON

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 8, 1959

Mr. VINSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by the distinguished gentleman from Texas, Hon. PAUL J. KILDAY:

Mr. Chairman, you are dealing with an important and very complex question. It is not as simple of solution as was proposed by the amendment offered in the Committee of the Whole during the consideration of the Defense Department appropriation bill. The fact that the amendment was then defeated by 1 vote on the division and by 22 votes by tellers indicates that many Members of the House recognize the existence of the problem, but are uninformed as to its complexity.

CATEGORIES OF RETIRED MILITARY PERSONNEL

There are a number of categories of retired military personnel:

1. Those who retire for length of service.
2. Those who retire for physical disability.
3. Those who retire for physical disability incurred in combat or as the result of an instrumentality of war.
4. Reserve officers who are retired under the provisions of Public Law 810.
5. Those Army of the United States officers who retired because of disability incurred during their wartime service.
6. There are others, including National Guard, temporary officers, etc.

Most of the discussions which have been had refer to "retired officers." There has been little, if any, discussion of the various types of retired officers. The list placed in the CONGRESSIONAL RECORD in the other body lists several officers as "reserve, retired." The individuals named could have served under a number of circumstances.

They could have been wartime citizen soldiers who were wounded or otherwise disabled and entitled to retirement.

During the war effort a great many technicians were recruited from industry, commissioned, and assigned to highly technical work. Therefore persons now designated as "Reserve, retired" could be persons who left an industry, served during the war, were disabled, retired and returned to the industry from which recruited.

EARLY RETIREMENTS

There has been discussion of the relatively early age at which military officers are being retired. However, it should be borne in mind that by a mandatory provision of law many of these officers are retired at an early age.

The Officer Personnel Act of 1947 contains a provision requiring the retirement of an officer after 30 years of service and 5 years in grade. This provision is designed to create vacancies at the top so as to permit orderly promotion through the grades.

The provision was included in the law in contemplation of a normal tour of duty in each grade. The Officer Personnel Act of 1947 contemplates a tour of 3 years as second lieutenant; 3 years as first lieutenant; 8 years as captain; 4 years as major; 4 years as lieutenant colonel; 4 years as colonel. It was therefore contemplated that an officer would reach the gratie of colonel after 22 years of service. Of course, those selected for general or flag rank would be eligible for further promotions. In contemplation of a normal career most officers would be approaching the normal age for retirement at the time he had both 30 years of service and 5 years in grade.

Before the Officer Personnel Act of 1947 had an opportunity to function normally, the Korean war began. Promotions were accelerated. We therefore have the period of 30 years of service and 5 years in grade coinciding when men are younger than men in industry normally would retire.

This is a temporary situation. It is about to be eliminated because all of the military services have reached, or are reaching, normal periods of service in grade.

These men face retirement and reduction in income when their families are at the period of the greatest expense to them. It is unreasonable to suppose that these relatively young men will remain idle. They possess experience urgently needed by both the Government and industry.

A number of these officers hold graduate degrees in engineering, management, and other fields. Not only should they be permitted to continue in their fields, but their services are urgently needed in those fields.

GOVERNMENT EMPLOYMENT OF RETIRED MILITARY PERSONNEL

Because the officers secured their experience and generally, education from the Government, they should first be utlized by the Government after retirement. This is rarely possible.

The Dual Officer Act of 1894 is an effective bar to the utilization of most retired regular officers by the Government.

The Dual Compensation Act of 1932 is an effective bar to most other retired officers.

However, in this connection the inequality of application of both of those laws is of major importance. There are many exceptions by clear provisions of statutes. The Court of Claims decisions provide other exceptions. There are exceptions provided by private bills passed by the Congress permitting the employment of named individuals in named positions.

It should be academic that if any restriction is now to be placed upon the employment of retired officers by industry, the laws restricting their employment by the Government must be reviewed and repealed, amended, or made uniform.

In addition, existing laws placing restrictions upon the employment of retired officers in industry are not uniform in their application to the various services. There is no bar in certain services and an absolute bar in others. Any legislation on this subject should make those laws uniform.

RELATIVELY FEW RETIRED OFFICERS ARE EMPLOYED

Because officers well known in Washington enter the employment of industries holding Government contracts, the impression exists that the practice is general.

Actually, relatively few retired officers are employed by industries holding Government contracts or employed at all. Rarely is a field commander so employed. Care must be taken that retired officers as a class be not subjected to criticism because of the action of a few.

CONFLICT OF INTEREST IS WRONG

No officer should retire and soon thereafter enter the employment of a contractor in a position which would give him an opportunity to have that contractor favored, or give the appearance of so doing.

For instance, there should be no objection of an electrical engineer retired from the military working on an electronic development for a Government contractor.

There is every objection to the employment of a procurement officer in a procurement position by a Government contractor. At least there should be the lapse of a reasonable period of time.

Mr. Chairman, this committee has a very difficult task in permitting the one and prohibiting the other.

In this connection I suggest you consider carefully the existing statutes which apply to Government lawyers in the practice of their profession after leaving Government service. Here you may find a reasonable solution of your problem. The effectiveness of that solution will depend finally upon the ethics and attitudes of the retired personnel which I will discuss separately.

THE RETIRED PERSONNEL MUST POLICE THEMSELVES

Military officers are professional men. They belong to the noble profession of Arms. That profession is based, to a very high degree, upon honor and ethical conduct.

All professions have codes or canons of ethics. While all professions have their codes and canons of ethics, we hear most of such in connection with lawyers and doctors.

There are provisions for disciplinary action for the violation of medical or legal ethics. However, disciplinary action in either profession is rare.

Actually, the lawyer or doctor observes the ethics of his profession because it is the right and proper thing to do. In addition he does not fear disciplinary action nearly as much as he prizes the respect of the other members of his profession.

No matter what law might be passed it will be ineffective if its violation remains socially acceptable. The observation of the spirit of any such law will depend largely upon the attitude of other retired officers towards the officer who finds a way to circumvent the intent of the law.

The reward to the retired personnel will come from the standing and prestige of the retired people in the community. In addition, they have a very practical interest. As an example, many bills are pending here to permit military personnel retired before June 1, 1958 to recompute their retired pay under the Military Pay Act of 1958. There has been much editorial and other support of that recomptuation. It would restore a highly desirable tradition that retired personnel be paid under the larger new rate. I would like to see that done. In view of the margin by which the amendment to the Defense Department appropriation bill was defeated, it is evident such a law could not be passed at this time.

Washington Pilgrimage

EXTENSION OF REMARKS
OF

HON. CHARLES A. HALLECK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 8, 1959

Mr. HALLECK. Mr. Speaker, under leave to extend my remarks I would like to call to the attention of the House an address by the Honorable Don Paarlberg, Special Assistant to the President, before the Washington Pilgrimage at a luncheon meeting on the campus of the George Washington University, Saturday, June 20.

ADDRESS BY THE HONORABLE DON PAARLBERG, SPECIAL ASSISTANT TO THE PRESIDENT, BEFORE THE WASHINGTON PILGRIMAGE AT A LUNCHEON MEETING ON THE CAMPUS OF THE GEORGE WASHINGTON UNIVERSITY, WASHINGTON, D.C., SATURDAY, JUNE 20, 1959

It is a pleasure to address the members of the ninth Washington pilgrimage. It is an honor to bring greetings to you from the White House. I am sure all the citizens of the Nation's Capital have welcomed you and saluted the high purpose of your visit.

As a public official I have a personal reason for enjoying your delegation. You came here to give us freely of your faith and spirit. Thank you. Thank you for reminding us that the religious heritage of America is a precious gift.

What is the religious heritage of this country? Have we been good stewards of this legacy? What needs, what hopes and possibly what forebodings inspire your pilgrimage?

The religious heritage of this Nation consists of the worship of God and a faithful obedience to His Commandments. Out of such worship and obedience comes the structure of morality and individual responsibility which is the strength of American society.

George Washington, in his farewell address, expressed this thought with deep conviction: "And let us with caution indulge the supposition, that morality can be maintained without religion. Whatever may be conceded to the influence of refined education on minds of peculiar structure; reason and experience both forbid us to expect that national morality can prevail in exclusion of religious principle."

This works both ways. We cannot sustain the religious life of America without a vigorous moral response. Last Sunday, a well-known preacher in New York said: "Religion and morality belong together, and whenever one of them suffers a decline, the other will not prosper long."

This says what religious faith has long taught: "For as the body without the spirit is dead, so faith without works is dead also."

The New York minister spoke of the present popularity of the church in America. He said church membership was at a record high. So are church budgets, church construction, and church attendance. Religious books and movies have a rich market. But despite all these signs of religious progress there is a disturbing back-sliding in public and private morality. There is an appalling increase in crime and violence. The American divorce rate continues to be a national scandal. Racial antagonism and the lack of personal discipline makes us reexamine the depth of our religious teachings.

So there is a feeling of disquiet as to the state of our religious heritage. There is a feeling that we may not be the best of stewards. Some are trying to improve our social and economic and moral performance without strengthening the religious faith; some are trying to improve our religious activity without strengthening our moral practice. In either case, the result can only be failure. We must have both faith and works. They are mutually supporting and enriching.

It seems to me that our religious heritage is threatened by a strange and unlike coalition: the subversive, the selfish and the slothful.

First, the subversive. This is atheistic communism, frankly intent upon overcoming both our Nation and the religious belief upon which it is based.

Second, the selfish. This is a kind of agnostic materialism, which pays lipservice to the deeper values while it strives to use the institutions of government for personal gain.

Third, the slothful. This is the lazy attitude which shifts moral problems to the Government. It tries to reach the millenium by the legislative route. It would substitute public law for private morality.

Let me now describe how this strange coalition through a mixture of motives, threatens our religious heritage.

Communism was born of religion gone sour. Karl Marx was a frustrated son of the church. His program is an international movement, zealous, dedicated, vigorous, and resourcesful. In a little more than 40 years of active growth, communism has brought into its camp one-third of the human race. One could hardly conceive of a philosophy or a form of economic and political organization more antagonistic to our religious heritage.

But it is not enough to speak strong words about communism. It is not enough to attack the Communist teaching directly, to expose its flaws, to lay bare its errors, or even to overthrow it by force. Our religious heritage grew not by attacking those who opposed it, but by positively demonstrating its own merits. In our daily living, in social context, we show forth our inner faith. The American system, rooted in our religious-moral heritage, provides the richest of spiritual and material rewards. To prove its worth, these rewards must be demonstrated by individual citizens and by the Nation as a whole.

As I said, the first member of the coalition which threatens our heritage is the subversive. He has a false religion of his own, on the offensive throughout the world. Let no one underestimate this deadly enemy.

And we are not underestimating his strength—nor our own strength. We too are on the march around the world but not with bayonets and guns. Rather with plows and spades—and in a thousand peaceful ways we are trying to build a peaceful and productive world.

Let me tell you something good out of my own particular field of experience. Last year, it was my privilege to travel around the world and see how American agricultural experts and products were being used to combat the forces of communism and to raise the levels of living of our neighbors in the underdeveloped countries.

And this, I believe, is practical religious service of the highest order. In fact, our missionaries were the first to practice it. They knew that part of the believer's re-

sponsibility is always to "feed the hungry and give drink to the thirsty."

America is doing great work in this area of need. Last year, we gave away $265 million worth of our surplus farm products to feed the hungry and give the thirsty a drink. It makes the story of the five loaves and two fish seem modest indeed. This food went, not to 5,000 people, but to 60 million in 78 countries.

This is what Americans are doing on a magnificent scale on every continent. We can be proud of them—and of our Nation which supports them. I saw their work with my own eyes and I was most encouraged.

I saw an experimental laboratory where Indian biochemists, trained in the United States, were developing new forms of human food from oil seed cake and meal.

In Bangkok I saw agricultural scientists from the United States teaching plant breeding, soil science, and farm economics to a group of alert Thai students.

In Greece there is an agricultural education system based largely on the American pattern, including extension agents and 4–H Clubs.

In India I talked with an American agricultural expert who had helped make a significant engineering advance. He had helped the village people to shift from the broad-bladed hoe, their traditional digging tool, to the American spade. For centuries these people have dug irrigation ditches by flailing the earth with this heavy hoe and then jerking up and throwing aside the bit of dirt they dislodge. "A spade would be better," thought this American expert, so he procured one. But the edge of the spade hurt the digger's bare foot and the spade was flung aside. The extension man welded on a flange, but then the dirt stuck to the spade. Finally, he devised a wooden sole, with leather thongs, which the digger could tie onto his foot, and then the transition from a hoe to a spade economy was achieved. This probably was a change comparable with the shift from binder to combine for a midwestern farmer.

In India, men from the Ford Foundation have developed a bullock-driven electric generator for village use. This opens the way for a new source of electricity for lifting irrigation water, driving tools for small industry, and providing electric lights for village homes.

Throughout all this area the American missionary, accompanied by the agricultural specialist, laid the foundation for the advance of agricultural science.

In the Middle East agricultural scientists from many countries have teamed up with the Food and Agriculture Organization of the United Nations to check the locust plague, a scourge in this area ever since Biblical times. American scientists are a part of the team.

This is part of our great American mission called mutual security. This is the only Government program I know of which has the unanimous support of the leadership of all the major religious groups in our land: Catholic, Jew, Protestant and Greek.

Don't believe all you hear and read about "the ugly American." In many, many places throughout the world, the face of America is the face of sympathy, helpfulness and understanding.

The best way to deal with the subversive is to fill the world so full of positive good as to dispel the hate, want, and lust on which the subversive feeds.

The second member of the coalition which threatens our religious heritage is the selfish man who pays lip service to religion but has no real feeling for our religious heritage or for the freedom which flows from it. He sees in government a means of protecting himself from a competitor, or gaining advantage over an opponent. Our religious heritage gave us freedom and responsibility; the selfish man accepts the freedom and disregards the responsibility. His standard of morality is what the law allows. To him the law is as power politics can write it. Though government was set up to protect the general interest from the special interest, the selfish man strives to make it serve the exact opposite purpose.

This member of the coalition has no intention of eroding our religious heritage; indeed he speaks highly of it. But his actions can bring our religious teaching into disregard and our government into disrepute.

How much of this can the country stand? At some point the citizenry would lose faith in the equity and justice of government action. At some point our people would doubt that religious teaching has any practical meaning. These are real threats to our religious heritage.

There is no better way to deal with this fellow than to revitalize our religious teaching, lift the standards of morality and adhere to sound principles of government. We must, as a people, set a standard worthy of our heritage and hold our public officials to that same high standard.

The third member of the group which threatens our religious heritage is the slothful fellow who would substitute public programs for individual responsibility. He avows the highest motives and is anxious to redress any human wrong by passing a law. He notes the shortcomings of the American system, but is somehow blind to its advantages. He does not understand the social sciences but he would remake our economic and social system. He does not understand the responsibilities laid upon the individual by the tenets of religious faith, but he is ready to undertake, by government programs, wholesale invasions of this area.

Robert Frost, the poet, once described this slothful fellow in a short poem. Let me read it to you. It is about the man who wants to remake the world by waving the wand of government over everything.

"Harrison loves my country, too.
But wants it all made over new.
He's Freudian Viennese by night.
By day he's Marxian Muscovite.
It isn't because he's Russian Jew.
He's Puritan Yankee through and through.
He dotes on Saturday pork and beans.
But his mind is hardly out of his teens:
With him the love of country means
Blowing it all to smithereens
And having it all made over new."

We all know this fellow. He's not as harmless as we sometimes think. When the load of moral responsibility is lifted off the back of the individual and transferred to the state, our religious heritage suffers.

Our religious heritage teaches that God counts us not as members of worthwhile civic associations, or as taxpayers who support worthy causes, or as persons who vote in favor of benevolent government programs, but as individual human souls.

Government owes each citizen an equal place at the starting line; it cannot assure that all will breast the tape at the same instant.

There are many helpful things which government can do, some of which are not now being done. But government is not omnipotent. If government undertakes some well-intended but ill-advised intervention in economic life, public decisions are substituted for private responsibility. And so, without wishing to do so and without knowing how or why it happened, freedom and individual responsibility may be lost. Individual responsibility is closely associated with the religious heritage of this land; to weaken one is to threaten the other. Good intentions would make this no less a tragedy.

So we have here the three who together threaten the structure which represents our religious heritage.

One, the subversive, is a deliberate housewrecker.

One, the self-seeker, thoughtlessly pulls down the house as he hunts for anything that could be useful to him.

One, the slothful with the best of intentions, dreams about additions and remodelings which the inhabitants of the house cannot afford and are unable to use.

But while some threaten our religious heritage, others, as I have said, build it up.

There are those who understand our religious heritage, who are committed to it, and who work for it in their daily lives.

There are those who understand the purpose of life, who recognize the shortcomings of our system, who would strengthen the system where it can be strengthened and accept it where it cannot.

There are those who recognize that communism, like toadstool, grows best in the dark—as far from the light of religion as it can get. These people want to set their light on a hill and work steadily, with faith and courage, for the betterment of their fellowmen.

There are those who love freedom and who accept responsibility, who ask of government no special favors for themselves.

These are the true stewards of our religious-moral heritage. They are the children of light. I believe they will overcome the children of darkness. But we cannot relax. We must work hard and faithfully with them.

When the historian of the future writes the history of our present times, he must write that the supporters of faith and freedom won out over the subversives, the selfish and the slothful. Our religious heritage must be preserved, strong and virile for our own people and indeed for the people beyond the seas. I know your Washington pilgrimage has this intent. I wish you well.

I add one further thought. A little while ago, I thanked you for coming to Washington because you want to give something. Of course you want to give. But you also want to receive something. You are pilgrims and pilgrims always have a goal and purpose. They want to get something so that they can return home stronger than when they started out. I hope that is what you are now able to do.

I hope you have seen your servants in Government at work and I hope you have been encouraged by what you have seen. I am not a career civil servant. I have been in Washington only a few years. But I am deeply impressed and gratified by the devotion—religious devotion—which inspires the work which is being done here on your behalf—and on behalf of our neighbors around the world.

I hope you will go home and tell your friends that the religious heritage of America is honored here—and I hope it motivates all that we do.

Thank you and goodby.

Funny, Unless—

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

Mr. MINSHALL. Mr. Speaker, our very able colleague from the Sixth District of Michigan, Mr. CHAMBERLAIN, has performed a service in pointing out some

of the many loopholes in our present revenue code. A few of the paradoxical provisions of present tax law are humorous—unless, as the Cleveland Plain Dealer pointed out editorially on July 6, you happen to be the one who has to pay. Under unanimous consent, I insert the editorial:

FUNNY, UNLESS—

One of the funnier examples of how silly some of our tax laws are was cited recently by Representative CHARLES E. CHAMBERLAIN, Republican of Michigan.

He explained that in 1951 when a 5-percent tax was levied against the unsuspecting and unorganized power mower lawn growers of the Nation, it was decided that industrial power mowers—for golf courses, farms, etc.—should not have to pay the tax. So any power mower 24 inches and wider in its cutting swath wasn't taxed, according to CHAMBERLAIN.

At that time most home mowers were 17 inches wide. But lately these have been widening, and the 17-inch home mower gave way to the 19-inch mower, the 19-inch mower gave way to the 21- and 22-inch mower, and then, naturally, came the tax-exempt 24-inch mower.

The result is wholesale confusion.

Very funny, as we said in the beginning. Unless, of course, you have had to pay the 5-percent tax on a mower. As Representative CHAMBERLAIN also commented, "It is one more example of the willy-nilly tax discrimination imposed upon the American consumer who has to pay a 10-percent tax on his automobile which is a necessity, while his neighbor pays no such tax on a yacht."

Four Banking Groups Favor H.R. 7950

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

Mr. MASON. Four important banking groups have issued a statement in favor of H.R. 7950, which I introduced to the House recently. Inasmuch as the proposed equal taxation of commercial banks, mutual savings banks, and savings and loan associations has become a matter of rather violent controversy in the newspapers within the past few days, I believe that this joint statement should be published as it was agreed to by the signatory groups, without addition, subtraction or editorial comment. It is as follows:

WASHINGTON, D.C., July 1.—The American Bankers Association, the Bankers Committee for Tax Equality, the Independent Bankers Association, and the Roth Committee will give their full united support to H.R. 7950, the groups said in a joint statement today.

The bill, introduced in the Congress last week by Representative NOAH M. MASON, of Illinois, provides for changes in the laws governing Federal taxation of commercial banks, mutual savings banks, and savings and loan associations. It would, if enacted, result in the payment of substantial Federal income taxes by mutual institutions.

The joint statement follows:

"The American Bankers Association, the Bankers Committee for Tax Equality, the Independent Bankers Association, and the Roth Committee are dedicated to a belief in the principle of fair competition through fair tax treatment of commercial banks, mutual savings banks, and savings and loan associations.

"These four organizations are keenly aware of the importance of savings as an anti-inflationary curb. They are also aware of the need for Federal revenue.

"The present tax advantage of mutual savings banks and savings and loan associations over commercial banks places commercial banks in a disadvantageous position in competition for savings and in their ability to serve the public. This should be corrected.

"To this end, the American Bankers Association, the Bankers Committee for Tax Equality, the Independent Bankers Association, and the Roth Committee stand united to achieve equitable tax treatment.

"Therefore, H.R. 7950, embodying a joint proposal of these groups was introduced in the Congress on June 24, 1959, by Representative NOAH MASON, of Illinois. It was referred to the House Ways and Means Committee, where all tax legislation originates.

"The bill provides for—

"1. A uniform bad debt reserve formula for all three types of institutions. It would permit these institutions to set up annually one-half of 1 percent of loans, not Government insured or guaranteed, as a bad debt reserve before taxes, until the reserve amounts to 5 percent of such loans;

"2. Repeal of the present provisions of law which permits savings and loan associations and mutual savings banks to make transfer to a reserve for bad debts, without the payment of taxes, so long as the total of their surplus, undivided profits, and reserves does not exceed 12 percent of withdrawable accounts or total deposits;

"3. Amendment of the present provision under which mutual institutions may deduct all dividends and interest paid out. The bill would limit such tax deductions to an amount equal to the average percentage of net income actually paid out by all savings and loans associations or by all mutual savings banks during the preceding 10 years.

"That part of H.R. 7950 described in point 3 above merits particular attention. Its effect would be to permit a mutual institution to make dividend or interest payments, on a tax-deductible basis, up to a fixed amount of its net income—the amount to be determined by the percentage of income paid in dividends or interest by the entire industry during the previous 10 years. If it paid out less than the limit, it would be able to deduct only the amount it paid out. If, for example, records through 1958 were to show that all savings and loan associations had paid out in dividends an average of 70 percent of their net income during the past decade, then under this bill each savings and loan association would be permitted tax deduction on dividends up to 70 percent of its net income. A similar test is provided for mutual savings banks.

"H.R. 7950 differs in some detail from the general proposal adopted at the April meeting of the American Bankers Association administrative committee and executive council, which was described in the letter of President Lee Miller of the American Bankers Association under date of April 24. The change resulted from discussions and conferences in Washington with representatives of the American Bankers Association, the Bankers Committee for Tax Equality, the Independent Bankers Association, and the Roth Committee, leading to the introduction of the bill.

"Other bills on the subject of taxation of mutual institutions are now pending befor the Congress. The Curtis bill and the Harrison bills purpose a straight reduction in the tax-free loss reserves of mutual institutions from the present 12 percent to 5 percent. The Harrison bill additionally limits tax deductible dividends and interest to 3½ percent. We recognize that the Curtis and Harrison bills also have as their objective equitable tax treatment. We believe that the alternative methods they offer will aid the Congress in arriving at a sound decision.

"The opposition which we may encounter claims to be deeply entrenched and influential.

"With this in mind, the importance of unified and well coordinated action by our respective groups cannot be overemphasized. It merits the wholehearted support of all banks.

"We therefore pledge our strongest efforts toward the achievement of equitable tax treatment."

Tribute to Congressman Daniel J. Flood

EXTENSION OF REMARKS
OF
HON. MICHAEL J. KIRWAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

Mr. KIRWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include therein an article from the Wilkes-Barre (Pa.) Record, concerning the tribute paid to our colleague DAN FLOOD recently when he was honored by the various civic groups of his hometown:

[From the Wilkes-Barre Record, July 3, 1959]

DELAYED TRIBUTE

EDITOR OF THE RECORD:

As one who had been looking forward enthusiastically to participating in the richly earned tribute on June 6, 1959, to Congressman DANIEL J. FLOOD, I was bitterly disappointed that the plane in which I was traveling to Wilkes-Barre was forced by storms to return to Philadelphia, and that I was thus deprived of the privilege and pleasure of joining our mutual friends in honoring the Congressman.

It had been my purpose, as president of the Association of the U.S. Army, to present him with a certificate of appreciation from the association, and in so doing to deliver some appropriate remarks. Since the aforementioned circumstances prevented my doing so, I beg to forward, as of possible interest to you, the accompanying copy of what I had intended to say on that occasion.

With my sincere good wishes,

A. J. DREXEL BIDDLE,
Major General, President.

"I have an abiding admiration, affection, and esteem for DAN FLOOD, and I consider it a singular honor to participate in this richly earned tribute, and to be granted the privilege of touching particularly on two facets of his distinguished, useful life.

"You see, prior to and during World War II I lived very close to the people of the now captive countries behind the Iron Curtain in Eastern Europe. From the outset of their deplorable plight, DAN became acutely concerned with their unhappy fate. Inspired, of course, by his love and deep devotion to the people of this area who are friends and relatives of those in captive Europe, DAN has always been ready to lend a helping hand. Believe me, there's many a family in Poland, Czechoslovakia, Hungary, and of the Baltic and other States who would welcome the chance to embrace DAN and thank him for what he has done and to express their ap-

preciation of his steadfast drive to further the principle of freedom and dignity of the individual.

"Then, too, it is with a sense of pride and appreciation that I point to his untiring efforts toward advancing the interests of our armed services. With his clear comprehension of the problems confronting the free world, our Nation in particular, together with his penetrating grasp of the military requirements necessary to meet them, he is always out in front, striving for what it takes to keep our military posture second to none.

"As president of the Association of the U.S. Army, I take the greatest pleasure in announcing in the association's award of a certificate of appreciation to DAN for his active and continued support of a strong national defense and his unswerving recognition of the Army as an indispensable factor in the Nation's defensive strength.

"Congressman FLOOD, it is now my privilege and pleasure to present to you this expression of appreciation from the Association of the U.S. Army.

"I should be remiss were I to conclude without paying my warmest respects to the other member of this outstanding team—one who has been constantly at DAN'S side, working with him in furthering the interests of this area, of this Commonwealth, of the Nation—none other than his charming, intelligent, and ever-understanding and helpful lady, Mrs. Dan Flood."

Reuben Darbinian

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following text of an editorial taken from the Armenian weekly, Hairenik, in its issue of July 2. The article pays tribute to the editor in chief of Hairenik, Mr. Reuben Darbinian, who recently celebrated his 50th anniversary of service to the Armenian people, as well as his practice of journalism.

It was my pleasure last week to be in Detroit on the occasion of the annual convention of the Armenian Revolutionary Federation, the Armenian Relief Society, and the Armenian Youth Federation. On Thursday evening, July 2, a testimonial dinner was given to Mr. Darbinian at the Sheraton-Cadillac Hotel, before which I had the privilege of speaking at that time. It was a great privilege for me to be present and to join Mr. Darbinian's many friends and admirers in paying a well-deserved tribute to him, and I include this editorial so that Members may have a chance to be familiar with his outstanding record and his many accomplishments in the field of journalism and on behalf of the cause of Armenian independence:

REUBEN DARBINIAN

The jubilee celebration of 50 years of service to his people which tonight is being accorded to Reuben Darbinian, editor in chief of Hairenik publications, at the behest of the central committee of the Armenian Revolutionary Federation, and in a festive setting of three conventions being held in Detroit, not only is a well-deserved tribute to a great man, but it has the proportions of a landmark in contemporary Armenian history.

During the past half century no other Armenian, perhaps, made his influence felt so sharply and so decisively upon the fortunes of the Armenian communities of the dispersion as the modest recipient of tonight's homage. Reuben Darbinian has behind him an illustrious record of more than half a century activity as a brilliant intellect, a distinguished journalist, and an incomparable party and national leader.

A man of deeds more than words, a champion of great causes and great accomplishments, he early came into prominence as a leading figure in literary, cultural, and policymaking schemes of the Armenian Revolutionary Federation.

His journalistic career, a field in which he distinguished himself as almost unrivaled, began early in his youth when he became editor of the Armenian language publication Arev (Sun) of Baku, followed by Harach of Erivan, the Korz (Work) monthly of Baku, the Azadamart (Fight for Freedom) weekly of Istanbul, and finally, during the past 37 years, as editor in chief of Hairenik publications. It may truly be said he was the sole inspiring genius behind the creation of the Hairenik Monthly, the Hairenik Weekly, and the Armenian Review, three distinguished publications which the paternal patronage of the Armenian Revolutionary Federation has maintained to this day.

With the dispersion of the Armenian intellectuals after the Soviet takeover of Armenia, Reuben Darbinian salvaged much of the wreckage by rallying these expatriated and expropriated unfortunates around the Hairenik Monthly, providing them at least a modicum of subsistence from the meager pay which they received for their contributions. He nurtured entire generations and discovered a host of talented young writers as a result of the Hairenik Monthly. Today, the Hairenik Monthly has become an imposing compendium of documentary literature about the recent and contemporary history of the Armenian people.

He did the same thing with the creation of the Hairenik Weekly and the Armenian Review. The latter, in particular, now in its 11th year, is slowly proving itself as a veritable counterpart of the Armenian language monthly.

A realist by temperament, he never was carried away by the romanticisms of his contemperaries which fell victims to various types of isms. A keen observer, a profound student of history, a man of unusual insight and unquestionably an extraordinary analyst, he always kept his foot on solid ground, and in so doing he kept countless others from wandering in devious paths. That is the reason why he won for himself the reputation of the greatest foe of communism, and conversely, the greatest champion of national freedom.

He analyzed and exposed the Soviet evil as early as the twenties and it may confidently be contended that, his conclusions of 40 years ago are just as fresh and valid today as they were then and no one has been able to improve upon them.

A great educator, leader, patriot, and statesman, Darbinian has endeared himself to countless admirers, being respected by friend and foe. He has given us a life of service and great achievement. He has served his people well.

Metropolitan Pollution Dilemma

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 2, 1959

Mr. JOHNSON of Colorado. Mr. Speaker, again the Rocky Mountain News has put the spotlight on the difficulties of a metropolitan area—in this instance Denver—in trying to manage the sewage wastes of a rapidly increasing and sprawling area.

Bill Miller's sixth article on June 26 reports how Denver has failed in its several efforts to get secondary treatment of its sewage, as required by the Colorado law.

In inserting this article in the RECORD Appendix, may I especially call attention to the commendable statement of Denver's new Mayor, Richard Y. Batterton, showing his intention of working this problem out in concert with his neighboring metropolitan communities.

It is these suburban areas I have the duty and privilege of representing here in the Congress. It has been in their interests that I have spoken before this House and its committees in favor of economical and effective action by the Federal Government, such as that provided in H R. 3610. I met with the public official of the metropolitan area on Monday of this week in support of a cooperative approach to this problem.

The article follows:

TWO PROJECTS HELD SOLUTION TO SEWAGE PROBLEM

(By Bill Miller)

Back in the depression-ridden 1930's Denver undertook two projects which, if successful, would have solved the city's sewage disposal problems.

Unfortunately, neither was successful. But the effort was made by Denver in bygone years when sewage problems, stream pollution and similiar phrases were seldom heard.

These two projects were the Whitecap Canal and magnatite filters.

First the story of the Whitecap Canal project, a fascinating one that showed imagination, vision, courage, and determination.

Unfortunately, it was a giant boondoggle.

PACT SIGNED

On August 30, 1935, Denver entered into an agreement with the Farmers Reservoir and Irrigation Co. concerning the Whitecap Canal, which had not been in use for many years.

The canal ran from Clear Creek to the Platte River and, according to the agreement, "needs extensive cleaning out and other renovating before it can be used."

At the time, Denver was engaged in bringing Fraser River and Williams Fork water from the western slope.

"Use of the Whitecap Canal would be advantageous to the city both in connection with its water to be brought through the Moffat water tunnel and its Williams Fork water," the agreement read. In return the reservoir firm was given certain rights to buy excess water.

To carry out the project, the manager of improvements agreed to build a dam to divert water into the Burlington Ditch.

CANAL CLEANED

The canal was cleaned up. The dam, inlet and outlet structures, a drainage system, and warehouses were built.

The canal work was accomplished through the aid of the Works Progress Administration (WPA) and the Public Works Administration (PWA). It ran along a shale outcropping that was covered in some areas by sand and gravel.

In addition, the canal was too level. There was not much gravity flow and some believed at times of high water in the Platte, water could be diverted into Clear Creek.

Its purpose, of course, was to carry Clear Creek water to the Platte.

After years of work and expenditure of dollars, water was released into the canal.

And all hell broke loose.

ALL FOR NAUGHT

The canal was porous as a sponge. Furthermore, the water didn't run either way. It just stayed in one spot and seeped through the canal bottom and banks.

Lowland farms, houses and even a schoolhouse were flooded.

The experiment lasted 3 days. The water was drained out and the experience forgotten, except for damage suits that stretched out through the years.

The old canal is covered now, its many structures just a memory. Out along Clear Creek, north of Denver, there still are visible a few outcroppings of cement pilings but that's about all.

What has this to do with the sewage problems in Metropolitan Denver?

The interesting thing about this entire project is this: It was built, primarily, as a sewage not a water project.

GOOD INTENTION

The theory behind it? Western Slope water would be diverted, brought into Clear Creek and eventually to the Platte River near the Burlington Ditch.

Purpose of this diversion water was to dilute the sewage being dumped into the Platte by Denver.

In addition, the city planned to construct a series of shallow lakes or lagoons and use some of this water for the natural treatment of sewage. The lagoon system still is effective—it is used extensively by smaller communities.

When sewage is dumped into these shallow lakes, nature, through bacteriological processes, disposes of the waste.

This canal project was not a small one. The depth at water line was 5½ feet and was 48 feet wide at the top and 26 feet wide at the bottom.

Its length was 20,200 feet or nearly 4 miles.

TROUBLE AHEAD

How much the project cost is a moot question.

A report of the Denver Water Board in 1936 indicated that nearly $500,000, mostly WPA and PWA, had been spent in 1935 and 1936.

However, the entire project was not a loss.

Water from the Williams Fork is still diverted to the Western Slope through the Jones Pass tunnel.

Now, about the magnatite filters.

Before 1936, Denver deposited all of its wastes into the Platte. When plans and specifications were drawn for the Denver sewage disposal plant, the city envisioned complete treatment facilities.

The plant was designed for a population of 317,000. It was to handle a flow of 54 million gallons per day.

The plant was put into operation December 11, 1937, and almost from the outset difficulties were encountered with the magnatite filters.

FILTERS FLOP

The filters, coupled with chlorine disinfection, were supposed to give Denver complete treatment.

But the filters didn't work. It was a new process and the filter screens would erode and the fine sand would wash away.

A city engineer later reported:

"For 4 years, the contractor and magnatite filter representatives attempted to correct the operational difficulties. More than $100,000 was spent to place the filters in satisfactory operation."

But the efforts failed.

The Magnatite Filter Co. was unable to put the filters in acceptable working order. The city sued for $288,000.

But the firm entered bankruptcy and the city settled for $30,000.

CHLORINE KEY

Magnatite filters and chemical flocculation were abandoned in 1942 when the plant was converted to primary treatment with some aeration and return of the sludge to increase solids removal.

Chlorine disinfection of the final effluent before it was dumped into the river was continued then and continues now.

Since this time, Denever experimented with many methods of treating sewage. Many have met with failure, others with moderate success.

But Denver has never stopped trying. Denver admits its shortcomings and does not claim to have perfect treatment.

But a report issued in 1950 spells out its position:

"It is apparent that the Denver sewage plant was designed with the intent of providing complete treatment. The failure of the secondary treatment by means of the magnatite filters necessitated the conversion of the existing plant to only preliminary treatment with chlorine sterilization of the effluent."

MUST BE SOLVED

The city recognizes that, eventually, the problem will have to be solved.

Mayor-elect Richard Y. (Dick) Batterton pledges:

"We recognize the problem and we wish to solve the entire metropolitan area sewage situation in cooperation with our neighbors. It's a problem that must be solved."

Complete treatment includes the primary and secondary, which usually involves some biological process in which a high BOD (biochemical oxygen demand) removal is obtained.

This is most often provided by either activated sludge or tricking filters, followed by secondary clarifiers.

Following this treatment and a good dose of chlorine for added safety, the effluent can be dumped with little fear of polluting the stream.

But without secondary treatment—and especially when mechanical difficulties or insufficient capacity forces bypassing the plant—downstream users are mighty unhappy.

There are odors, there is stream pollution. When this happens people living in the Brighton area get incensed at Denver.

There's also another interesting sidelight about the effect, if any, on truck farming.

Admissibility of Evidence—Statements of Confessions

SPEECH

OF

HON. JOHN V. LINDSAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 4957) to amend chapter 223 of title 18, United States Code, to provide for the admission of certain evidence, and for other purposes.

Mr. LINDSAY. Mr. Chairman, my chief difficulty with this bill, to which I am opposed, is that it is an indirect attack against rule 5(a). Rule 5(a) is very simple, and it says much. It states that any accused shall be arraigned without unnecessary delay. As was so succinctly and ably pointed out by my distinguished colleague, the gentleman from New York [Mr. RAY], in the Mallory case there was an 8-hour delay, and it was shown that there was every opportunity to arraign prior to the time that arraignment occurred. It has long been Federal practice, and it has been the rule ever since the McNabb case that rule 5(a) will be safeguarded by excluding from evidence the fruits of its violation. Therefore, what this proposed bill does is to indirectly nullify rule 5(a), and I suggest to the Committee that if there is disagreement with the rule stated in 5(a), that any accused shall be arraigned without unnecessary delay, we should attack it on this ground and not by a back-door approach.

The Mallory case represents no basic change to the evidentiary rule established by the McNabb case in 1943. Since 1943, certainly, the Congress has not seen fit to take action to overcome what was done in the McNabb case. I point out also that the Mallory decision was a unanimous decision of the Supreme Court, and the author of the decision was Mr. Justice Frankfurter who was also the author of the majority opinion in the McNabb case. What rule 5(a) does, which is at the basis of this, is to simply state the fundamental rule that a man is to be detained in a criminal proceeding solely for the purpose of bringing him before the court, to assure his presence at the trial and to set in motion the various rules of protection upon which so much of this country's history is founded. Rule 5(a) reflects the right to counsel; the right against self-incrimination; the right to habeas corpus and the right to be detained only for probable cause. The argument has been suggested that in the majority report, which the Committee has before it, the difficulty with the Mallory opinion and the Mallory decision is that the public is being punished and that if we allow the rule of the Mallory case to stand, the entire public will be punished, society will not be safeguarded and the police will be unduly hampered in their efforts to safeguard the public. Let me

answer this by referring to a very excellent report, in the form of a letter to the chairman of the Senate Committee on the Judiciary, from the Association of the Bar of the City of New York, one of the leading bar associations of this country, which is opposed to the Mallory bill. The letter says this:

This argument, in short, proves too much, because almost any exclusionary rule of evidence or procedure adopted to protect the rights of accused persons might be criticized on similar grounds.

For example, it may frequently happen that hearsay evidence is available which, if received in evidence, would go far to establish that an accused person is in fact guilty. Under some circumstances, hearsay evidence may be very reliable and highly pertinent on the issue of guilt or innocence. Nevertheless, for reasons which are generally understood by the public as well as the legal profession, such evidence should not be, and is not, received. The interests of justice are thought to be better served by excluding all hearsay evidence than by admitting such evidence, either on a general or a selective basis. Is the public punished because, on some occasions, a guilty man goes free who might have been convicted on the basis of hearsay evidence? Surely not, if one accepts the general conclusion that the interests of justice are best served by the exclusion of hearsay evidence. So, too, if the interests of justice are best served by requiring prompt arraignment of arrested persons, the public is not punished merely because confessions might sometimes be obtained during an unlawfully protracted confinement.

So I would suggest to the members of the committee that the difficulty with this bill is that it might well deprive the accused of the cloak of innocence; it might deprive him of counsel when counsel is most needed; it would permit detention incommunicado and by that means deny him the right of habeas corpus.

In connection with the argument that the rights of the accused are safeguarded by the writ of habeas corpus and always will be despite this bill, it should be pointed out that as a practical matter the great writ of habeas corpus cannot come into play until someone is notified that the accused has been detained. His family or friends must know where he is. It is therefore fundamental that the most important thing that a man can have under the conditions of an accused like the Mallory case is the independent advice of counsel which must be supplied, of course, by persons on the outside who have knowledge of his detention. Therefore, in summary, I should like to say that this bill in the interest of justice should be defeated.

Mr. POFF. Mr. Chairman, will the gentleman yield?

Mr. LINDSAY. I yield.

Mr. POFF. May I inquire of the gentleman if he feels that unnecessary delay in and of itself should void a confession even though admittedly the confession was voluntary?

Mr. LINDSAY. I think the answer to that is that as was pointed out by the chairman of the committee, that as a practical matter it is impossible to know whether or not unnecessary delay—that is to say, a long period of unnecessary detention without arraignment, whether such a delay in and of itself could render a confession involuntary; and for that reason, and going back through history, therefore, it has been a rule established in this country that unnecessary delay in and of itself is unlawful, and all evidentiary matter which is obtained as a result of that delay must be excluded. The question cannot be put in terms of whether the confession was voluntary "even though there was unnnecessary delay." Delay in and of itself can be coercive.

Mr. POFF. Then the gentleman's answer to my question is yes.

Mr. LINDSAY. Yes.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. LINDSAY. I yield.

Mr. YATES We have seen many instances recently passed and through the years, where the fifth amendment has been used by people whom the police have tried to convict. Is that a sufficient reason for doing away with the fifth amendment, would the gentleman say?

Mr. LINDSAY. Of course not.

Mr. YATES. Does not that same reason hold true for sustaining the Supreme Court decision and for voting against this bill?

Mr. LINDSAY. I would say so.

No Place for Bigotry and Intolerance in America

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

Mr. FEIGHAN. Mr. Speaker, under leave granted, I insert in the RECORD an address I delivered Sunday, June 28, in Cleveland, at a banquet of Knights of Columbus, Cleveland Council No. 733, in honor of His Excellency, the Most Reverend Edward F. Hoban, Archbishop-Bishop of Cleveland. The subject of my address was "No Place for Bigotry and Intolerance in America":

It is a very great honor and privilege for me to have this opportunity to speak at this banquet through which we express our esteem and affection for His Excellency the Most Reverend Edward F. Hoban, Archbishop-Bishop of Cleveland. It is altogether fitting that Cleveland Council No. 733 should name this third degree class in honor of Archbishop Hoban, coming as it does one day after the celebration of His Excellency's 81st birthday.

This occasion affords us a splendid opportunity to look back on the founding days of the Knights of Columbus, to examine the reasons which brought our Order into existence and to reflect upon its importance in these days in which we live.

The founding of the Knights of Columbus was based upon the avowed intention of its members to protect the holy office and person of all Catholic priests. Through the years, that has remained as the purpose, as the inner life, of all members of our order.

It would do us all well to look back upon that era when such protective action was a matter of practical necessity. In 1882 when the Knights of Columbus was founded our country was in the throes of a period of bigotry and black prejudice. As always, the bigotry and prejudice of that era was based upon ignorance and the exploitation of this ignorance by those who sought personel gain by advancing disunity, misunderstanding, and distrust among the American people. At that time all sorts of evil gossip was being spread about the mission of the Catholic Church in the world, about our clergy, and indeed, about our outstanding Catholic laity. These bigots described the mission of the Catholic Church in America as a conspiracy, an effort to rob our people of their liberties and freedoms. Rumors were spread that our churches and rectories were storehouses for arms and ammunition which was to be used at some future date by us Catholics to seize control of the civil machinery in our country. Cartons appeared in the hate journals of that day depicting our priests and religious as wearing horns. Charges were frequently heard that the clergy and laity in America were working together toward the day when the Holy Father would be installed as temporal and spiritual ruler of the United States.

Those were the days when the bigots played upon the minds of the illiterate and the gullible, and quite a racket they made of it—that is, a racket for their own personal and material gain. It was in these circumstances that the holy office and the person of our Catholic priests fell under violent attack and insistances arose in which the very lives of our clergy were in danger. It was in these same circumstances that a handful of Catholic laity, alarmed by the trend of that day, banded together to form the Knights of Columbus. Their good works, and particularly their advocacy of the truth about the mission of the Catholic Church in America, stimulated the development of the order throughout the United States.

With the coming of World War I, when the cause of human freedom hung in the balance, the bigots were forced to run for cover by the patriotism and courageous deeds of the Catholic clergy and laity. Legions were the Catholic chaplains and fighting laity who won the acclaim of their fellow Americans by their bravery and sacrifices in defense of our country. It would have been very unpopular indeed to impugn the loyalty of our clergy and laity in this atmosphere. There followed then a period of warm understanding and tolerance in our country. It was no accident that, in the years immediately following World War I, our country enjoyed a period of great progress and development. In no small measure, the unity of all our American people contributed to this development.

But once again the evil voice of bigotry was heard in our public life, this time in the form of a secret and terroristic organization. I speak of the Ku Klux Klan—the KKK. The public memory is short. The deeds of patriotism and sacrifice during World War I which had put the lie to the false claims of the anti-Catholic bigots had been dimmed by the passage of time. The professional bigots, whom it seems we are likely to have with us in all ages, then organized to destroy the unity and amity among all our American people, which grew out of facing and defeating a common danger. The Ku Klux Klan attempted to set apart all Catholics, Jews, and Negroes from their fellow Americans and to make them the targets of suspicion, distrust and hatred. What a racket this turned out to be. You will recall that the leaders of this un-American movement were exposed as scoundrels of the first order, stealing vast sums of money, contributed by its members. The hoods and robes, the symbols of terror and the acts of violence which characterized the KKK, in due time brought about its

destruction. The American people will not long tolerate the advocates of hate once they are exposed to public light.

With the coming of World War II American Catholics, clergy and laity alike, were in the forefront of the struggle for human freedom and the dignity of man. Our Catholic people saw the dangers of Hitler and his movement presented to our democratic way of life long before any of their fellow Americans. They also recognized the equal danger of Russian communism and the threat it posed to our American way of life. What a bitter pill our people had to swallow as they heard Russian communism referred to as a democratic way of life and the Russians called fighters for the basic human freedoms. When the Russian Communists were officially declared as our allies in World War II this served as a real test of the devotion and loyalty of our Catholic people. In these circumstances our Catholic clergy and laity again arose to superb heights as they demonstrated their unswerving loyalty to our country on the battlefields of the world. The daily list of fatalities and the wounded, by their names alone, stand as an indelible testament to this unquestioned loyalty.

So again at war's end, that is World War II, there was no room for bigotry and intolerance in our public life. The common sacrifices of all the American people again brought us closer together as a diversified, but always united, people. There was then no room in our country for those who would question the origin, the religious faith or the color of a fellow citizen as a requisite to loyalty. This was especially true in our public life as fresh from the trials of a devastating war, we, as a people, looked forward to an era of peace with justice for all nations and people. The world had undergone a very great change and with it came changes which had affected the daily lives of every one of our citizens.

In these past 10 years we, as a Nation, the citadel of human freedom, have been forced to look to our ramparts by the threat which atheistic communism, on the march, poses not only for us but for all civilized mankind. These are days when the call for unity, mutual respect, and understanding among all our people, overrides any other consideration. These are days which test all the values and, indeed, the very foundation of civilization.

Is it not strange, then, that in these days the head of the evil serpent of bigotry has been raised to strike a hard blow at the cause of unity, mutual respect, and understanding among people. There are operating today, on the American scene, a number of hate organizations, some of which have attracted national attention by the violence of the falsehoods which they seek to permeate into our public life. I do not propose to name these organizations, but I would group them all under this appropriate title "Bigots and Other Un-Americans United for the Spread of Falsehoods and Disunity Among the American People."

It is almost unbelievable that in these enlightened times we see the qualifications of a candidate for public office put into question because of his religious faith. To put it more bluntly, a small band of professional bigots are questioning the loyalty of all Catholics in the United States and in particular they have raised the question as to whether a Catholic, because of his religious beliefs, is fitted to be President of the United States.

It is both fair and proper to ask what occasions such an un-American inquiry as this. As I have said, it seems as though we are destined to have the advocates of bigotry and intolerance among us in all generations and they appear when the moment seems most opportune. But this is hardly an opportune moment for the professional bigots to undetrake a widespread propaganda campaign calculated to spread disunity and to weaken the fabric of our democratic way of life. Nothing could serve better the despotic purposes of atheistic communism and the plan of the Russians for world conquest than to cause division on the American scene on the basis of religion. So I believe it is urgent in the extreme that thinking Americans ban together for the purpose of taking a hard and honest look at the question of what motivates those who seek to divide our country by bringing into question the loyalty of anyone because of his religious beliefs.

The Knights of Columbus was founded for the avowed purpose of defending and protecting the holy office and the person of all Catholic priests. In this, the members of the order have done well. But the task is not finished. A great public service would be accomplished if the members of the order would take the initiative necessary to expose the motives and objectives of all hate organizations now operating on the American scene. I commend this to you as a task worthy of the purposes for which you stand. I ask this of you as Americans who have proved your loyalty and devotion to the highest American ideals so that we may remain a united people, fearless of the future, and certain of the destiny which divine providence holds for our beloved country.

Freedom's Birthday

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 1, 1959

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the East Side News on July 4, 1959:

FREEDOM'S BIRTHDAY
(By Harry H. Schlacht)

Tomorrow is freedom's birthday. July 4th is a glorious day. It is an immortal day—our national holiday.

It is the day when our birth certificate as a nation was signed. It is the 183d anniversary of our Declaration of Independence. For the blessings of liberty have sprung from God and are enshrined in the hearts of His children.

Our sacred document recognized the principle that all men are created equal. It declared that man is endowed by his Creator with certain inalienable rights. It was a fearless arraignment of tyranny. It was the bold assertion of the rights of man. It was indeed the soul of the Liberty Bell.

The Liberty Bell pealed like a trumpet blast throughout the world. It roused men and women to thought and to action. It was the fulfillment of the prayers of every living soul.

Here was a land where liberty is the property of every man. Here was a land where freemen dare to think, to speak, and to write their convictions. Here was a land where every man dares to go from any schoolhouse to any church house. Here was a land where every man is a peer and where no man dares to wear a crown.

The pillars of all races and creeds came to our shores. They drank deep from the fountain of liberty. They helped to forge and build a new civilization. They fought and died that liberty might live—that our flag might be unstained. They fought so that all men underneath its fold shall bear no chains, and that no man shall sigh for freedom while a single star shines in the heavens. It was truly God's country.

America has become the worldwide synonym for truth, charity, justice, liberty and equality. American sons and daughters have fallen on every battlefield where the inherent rights of free people have been challenged since the birth of our Nation.

At the dedication of the 5th Marine Cemetery on Iwo Jima, in March 1945, Rabbi Roland B. Gittlesohn caught the spirit of the meaning of freedom when he said in part:

"Here lie men who loved America because their ancestors generations ago helped in her founding, and other men who loved her with equal passion because they themselves or their own fathers escaped from oppression to her blessed shores. Here lie officers and men, Negroes and whites, rich men and poor—together. Here are Protestants, Catholics and Jews—together. Here no man prefers another because of his faith or despises him because of his color. Here there are no quotas of how many from each group are admitted or allowed. Among these men there is no discrimination. No prejudices. No hatred. Theirs is the highest and purest democracy.

"Any man among us, the living, who fails to understand that will thereby betray those who lie here dead. Whoever of us lifts his hand in hate against a brother or thinks himself superior to those who happen to be in the minority makes of this ceremony and of the bloody sacrifice it commemorates an empty, hollow mockery. Thus, then, do we, the living, so dedicate ourselves to the right of Protestants, Catholics, and Jews, of white men and Negroes alike to enjoy the democracy for which all * * * have here paid the price."

Let us make July 4 a day of rededication throughout our land. Let us take a new look at freedom, think how it works for you in your community and help it along today as it has helped you in the past.

Admissibility of Evidence—Statements and Confessions

SPEECH
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 4957) to amend chapter 223 of title 18, United States Code, to provide for the admission of certain evidence, and for other purposes.

Mr. WAINWRIGHT. Mr. Chairman, it seems to me the principal question before the House today is not so much a matter of a technicality or a question of semantics. The question is whether one of the real treasures that we have in this country vis-a-vis the Soviet Union, our liberty, our liberty from the police state, will be further reduced. Any encroachment by the Congress of the United States seems to me rather astonishing and rather a shame. Apparently, this bill will pass as it passed overwhelmingly last year. I certainly will not be one to support it.

Mr. Chairman, I yield back the balance of my time.

Ashley Resolution Offers Congress an Opportunity To Help Solve Berlin Crisis

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. REUSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter to the editors of the New York Times which appeared on Sunday, July 5, 1959, describing the concurrent resolution, introduced by Congressman THOMAS L. ASHLEY, for a statement of U.S. solidarity on the Berlin problem. The Ashley resolution also explains that the U.S. position is based on a commitment to liberty shared by peoples everywhere. Representative ASHLEY has made a positive contribution to the solution of the Berlin problem. The text of the resolution appears at page 10471 of the CONGRESSIONAL RECORD for June 22. The letter to the Times follows:

BACKING OUR BERLIN STAND—CIRCULATION AMONG SOVIET PEOPLE OF ASHLEY RESOLUTION TEXT URGED

(The writer of the following letter has served as Information Officer at the American Embassy, Bangkok, and is former European director of Free Europe Press in Germany.)

To the EDITOR OF THE NEW YORK TIMES:

The Geneva deadlock is based squarely upon a fundamental conflict of principles. Because those principles reflect interests which are neither territorial nor military, but are psychological, disengagement of forces seems to hold little promise as an avenue toward solution.

The Berlin problem is consistent with the general pattern of East-West tensions since World War II. Initiative exercised by the Soviets elicits a defensive Western response and a polemical battle ensues, revolving about the issue cited or created by the U.S.S.R. In this case the minimum Soviet demand, to date, is liquidation of the cancer of liberty in West Berlin. The Western position is defensive: to avoid war and to seek an accommodation, but not at the price of West Berlin's liberty.

Perhaps a posture of firm, defensive response is as far as we can go. It was this sort of limit which was implicit in the containment policy. But nowadays even realpolitik must incorporate dynamic psychological action, and Berlin is no muddled issue like a Dienbienphu or a Quemoy. Moreover, American public opinion is reported to be consciously and stanchly behind our Geneva stand.

DYNAMIC POLICY LACKING

It is disturbing, therefore, that our political imagination and shrewdness have failed to put us in a position more dynamic. It is almost as if our arsenals contained no more than hardware and not a stimulating proportion of that.

Having taken a bold position for very positive reasons, can we not build that position up to more than mere intransigence? Can we not exploit those reasons in order to set the stage of this continual international tension against the backdrop not of our passive fondness for the status quo, but of sly Soviet machination and brinkmanship?

A new congressional proposal recently pointed to psychological opportunities existing for us in the present deadlock. In the House Congressman THOMAS L. ASHLEY, of Ohio, introduced a resolution (text reported in the CONGRESSIONAL RECORD, June 22) which would provide a much-needed statement of U.S. solidarity on the Berlin issue and at the same time comprise an act of psychological initiative by addressing a significant message to the Soviet peoples.

This resolution, by putting both Houses of Congress on record as endorsing the U.S. diplomatic position, would underscore American unity and forestall a totalitarian miscalculation of our degree of determination.

But the resolution goes beyond our firmness (and willingness to negotiate) to explain why our stand is derived from a commitment to liberty and how that commitment is identifiable with the aspirations of peoples everywhere. It is in these passages that the resolution (which would be communicated to the Soviets with the request that it be made public information in the U.S.S.R.) contains ideas of significance to the Soviet peoples and the regime alike.

SOURCES OF TENSION

Pointing to the lack of conditions of liberty as a source of tension, e.g., the Hungarian revolution, the resolution deplores dogma which creates fear and tension by alleging the inevitability of antagonisms between nations or so-called classes. It calls for elimination of restrictions upon communications, both international, and internal, as a practical, immediately available means of reducing misunderstanding and friction.

In a dignified expression of friendship for the Soviet peoples and of respect for the achievements of Soviet individuals, the Ashley resolution states plainly that the accomplishments of Soviet citizens can be regarded as no threat or danger when they are devoted to the service of the Soviet peoples as they freely decide.

By emphasizing the universality of men's ordinary aspirations, this message shows that we are against something because we are for a future of individual dignity and peaceful prosperity.

For us to try to communicate these ideas, particularly through the device of a special pronouncement of our elected representatives, can be far more than propaganda. Reflecting without belligerence the nature of our commitment, the resolution goes to the heart of the big lie, that ideological notion of hostility which is employed by a minority to mobilize a nation in support of its totalitarian regime.

By acting upon an understanding of the Soviet regime's reliance on such notions we may rise above desperate inflexibility and wishful thinking in countering that regime's initiatives.

H. S. WEAVER.
CAPE ELIZABETH, MAINE, *June 30, 1959.*

Recreational Buildings With a Threefold Purpose

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 29, 1959

Mr. ANFUSO. Mr. Speaker, what seems to me as an excellent and at the same time a very practical proposal has just come to my attention. The City Fusion Party of New York suggests the construction of recreational buildings which would serve a threefold purpose: as armories, which could also serve as recreational centers for youngsters; as air raid shelters in the event of emergencies; and as garages which would serve to keep many cars off the streets and thereby supply the funds to cover the cost and maintenance of such buildings.

This proposal has come to my attention through Mr. Jack Padawer, chairman of the City Fusion Party and a good friend of mine. I am pleased to insert into the RECORD the text of a brief release to the press issued by Mr. Padawer explaining the proposal. I think it deserves serious consideration and I commend the proposal to the attention of my colleagues:

The City Fusion Party proposed that the city construct combination armory-shelter-garage recreational buildings in place of existing obsolete armories.

Jack Padawer, party chairman, said this is a good method of providing a large number of youth recreational centers on a self-supporting basis.

By combining the garage portion with the other uses, the buildings will be self-liquidating in cost and self-supporting in operation, Padawer claimed.

"The city and State governments should jointly establish a new authority to finance the cost by the sale of bonds. This authority would function in a way similar to the Port of New York Authority and Tri-Boro Bridge Authority," Padawar explained.

"The subbasements which will be garages can easily be converted into air raid shelters whether the autos are in them or not, in case of emergency. The armory portions can double as juvenile recreational centers for after-school hours and on Saturdays, and Sundays, and holidays.

"The roof can be used as a helicopter landing area in times of stress, and a play area at other times.

"The revenue from the parking of cars will support it all."

Kennebago Guide, Cooking Champ

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

Mr. McINTIRE. Mr. Speaker, time after time I have been pleased to read in the CONGRESSIONAL RECORD elaborate and interesting accounts of what is going on in the congressional districts of my colleagues.

With an effort to reciprocate, I am inserting into the RECORD an article from the Bangor Daily News that shows what has been cooking in my congressional district in Maine:

KENNEBAGO GUIDE, COOKING CHAMP

(By Bud Leavitt)

It wasn't the world series, nor the spit and polish of an Army-Navy football game, but for a touch of Maine's vacationland, plus some ingenius skill over a hot fire, Saturday's international outdoor contest at Bass

Park offered stay-at-homes something new and colorful in the way of entertainment.

A longtime Maine guide and bush pilot, Bud Russell, of Kennebago, was adjudged the grand champion and for the seven-course production carried away prizes and cash totaling $1,680.

Russell didn't win going away, not by any one slice from his seven rib, tastefully served roast beef. It took the jury 1 hour and 6 minutes—and some pencil work before Russell won it all. But he did, and no one protested the final decision.

Russell's $1,680 haul, broken down, went this way: $300 for winning the appetizer round, a creamy lobster bisque; $1,000, grand champion; $50, judged the most colorfully garbed entrant; a Scott outboard motor and a McCullough chain saw, valued respectively, $140 and $190, gifts to the king of the kettles by Southard's and Son of Bangor. It added up to a solid day's pay for the smiling Rangeley sporting camp owner and guide. He didn't take all the money, but the lion's share.

Valuewise, Blue Hill Artist Frank Hamabe ran second in the race. He copped $300 in the bread category and from the Pillsbury and General Electric Co., trucked home an electric range marketing at $420.

Then came the $300 winners, judged best in the seven course dinner derby.

REFUSES TO ACCEPT BOND

Charlie Miller of Bangor, skillfully preparing chicken, provided by the Hillcrest, Co., of Belfast, won the big round—1 to 25 points—for the preparation of meat, fish or fowl.

He took this heat, won $300 and passed up another $100, a savings bond, offered by the Henri Sauce Co., when he declared publicly that he had not used the product. This posed one for Executive Secretary J. Dan Baldwin of Bangor's 125th anniversary committee to untangle.

Charlie announced, "Give the full amount to my favorite charity, the Pine Tree Cripple Children's Camp."

But this couldn't be, according to the rules, said Baldwin. The savings bond then went to second contestant in the contest for meat honors, Mrs. Luke Smith, of Norfolk, Va.

Right down the line came Sports Editor Bob Kennedy, of the Portsmouth, N.H., Herald, a $300 victor in the salad class; Stanley Howland, of Milo, $300 for doing the outstanding job on a potato; Mrs. Sarah Saarikko of Lincoln, tastiest beverage, a Scandinavian drink and for the dessert class, a young man assigned to the U.S.S. *Jacana*, James Mastronardi.

VICTORY NO FLUKE

The whole lot, $3,500 in cash and another $900 in merchandise, added up to the richest outdoor dinner in America.

Russell's victory was no fluke. He came to make a run for the winner's circle.

His seven-round knockout opened with a lobster bisque, then broiled native Maine trout, a handsome cut off a 20-pound roast of beef, potatoes with sour cream, venison shish kebab, hot biscuit, pancakes and maple sirup and if the judges were willing boiling coffee with a whale-sized strawberry shortcake.

ARRIVED AT 7 A.M.

He served on a beautifully prepared woods table, flanked by green trees and scented with wild flowers—all native to the Maine eye.

Russell was at Bass Park preparing affairs at 7 a.m., 5 hours before the judging. He'd checked and double-checked to make certain every item was in its proper place. By midafternoon, after the judges had been out more than an hour, Russell's detailed planning paid off handsomely.

The whole scene thrilled the gathering who milled around the fires, some wood, some charcoaled. The crowd saw the oldest of outdoor cooking technique employed, Stan Howland's and Charlie Miller's woodsy settings; the modern contrivances featuring mechanically-timed broiling units.

VISITORS DELIGHTED

It was evident early in the morning that here was a show certain to delight visitors. And the visitors stayed around late, warmed and comforted by a perfectly beautiful splash of sun and humid-free temperature.

The judges worked each course like they were weighing diamonds.

They realized the importance of their task and each shouldered the responsibility with earnestness and great sincerity.

Judging the championship were: Congressman Clifford G. McIntire, of Perham; Dr. Kathryn Briwa, University of Maine; Francis B. Messmore, Esther Foley, New York; and Lydia Infield, India.

Did the Government Flood $40 to $50 Million Worth of North Dakota Land Forever Just To Protect a Few Kansas City Warehouses?

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

Mr. SHORT. Mr. Speaker, the Government made a bargain with North Dakota, and North Dakota has carried out her part of the bargain: namely, the sacrifice of nearly 400,000 acres of her lush river bottom and crop land to enable the construction of the Garrison Dam. To compensate for this loss, the Government promised when the Flood Control Act of 1944 became law, to construct the Garrison diversion project for irrigation and other beneficial uses in North Dakota. The situation, as it stands today, is summed up very well in an excellent editorial dated July 1, in the Bismarck, N. Dak., Tribune. The editorial follows:

THE BARGAIN SHOULD BE KEPT

Hope that Garrison diversion legislation might reach Congress in time for at least a start on hearings during the current session has evaporated.

The Bureau of the Budget, which is the policymaking arm of the White House, has adopted a negative attitude toward the project. It is now so late in the 1959 session that any congressional consideration before 1960 is all but impossible.

That is bad enough. But it's not the worst part of the story.

The worst is the growing fear that the Eisenhower administration is going to go back on the Federal Government's commitment to build Garrison diversion as a part of the Missouri Basin program adopted into law in 1944.

When the Flood Control Act of 1944 was adopted by Congress, diversion from the Missouri River for irrigation and other beneficial uses in North Dakota was an important part of the program it authorized.

The benefits to be achieved through diversion and irrigation were used to help justify the total program.

By the nature of things, it happened that construction of this phase of the program had to follow construction of other phases, such as big dams like Garrison. The dams were designed to serve not only irrigation but also flood control, navigation, flow stabilization for municipal and industrial water, power production, and so on.

Now the structures which will fulfill those purposes have been built, and the Federal Government is being asked to finish what was started by making a start on Garrison diversion.

North Dakota might have been excused for assuming that this would follow almost as a matter of course. Hadn't we been promised, in the 1944 act, that we'd get diversion, and with it irrigation, in return for sacrificing several hundred thousand of acres of rich Missouri bottom lands for Oahe and Garrison Reservoirs?

That was the commitment. When North Dakota worked for the basin program, including Garrison Dam, and even fought to have Garrison Dam Reservoir level fixed at the maximum efficiency height, it did so with the understanding that it would get diversion and irrigation.

If it had known, or even suspected, that it would get the dams and lose the land and not get diversion and irrigation, it would have fought the dams with all it had.

It couldn't make sense to flood maybe $40 to $50 million worth of North Dakota bottomland forever to protect a few million dollars' worth of Kansas City warehouses from infrequent floods, and get nothing in return.

Unfortunately, North Dakota may be in the position of having irrevocably carried out its part of the bargain and now begging the other party to the bargain, and the one who holds the strings, to carry out his part.

There is not space here to go into the benefit-cost ratio studies which have convinced the Bureau of Reclamation and the Department of the Interior that the Diversion project is more than justified from an economic standpoint. If the facts that have been given the Bureau of the Budget haven't convinced it, it is because someone high in the administration doesn't want to be convinced. The suspicion exists that the negative attitude toward Garrison diversion stems from a general antipathy toward reclamation as opposed to other public works like river and harbor development—which, incidentally, don't pay their own way like irrigation does.

North Dakota and the reclamation program deserve better at the hands of the administration, which will have to take full responsibility for the betrayal which an adverse Budget Bureau report on the project would be.

Maine Greets New Old Glory

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

Mr. McINTIRE. Mr. Speaker, Fourth of July this year afforded us an opportunity not only to celebrate our independence but to extend a warm welcome to the new State of Alaska as well.

All over America flags flew from their staff tops, greeting the new Fourth of July day with a new member included in its family of stars.

In some sectors of Maine this new version of Old Glory greeted Independence Day at its dawning, and because of the inspirational quality of these sunrise ceremonies, I am inserting into the RECORD a Bangor Daily News account of this exciting event at two locations in Maine.

[From the Bangor (Maine) Daily News, July 6, 1959]

MAINE GREETS NEW OLD GLORY AT MOUNT KATAHDIN

MILLINOCKET, July 5.—There were stars over Katahdin July 4.

Stars of the heavens that glowed brightly at midnight but faded in the graying light of the chilly windswept dawn.

Forty-nine stars of the flag of the United States raised on Monument Peak at 4:42 o'clock in the morning as the sun's golden disk broke over the northeastern horizon.

And eight golden stars of the flag of the State of Alaska set in a field of blue in the outline of the Big Dipper.

There were human stars in the sunrise drama atop Katahdin, too. Members of the Millinocket Post, Veterans of Foreign Wars, and troop No. 58, Boy Scouts of America, who carried the new flag 5⅛ miles up the rugged slopes to hold the first civilian flag raising in the Nation in honor of the 49th State. Flag etiquette permits display of the colors at sunrise except in unusual circumstances.

Seven members of the VFW post and five Boy Scouts reached the windy plateau atop Katahdin after dark Friday and poised for the predawn dash to Monument Peak, which rears its granite ramparts 5,267 feet above the level of the sea.

There was little in the nature of a formal ceremony to accompany the unfurling of the 49-starred banner planted above the rough boulders which mark the northern terminus of the Appalachian Trail from Georgia.

An eight-starred flag, donated by an Alaska friend for the occasion, whipped below the American flag in the windy dawn.

It was only a fleeting ceremony, and in minutes after the sun had cleared the horizon the party began its long trek down the mountain for a hot breakfast and a rest for weary legs.

Heading up the event and making the trip up the mountain were VFW members Frank Perry, Dana Burleigh, Wilson Greene, Everett Barnes, Henry Ackerson, and Alfred Jenkins.

Boy Scouts from Troop No. 58 who made the trip under direction of Scoutmaster Herbert Tucker were Robert Larkin, John Barker, George Murray, Robert Ellis, and Wayne Kidney.

Supporting the expedition at the base of the mountain with a hot meal were Francis Larkin, Edward Weiskitchen, Ralph Jewers, and Carlton Kidney.

AT MOUNT CADILLAC

BAR HARBOR, July 5.—It was a far cry from that day 183 years ago when this country's infant politicians signed the Declaration of Independence to the summit of Mount Cadillac at Bar Harbor Saturday morning at 4.46 o'clock when a group of dignitaries made their own declaration welcoming Alaska as the 49th State.

For 183 years ago the Declaration was signed amidst bitterness and argument, with this country seeking escape from its motherland and citizens regarding each other with suspicion as to where their loyalties stood.

But on Mount Cadillac the dawn showed that most of that feeling has vanished. In fact, a representative of the Canadian Government took part in the ceremonies which saw one of the first U.S. flags to greet the sun of a July 4 day hoisted on its staff here.

The ceremony was held to officially welcome Alaska as the 49th State.

The 49-star flag which was sent aloft will be shipped to the Governor of Alaska. Approximately 500 persons attended the ceremonies.

George Hadley, first mate aboard the ferry *Bluenose*, which plys the Bay of Fundy between Yarmouth, N.S., and Bar Harbor, represented the Canadian Government at the affair.

Three members of the committee arranging the ceremonies on Mount Cadillac listed the official time that the sun's rays first struck the new flag at 4:45.5 o'clock. They were H. Otis Keene, Bar Harbor harbormaster; C. Edward Shea, Bar Harbor Times editor and publisher; and Col. Pardon Watson, honorary president of the Mount Cadillac Sunrise Club.

Speaking at the dawn rites was U.S. Congressman CLIFFORD G. MCINTIRE, of Perham, who told those gathered at the summit that "as we extend our greetings and a hearty welcome to the new State of Alaska, we are reminded that others before us have experienced a similar excitement, watching, as they have, our family of stars grow from 13 to its present number. And next year, with the admission of Hawaii to the Union, this family will have grown to 50."

He urged Americans to regard the Fourth of July not only as a day of celebration, but one of dedication.

A telegram from the Governor of Alaska, William E. Egan, to the committee was read. Egan wrote: "that this ceremony is being conducted while it is yet July 3 throughout much of the vast expanse of the 49th State provides dramatic evidence of the greatness of a Nation in which we are all one under the flag."

Taking part in the ceremonies were a U.S. Marine detachment from Brunswick; members of the George E. Kirk American Legion Post at Bar Harbor, Lt. Comdr. J. Feeley of the U.S.S. *Miller*, a Navy destroyer which anchored at Bar Harbor for the July 4 observance; and members from Portland, Maine, headed by the Loring Post AMVETS, Department Commander Wallace Bragdon of New Gloucester.

The Farm Mess: Rural and Urban Voters Say Clean It Up

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 8, 1959

Mr. HOSMER. Mr. Speaker, my 4-point program to end the farm mess is as follows: First, end all farm subsidies forthwith—they will cost almost $6 billion this year alone; second, hold a "fire-sale" of Government stocks of accumulated farm surpluses aggregating about $9 billion—and costing about $1 billion a year to store; third, use part of proceeds to relocate smaller, marginal farmers; and, fourth, use remaining proceeds for debt and tax reduction.

Since this plan has been proposed, letters of approval have reached me from all parts of the Nation written by both rural and urban voters. I have received not a single disapproving letter, even from a farmer receiving subsidy. This pretty well bears out a recent poll of the Nation's farmers in which 55 percent of them voted to get rid of all subsidies and get the Government out of farm programs altogether.

Previously on several occasions I have placed in this RECORD extracts from some of the letters I have received. In the hope of convincing my colleagues to go along with the 4-point program and to support H.R. 7848, which I have introduced to implement it, I call to their attention the following additional extracts from voters' letters:

Am delighted to read that you are taking action to help end the farm mess. It is certainly a deplorable situation and one that must be corrected.

I heartedly approve your program.

Just a note to tell you that I heartily agree the farm mess must be ended. Your program sounds good—at least subsidies must be stopped—and they can only be stopped by courageous action.

I further wish to commend you on your stand on farm subsidies which I have just read. It is my firm belief that it should have been dropped long ago.

Kill all farm supports and let free enterprise work.

I am 100 percent in favor of your ideas on ending farm subsidy. This terrible waste of food and money has to stop.

I am all for your farm program and would go even further by limiting Federal money being spent to bring more land under cultivation, as it doesn't make sense to me to pay farmers not to use their land and at the same time spend millions to make more land available for farming.

Congratulations on your courageous action on the farm mess. We are all for the fire sale and stopping farm subsidies now. May Congress see the light and without delay.

We have long thought the farm subsidies were just plain nonsense. Your program is sound and makes sense and we hope it will be adopted.

I feel very strongly that you should continue your efforts in behalf of the public in reducing the subsidy allocations.

Please do what you can to get some type of farm legislation passed so that we can get rid of some of that surplus that eats up so much money just paying for the storage thereof.

I was very happy with your stand on the farm subsidy mess. Hope I can see more of the same in the papers soon.

Your sensible approach to Government problems is greatly appreciated.

Please—let's end the farm mess. All of them. We have 30 adult voters in my family and I can promise you their support.

I took a trip back East and talked with a number of farmers in my old neighborhood in Ohio. Most of them resent the restriction and price control. They would rather be governed by supply and demand with no price supports.

Am more than pleased to know that you are working toward the stopping of this farm subsidy nightmare—the quicker the better.

I agree with your idea to stop all farm subsidies and sell the surplus.

I am in agreement with you on your four-point plan on the farm program. Should have been done long ago.

Bridges—Tough To Cross

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

Mr. CEDERBERG. Mr. Speaker, thanks to the vigilance of one of the distinguished Members of the other body, the Communists have been deprived of an elaborate propaganda event which would have resulted in untold damage to the standing of the United States among our allies in the free world.

Soviet Deputy Premier Kozlov is on a barnstorming trip across our country—solely for the purpose of attempting to neutralize our feelings over the shooting down of American planes over international territory and other unfriendly acts.

During his visit to Capitol Hill the Reds thought the stage was set for a big show—Kozlov's appearance on the floor of the other body—and they had their press agents in the gallery poised for action.

How the plan was thwarted by an alert colleague is described in an article by Constantine Brown appearing in the Washington Star July 7 under the title "Bridges—Tough to Cross." It follows:

BRIDGES—TOUGH TO CROSS—YANKEE REPUBLICAN SEEN AS BLOCK TO KOZLOV'S APPEARANCE IN SENATE

(By Constantine Brown)

The smiling, hand-pumping Soviet Deputy Primier Kozlov has been snubbed twice by high-ranking officials. The first by the mayor of Detroit was widely publicized. But Senator STYLES BRIDGES' stand in preventing the Russian leader from appearing on the floor of the Senate has received little publicity.

Last Wednesday the Deputy Premier was scheduled to lunch with members of the Senate Foreign Relations Committee. This was a courtesy extended to the other No. 2 man of the Kremlin, Anastas Mikoyan. But the hosts thought they might help the cause of "relaxation" by doing more honor to the charming Kozlov than they did to the frowning Mikoyan. They decided it would be good policy, and possibly good politics for some of them, to bring the burly Russian to the Senate floor and introduce him to the assemblage. Expecting a spectacular and historic scene when for the first time in history a high-ranking Russian would receive the Senate's accolade, two Russian reporters were given temporary visitors cards to the Senate press gallery.

But Kozlov never appeared. Senator BRIDGES, the senior Republican and chairman of the policy committee, had stopped him.

Before Kozlov's arrival, some of the leading Senators who were to attend the luncheon realized that there might be some unpleasantness if their honored guest were brought to the Senate floor before talking the matter over with the senior Republican Senator. So Majority Leader LYNDON JOHNSON, Minority Leader EVERETT DIRKSEN, and Chairman WILLIAM FULBRIGHT of the Foreign Relations Committee informed Senator BRIDGES of their intentions. They pointed out the good effect such a presentation might have on Soviet-American relations. And they asked BRIDGES what his position was.

BRIDGES' answer came without any hesitation. He informed his colleagues that before they would have a chance to introduce Kozlov he would take the floor on a point of personal privilege and denounce the presence of the representative of one of the most ruthless dictatorships in history. It would be an insult to the American people, he added, as well as to those nations fighting hard to preserve their freedom against the Red onslaught.

It was bad enough, Senator BRIDGES said, that this representative of Communist oppression was invited to a private luncheon under the dome of the American Capitol. He could not interfere with that in any way except by refusing an invitation to attend that shocking affair. But he would not hesitate to denounce not necessarily Kozlov but the whole system of which Kozlov was the devoted servant. The Senators took the hint. The Senate and the galleries were spared the sight of one of the leaders of the international Communist conspiracy receiving the compulsory plaudits of the representatives of American democracy.

In later conversations, Senator BRIDGES pointed out to his colleagues that he considered the luncheons tendered by the Foreign Relations Committee to the visiting Soviet dignitaries as humiliating and completely out of place.

BRIDGES had made his views clear in a speech from the Senate floor after Mikoyan had been entertained by Senate leaders. He recalled the lame explanations given by his colleagues such as "it was a good place to find out what that man was thinking" or "we frequently invite dignitaries and some of our own ambassadors to such luncheons and there we have a better chance to talk things over leisurely." Majority Leader JOHNSON explained at that time his own position with that shibboleth "it is better to exchange words than bombs."

So far Kozlov's reaction to BRIDGES' adamant stand is not known. But the fact that an advance guard of Soviet reporters had been sent to the Senate gallery to chronicle the historic event indicates that the Soviet propaganda machine had laid much store in Mr. Kozlov's waving his hands in response to the anticipated standing ovation from the Senators and the public galleries.

Who Is Hurt by Inflation?

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

Mr. BERRY. Mr. Speaker, although many letters come across my desk urging the Federal Government to live within its income in order to stop the inflationary trend, one I received this morning from Mrs. Vivian D. Saul of Belle Fourche, S. Dak., impressed me particularly. I ask unanimous consent to insert part of it in the RECORD, as follows:

I have just been reading an article in the July Reader's Digest, written by Maurice H. Stans, Director, Bureau of the Budget, and I feel concerned about it enough to write you.

He passes on a solemn warning, and I quote, "Unless we as a Government insist right now upon living within our income, we face certain hard inevitabilities. Either there will be more tax increases, piled on top of our already heavy tax load; or there will be a mounting national debt and growing inflation with disastrous rises in the cost of living and a dangerous weakening of our national strength."

I am one of many thousands of women who have been widowed, have invested the life savings of the combined efforts of husband and wife as carefully as we knew how in order to insure us a decent income on which to live when our earnings years are over. Everyone suffers when disastrous things happen to the national security, but those on a fixed income are hit harder than others, I believe.

The only thing that I can think of at the present is to appeal to those in Washington to do the best they can to avoid the pitfalls.

Please do not forget the little people, one of whom I am.

Sincerely yours,

Mrs. VIVIAN D. SAUL.

The Man Who May Be President

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

Mr. MICHEL. Mr. Speaker, as a followup to the series of articles from Look magazine concerning Earl Mazo's book "RICHARD NIXON: A Political and Personal Portrait," which I previously submitted under extensions of my remarks, I feel it imperative to make special mention of Mr. Mazo's background as well as to insert two articles which point out implicitly the objectivity of the book.

Earl Mazo has been a journalist ever since he joined the Charleston News and Courier in 1935. Born in Warsaw, in 1919, he was brought to Charleston as an infant by his parents. He attended Clemson College, and worked on South Carolina papers until the war, when he served in the USAF in England and became a combat reporter for the European Stars and Stripes. Afterward, he worked on the Camden, N.J., Courier Post, and also was executive director of a Democratic group to oust Boss Hague. Since 1955 he has been national political correspondent for the Washington bureau of the New York Herald Tribune. He has covered hundreds of political campaigns, has traveled with NIXON in Africa, Europe, and South America. His researches for RICHARD NIXON alone have taken him on revisits to many parts of the country. With his wife, Rita, and two children, Mr. Mazo lives now in Washington, D.C.

Mr. Speaker, under leave to extend my remarks I wish to include two articles, one by William H. Lawrence, corre-

spondent for the New York Times, which appears in the June 27 issue of the Saturday Review and the other by Raymond Moley, appearing in the Peoria Journal Star of July 6:

[From the Saturday Review, June 27, 1959]

THE MAN WHO MAY BE PRESIDENT

(By William H. Lawrence)

Earl Mazo's account of the life and times of Vice President NIXON is, by all odds, the best biography of the controversial man who may be our next President that has yet appeared.

Happily, it is neither idolatrous nor is it a hatchet job. What Mr. Mazo has put together is basically a reporter's report: a collection of facts—the good with the bad—about Mr. NIXON, his personal and political history, his temperament, his thoughts and beliefs.

Although it was prepared with the most complete cooperation of Mr. NIXON and his staff, including access to hitherto unpublished personal papers, the biography certainly is not the campaign book candidates usually arrange to have published.

There is, in this volume, a lot of praise for Mr. NIXON and his accomplishments; but there is also harsh criticism of the malignant innuendo of his campaign hyperbole and other actions. Both sides will find it useful source material next year—in the struggle for the Republican Presidential nomination—as well as, if he wins in the convention, in the battle for votes in November.

To Mr. Mazo, the Nixon personality is "singularly complex, a paradoxical combination of qualities that bring to mind Lincoln, Theodore Roosevelt, Harry Truman, and Joe McCarthy," which is probably the first time those four names have been linked in a single sentence to say nothing of a single individual. And he concludes that "no one, whether in dismay or in admiration, can expect that RICHARD NIXON would be a weak executive."

What makes the book particularly fascinating reading is that it contains a lot of previously unpublished political history. There is the fullest account yet of the crisis over the 1952 disclosure of "the California fund" for Mr. NIXON, and the pressures Mr. NIXON was under to get off the ticket promptly to avoid another Republican defeat. It tells how an undecided General Eisenhower, hoping characteristically that he wouldn't have to make the decision, telephoned to his still undecided, but, by now, quite depressed, running mate, only to have Mr. NIXON snap back, "There comes a time in a man's life when he has to fish or cut bait." Mr. Mazo parenthetically admits this quotation is false, because the Nixon words were stronger; and one hears that the words had an earthy flavor that must have shocked a five-star general whose word had always been law with subordinates.

One of the Democratic complaints about Mr. NIXON is that any campaign in which he is involved gets mighty rough, that the NIXON technique is to "go for the jugular." This book reports that the Eisenhower forces got the same treatment from the Nixon camp within a week after the Vice President barely escaped being dropped from the ticket. The issue was some nationwide television time, originally set aside for Mr. NIXON to talk about the Alger Hiss case, which had been preempted for General Eisenhower, himself. Murray Chotiner, the valuable close personal campaign aid who later was to be dropped by NIXON as a possible liability, got the time Mr. NIXON wanted by threatening Republican headquarters he would ask the public to put Mr. NIXON on the air on another network opposite General Eisenhower "with the dual speeches being billed as a contest for the biggest audience." Mr. Mazo reports Mr. Chotiner made this bold threat to party headquarters without Mr. NIXON's knowledge.

These and other incidents serve to explain why there has not been a close personal friendship between the President and his Vice President, and between the Vice President and some of the key powerful White House aides.

He fought until the end the White House decision in 1954 that the time had come, at long last, to come to grips with Joe McCarthy. Mr. Mazo discloses that Mr. NIXON was so lonely in the administration, and so generally dissatisfied with things political, that in February 1954, he agreed with his wife, Pat, to retire from politics when his first term ended in 1956—and at her request he noted the decision and date on a small slip of paper he tucked into his wallet. By 1956, however, he was shocked and hurt when President Eisenhower, in a man-to-man conversation in the privacy of the White House, did not ask him to run for reelection but instead suggested the NIXON political future might be served better by his taking a Cabinet job instead, specifically as Secretary of Defense. Again he decided to quit, and to announce it publicly, but was dissuaded by Republican professionals in whom he confided. All this was months before Harold E. Stassen began his spectacular, if abortive, "dump Nixon" campaign, but it helps to explain in part the uneasiness of the Nixon camp until the renomination was safely sewed up.

In terms of 1960 and the battle for the nomination—in which the only prospective strong rival seems to be Governor Nelson Rockefeller, of New York—it is interesting that Mr. NIXON chose to make available to Mr. Mazo a series of previously unpublished letters of praise for Mr. NIXON from Mr. Rockefeller. In these the New Yorker writes as an ardent supporter of Mr. NIXON for renomination, and one who greatly admired the Vice President's struggles, within the administration, for strong stands for stronger policies.

The Rockefeller letters, by the way, are much friendlier and more intimate than the letters also published in the book from President Eisenhower to his young lieutenant. One of the Eisenhower letters, although addressed "Dear DICK," actually is signed Dwight David Eisenhower." The formal, official signature he puts on laws and proclamations is "Dwight D. Eisenhower," but letters to real Presidential intimates bear the signature "D. E." and those to slightly lesser intimates are signed "D. D. E."

[From the Peoria Journal Star, July 6, 1959]

NIXON IS NO ENIGMA

(By Raymond Moley)

As Vice President NIXON's decisive year approaches, a very great amount of comment about him will be published. The volume of such material is already considerable. Much that has been written in the newspapers, magazines, and books has been reportorial, dealing mostly with the many sensational crises and campaigns in his relatively short life in politics. For the most part, evaluations of him as a man, a statesman, and politician are added as a somewhat hasty conclusion.

Some commentators who have written about him in national magazines are in the process of shifting their earlier opinions. They had accepted rather uncritically the adjectives and epithets thrown at him by political opponents. This was to be expected in politics, since in two Presidential contests the head of the Republican ticket was a great national war hero who, as such, enjoyed a certain immunity. NIXON was made to be the ogre in the wings.

Lengthy contacts with the Vice President on campaign trips or on diplomatic errands have convinced some of these realistic reporters that there is in this young man a great deal of the solid stuff that rates high in public life. He is, they have discovered, a strong, ambitious individual who does his own thinking and keeps his own counsel. He is one of the most accomplished political strategists of his time. Hence, the conclusions of these commentators when faced with the complexities of a first-rate mind and the subtleties of an able political leader, have begged the question. It is common to hear that NIXON is an enigma.

Those who dwell upon this point about NIXON must remember also that he has had ordeals which have sobered him and increased his reserve. He has been hurt by other political figures, even in his own party. Above all, by thrusts in print. This, too, induces caution.

In a new book by Earl Mazo, a painstaking reporter, "RICHARD NIXON: A Political and Personal Portrait," the personality and opinions of the Vice President emerge clearly enough to dispel the cliche that the man is a mystery. There emerges a man who has greatly developed with 6 years of experience in his present office; a strong man who would make a strong President; a firm believer in the two-party system; a supporter of party loyalty and party responsibility; and an experienced and gifted practitioner of the political art who believes that party or personal success depends upon organization.

The final 10 pages of the book will, to most, be the most important of all. Here the author sets down in direct quotes the Vice President's opinions on practically every issue that is likely to concern voters in 1960. These reach to the essence of public affairs. This frankness is remarkable, because the rule in politics is that a candidate for the Presidential nomination should be general and vague about issues.

United Rubber Workers Local 511-O'Sullivan Rubber Corp. Dispute

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 8, 1959

Mr. DENT. Mr. Speaker, many years ago, about the time I reached my maturity, I was employed in one of the largest rubber companies in our country, the Pennsylvania Rubber Co., of Jeannette, Pa. Due to our economic conditions at that time, it became necessary to form a union in order to try to better our living standards. I was elected as the first president of that union, and at the first convention of the international held in the city of Akron, I held the extreme pleasure and honor of being elected to be executive counsel.

I have followed the United Rubber Workers' Union very closely over the years, and have particularly watched the developments at the O'Sullivan strike. I have read many stories and reports, and I believe it would be educational at this time to present to the House of Representatives some observations pertaining to this dispute that may help us in the

consideration of the serious labor legislation now pending.

Labor unions and business corporations are great institutions in our free society. The fundamental and dynamic roles which they both play need no elaboration. I often wonder, however, if many of us do not too frequently think of our unions and corporations solely as institutions—solely as impersonal artifacts—and if we do not forget now and then the individual human beings who are their very substance and reason for being.

It is particularly easy to fall prey to this kind of generalized thinking just from reading our daily newspapers. Union racketeering and corporation manipulations make ready headlines. Yet, in our society as it functions and grows it is the interaction of ideas, laws, institutions and individuals that provides the tangible test of the wisdom with which we order our affairs. To the extent to which we can isolate, study, and interpret these complex social interactions, I believe we can find solid ground to assess our progress or shortcomings and fix our present and future needs. It is in this framework of examining one small and yet significant instance of the interaction of law, the labor union as an institution, the corporation as an institution, and the people concerned with all of them, that I would hope that we might educate ourselves without the clamor or headlines about a facet of our industrial relations in America today.

I would like to focus on the long-standing labor dispute between local 511 of the United Rubber Workers, AFL–CIO, and the O'Sullivan Rubber Corp., of Winchester, Va. I chose this case precisely because it is not amenable to sensationalism. There are no charges of racketeering. There are no charges of collusion. There are no charges of bribery. There is no record of a labor union with a history of suspicion or dictatorship. There is no record of corporate racketeering. Yet, within the law, industrial relations processes have ground to a stop. A local union has been all but destroyed. And, most important, working people have lost their livelihood. As a lawmaker, this kernel of our actual social history interests me much more than headlines. What happened? Where did the industrial relations process fail? We shall find that the law itself was most to blame. The facts are simple.

In April of 1956, the employees of the O'Sullivan Rubber Corp. in Winchester, Va., voted by 343 to 2 in an NLRB election to affiliate with the United Rubber Workers of America. Local 511 of that union was established. Negotiations for a contract and an improvement in wages and working conditions were held. The average wage then being paid by O'Sullivan was 40 to 60 cent below similar organized shops in the heel and sole industry. The negotiations were not fruitful. The union proposed conciliation and mediation; the company refused. The union suggested a panel of clergymen; the company refused.

In May of 1956 the workers voted to strike, 355 to 2. The strike vote was held by secret ballot under the Rubber Workers International Union constitution. The strike began on May 13, 1956. At this time there were 422 workers in the plant.

Who were these workers who voted to join the Rubber Workers, who tried to negotiate a contract, and who were forced to strike? Most of them were raised in Winchester and its environs. Many had worked as youths in the apple orchards of this fertile area. Arthur and Asa Smith are brothers who helped build the O'Sullivan plant in the 1920's and worked there for about 30 years of their lives before going on strike. There is Mrs. Martha Webster, a widow who went to work for O'Sullivan with her brother and brother-in-law 27 years ago. There is Bruace Muse, who earned 25 cents an hour when he began working a 12½-hour day 27 years ago. These and hundreds like them were honest working people who knew little of labor laws and were not concerned with power or personal aggrandizement. They were citizens who exercised their legal right to join a legal union and voted legally to go on strike.

They were not long to remain novices in industrial relations, however. The company immediately began to recruit strikebreakers from the surrounding mountain country. Virginia has a so-called right-to-work law and the State police stood guard at the plant gates as strikebreakers trickled in day by day. These replacements eventually numbered about 200.

Meanwhile, the strike went on. Negotiations were resumed, broken off, resumed again, and stalled. The company steadfastly refused to allow impartial parties such as the Commonwealth attorney for Virginia to help mediate the dispute. In January 1957, the Rubber Workers Union began the first consumer boycott campaign in its history against O'Sullivan products. The union turned out leaflets, bumper stickers, press releases, radio programs, and slogans. Rubber Workers from other local unions visited shoe-repair shops and shoe companies, asking them not to buy O'Sullivan heels.

The Taft-Hartley law relating to boycotts produced a paradoxical situation. Rubber Workers International President L. S. Buckmaster has said that the secondary boycott provisions of the Taft-Hartley law make a successful primary boycott, which is theoretically legal, almost impossible. For example, O'Sullivan has developed a plastic material for automobile dashboards and other uses that is being sent for processing to plants organized by the Rubber Workers. Buckmaster says:

> You have the following fantastic situation: Rubber Workers in plant X pay dues each month. Sixty cents goes into a strike fund to help the O'Sullivan strikers. But the plant is processing O'Sullivan material, and under the law union rubber workers cannot refused to work on scab-made goods. Under the Taft-Hartley law, union rubber workers are forced to come to the aid of the O'Sullivan Corp.

Some businessmen rallied to support the O'Sullivan Corp. just as organized labor generally supported the Rubber Workers. One businessman crusaded for O'Sullivan as a classic example of a small concern beset by big labor bossism.

Here again this labor dispute presents a good opportunity for a national case study of industrial relations. For what kind of union is the Rubber Workers? Was this in fact a case of labor bossism at work? This I can answer firsthand for it was my privilege to serve as the president of Rubber Workers Local No. 22 in Jeannette, Pa., in my district. I know the Rubber Workers' constitution. I know its provisions for secret votes and democratic elections. I know its leaders. Also, I know something of its reputation.

At the time of the United Rubber Workers' convention in Long Beach, Calif., there appeared on September 27, 1956, the following editorial in the Akron Beacon Journal, a Knight newspaper:

REASON TO BE PROUD

"No place in the United States will you hear the integrity of the United Rubber Workers questioned, and I am as proud of that as you are."

With those words, Sherman H. Dalrymple, first president of the United Rubber Workers, concluded his speech at the union's convention in Long Beach. He drew a rising ovation, which was appropriate.

What Dalrymple said was true. The convention delegates knew it and had reason to be proud.

Employers at times have found the United Rubber Workers hard to get along with, we suppose, but when it comes to honesty, this union has been a model from the beginning.

Dalrymple and his successor, L. S. Buckmaster, and other international officers of the union are men of integrity themselves. This explains why the United Rubber Workers has enjoyed such a fine reputation up to now. For the future, protection is contained in the democratic process which is the union's cardinal rule.

Corruption is found in unions which are controlled by dictators.

Nobody controls the United Rubber Workers but its 200,000 members.

More recently, the same Knight newspapers—Akron Beacon Journal—printed an article by its labor writer, Ken Jacobson, on May 17, 1959, headed:

URW MEMBERS HAVE AN ACTIVE VOICE IN EVERYTHING OF ANY SIGNIFICANCE THAT THE UNION DOES

The strikes in the rubber industry pose an interesting question: "Do we really want the union democracy which is causing such a stir in Congress?"

Passage of the amended Kennedy-Ervin bill, with its tacked-on bill of rights designed to protect the rank and file, wouldn't affect the United Rubber Workers in the least.

URW members already enjoy more democracy than the bill provides.

Some weeks ago, Kenneth McGuiness, an attorney for the House Labor Committee (which must OK the Kennedy bill before it becomes law) asked me to send him a copy of the URW constitution.

I asked him about it later. McGuiness, a Republican and a former counsel for the National Labor Relations Board, replied: "Gosh, that's a model constitution. No legislation now before Congress could give these fellows any more union democracy."

URW members have an active voice in everything of any significance that the union does.

There is no room for an all-powerful czar who can dictate policy to the membership.

A Jimmy Hoffa—if he cared—could tell strikers in his union: "All right, boys, this thing has gone far enough. I want you back in the shop on Monday." And back they'd be.

This couldn't happen in the URW.

URW President L. S. Buckmaster could not order an end to a strike any more than he could start one.

The most Buckmaster—or any other URW president can do—is recommend.

Clearly, this is no union dominated by labor bosses or racketeers.

In Winchester, Va., however, events were moving to a climax for the O'Sullivan employees who had joined a union. No longer was the major factor in the situation to be the on-again-off-again negotiations. Whether or not a mediator could be found was soon to become academic. The law was to be brought to play a major role in the outcome of this dispute.

Section 9(c)(3) of the Taft-Hartley law says:

No election shall be directed in any bargaining unit or any subdivision which, in the preceding 12-month period, a valid election shall have been held. Employees on strike who are not entitled to reinstatement shall not be eligible to vote.

A few weeks after the required year had elapsed after NLRB certification of the Rubber Workers as bargaining agent for O'Sullivan employees, the company instituted a petition with the NLRB to have the union decertified. The NLRB held the appropriate election in October 1957. The union lost, 288 to 5. The Smith brothers, who had been No. 1 and No. 2 on the O'Sullivan seniority list, with more than 60 years' combined service between them, were not allowed to vote. Neither were the several hundred others who had joined the union and gone on strike. This was no breakdown in free collective bargaining, tough as that might have been in this case. This was no result of sinister or evil forces. This was the work of the law of the land. The law which was intended to give meaning to collective bargaining became the tool of its destruction. Local 511 all but collapsed.

The local did not, in fact, die. The picketing continued. The boycott continued. Proceedings were instituted by the company before the NLRB, and the case relating to these matters is now in the courts. But the case is in the courts today on an issue of free speech, not of collective bargaining. No litigation will restore the voting rights of these strikers to decide their destiny. The Taft-Hartley law, particularly section 9(c)(3), settled this dispute in collective bargaining once and for all—in favor of strikebreakers.

I spoke earlier of the interactions of ideas, law, institutions, and men as the dynamic fabric of our society. The case I have cited shows clearly how the law can work an injustice. It is in the power of Congress to change, and I pray that we do so. Now, several legislative proposals have been made which would amend section 9(c)(3) to give economic strikers the right to vote in representation elections but which would establish arbitrary or administrative time limits on the exercise of that right. One proposal, for example, would cut off the economic strikers' right to vote after they have been on strike for more than 6 months. Such a provision is but a stay of execution for a certain time. It would not have altered the events at O'Sullivan one bit.

The injustice of this part of the Taft-Hartley law was recognized by the late Senator Taft, who urged its amendment.

President Eisenhower in 1954 referred to this section when he said:

As the act is now written, employees who are engaged in an economic strike are prohibited from voting in representation elections. In order to make it impossible for an employer to use this provision to destroy a union I recommend that in the event of an economic strike the National Labor Relations Board be prohibited from considering a petition on the part of an employer which challenges the representation right of the striking union.

Earlier the President had also said:

I have talked about the Taft-Hartley Act with both labor and industry people. I know how the law might be used to break unions. That must be changed. America wants no law licensing union-busting, and neither do I.

It is time that we give meaning and substance to these thoughts by properly amending this law.

How Big Is the Feed Surplus?

EXTENSION OF REMARKS
OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 8, 1959

Mr. HOEVEN. Mr. Speaker, pursuant to my remarks in the RECORD on July 7, I include the second in a series of articles prepared by Mr. Alvin F. Bull, managing editor of Wallace's Farmer, dealing with the farm problem. The article appeared in the June 20, 1959, issue of Wallace's Farmer:

HOW BIG IS THE FEED SURPLUS?

(By Al Bull)

About 60 percent of Iowa's bumper 1958 corn crop is surplus. That's a blunt way of illustrating the size of 11 million tons expected to be left over from the Nation's 1958 crop of feed grains.

Feed grains include corn, grain sorghum, oats, and barley.

One would expect some carryover from a bumper crop like last year's. But the 11 million tons added to 59 million left over from previous years gives real cause for concern.

Most of the buildup has come since 1952. We started that year with about 20 million tons of feed grain carried over—about the same amount with which we started into World War II.

Each year since, we've been adding to the total—usually from 4 to 10 million tons a year. Now it looks like the carryover this fall will total 70 million tons.

How much is 70 million tons? About four good Iowa corn crops. About enough to feed all the Nation's livestock for the rest of the year.

Of course, not all of this is surplus. Some carryover is desirable. It protects the Nation from possible food shortage due to unfavorable weather. It is also an asset in case of war. Even then, it needs to carry us only until our tremendous productive capacity can be put into play.

In the Agricultural Act of 1954, Congress placed the normal corn carryover at 15 percent of a year's supply. So let's set aside 22 million tons as the amount we'd like to keep for the Nation's welfare.

That leaves about 48 million tons of surplus this fall. All turned into hogs, it would mean close to 100 million head—about 15 percent more than will be slaughtered this year.

Even this isn't the whole story. Wheat was not included with the feed grains. Price supports have almost priced it out of feed use.

Wheat used for livestock has dropped from around 300 million bushels in 1945 to 36 million last year. But it makes good livestock feed when the price is right.

Two of three wheat bills now in Congress would free future surplus wheat production for feed use.

Surplus wheat already in storage is pretty certain to end up as livestock feed, too.

How much could this amount to? Wheat carryover on July 1 is estimated at more than 38 million tons. Deducting about 10 million (30 percent of year's needs) for normal carryover leaves 28 million tons as surplus.

Together, feed grains, 48, and wheat, 28, surpluses will total about 76 million tons, still leaving normal carryover.

While this feed was being held off the market, we've been using feed grains at an increasing rate. Expected 1959 use for livestock is 22 percent above the 1952 level.

Exports, with Government assistance, have more than doubled during that period. Other uses have held steady.

Nor can increased plantings be blamed for the surplus accumulation. Fewer acres are planted to feed grains and wheat now than in the 1940's.

Zooming yields hold most of the answer. Take corn for example.

Over the Nation, average corn yields have increased about 50 percent since 1940. Agronomists estimate another 30 percent increase is possible by 1972. Much of our future yield boosts will have to come from increased fertilizer use. So we're not likely to get it all at present price levels.

Yields of most other crops show a similar, though less sharp, upward trend.

Projecting present trends for production and use of feed grains over the next 2 years isn't encouraging, either. Extra acreage planted to corn this year promises a crop to rival last year's record output. In spite of the higher livestock numbers expected next year, some addition to carryover is likely on October 1, 1960.

Even for the 1960 and 1961 crops, most factors point to feed production greater than needed for heavy livestock feeding.

USDA projections carried to 1975 also indicate that we'll have no trouble producing enough feed grains and livestock for 230 million people anticipated by then.

So, in a nutshell, here's where we stand now:

1. Agriculture is able to produce more than enough food for the growing population—at least through 1975.

2. Feed grain surplus this fall is expected to total close to 76 million tons. This is nearly enough feed to produce a 2-year supply of pork.

Stocks under CCC control usually equal all of the surplus and part of the desirable carryover. Storage charges on these stocks have reached a point (about $1 billion per year) where many city folks and their Con-

gressmen are growing restless about the expense. So are many farm folks.

Still, under present farm programs, the surplus—and storage costs—will continue to mount steadily.

3. We're not willing to eat much of the surplus as grain—at any price. Exports have already been pushed above normal by Government assistance. Even giving our surpluses away poses big problems. Other uses have just held their own. No breakthrough is expected in any of these areas.

About the only outlet for surplus feed grains and wheat is through livestock. But this doesn't appeal to livestock producers.

All of the current production, fed to livestock, would bring near-ruinous prices. Each 1 percent boost in livestock production brings a 2- or 3-percent drop in prices.

We have an unwanted 6-month supply of surplus feed running up all the storage bill taxpayers will stand for. This is the core of the problem that must be dealt with in any farm program thinking.

Military Influence on Defense Contracts

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

Mr. SANTANGELO. Mr. Speaker, under leave to extend my remarks, I take this opportunity to insert my remarks which I delivered on July 8, 1959, to the Special Investigations Subcommittee of the Armed Services Committee which is investigating the influence of retired military officers on defense contracts.

Mr. Chairman, I am pleased to appear before this Special Investigations Subcommittee of the Armed Services Committee to give you the benefit of my thoughts regarding the influence of retired military officers upon defense procurement.

As you gentlemen remember, during the consideration of the defense appropriations bill, I introduced an amendment which would bar funds to defense contractors who provide compensation to retired or inactive military or naval general officers who have been in such retired or inactive status within a period of five years from the date of the passage of the act.

Recently I introduced a bill, H.R. 8069, which amends section 2306 of title 10, United States Code, and adds a new subsection, f, which prohibits the head of any agency from negotiating a contract with any defense contractor who employs or retains any individual who, within a five year period immediately preceding such employment, served on active duty with an armed force in the rank of colonel or higher in the Army, Marine Corps, or Air Force, or as captain or higher in the Navy or the Coast Guard.

My bill provides two exceptions. It does not prevent (1) the negotiation of a contract for research or development with any college or university because of the employment of any person by such college or university as an instructor or teacher, and (2) does not apply to any contract entered into with a contractor during any fiscal year in which the aggregate of the payments made by the United States to such contractor on that contract and all other contracts entered into during that fiscal year with such contractor by the military departments will not exceed $1 million.

EXISTENCE OF INFLUENCE AND NEED FOR EFFECTIVE ACTION

The House Appropriations Subcommittee on defense appropriations on Page 42 of the 1960 report indicated its concern over problems which arise as a result of the acceptance by retired senior officers of employment in responsible executive positions with defense contractors.

In 1956 the Committee on Government Operations in House Report No. 1891, 84th Congress, inquired into the Navy jet aircraft procurement program, and on page 44 of its report recommended that: "the Secretary of Defense should review the laws and regulations relating to the employment in industry and Government of retired military officers and make recommendations for the clarification and amendment to protect the military officers and the public as well."

Five years and $200 billion of defense appropriations later, have you seen any such recommendations by the Secretaries of Defense or the Bureau of the Budget or our Commander in Chief?

The President's $77 billion budget is the greatest this country has ever seen. Fifty-nine percent of $45,805 million is allocated to the national security; $13,938 million of the military budget is allocated to procurement, the purchase of aircraft, missiles, ships, and other military equipment. It is in this area that we must eliminate the waste in order to help the taxpayers.

Drew Pearson and Jack Anderson in their book, "U.S.A. Second Class Power?", dramatically point out the relations of defense contractors and retired military personnel. The chapter commencing on page 164, "Profits versus Patriotism" relates sufficient details to arouse a lethargic Nation into effective action. I urge this committee to call men like Colonel Nickerson, who declared that "high ranking officers of the Air Force, including general officers, get to thinking about retirement and the job as head of missile research with Lockheed or some other firm" and "sales officers of aircraft companies in Washington are 'primarily lobbyists' and 85 percent of the aircraft sales are with the Government. These firms put pressure through direct contacts by representatives of the aircraft industry with all levels of the Pentagon."

I recommend this book to you as it might open your eyes as it did mine to situations which cry out for preventive action.

This problem is so important in my opinion that a full fledged inquiry should be made with the assistance of an adequate staff, and this in my opinion does not mean only two investigators. Here we are dealing with billions of dollars which ultimately affect our tax structure and our Nation's safety. A cursory inquiry will not satisfy the demands of Congress and the citizens who are ready to spend billions for our country's defenes and not 1 cent for military influence.

It is said that Pentagon influence cannot be proven because procurement officers will not speak for fear of destroying their future advancement. It is said by others that such military influence is minimal. It is said that procurement officers await the day when they shall retire so that they can join defense contractors at lucrative salaries. It is asserted that procurement officers are motivated by a desire to feather their future nests and thereby grant negotiated contracts when the items lend themselves to competitive bidding. It has been reported by the Renegotiations Board that negotiated contracts comprise 90 percent of contracts, that competitive bids comprise the remaining 10 percent.

At the tail end of the situation is the recapture of excessive profits. Since 1951 defense contractors have voluntarily or involuntarily disgorged $1½ billion. Last year procurement contractors disgorged $112 million. Whatever is the fact, I sense that there is an odorous and unsavory aura created by the extensive hiring of retired military personnel. This practice of hiring retired officials smells to the high heavens and races with missiles and aircraft to outer space.

It is my opinion that the decision of a procurement officer to make awards to defense contractors should not be and must not be coerced into a state of imbalance due to a featherbed complex or a former relationship based on prior career subordination or friendship. The decision must be liberated from all parasitic influence and made with an objectivity designed to obtain the most effective product at the most equitable and competitive price.

Present statutes and military regulations are ineffective and inadequate. These statutes and regulations apply to conflict of interest. I quote the applicable statutes:

First, 10 U.S.C. 6112–(b) (1956):

"If a retired officer of the Regular Navy or the Regular Marine Corps is engaged for himself or others in selling, or contracting or negotiating to sell, naval supplies or war materials to the Department of the Navy, he is not entitled to any payment from the United States while he is so engaged."

Second, 67 Stat. 437, 5 U.S.C. (Supp. IV) 59c (1953):

"No payment shall be made from appropriations in any act to any officer on the retired lists of the Regular Army, Regular Navy, Regular Marine Corps, Regular Air Force, Regular Coast Guard, Coast and Geodetic Survey, and Public Health Service for a period of 2 years after retirement who for himself or for others is engaged in the selling of or contracting for the sale of or negotiating for the sale of any supplies or war materials to any agency of the Department of Defense, the Coast Guard, the Coast and Geodetic Survey, and the Public Health Service."

The distinction between these two statutes should be carefully noted. The first act applies (a) only to retired officers of the Regular Navy and Regular Marine Corps, (b) as long as they hold their retired status, (c) who for themselves or others, sell, contract, or negotiate for the sale of naval supplies or war materials to the Navy Department. The second statute applies (a) to retired regular officers of all Armed Forces—and other listed Government departments—(b) only for a period of 2 years after retirement, (c) who, for themselves or others, sell, contract, or negotiate for the sale of any supplies or war materials to the specified Government departments—including the Department of Defense. Neither statute applies to Reserve officers; and it appears that neither statute applies to retired permanent enlisted personnel, advanced to commissioned rank on the retired list under the provisions of 10 U.S.C. 6151 (1956).

Title 18, chapter 175, section 281, provides for a fine of $10,000 or a prison sentence for whoever being the head of a department or other officer or employee of the United States or any department or agency thereof, directly or indirectly receives or agrees to receive any compensation for any services rendered or to be rendered by himself or another, in relation to any matter in which the United States is a party or directly or indirectly interested, before any department, agency, court martial, officer, or any civil, military, or naval commission.

The next section of 281 reads as follows: "Retired officers of the Armed Forces of the United States, while not on active duty, shall not by reason of their status as such be subject to the provisions of this section. Nothing herein shall be construed to allow any retired officer to represent any person in the sale of anything to the Government through the department in whose service he holds a retired status."

The enforcement of statutes or regulations leaves much to be desired. An article by a newspaper reporter, Jack Steele, demonstrates the inadequacy of the law where a retired Navy lieutenant was forced to forfeit his retirement pay during an 8-month period in which he allegedly sold beer to officers' clubs and ships' stores. It might be refreshing also to find out who distributes the liquors to officers' clubs and it is timely to learn which watch companies sell to the Post Exchanges at Fort Myer and Fort McNair. Anonymous people have written to me that military people have obtained these concessions for certain companies.

MANNER OF DETERRENCE

What methods are available to eliminate Pentagon influence in defense procurement contracts? Present statutes are apparently inadequate. The proposals of two Senators who have recently introduced legislation imposed the burden on the officer who is used and abused. Such proposals, in my opinion, will not solve the problem. My proposal is designed to eliminate the source of evil, to curb the profiteer who uses Pentagon influences by denying the opportunity of profits. Letters and articles have raised a howl that retired officers have a right to earn a living. They certainly do, but not at the expense of John Q. Public, the taxpayer who pays their retirement benefits.

LENGTH OF LIMITATION

My desire is to eliminate influence without impairing the good. If an officer recognizes that employment at premium salaries is not forthcoming upon retirement, contracts will definitely be let on merit rather than upon the basis of anticipated employment. It has also been said that defense contractors are badgered constantly by officers seeking to obtain employment upon retirement. If contractors recognize that for a period of time they cannot use officers for their influence, they will not be so prone to hire retired officers except for their technical skill. Some of my colleagues feel that a 5-year prohibition is too drastic; others feel that 3 years is reasonable; and some claim that 2 years is ample.

I have made an analysis of the retirement dates of retired officers whose names were listed in the CONGRESSIONAL RECORD. The Air Force, Army, and Navy furnished me with the retirement dates of those identifiable officers. I submit my analysis and conclusions to this committee for its consideration.

The following figures are based on information supplied to me:

Of the 197 retired Army officers who have latched on with defense contractors, 26, or 13 percent, retired since January 1, 1958, or within 2 years; 57, or 30 percent, retired since January 1, 1957, or within 3 years; 105, or 53 percent, retired since January 1, 1955, or within 5 years.

Of the 100 retired Air Force officers who have latched on to defense contractors since retirement, 30 percent have been retired within the last 2 years, 50 percent within the last 3 years, and 71 percent retired within the last 5 years.

Of the 274 retired naval officers who have latched on to defense contractors since retirement, 56, or 20 percent, have been retired within the last 2 years; 122, or 44 percent, have been retired within the last 3 years; 184, or 66 percent, have been retired within the last 5 years.

[In percent]

	Retired since—		
	1955	1957	1958
Army	53	30	13
Air Force	71	50	30
Navy	66	44	20

It would seem, therefore, that if we prohibit employment from within 2 years from date of retirement, we would not reach a substantial number of people; if we adopt a 3-year period, we would prohibit a little less than one-half of retired employees; if we adopt a 5-year prohibition period, then we eliminate approximately two-thirds of the employees who were retired officers.

So long as the practice of negotiated contracts and letter contracts is continued, and so long as defense contracts are let on a cost-plus-fixed-fee basis, there will be very little control of defense expenditures. Negotiated contracts, i.e., noncompetitive, which comprise 90 percent of defense contracts, are by their nature subject to human frailties, motives, and influence; letter contracts are granted because of urgency of speed and blindness of cost, and, consequently, are subject to human errors and frailties; cost-plus-fixed-fee contracts are expensive because of uncontrolled costs: Some of the elements of such uncontrolled costs are expensive advertising, and high salaries of retired military personnel. Action is imperative because Government defense appropriations and spending cost accompany the endless cold war at the average rate of $1.2 billion a month. Our economy will not permit unnecessary expenditures.

Don't Penalize First-Class Mail

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Inquirer of June 29, 1959:

DON'T PENALIZE FIRST-CLASS MAIL

It seems to us unfortunate that the Eisenhower administration has proposed, at this time, an increase of 1 cent in the rates for first-class mail and airmail. The present 4-cent letter rate is only a few months old. The suggested rise would take it to 5 cents and airmail to 8 cents.

This projected mail rate boost comes at a time when magazine sales at newsstands have been greatly diminished and magazine publishers are exerting strenuous efforts to raise their circulations through mailed subscriptions.

It appears decidedly unfair that an increase in postal rates should apply only to first-class and air-mail while users of second- and third-class mail continue to evade their fair share of mail costs.

Why magazine sales have slumped at newsstands we don't know. There could be a number of factors—competition of television, increased outdoor activities, new and varied pursuits and hobbies taken up by many persons. But it is not very convincing for magazine publishers to say, in explanation of reduced newsstand sales, that people prefer to buy through yearly subscriptions rather than go to the newsstand.

If this is really the preference of magazine purchasers, they should be required to pay for this service.

The fact appears to be that in a number of cases magazines are being offered at subscription rates so low that they are practically giveaways.

Now, the obvious truth is that under such open-handed circulation policies second-class mail will in a few years be bogged down by a perfectly stupendous load of magazines. At higher mailing rates? Not if the magazine publishers can help it. They would be vastly pleased to let first-class postal rates go on making up the deficit for second- and third-class mail. And it can't be doubted that with mounting quantities of magazines in the mail the postal deficit would be astronomical.

Even when first-class mail was carried with a 3-cent stamp it paid its own way. During the present 4-cent era it definitely runs in the black and helps to defray part of the Post Office Department's losses on other classes of mail.

The Government is in the business of public service, not to show a profit. To raise letter mail to 5 cents would be an additional tax on this service. Furthermore, such a 25-percent increase should imply a considerable improvement in general postal service.

But the added time, effort, and expense which this proposed penny increase is supposed to cover would not be devoted to providing faster first-class mail delivery but to the handling of a greater amount of second- and third-class matter.

The Inquirer has always believed, and has said so many times, that the publication industry—that means newspapers, too—should pay its own way; that holds, also, for third-class mail. There is no reason why these should, in effect, be subsidized by higher rates on first-class mail. Such a levy is unfair, unnecessary, and inflationary.

The administration's higher rate schedule on first-class and airmail has been introduced, through the Post Office Department, in the Senate. It has not yet been offered to the House. But when it is, the proposal should be given a prompt heave-ho, out, by both Chambers of Congress.

Meanwhile, we believe the magazine publishers should carefully reappraise their subscription sales policies. If they are going to rely on the Post Office instead of the newsstands to market their products they should face up to an equitable payment for the service and not depend on a subsidy made possible by higher rates on first-class mail.

Forced Labor in the U.S.S.R. Today

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

Mr. BENTLEY. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following text of a letter dated July 3, 1959, from Mr. Jay Lovestone, director of international publications of the AFL–CIO, together with the text of an article entitled "Forced Labor in the U.S.S.R. Today," written by Paul Barton and taken from the July issue of the AFL–CIO Free Trade Union News. As I have said in the past, it is refreshing to again be reminded of the

realistic attitude which American organized labor views the present situation in the Soviet Union and it is especially helpful to have the enclosed article brought to the attention of Members of the House at this time. We all should be aware that, no matter what Communist propaganda may endeavor to say, the practice of slave labor and slave labor camps is just as prevalent in the Soviet Union today as it ever was, if not more so.

The letter and article follow:

AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS,
Washington, D.C., July 3, 1959.

MY DEAR REPRESENTATIVE BENTLEY: In recent weeks, several prominent public figures have visited the Soviet Union. During the course of their visit, these American observers have made public statements or serialized in some of our Nation's leading newspapers articles dealing with conditions in the U.S.S.R. In the main, these articles have emphasized the official Soviet line that, since the death of Stalin, all forced labor and concentration camps have been abolished in the U.S.S.R.

As you know, it was upon the initiative of American labor that the United Nations, several years ago, investigated and condemned the extensive forced labor system in the U.S.S.R. and Communist China. In view of the aforementioned articles, we requested Paul Barton, an outstanding student of Soviet economic and labor affairs, to survey the situation and provide us with the actual facts.

The Barton report is herewith sent to you in advance of its publication in the AFL–CIO Free Trade Union News. Should you have any questions or want further clarification after perusing this report, please send us your queries. We will do our best to provide you with the information you may want.

Thank you for your kind interest.

Sincerely yours,

JAY LOVESTONE,
Director, International Publications.

[From the AFL-CIO Free Trade Union News, July 1959]

FORCED LABOR IN THE U.S.S.R. TODAY

(By Paul Barton)

On Sunday evening, May 17, 1959, Radio Moscow broadcast the message addressed to the central committee of the Communist Party of the Soviet Union by the participants in and important conference which had gathered together a large number of state security officers, in the presence of representatives of the government and of the party. The following is a significant excerpt from that message:

"The 21st congress of the Communist Party fully defined the role and the position of state security in the Soviet state, as well as the tasks which it is to carry out in the political service of the Communist Party. The resolutions of the Congress emphasized the need for a continued reinforcement of the state security services. The congress also specified that numerous government functions are gradually to be transferred to the jurisdiction of social organizations and that the repressive functions of the state are gradually to be reduced. We fully realize, however, that the reduction of repression in our country does not in the least mean that we shall have less to do or the machinations of our enemies will decline."

LEGEND SHATTERED

It would be difficult to imagine a more shattering contradiction of official propaganda which, especially with the help of credulous foreign visitors, would like to make the outside world believe that the horrors of the Stalin era belong to an irrevocable past. And since, by being constantly repeated, this legend becomes increasingly widespread we should be grateful to the officials of the political police for having drawn up their message to central committee in such characteristically clear and straightforward language.

This is not the first time that the lies of the Soviet Government, so obligingly repeated by some Western experts and tourists, have been shattered by its own servants. In fact, the same thing happens each time when experts in the subject of repression begin to discuss the problems of their trade.

For example, there has been a great deal of talk about the so-called reform in the carrying out of the penalty of deprivation of liberty in the prisons and camps; it has been claimed attempts would henceforth be made to reeducate the detainees rather than punish them. But B. S. Utevski, one of the Soviet experts best qualified in this sphere and the author of a handbook which was an authority in the thirties, "The Soviet Policy of Corrective Labor," Moscow, 1935, simply states that there is no such thing. This is what he writes in his article, "Fundamental Problems of Social Legal Theory Relating to Corrective Labor," published in the review Soviet State and Law, in March 1957:

"Even the consequent carrying out of the task of reeducating the convicts does not mean that the task of punishment disappears from the work of corrective labor institutions. * * * The very fact of seeing any contradiction between punishment and education constitutes an error."

Utevski returned to this theme in a report which he presented to a conference on the corrective labor law, which assembled in Moscow in May 1957 and of which the same review published a detailed report in its December 1957 issue. And it is by no means Utevski's personal opinion only. Other experts who took part in this conference expressed an identical point of view. The following is an excerpt from the report:

"G. Z. Anashkin, S. S. Studenikin, and B. S. Nikiforov emphasized in their contributions the idea according to which the task of reeducating the prisoners should play the principal part. The proposal was made that, during the first period of their punishment, the various categories of criminals should be obliged to perform heavy manual labor, and should then, at the end of a specified period, be transferred to more skilled work. * * * B. S. Nikiforov showed that in the work of the corrective labor institutions there are always present, independently of the character of these institutions, certain elements of punishment which achieve the educational aim only in the last resort and particularly by means of coercion. * * * B. S. Nikiforov emphasized, in this connection, that there is no question of opposing the penalty to punishment, but of determining the significance and the position to be accorded to the latter, which is, like education, one of the elements of the penalty."

Thus, although some of the policies of A. Y. Vyshinski, the infamous prosecutor in the witchcraft trials, have been treated with reserve for some time, his doctrine that education is best practiced through punishment and that, consequently, the more severe the punishment, the more effective is the education, are fully maintained.

DECREE NEVER PUBLISHED

Another example: official propaganda has often spoken of the government's resolution, dated October 25, 1956, finally to do away with the concentration camps and to replace them by two systems of detention: prisons and corrective labor colonies; in pursuance of the same decision, prisoners would, henceforth, be confined within the district in which they normally lived, instead of being deported to distant areas.

No decree containing provisions of this kind has ever been published in the Soviet Union. Former inmates of the camps of Vorkuta, Inta and Potma, whom I questioned on this matter after their repatriation in the West, had never heard of a transformation of the concentration camps in which they were imprisoned into corrective labor colonies; and some of them were still in the camps in autumn 1957, that is, a year after the alleged reform was adopted.

Still more important, the report of the conference of May 1957 once more provides proof to the contrary. The minister of the interior declared at the conference that, since the number of "corrective labor institutions" had diminished, "more favorable conditions have thus been created for an effective control of the distant institutions." There is thus no question, for the minister in charge, of liquidating the great complexes of camps set up in various God-forsaken places, at Kolyma, Norilsk, Vorkuta, and elsewhere, but only of organizing matters in such a way that they should cease to be states within a state, escaping more or less from the authority of Moscow.

Furthermore, certain participants in this conference specified that the term "corrective labor institutions" means prisons, camps and colonies. This is what the report has to say about it:

"The speakers maintained that the steps taken by the party and by the government to improve the work of the institutions within the jurisdiction of the Ministry of the Interior have contributed in many ways to the consolidation of socialist legality in the work of these institutions and especially in that of the corrective labor camps and colonies."

And further:

"Considerable attention has been paid to the system of detention in the prisons and the practice of transferring the inmates of corrective labor camps and colonies to prisons, and vice versa."

SENT TO DETENTION CAMPS

Moreover, since the supposed abolition of all such camps, a certain number of verdicts sentencing the accused to detention in a camp, have been reported in the Soviet provincial press, for example in Bakinski Rabochi for November 14, 1956, Zarya Vostoka for December 2, 1956, Pravda Vostoka for February 24, 1957, Turkmenskaya Pravda for April 14, June 11, June 25, July 17, and July 24, 1957.

There is certainly no question of denying that the concentration camps and forced labor have undergone important changes in the last few years, and especially since the strikes and uprisings in the years 1953–55. But it is necessary first of all to clear away the confusion created by official propaganda and by naive observers, and to state the basic fact that camps and forced labor still exists in the Soviet Union. For only on this basis is it possible to understand the changes of these last few years.

In the last 10 years or so, the Soviet forced labor system has been going through a serious crisis. A glance at the data concerning the population of the country will suggest the reason for this. In 1940, the U.S.S.R. had between 193 and 196 million inhabitants. Under normal conditions, it should by now have had more than 250 million. But the census carried out last January showed less than 209 million. (Izvestia, May 10, 1959). The 200 million mark was not reached until spring 1956.

The loss of some 40 million inhabitants which these figures reveal cannot be wholly attributed to military casualties or to the

low birth rate during the war years. Mass deportations have also played an important part in bringing about this situation.

This is demonstrated most clearly by the data relating to the numerical disproportion of the two sexes, which is very serious even when one considers the country as a whole.

According to the census of last January, the total number of women exceed that of men by 20 million. But this figure is trifling in comparison with Naum Jasny's estimates, based solely on official data. In 1955, there were, in the kolkhozes (collective farms), only 3 adult men to every 10 adult women; so that, perhaps for the first time in human history, the birthrate is, at present, lower in rural areas than in cities.

On the other hand, in the vast regions covered by enormous concentration camp complexes and peopled mainly by convicts and ex-convicts, there is a disastrous lack of women. For example, in the town of Norilsk, which forms the center of one such complex at the western extremity of Eastern Siberia, the Japanese prisoners have collected, with admirable patience, all the data which it was possible to obtain. From this it appears that the numerical proportion of the sexes there was eight men to one woman.

In the face of so alarming a demographical situation, it was no longer possible to carry on the mass deportations at the same rate without causing irreparable damage to the national economy. After having drawn abundantly on the reserves represented by the satellite countries, the authorities, around 1950–51, were forced to recognize the fact that the sources of recruitment for the camps had dried up and that it was necessary, henceforth, to make more efficient the exploitation of those prisoners who were already available.

It was at last realized that the use made hitherto of the prisoners was not only inhuman but also uneconomic. By way of illustration, we cite the Vorkuta conditions where there was one dead per sleeper in the construction of the railway; in the mines, there were two dead per every meter sunk in depth.

The first steps toward greater efficiency aimed at a reduction of the death rate. Common-law prisoners were separated from political prisoners and subjected to less harsh conditions; food, clothes, and medical services were gradually improved; the enterprises attached to the camps, which had always worked with the most primitive installations and tools possible began to get better equipment. Beginning with the summer of 1953, they were transferred from the authority of the MVD and entrusted to specialized economic ministries (mines, nonferrous metals, forest exploitation, etc.)

As the capital invested in these enterprises increased, the employment of physically unfit men and the generally low output of the prisoners' work became increasingly more burdensome economically. The release of invalids, the stimulation of productivity by offering inmates the hope of release before completion of their sentence, and the transformation of as many prisoners as possible into deportees became increasingly urgent. It is, however, typical that the government did not decide to adopt these reforms—desirable from a strictly economic point of view—until the prisoners extorted it from them in a bitter struggle, through the strikes and uprisings which had broken out in the camps beginning in the spring 1953.

What is the status of the concentration camps and of forced labor following these reforms? The total number of prisoners has decreased considerably. But the overwhelming majority of those who have been released from the camps have not become free citizens (if this term can be applied to any of the inhabitants of the Soviet Union); they are obliged to remain in the district where they were imprisoned and to continue to work in the same enterprises as before. Thus, what has happened in most cases was merely a transfer from one category of forced labor to another.

The decrease of actual prisoners in the camps varies from district to district. Very marked in the western parts of the U.S.S.R., it grows less so as one travels eastward, The Japanese repatriated from Kolyma at the end of 1956 estimate that the number of prisoners in this vast system of camps in northeastern Siberia has actually remained the same. The fact remains that many prisoners have been transferred from camps in the west to those in the east.

INCREASE OF FORCED LABOR

At the same time, there is an increase of forced labor in the prisons. In 1955, construction was started on a whole series of large new prisons—for example at Kotlas, at Sverdlovsk, and at Novosibirsk. On the other hand, a report on the well-publicized prison of Butyrki in Moscow, published in Izvestia of September 13, 1956, shows that the prisoners are henceforth obliged to perform forced labor, organized in a way similar to that practiced in the camps. This fact is confirmed in a study by B. S. Utevski, published in the review "Soviet State and Law" in March 1957. This author also states that the detention in prison should, after the reforms of the camp system, be inflicted on men who are to be punished with particular severity. This proposal was made into law by the new penal legislation, adopted December 25, 1958.

Finally, there is the extension of forced labor without detention. During 1957, most of the Soviet Republics passed a law aiming at the intensification of the struggle against antisocial and parasitic elements. This law authorizes the banishment of a citizen for a period of not less than 2 and not more than 5 years, without any judicial process, by a simple vote of a citizens' meeting—if the verdict thus passed is confirmed by the executive commitee of the Soviet of the district or of the city.

One can get an idea as to the application of this new law by reading in Pravda Vostoka of July 13, 1957, that a kolkhoznik was condemned to be banished for 5 years for being too preoccupied with his individual garden plot and for having neglected his compulsory work in the fields of the kolkhoz.

On the whole, the present situation regarding the concentration camps and of forced labor is clear enough. Because of the serious demographic crisis, and in consequence of the prisoners' uprisings, the whole system is gradually falling to pieces.

But the authorities are not, because of present difficulties, losing sight of long-term prospects. While throwing ballast overboard, they do what is necessary to safeguard the essence of the institution throughout this critical period. Thus, they preserve the possibility of developing the institution in another direction, if a more favorable situation should arise.

Cultural Exchange, Kozlov Style

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 8, 1959

Mr. DORN of South Carolina. Mr. Speaker, how crazy can we get? We send arms and money overseas to fight communism. We tell our allies to stand firm; then we pull the props from under them by entertaining a faker like Kozlov. The real enemies of communism abroad feel we are doublecrossing them when they see these accounts of our lovey-dovey parties with such bloody fiends as Kozlov and Mikoyan. All of us should read the following by Ruth Montgomery:

KOZLOV STAGES A TV EXTRAVAGANZA, DIMPLES AND ALL

(By Ruth Montgomery)

WASHINGTON, July 3.—Dimpled, wavy-haired Soviet Deputy Premier Frol R. Kozlov starred yesterday in a television extravaganza which should strike envy into the hearts of very Madison Avenue entrepreneur.

The Kozlov comedy was staged at the Statler-Hilton Hotel before an assemblage of some of the world's top news correspondents, who found themselves playing straight man for some of the slickest propaganda ever served over American airwaves.

Without benefit of coaching from actor Robert Montgomery—whose star TV pupil is President Eisenhower—Kozlov faultlessly read his Red speech, flashed his dimples, gracefully waved a soft right fist for emphasis, and bedazzled his coast-to-coast viewers.

He purred about peace, praised our wonderful country, dripped honey over friendship and peaceful coexistence. With superb acting ability, he managed gently to chide his audience for even pretending to believe that dear old Russia could possibly be thinking of aggression.

Absolutely, positively the only goal of the Kremlin, he winningly remarked over and over, is to give the peace-loving Russian people the shortest workweek and highest living standards in the world.

"Is it possible for people with such vast aims to contemplate war?" he cried dramatically, then paused for exactly the right amount of time before answering himself with an explosive "Certainly not."

"We are the servants of our people," the deputy premier murmured, so disarmingly that you could almost forget the millions who lie rotting in their graves because they dared to question their unwanted leaders.

The corn was never thicker than when the strangely bewitching Commie tried to whip up sympathy for the $170 billion Russia had to spend to repel the German fascist invaders who destroyed hundreds of villages.

How sad, you almost felt yourself thinking, until you remembered that the late, unlamented Josef Stalin himself brought on the deluge by his pact with his nefarious, two-timing partner, Adolf Hitler.

Kozlov paused twice during his speech to permit a translator to repeat his gracious lies in English. During the final translation, Kozlov seated himself beside Ambassador Mikhail (Mike the Smile) Menshikov, and as he played with a spoon seemed to be cracking witticisms in an unending flow of small talk.

The two Russians, chuckling and dimpling together, looked for all the world like a couple of Midwest auto salesmen waiting for the floor show to begin at the local Elks Club.

A couple of times, after fleeting glances of concern at the busy translator, Menshikov penciled notes, showed them to Kozlov, and then slipped around his chair to lay them on the podium for the Russian translator.

The speech, with its translation, ran so long that only 10 minutes remained for questions. Here again Kozlov had the upper hand. Unlike all other Press Club guests, he had insisted upon the right to censor and select which of the written questions he would deign to answer.

Only one of the six drew a reply of obvious significance. Asked if Russia would use

force, in the event that Western foreign ministers refused to make West Berlin a free city, he replied:

"If we fail to reach agreement at the Geneva Conference, then our Government will be compelled to conclude a peace treaty with the German Democratic Republic * * * and if a war is unleashed and force is used, that force will be met by force."

Congress, generally taking a ho-hum attitude about the stark and naked warning, seemed to think there was nothing new in the threat.

Assistant Senate Leader MIKE MANSFIELD, who attended a Senate luncheon for Kozlov yesterday, commented after today's speech:

"He struck me as a confident, determined man who knows where he's going—and as a man who is prepared to make no concessions whatsoever."

The future can take it from there.

Idea for an Institute of the South Seems To Possess Many Very Interesting Possibilities

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 26, 1959

Mr. BENNETT of Florida. Mr. Speaker, I am pleased to call attention to a recent article from the Florida Times Union which raises an interesting idea originally expressed by Dr. Richard K. Morton, of Jacksonville University. It seems to me that this idea possesses many interesting possibilities and I hope that persons who are intereted in this idea will contact Dr. Morton at Jacksonville University giving him the benefit of their suggestions. I have known Dr. Morton for many years. He was formerly pastor of a leading church in Jacksonville, Fla., and is now in the field of education at Jacksonville University. In my opinion, he has a fine mind and is trying to do everything he can to benefit mankind; and, in my opinion, he does this very effectively. The article is as follows:

THE IDEA FOR AN INSTITUTE OF THE SOUTH SEEMS TO POSSESS MANY VERY INTERESTING POSSIBILITIES

(By Robert T. Pittman)

The idea for a broad institute which would bring together each year leaders in many diverse fields to discuss region-wide problems of the South has been presented by Dr. Richard K. Morton, dean of the evening college at Jacksonville University.

Dr. Morton visualizes a gathering, perhaps here in Jacksonville, of the best minds in the South devoting serious attention to some major political, social, economic, or scientific problem. To our region, which sometimes seems to have more than its fair share of problems, this seems likely to be an attractive proposal. If so, Dr. Morton hopes others interested will communicate with him. He is willing to form a temporary committee to lay the original plans for an Institute of the South.

To this writer's knowledge, it would be unique for a region to attempt to find solutions, which would be at least a partial goal, in such a manner. If such an institute exists elsewhere in the world, it is not so broadly conceived and certainly not dedicated to a single region in a single nation. The South's highly developed regional consciousness might make success possible where other regions would fail.

Morton's idea was first presented to a local club several years ago. But it then entered a dormant stage. In 1958 Dr. Morton included the suggestion as a recommendation for the consideration of Jacksonville University, which he thought might sponsor such a meeting. However, it was decided that because of the financial situation the university would be in no position to consider it while the all-out effort toward securing accreditation was in progress.

A recent editorial in the Times-Union intended to stimulate thought as to how the South can best achieve understanding of its culture brought the idea to the surface again.

Of course, when any such idea is in its formative stages, a thousand questions arise as to exactly what would be the purpose sought. Dr. Morton sees two major objectives of the institute. It would seek, through the presentation of expert opinions, to help the region crystalize its thought on subjects considered. Secondly, it would present a picture of the southern mind to outsiders.

What subjects would be discussed? How would it be financed? Who would attend? Where would it be held? When would it be held? These are but a few of the questions that as yet cannot be given definite answers.

In Dr. Morton's view, the range of annual subjects would be almost unlimited as long as it was an important subject to the South. Everything from industrial relations to education to race relations would be a possibility. The topic would be selected well in advance by a qualified committee.

How to find the money to finance such a meeting each year would be the toughest nut to crack. Dr. Morton thinks that perhaps the Florida Legislature, which passed a $500,000 bill to "sell the South" to the North (later vetoed by Governor Collins), might look favorably upon such an institute. Besides "selling the South," the institute would have the added advantage of spending its money in the State. Other possible sources of money might be one of the various foundations, public subscription, or organizational sponsorship.

Who would attend? "My idea," says Morton, "would be to invite a selected list of southern industrial leaders, educators, heads of community organizations and religious groups and others who would contribute to the sessions."

The question arises as to whether nonsoutherners would be invited. This would be decided by the sponsors, of course, but it would appear necessary if the southern viewpoint is to be communicated by any method other than the mass media.

Dr. Morton does not think the institute's meeting place should be limited to one city because so much would be gained by moving it from State to State. Jacksonville's central location in the Southeast would give our city an inside track, it would seem. The new city auditorium would provide an almost ideal convention hall.

"To my knowledge there is no assembly or institute or other agency which does exactly what I have in mind," says Dr. Morton. "Maybe it is neither practical nor advisable, but it seems to me that it would be worthwhile to start some such project as this. And I should like to see what some others think about it."

One of the major obstacles of such an institute would be the diversity of opinion that exists in many fields within the South itself. This often has led observers to refer to "the many Souths."

This is especially true in the field of race relations, the problem that overshadows all others today and promises to do likewise in the future. Not only do opinions vary along geographical lines in the South, but almost every individual has his own specific opinion.

There is the idea, anyway. In spite of all the ifs, ands and buts, it appears to be an idea with good possibilities.

Poison in Your Water—No. 140

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an article appearing in the El Dorado (Ark) News of April 13, 1959, entitled "The Pollution Problem."

THE POLLUTION PROBLEM

There are many odors emanating from Washington, D.C., these days, and not all of them are political in nature.

Take that beautiful stream, the Potomac River, for instance. The stench from this stream rivals anything that has occurred, politically, in the Nation's Capital for generations, and this covers a lot of territory.

The Potomac is so polluted today that no one, ignorant or foolhardy, would dare to swim in its waters. Even to get accidentally spilled in the water brings serious danger of contracting any number of serious diseases.

Pollution of the Nation's rivers and streams is a problem that endangers the health of the people, and the growth of the Nation.

Sadly enough, we have evidence of pollution of lakes and streams right here in the four States area.

In its convention in Shreveport the other day, the Red River Valley Association took up the pollution problem and there are indications that the RRVA will throw its full weight behind efforts to halt pollution of waterways in the valley.

Industries and communities which fail to correct practices which pollute lakes and streams should be dealt with promptly and effectively. There are antipollution laws which must be rigidly enforced. Other laws should be passed if the present laws prove ineffective in curbing this problem.

The Potomac River should serve as an excellent example of what happens when citizens drag their feet on this subject.

Pollution is deceptive. To a visitor in the Nation's Capital, the Potomac is indeed a beautiful stream. The river is spanned by bridges carefully designed to fit into the scenery. Along its grassy banks are such tourist attractions as the Jefferson and Lincoln Memorials. The river is wide, and during much of the year its waters are deceptively clear and blue.

One would think that the centerpiece of beautiful Washington—the Potomac—would be as clean, as well kept as its monuments, parks, and parkways.

The river, in fact, is worse than ill kept, a Washington correspondent reports. Its condition is disgraceful. Its waters are an open sewer along part of the Washington waterfront during some of the year.

A Member of Congress recently described the river in this way:

"Beautiful parkways and sweeping green lawns border both sides of the river, but anyone picnicking here or driving by on a still summer day would be nauseated by the smell of decomposing sewage and the sight of repulsive materials in the stream."

Fish which go up the river in the spring to spawn have difficulty getting through the polluted water, even when rains have brought down more than the usual amount of water to dilute the sewage. Only the roughest and hardiest of fish ordinarily inhabit these waters, and to catch and eat one is a health hazard.

The wide river is a favorite spot for boating enthusiasts. On pleasant days, cabin cruisers, outboard motors, sailboats, and canoes journey on its waters. Washington-Lee High School in Arlington, Va., has won three national schoolboy championships with its rowing teams trained on the Potomac. But water sports are dangerous to health, because the spray from motors and oars carry disease germs.

Not a pretty picture, is it?

What makes it even uglier and more ominous is the fact that it can—and has—happened elsewhere in this beautiful country. And it could happen here.

El Dorado and the four States area has a great stake in the future, with its splendid lakes and rivers. We cannot be too stern in our demands that antipollution laws be enforced.

The Gentleman of Song

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

Mr. LEVERING. Mr. Speaker, on June 26 it was my honor and privilege to participate with the good people of Mount Vernon, Ohio, in commemorating the 100 anniversary of the composition of "Dixie" by Daniel Decatur Emmett, who was born, died, and is buried in this typical American town in my congressional district. A 3-day celebration of this event under the sponsorship of the Mount Vernon Kiwanis Club was a huge success in the opinion of countless citizens from many parts of the country who attended this affair in tribute to a humble man whose songs will live forever. I ask unanimous consent that the remarks which I made on this occasion be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD as follows:

THE GENTLEMAN OF SONG

(Address of Representative ROBERT W. LEVERING, at Mount Vernon, Ohio, in connection with Daniel Decatur Emmett celebration June 26, 1959)

Mr. Chairman, distinguished guests, visiting dignitaries, ladies, and gentlemen, I am deeply honored to be with you on this occasion and to pay tribute to an humble gentleman, Daniel Decatur Emmett, and to his songs that have lived so long.

As you all likely realize, I have introduced legislation which, if enacted, would cause to be printed a stamp commemorating Daniel Decatur Emmett and this 100th anniversary of his most noted composition, "Dixie." I cannot be too hopeful about the success of my legislation, considering all the other momentous and important issues facing the Congress in these closing months of the first session, but I have been happy at the manner in which we have been able to engender a new interest in "Uncle Dan" Emmett, in Mount Vernon, and in his songs.

"Dixie" still has a substantial place in the hearts of many men. The largest radio station in Atlanta, Ga., opens and closes its program days with the playing of "Dixie." Columnists in all parts of the country have taken an interest in both "Dixie," and "Uncle Dan" Emmett, and, all in all, the evidence is clear that "Dixie," 100 years after its birth, still is very much alive throughout the United States.

Mount Vernon rightly is proud of "Uncle Dan" Emmett, and his memory. I think it is fine that the members of the Kiwanis Club here, and such good citizens as Ogden Wintermute, would continue to stimulate this interest and accentuate the interest in Daniel Decatur Emmett's life and works.

In 1703, Andrew Fletcher, of Saltoun, in a conversation with a friend, said: "Give me the making of the songs of a nation, and I care not who makes its laws." Percy Bysshe Shelly, one of the greatest poets of world history, declared in 1821 that "poets are the unacknowedged legislators of the world."

It is possible that in the long future Daniel Decatur Emmett will become one of those honored few who make the most lasting indentation on the world, through "Dixie" and his other poetic music.

Although virtually every adult in the country knows "Dixie," relatively few, I daresay, are familiar with the impact it has had on our Nation's life.

"Dixie" was the great rally cry of the Confederates in their ill-fated attempt to rebel against the Union. When Pickett's men charged at Gettysburg, they were singing "Dixie," to the accompaniment of the inspired drummer boys of the Southland. Yet, "Dixie" was used as a peace offering by the Great Emancipator, Abraham Lincoln, at the dawn of national reunion. "Dixie" was the air to which the boys in blue kept step as they stormed San Jacinto Hill and as they liberated Cuba from the hands of Spanish tyranny. It has become one of the most beloved songs ever to be written in the United States of America.

I am happy that Dan Emmett, its composer was born and reared in this town of Mount Vernon, the capital of Knox County, where my people have been living for generations, the area it is my honor to represent in the Congress of the United States. "Uncle Dan" Emmett made a great indentation on the people of his day, and, as fate has decided, he has made a great indentation on the people who came after him. Yet, this was a man of meager formal education, who joined a wagon circus as a drummer boy when he was a mere lad and at 15 composed "Old Dan Tucker," one of his greatest songs that my mother used to sing to me when I was a child. He was an Irishman, and as an old minstrel he carried always in his pocket a little volume of his songs, which he labeled, "The Patriotic Songs of America." Among them was "Dixie," of course.

Uncle Dan Emmett was, for some years, a contemporary of Abraham Lincoln, and was known to Lincoln, if not actually known by the Great Emancipator, the man Carl Sanburg has described "as hard as rock, but as gentle as drifting fog."

The fact that he wrote "Dixie"—he called it "I Wish I Was In Dixie's Land" originally—on a cold, wet week-end in New York City in the early Spring of 1859 is not the only reason we pay tribute to him.

After the Confederate forces had surrendered at Appomattox Courthouse, President Lincoln, who was in Richmond at the time, returned immediately to Washington. There was a great celebration at the White House that evening, at which several members of the Cabinet appeared. The U.S. Military Band marched to the White House lawn to help celebrate the victory. Lincoln was called to the balcony to greet the crowd. Through the cheers, the leader of the band asked the President for his favorite selection.

Lincoln promptly called back: "Play Dixie." We have captured the Confederacy, and now 'Dixie' belongs to the Union."

Another version of the same incident is that in Mr. Lincoln's response to a public serenade in front of the White House on the evening of April 10, 1865—the day after Lee's surrender—in which, promising more extended remarks the next evening (which proved to be his last public utterance), he dismissed the crowd with these words:

"I propose closing up this interview by the band performing a particular tune which I will name. Before this is done, however, I wish to mention one or two little circumstances connected with it. I have always thought 'Dixie' one of the best tunes I have ever heard. Our adversaries over the way attempted to appropriate it, but I insisted yesterday that we had fairly captured it. I presented the question to the Attorney General and he gave it as his opinion that it is our lawful prize. I now ask the band to give us a good turn upon it."

It is said that Abraham Lincoln remarked often that "The Blue Tail Fly"—another of Uncle Dan Emmett's famous songs—was his alltime favorite song.

As Uncle Dan once pointed out, he was the only man north of the Mason-Dixon line allowed to sing this song all during the Civil War in any theater, concert hall, or place of amusement. Of course, it was the great national song of the forces of the rebellion in the Southern States.

But we are all proud today that the Civil War was not the end of "Dixie," the song or the section it personifies. As I have pointed out, Abraham Lincoln himself, once the cruel war was over, wanted "Dixie" to be sung throughout the country in order to help bind up the Nation's wounds and to make all Americans, North and South, realize that we are one Union, indivisible, with liberty and justice for all.

In traveling through the South, on a tour that began at Newark, Ohio, on August 22, 1895, the Al G. Fields' Minstrel, presenting Uncle Dam Emmett in person, made one of the more remarkable records ever chalked up by a minstrel company. The theaters were packed wherever they appeared. When the company reached Richmond, Va., there was a rousing reception for Daniel Decatur Emmett. The Daughters of the Confederacy showered him with flowers; the Governor and representatives of the old Virginia families called upon him in delegations, and the theater was packed night after night.

Mr. Fields later described the tour in these words:

"Uncle Dan was not in the best voice after he had marked his fourscore years, but every time he appeared before the footlights to sing 'Dixie,' the audience went wild. It seemed as though they would actually raise the roof. Every man, woman, and child would rise in a body and simply overwhelm Uncle Dan with applause. It was great. It brought back memories of the grizzled men who bore arms for the Southland, the desolate camps, the fields of defeat, the enthusing recollections of victory. The Confederate soldiers had sung 'Dixie' on the march and in their camps. The widows, wives, and daughters recalled the occasions on which the song had been sung while the men were valorously fighting for the cause that was so dear to all of them."

Wherever the troupe appeared—in Charlottesville, Va., in Atlanta, Ga., in Wilming-

ton, Del., in Nashville, Tenn., recordbreaking crowds turned out and Uncle Dan, a modest man, was feted by the great families of that area and era. Through it all, he remained as humble and as gentle and as fine and kind as he always had been among his neighbors back home in Mount Vernon. In spite of his genius for playing on the heartstrings of the people, he remained as comfortable as an old pair of shoes, among people of all kinds, and he was so unaffected in his actions that many individuals actually called him eccentric, because he lived and acted in the simple, modest ways he wanted to live and act. I think that this simplicity, this gentleness, this lack of affectation, always has been and likely always will be the mark of true greatness. Jesus of Nazareth walked among the people as one of them. He loved the people and he lived plainly. The same was true of Saint Francis of Assissi. It was true of Socrates and Plato and Aristotle, and, of the greatest of our mighty dead. The great men of the world, in my observation, have deigned the trappings of power and the pomp of ceremony. They have realized that their gifts are God's gifts, and that their role is not to try to appear great by lording it over their fellow men, but to be great by doing the things God has made it possible for them to do.

The last performance of the season of the Al G. Fields minstrel company was at Ironton, Ohio, on April 11, 1896, and Uncle Dan, in his customary speech following his song, said: "This is my farewell trip and my last appearance. This is my goodby to the public."

The audience cheered him so much that night, it was recorded, that it seemed as if the performers could never go on with the show. The troupe disbanded in Columbus 2 days later. Dan Emmett remained there 1 day to make a few purchases and then came home directly to his little cabin, as happy as a king returning to his kingdom. He told his neighbors: "I'm back just in time to put in a mighty nice garden."

To the reporters who called on him, he made this statement: "I am not insensible to the uniform kindness and marked attention that has been mine on this trip, but such a lot of the same lavishness became too monotonous, and home and quiet looks good to me."

Daniel Decatur Emmett came onto the stage of life on October 29, 1815, in a little cottage here in Mount Vernon, Ohio. He stepped off the stage of life, in peace and quiet, when the final curtain was lowered on June 28, 1904, having lived 89 years. His request was that he be buried in the gray suit which Al G. Field had given him. Then, after appropriate ceremonies, he was buried next to the wife he had loved as a young man, in the family burial plot.

Mount Vernon does honor to itself to pay tribute to this plain, humble man who brought so much joy and inspiration to the people of all America, and the world.

Backfire in the War Against Insects

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 19, 1959

Mr. FULTON. Mr. Speaker, I have received a timely letter from the National Wildlife Federation by Charles H. Callison, conservation director, which I believe all sportsmen and the people of the United States should note carefully.

I strongly urge reading the article, "Backfire in the War Against Insects," from the June 1959 issue of Reader's Digest, which presents a real challenge to sportsmen and our citizens who are interested in conservation and our natural resources, including the protection of wildlife:

BACKFIRE IN THE WAR AGAINST INSECTS
(By Robert S. Strother)

The United States is engaged in an intensive war against destructive insects. The weapons employed are powerful and widespread, and so is the controversy they have engendered. Billions of pounds of poisons were broadcast over 100 million acres of cropland and forest. More billions of pounds are being spread across the Nation this year—against spruce mudworm in northern forests, grasshoppers in nine million acres of wheatland in the Midwest, white-fringed beetle in the Southeast; against sandflies, gnats, Japanese beetles, corn borers and gypsy moths. The U.S. Department of Agriculture is only one of the large-scale users of insecticides. State, county and even local groups also employ them, sometimes in cooperation with USDA, sometimes alone.

The new insecticides, often used as massive sprays from planes, kill birds, fish and animals along with insects of all kinds, good as well as bad. The costs of the campaigns in money, destruction of wildlife and possible harm to human health are not adequately known. The need for them is hotly challenged and hotly defended.

Says Dr. George J. Wallace, Michigan State University zoologist, "The current widespread program poses the greatest threat that animal life in North America has ever faced, worse than deforestation, worse than illegal shooting, worse than drainage, drought, oil pollution; possibly worse than all of these decimating factors combined."

The USDA points to the eradication of the Mediterranean fruitfly in Florida as an example of what spray programs can accomplish. It also cites thousands of letters from grateful farmers all over the country. "Benefits to agriculture and the public," says USDA, "far outweigh damages that have occurred. Claims of wildlife destruction are greatly overstated."

Nobody knows for certain just how much damage is done, but there have been indications. In Florida, when a 2,000-acre tidal marsh was treated with dieldrin for sandfly larvae, a biologist was on hand. His report: "The fish kill was substantially complete. The immediate overall kill was 20 to 30 tons of fish, or about 1,175,000 fish, of at least 30 species. The larger game and food fish succumbed most rapidly. Then crabs devoured them; next day the crabs themselves were dead."

Large numbers of dead and dying birds, mostly robins, were found on the campus of Michigan State University in the spring of 1955. Indications were that death was due to insecticide poisoning, and subsequent investigation disclosed the chain of events. In the previous year, campus elms had been sprayed against bark beetles, carriers of the fungus which causes Dutch elm disease. Earthworms eating the leaf litter accumulated DDT in their viscera. When spring came and the worms emerged from the thawed ground, the robins ate the worms and died.

The annual elm spraying was continued. Its effect on reproduction among surviving robins was startling. In the spring of 1957 zoologists searched the 185-acre north campus for nests. Only six were found. Of these, five produced no young, and the fate of the sixth was undetermined. Late in June a 3-day search for young robins found only one—all this in an area that in 1954 had produced, on the basis of sampling counts, at least 370 young robins.

The first public outcry against massive spraying arose in 1957 during the USDA campaign against the gypsy moth in southern New York. Planes flew over at low levels, discharging a fog of DDT-impregnated kerosene on three million acres, including densely populated communities in Westchester County and on Long Island. Commuters awaiting their trains were sprayed, as were dairy farms, ponds, vegetable gardens and children, some of them three times.

Tempers flared, and 14 citizens charging careless use and official arrogance went into Federal court demanding an injunction against aerial spraying. After an extended hearing their application was denied.

Another and louder outcry was in the making. According to reports, 27 million acres in nine Southern States from eastern Texas to South Carolina were teeming with South American fire ants. These quarter-inch-long ants, it was said, had captured much of the South's best farmland and were eating their way north and west, sucking plant juices, killing young wildlife, and swarming in vicious assault on men in the fields. Their onslaught, if unchecked, might not stop short of California and Canada.

To combat the menace Congress voted an emergency appropriation of $2,400,000 for USDA. Plant Pest Control crews, without prior field testing, started an aerial broadcast of heptachlor, a powerful chlorinated hydrocarbon of the DDT family. They treated 700,000 acres before the appropriation ran out. The USDA now has asked Congress for another $2,400,000 for the second step in a long-range poisoning program. Does the fire-ant threat justify this costly campaign?

To get a firsthand view I went to Alabama, where fire ants have flourished for 40 years, and talked with people for, against, and in the middle of the program. Some remarkable facts emerged.

The foremost is this: the fire ant is not a serious crop pest; it may not be a crop pest at all. Dr. F. S. Arant, chief of the zoology-entomology department at Alabama Polytechnic Institute, told me, "Damage to crops by the imported fire ant in Alabama is practically nil. This department has not received a single report of such damage in the past 5 years. No damage to livestock has been observed. The ant eats other insects, including the cotton boll weevil. It is a major nuisance, but no more."

Though USDA circular No. 350 asserted that the imported fire ants often attack newborn calves and pigs, are fond of quail and chase brooding hens off their nests to eat their chicks, researchers at Alabama Polytechnic could rarely induce fire ants, even starving ones, either to eat plants or attack young animals. Instead, the insects became cannibalistic and ate one another.

Farmers and cattlemen detest the fire ants because their ugly 2-foot-high mounds clog mowing machines, and the ants bite when the farmer gets down to clear the blades. But none of the farmers I talked with had suffered any crop damage from fire ants. To control them, all farmers have to do is pour insecticides into the individual mounds or disk insecticides into the soil along wth fertilizers—two successful, low-cost methods developed by the agricultural experiment stations of Alabama and Mississippi.

Last September, 52 experts, including a USDA contingent of 5 were present at a fire-ant research meeting in Auburn, Ala. Dr. L. D. Newson of Louisiana State University challenged anyone there to go on record as saying that the fire-ant-eradication pro-

gram could be justified by damages to crops or animals. There was no answer.

What was the effect of the 1957–58 fire-ant campaign on wildlife? Dan Lay, Texas wildlife biologist, reported from Hardin County: "On May 12, before the poisoning, the fields were noisy with birds singing for territorial establishment. Dickcissels, red-winged blackbirds, and meadow larks were building nests and laying eggs. Forty-one nests with eggs were found in one clover field."

Then the planes came, scattering tiny pellets of clay containing 10 percent heptachlor. The poison covered the ground, 7 to 12 sugar-size granules to the square inch. The birds ate poisoned insects, pulled worms through poisoned soil or absorbed the poison through their feet. Within a day they began to tremble, went into convulsions and died. Orphan broods hatched and died in their nests. By June 3 only 3 of the 41 nests in the clover field remained occupied. Birds along the roads were reduced 95 percent.

It was the same in other areas sprayed: quail and killdeer wiped out; doves, woodpeckers, snipe, mockingbirds, cardinals, woodcock, hawks, wild turkeys, shrikes, and many other species almost exterminated.

Animals died, too. A racoon which had been seen rolling frenziedly in the road was later found dead by the roadside. Four fox pups were found dead in their den, poisoned by food brought in by their mother. Fish, turtles, snakes, rabbits, opossums, squirrels, armadillos were killed.

Today fish and game commissions in most of the afflicted States, finding the cure worse than the disease, have demanded a halt to aerial spraying. "It's like scalping yourself to cure dandruff," said Clarence Cottam, former official in the Fish and Wildlife Service.

"Sickening," said Charles Kelley of the Alabama Conservation Department. "These people can kill more game in a month than our department can build up in 20 years." Kelley handed me one of the USDA warnings given people whose lands are about to be doused:

"Cover gardens and wash vegetables before eating them; cover small fishponds; take fish out of pools and wash pools before replacing the fish; don't put laundry out; keep milk cows off treated pastures for 30 days, and beef cattle 15 days; cover beehives or move them away; keep children off ground for a few days; don't let pets or poultry drink from puddles."

"How can any official read that and still say the losses of wildlife are insignificant?" he demanded.

Last year, under the prodding of Representative LEE METCALF, of Montana, whose interest grew out of the wholesale destruction of fish in the Yellowstone River following a mishap in spraying DDT, Congress conducted hearings on the pesticide problem and set aside $125,000 for studies to learn what we are doing to fish and wildlife. All witnesses agreed basic research was badly needed. They raised many unanswered questions.

Do repeated small doses of the poisons impair the reproductive ability and lower the survival rate of the young in animals and birds? Most of the new chemicals retain their killing power in the soil for 3 years at least. Can they still kill after 5 years? Ten? Nobody knows.

What of the microorganisms that create soil fertility in the first place? What of the bottom organisms in streams and bays, on which marine life feeds? Do they accumulate the poisons? Since pesticides kill mice-eating hawks, owls, and foxes as well as rodents, and beneficial as well as harmful insects, may we not find ourselves without natural allies in the war on pests, and become wholly dependent on ever-stronger chemicals?

What about insects developing immunity, just as some germs have become immune to penicillin? The housefly and the mosquito were the initial targets for the new sprays. Now some common species of these insects are 1,800 times more resistant to DDT than were their ancestors of a few years ago. Are we trading a costly temporary victory over other pests for disaster in the form of super insects later on? Nobody knows.

And finally there is the greatest question of all: how serious are the hazards to human health? Doctors are increasingly troubled by the possibility that DDT and its much more poisonous descendants may be responsible for the rise in leukemia, hepatitis, Hodgkin's disease, and other degenerative diseases.

It may take years to find the answers to some of these questions. But one thing seems plain enough: aerial spraying needlessly kills wildlife and should not be done except in small areas and real emergencies.

Our forests flourished without chemical help through eons of time, and man has practiced agriculture with reasonable success for 100 centuries of recorded history. The new pesticides have been in general use for 15 years. "Surely," says Dr. Fairfield Osborn, noted conservationist, "we would be wise to halt massive spraying until we know what effects the toxins are having on ourselves and our animal coheirs to this planet."

Dr. Wallace has made a grim prophecy: "If this and other pest-eradication programs are carried out as now projected, we shall have been witnesses, within a single decade, to a greater extermination of animal life than in all the previous years of man's history on earth."

This may be a wildly pessimistic view. Nobody knows. But why risk it?

Russian Propaganda and Bluff

EXTENSION OF REMARKS

OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 8, 1959

Mr. DAGUE. Mr. Speaker, the question of just how much of Russia's claim to superiority in all phases of defense is sheer propaganda should be evaluated and toward that end we should have information concerning the sources of the data which certain columnists and politicians so glibly recite as indicative of the supremacy of the Russians over the Western democracies in the filed of aeronautics, missiles and nuclear weapons.

The Washington Evening Star of July 6 carried the report showing the latest figures released by the Soviet Government from which we now find how badly we were misled by the Communists as to their real losses in World War II and how such misinformation shaped our policy toward the U.S.S.R. at a time when the free world was trembling at the threats of an aggressor whose gun, we now know, was quite evidently not loaded.

As a matter of fact, the Russian war losses had so decimated her manpower reserves that quite evidently she has never been and is not now in a position to wage successful war with the free world. Also it is to be noted that women outnumber men 55 to 45 percent and that 48 percent of her population is concentrated in her cities.

Mr. Cecil Holland, the author of the Star report, in quoting the July issue of Population Bulletin has this to say:

"The postwar crisis in manpower," the study adds, "might be the key to this secretiveness, because the U.S.S.R. certainly was aware that the demographic (population) facts would reveal a serious, inherent weakness impairing her bargaining position, a weakness from which she could not quickly recover."

The study said this weakness also might partly explain Soviet warlike behavior in the postwar years and her enslavement of such satellite countries of dubious economic assets such as East Germany and Hungary.

The population blackout and "poker-playing bluff" plus "a sense of intense compulsion and dedicated spirit," the study said, contributed to the force which won for Russia "many postwar concessions and diplomatic victories."

In other words, Mr. Speaker, we have been "taken into camp" in this instance and there is nothing to prove that many of their current boasts of military superiority are not also cut from the whole cloth. In a series of articles appearing in True magazine, Mr. Lloyd Mallan has persued most convincingly the theory that the Russians presently have neither the capability nor the know-how to put into production an ICBM that can be zeroed on American targets, much less launch a sun-circling satellite which they claim without any verification whatsoever and without the slightest chance of their claims being scientifically refuted.

And why should anyone outside of Russia want to delude us as to Russia's capabilities? Well it is quite obvious that there are several groups who will profit if America can be kept off balance by the red herring of Soviet invincibility. And who are they? The military, first, since they have a vested interest in increased appropriations for defense and missile procurement; second, the manufacturers of such military hardware; third, the scientists who are riding the crest of the wave of apprehension since the launching of Sputnik I; fourth, the educators of the country who find the demand for an expansion of educational facilities to meet the Soviet threat sweet music to their ears; and finally, the columnists who are always seeking the sensational with the assurance that they never have to reveal the sources of their scare propaganda.

All of which is not to say that we should not proceed with reasonable dispatch to maintain our unquestioned superiority, both in the development of supersonic weapons as well as the strengthening of our conventional military structure. We should not, however, allow these alarmists-for-a-price to scare us into crash programs that can result in the acquisition of stockpiles of outmoded devices and at the same time plunge us into ruinously inflationary spending.

U.S. Security Endangered

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I submit for inclusion in the RECORD a very timely editorial which appeared in the July 3, 1959, Los Angeles Herald-Express discussing the need for swift action to formulate a program to screen civilian defense workers.

In the editorial the Herald-Express points out the fact that our defense plants are a part of our Military Establishment behind the lines and that we must have a means to prevent agitators, spies, and saboteurs from stealing information and otherwise doing damage to our military projects. A recent Supreme Court ruling held that defense plants cannot screen civilian workers to check their loyalty and integrity on grounds that such screening has never been authorized by the Congress or President.

A bill is already before the House to revive the screening program. On July 8, Congressman FRANCIS E. WALTER introduced a bill which would give the Secretary of Defense congressional authority to establish an industrial security program.

I believe that the Congress should act without delay to authorize an industrial security program for until such action is taken there will exist a dangerous gap in our security efforts.

The editorial follows:

[From the Los Angeles Evening Herald Express, July 3, 1959]

U.S. SECURITY ENDANGERED

This country cannot run the risk of endangering the national security whether it be in time of war or in time of peace.

Today the national security has been placed in jeopardy by a ruling of the Supreme Court that defense plants cannot legally screen civilian workers to check on their loyalty or their integrity. The Supreme Court ruling is based on the fact that such screening was never authorized by the President or Congress.

Therefore, it is the immediate obligation of the administration and Congress to plug the hole by formulating a program that will stand up against legal maneuver and attack.

Until such action is taken the Government cannot prevent Communist agitators, spies, and saboteurs from infiltrating the defense plants as workers, stealing classified information, and doing untold damage to our most secret and important military projects.

A defense plant, where secret weapons and parts for them are made, while being private enterprise, is actually a part of our Military Establishment behind the lines. Our survival depends upon their building our planes, our ships, and our tanks. We know and the Government knows that workers in such plants must be loyal. They should welcome the chance to be checked and screened, for their survival as well as ours depends upon their endeavors.

At the same time, workers have the right to the assurance that whatever screening program is devised will protect them from slander, malice, lies, and dubious evidence. It is surely the duty of the Government to make sure evidence against any worker is free of prejudice and perjury.

Our national security is endangered until such time as the administration or the Congress drafts a program which will insure the loyalty of workers and at the same time safeguard individual rights.

That should not be difficult, but time is short.

Congress and the President must act—and act now.

Civil Defense

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 7, 1959

Mr. LANKFORD. Mr. Speaker, civil defense is, first of all, a family and a local matter. The people themselves have to taken an interest and do the job or we cannot have an effective civil defense. Every community must be prepared to meet any conceivable emergency before we can have real civil defense throughout the Nation.

Prince Georges County, located in the Fifth Maryland Congressional District, which I have the honor to represent in the Congress, has one of the most active civil defense organizations in the Nation. It is composed of 45 well-organized, well-trained community units under the directorship of R. Hal Silvers. The Prince Georges County agency, Mr. Speaker, believes that one of the purposes of civil defense is to save lives and reduce suffering in the event disaster strikes. It carries out programs and projects to educate the people on rescue procedures and how to protect themselves in any kind of disaster, whether it be a disaster created by enemy attack or a natural disaster. Recently the Prince Georges County agency issued a pamphlet which in abbreviated form outlines potential health hazards and procedures applicable at the scene of accidents involving atomic weapons and/or radioactive materials. The booklet was designed to specifically educate various public safety officials on suggested safety precautions. Under leave to extend my remarks in the RECORD, I include the text of this bulletin, as follows:

RADIOACTIVE MATERIALS, ATOMIC WEAPONS, ACCIDENT HAZARDS, PRECAUTIONS, AND PROCEDURES

SECTION I—GENERAL

1. Purpose: The purpose of this memorandum is to present unclassified information on safety precautions, potential health hazards, and procedures applicable at the scene of an accident involving atomic weapons and/or radioactive materials.

2. Background: Atomic weapons and/or radioactive materials may be transported by aircraft, truck, train, and naval vessel. In each case, weapons and components are installed in special containers which are securely fastened to the transport vehicle by carefully designed tie-downs and mountings. Stringent safety measures have also been incorporated in the design of all atomic weapons. The latter measures, combined with existing handling and transportation procedures and equipment are designed to preclude a nuclear explosion in the event of any accident, even of a military aircraft in operational exercises. It is emphasized that for all atomic weapons in combat aircraft, a specific sequence of positive actions is required to ready them for a nuclear detonation.

3. Possible hazards: Even though atomic weapons are so designed as to prevent a nuclear yield in the event of accidental detonation, there is still a probable hazard commensurate with conventional weapons and materials. The two components of a nuclear weapon that constitute the most probable hazard in the case of an accident are (1) the high explosives and (2) the plutonium. Other components may produce hazards, but they are of such a nature that precautions taken against explosives and plutonium are more than sufficient for their control. It should be kept in mind that accidents involving nuclear weapons or components will usually involve other materials in more widespread use, such as gasoline or other volatile and explosive fuels. If fire occurs, acrid, suffocating, and toxic fumes and smoke will probably be generated by the combustion of surrounding materials. In that event, normal procedures and precautions applicable to the type of fire should be taken.

(a) High explosives: Most atomic weapons will contain conventional high explosives in varying amounts up to many hundreds of pounds. These high explosives comprise the major hazard associated with accidents involving atomic weapons. Due to the probable presence of high explosives in any atomic weapons shipment, accidents or fires involving such shipments must be treated as would accidents or fires involving conventional high explosives. The following is a summary of knowledge concerning high explosives and their danger and should be applied to atomic weapons where appropriate.

(1) Detonation: In any accident involving a high explosive there is some possibility of a detonation occurring. The detonation may range from a very small one to one of considerable magnitude or it may be a series of small explosions. The breakup of the weapon due to impact or a small explosion will probably result in the local scattering of small pieces of high explosive. Rough handling as well as accidents may produce powdered explosives. Most explosives are more unstable in these conditions and are more apt to detonate due to changes in temperature and/or shock. Exposure to sunlight likewise increases the sensitivity of the explosive and changes its coloring, usually making small pieces and powder difficult to distinguish from their surroundings. Thus, it is unwise for anyone other than trained demolition personnel to attempt clearing an area of broken high explosives.

(2) Fire: If a nuclear weapon is enveloped in the flame of a gasoline fire, the high explosive may ignite, burn, and in most cases, detonate. These detonations may also range from one large to several small ones. It is extremely difficult to extinguish large quantities of burning high explosives. Whenever burning high explosives are confined, as in an intact weapon, detonation may occur at any time. When high explosives burn, "torching" (jets of white flame coming out of the weapon) may be observed, but torching is not always evident before detonation. High explosives may melt at comparatively low temperatures, flow out of the weapon and resolidify. In this state, they are extremely sensitive to shock. If unconfined, high explosives may burn with the production of toxic gases and leave a poisonous residue. Ignition or detonation of the high explosives in a nuclear weapon involved in a fire can be prevented if the temperature of the explosives is kept below 300° F.

(3) Disposal: Only personnel specially trained in high explosives disposal should attempt to clean up, recover or dispose of high explosives.

(4) Nuclear yield: While it is not feasible to predict the exact effect of an accident involving high explosives, it is considered that the possibility of accidental nuclear explosion of a nuclear weapon is so remote as to be negligible.

(b) Plutonium: Plutonium contained in an atomic weapon may become dispersed as small particles as the result of impact or detonation of the high explosives, or as fumes if a fire occurs.

(1) Body effects: When small particles of plutonium are suspended in the air, it is possible to inhale them and thus deposit plutonium in the lungs. It may also get into the body through swallowing, but in such cases only a small percentage is retained by the body, since the plutonium is in a highly insoluble form. Cuts in the skin provide a third source of entry through which plutonium may enter the bloodstream. Plutonium is not a hazard if it remains outside the body, because it is an alpha emitter. The alpha particles have a very short range and lack the ability to penetrate the skin.

(2) Amount available: Field experiments indicate that the principal potential source of intake of plutonium into the body is inhalation during the passage of the cloud resulting from the detonation of the explosive, or a fire. Safety restrictions have been placed on the number of atomic weapons per shipment, so that the plutonium, inhaled from an accident would not result in serious injury. Once the fine particles have been deposited on the ground, the hazard is markedly reduced. Whereas it is always desirable to reduce to a minimum the intake of plutonium, where necessary one may enter or remain in a highly contaminated open area for short periods of time (up to several hours) after passage of the cloud.

(3) How to avoid: When fighting a fire involving plutonium, contamination of rescue personnel can be markedly reduced if they remain upwind and uphill from the accident. Conventional mechanical breathing apparatus or dust filter masks, goggles, and protective clothing will reduce contamination for those who must enter the smoke. Members of the special radiological teams wear full protective clothing, since they usually remain in the area for considerable lengths of time; however, the nonavailability of any or all of these items should not hold up rescue operations. Potential hazards in buildings can be reduced by shutting doors and windows and turning off ventilation equipment.

(c) Other radioactive materials: Accidents involving cargo type air, sea, and/or vehicle transports should always be approached with caution until the absence of radioactive materials can be ascertained. Radioactive materials are generally transported in heavy, lead lined, sealed containers, and may be handled safely under emergency conditions provided the shipping container is undamaged.

If the container is damaged, broken, or melted, all rescue personnel must be withdrawn from the area, except as required to save lives, pending arrival of special radiological teams.

Radiation commonly encountered will be the more penetrating beta and gamma radiation.

SECTION II—EMERGENCY PROCEDURES

4. General:

(a) The Department of Defense, the U.S. Atomic Energy Commission, and the Prince Georges County Civil Defense Agency have specially trained and equipped radiological assistance teams prepared to deal with accidents involving radioactive materials.

(b) In the event of an accident involving atomic weapons or cargo vehicles suspected of carrying radioactive materials report the incident immediately to the nearest military installation, AEC office, and the Civil Defense Agency. Give brief details of the accident, and if an aircraft is involved, its type, i.e., transport, bomber, or fighter.

5. Action:

(1) Rescue and assist injured personnel as practicable.

(2) Notify military installation, AEC office, and Civil Defense Agency of the accident (and of the type of vehicle involved) and give them any information available as to whether nuclear weapons could be or are involved. They will in turn dispatch their own men to the scene of the accident and notify the Joint Nuclear Accident Coordinating Center as appropriate. In addition, pending arrival of the special teams, the activity called will provide advice regarding the incident.

(3) Clear area of all nonessential personnel to a distance of at least 1,500 feet or more. Maintain exclusion of the area until arrival of radiological assistance team.

(NOTE.—If a weapon is involved, there is always the danger of a detonation of the conventional high explosives.)

(4) Organize other witnesses to keep sightseers away from the accident. In the open, an exclusion distance of 1,500 feet should be established because of the potential hazards from the direct blast effects of a detonation of conventional high explosives, but cover must be taken even at this range from secondary missiles flung into the air by the explosion. If there has been no explosion and it is suspected that a bomb is involved, there may still be an explosion.

(5) If there is a fire and if weapon is not burning or engulfed in flames, attempt to extinguish fire in the normal manner (from upwind side only). Keep weapon cool. Tests have shown that very early application of water spray from two 2½-inch all-purpose-fog nozzles will keep temperature of weapon below 200° F. when nozzles are positioned on each side of weapon to envelop it in the spray. (Stop water if it accelerates burning.) The high explosive should not explode if the temperature is kept below 300° F. Do not use foam on a bomb where it will act to trap heat inside. Foam is an insulator and may act to retain sufficient heat to detonate the bomb.

(6) If weapon is engulfed in flames or if the high explosive is burning (torching), clear area out to at least 1,500 feet of all personnel; do not attempt to fight fires.

(7) Avoid smoke and clear downwind area, but if dense smoke must be encountered for long periods of time, dust filtering masks, goggles, or breathing apparatus should be used. These are not needed for short stays in the smoke and their nonavailability should never hold up rescue efforts. Although there may be a toxic, caustic, or minor radioactive hazard in the smoke, short incursions are not likely to be serious and will not be lethal. Personnel who have entered smoke in the crash area must report to the special team for monitoring, and, if necessary, decontamination after initial action is over.

(8) After the burning has subsided, and if the special teams have not yet arrived—

(a) Do not attempt to clean up the scene of the accident.

(b) Do not permit reentry into scene of accident by anyone. Rope off scene in a semipermanent manner.

(c) Organize all personnel that may have been contaminated to preclude the spreading of plutonium about the environs and so that they can be monitored by the special team on arrival.

(9) Follow advice of the special radiological teams upon their arrival.

Labor Reform

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 8, 1959

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I submit for inclusion in the RECORD George Todt's column "Why Labor Reform Gets Nowhere," appearing in the July 2, 1959, Valley Times. The Valley Times serves California's San Fernando Valley, which is so ably represented in Congress by our colleague, Congressman EDGAR W. HIESTAND.

The editorial follows:

GEORGE TODT'S OPINION

WHY LABOR REFORM GETS NOWHERE

Whether reform is possible in the field of labor legislation, which Congress is now debating, still remains to be seen.

The august solons have been at it for more than a year and thus far nothing tangible has been turned into law.

To this date there has been little or nothing at all shown in the way of progress—despite the revelations of the McClellan committee which have rocked the Nation to its foundations.

One of the more obvious reasons why we have no ready labor remedial legislation by this time is simply because the leaders of organized labor haven't put their personal stamp of approval on some of the features which many believe a strong bill must incorporate in order to be really effective.

As a result, we are constantly hearing cries from interested parties to the effect: "George Meany says he can live with this bill." Or "Walter Reuther doesn't feel that he can go along with that bill." Even perhaps "The AFL–CIO will let the bill pass if we go this far—but any farther would ruin its chances to pass in Congress."

Now such outcries ought to seem at least a little strange to all of us, if we are fair-minded citizens. And this includes our top-bracket friends in organized labor, too. Let's take a look at the other side of the coin for a moment.

Let's consider a hypothetical example: Suppose that the McClellan committee had turned its identical type of evidence in to be considered by the Nation—but, instead, the corruption uncovered had been on the side of business, medicine or farming?

If an outraged public might demand that remedial legislation ought to be proposed for any of the examples given—who, then, would we naturally expect to write the bills? Ought it to be the National Association of Manufacturers or the U.S. Chamber of Commerce in the case of business? The Farmers Union in the case of the farmers? The American Medical Association in the case of medicine? Or should we expect the Congress to write its own remedial legislation for any such affected groups without favor or partiality shown to anyone and with nothing except the public welfare in mind?

Most of us would prefer that Congress might pursue the last course mentioned in a courageous manner designed to favor, as octogenarian Frank Buchman is wont to say, "not who's right, but what's right."

Actually, this is the only realistic attitude with which our legislators ought to approach the controversial labor question these days. Nobody I know of wants to set organized labor back in its legitimate gains of the past 50 years. But at the same time, it ought to be equally understandable that

most American citizens today don't want the leaders of this powerful giant to run roughshod over the public in our country, either.

Let's play ball on this particular matter and expect our legislators to be fair and square with all of us. Let's have a proper bill that favors nothing except the public interest. This means, in the last analysis, Joe Doakes. Who's a better man to be considered here?

Congressman EDGAR W. HIESTAND, whose district covers a large portion of the San Fernando Valley, believes that we should expect the following items in any labor law which can be actually called effective:

1. Protection for innocent third parties (usually small business) and the public against the malicious secondary boycott.

2. Protection for workers unwilling to join a union against coercive blackmail picketing.

3. Return to workers and small business the right of a "day in court," by closing the jurisdictional gap between Federal and State law.

4. Protection of the rights of individual union members, especially the right of secret ballot in electing officers and setting policy.

5. Safeguards to prevent reprisals against union members who speak out against union bosses, or who act or vote against union dictates.

6. Safeguards for workers' money in union treasuries and pension funds.

Some union members believe that their own unions may now provide such safeguards, in addition to others already on the books, but we must remember that this is hardly the case of uniformity throughout the Nation.

Let's assure to all union members the exemplary treatment which may be found in certain of the more salutary labor organizations whose democracy is readily upheld by their memberships.

Can we really be said to have democracy in its best sense unless it is available to all who qualify under its terms?

Passaic Honors a Soldier of the Past

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 8, 1959

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks, I would like to have printed in the CONGRESSIONAL RECORD at this time an editorial that appeared in the Passaic Herald-News of Passaic, N.J., on Wednesday, July 1, 1959.

The editorial follows:

PASSAIC HONORS A SOLDIER OF THE PAST

Unveiling of an oil painting of Maj. Frederick E. Rohrbach at Passaic's City Hall recalls an outstanding military figure in the city's history.

The company he led successfully through a bloody battle in World War I was Passaic's historic successor to other home guard companies in all previous wars going back to colonial New Jersey. In the days when Acquackanonk Landing was just a cluster of buildings on River Road all able-bodied men between 16 and 60 were automatically members of the home guard. They were required to keep a musket and ammunition in good shape and had to muster from time to time to prove they were ready to defend their homeland. Major Rohrbach's portrait stands as a kind of symbol for all local veterans, present and past.

The major was more than a soldier, however. He was a popular figure in his day, a gentleman as well as a good commander, and for many years a city tax assessor. Many will remember him as the marshal in a steady succession of Memorial Day parades.

Unlike some cities, Passaic has no statuary of local figures and few portraits in public places. The painting of Major Rohrbach is therefore all the more valued by the city. Those who made it possible should feel well repaid.

Federal Aid for Sewage Plants

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 29, 1959

Mr. COAD. Mr. Speaker, under permission to extend my remarks in the Appendix of the RECORD, I would like to make available to my colleagues an editorial appearing in the July 1 issue of the Des Moines Register, which supports the House-passed bill to amend the 1948 Water Pollution Control Act.

Iowa's need for plants to control water pollution is possibly typical of her sister States, and I believe that this editorial very ably implies the heartfelt thanks of the local governments, health officials, conservationists, and all the citizens of my State for the initiative taken by the Congress to provide an aid program which is doing a good job in correcting a serious water pollution problem.

The editorial follows:

FEDERAL AID FOR SEWAGE PLANTS

Iowa communities stand to receive greatly increased amounts of Federal aid to attack the State's water pollution problem under a measure recently passed by the U.S. House. The measure will allow the Government to double existing Federal grants for construction of local sewage treatment plants.

The present program dates from 1956, when Congress approved a 10-year plan to cut down pollution by aiding expansion of sewage facilities. The Federal Government agreed to put up 30 percent of the cost of an approved project, or $250,000, whichever is greater, if local communities financed the remainder. Congress set a ceiling of $500 million for the 10-year program and has been putting up around $50 million of matching funds each year.

The funds are allocated to the States under a formula based on population and need. Iowa has been receiving in the neighborhood of $830,000 each year. The funds are earmarked for projects by the State health department, which establishes priorities on the basis of the seriousness of a community's water pollution problem.

The Federal aid funds have served as a major inducement for communities to plan and construct sewage treatment plants. In Iowa, some 52 projects have benefited from Federal aid funds in the last 3 years. Since the program has been in effect, $2.7 million of Federal funds have resulted in $11.5 million of sewage plant construction in the State.

Nationally, $119 million of Federal aid funds have resulted in expenditures of more than $400 million of local funds in the last 3 years. This is far short of the spending needed to catch up with the growing water pollution problem. The U.S. Public Health Service estimates construction will have to total $575 million annually for the next 8 years to keep up with pollution loads. The Iowa State Health Department reports it has 26 applications for projects on file for which there are no funds, with many additional projects in the State in need of financing.

The Housed-passed bill would stretch out the aid program for an indefinite period and boost the ceiling on expenditures from $500 million to $1 billion. The amount Congress could appropriate in any one year would be raised from $50 million to $100 million.

This measure is in sharp conflict with President Eisenhower's proposals. The President proposed an appropriation of only $20 million for sewage plant aid and called for termination of the program at the end of this year. The President wants the States to have sole responsibility for financing sewage construction. The administration would help States finance the projects by allowing them to collect a part of the present Federal excise tax on telephone service.

It isn't certain that all States could or would earmark this revenue for sewage plants. Some States have constitutional restrictions on the way such taxes can be spent. It is debatable, also, whether water pollution is a problem from which the Federal Government should be divorced. As the League of Women Voters, which looks favorably on the new legislation, points out:

"No single community within any State regards its own pollution problem as entirely its problem. As long as water runs downhill, as long as rivers ignore State boundaries, water pollution is everybody's—a national—problem."

The danger of Federal-aid programs is that once begun they are extremely difficult to cut down or eliminate. But Congress in this case can hardly be blamed if it refuses to give up a program for which there is a proven need, which is getting the job done and which States are showing no enthusiasm to undertake.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

Commencement Day Address by Hon. Hugh Scott, of Pennsylvania, at Suffolk University, Boston, Mass.

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Thursday, July 9, 1959

Mr. DODD. Mr. President, recently I had the great pleasure of attending commencement exercises at Suffolk University and was privileged to hear the splendid commencement address delivered by our distinguished and able colleague from Pennsylvania [Mr. SCOTT]. Senator SCOTT describes the position of the moderate in American politics with insight, with clarity, and with an illuminating touch of humor. Senator SCOTT's address was well received by his hearers at Suffolk University and I think it will be well received by the country.

I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

COMMENCEMENT DAY ADDRESS BY U.S. SENATOR HUGH SCOTT, AT SUFFOLK UNIVERSITY, BOSTON, MASS., JUNE 21, 1959

For a long time you have looked toward this happy day when you could close your books and be sprung by this great institution upon a waiting world. You have survived final examinations. You have invited your families to see you wind up in a burst of glory and a swirl of academic gowns. You are planning to heave a sigh of relief once you have diploma in hand.

I have been called in by President Munce and Judge Donahue to prevent that sigh from settling over your minds like a damp blanket. I have been asked to tell you—in a way that will penetrate through the shock of final grades, these and oral examination—that the dictionary definition of commencement is in fact the real meaning of this day; bachelors you now are, or even masters of learning, but your marriage with life has yet to be consummated.

Why do college administrators and out-of-town Senators bother you with mighty alarums on a day when you should be ending, not beginning to worry?

We are compelled by an attitude similar to that of a parent who looks upon a child and thinks, "There is so much this young life can do. These are the things I would do if I could start over again."

In other words we—the administrators and the Senators—see room for vast improvement in our society. Although we have not entirely given up on our contemporaries, we believe that, statistically, we can get the best odds right here on college campuses.

There is a novel display in the lobby of the Department of Commerce Building in Washington. It is called a census clock and last Tuesday it showed that the estimated population of the United States had reached an even 177 million. In 1950, the time of the last census, the population of our land was but 151 million.

That means 26 million more people to earn money and to make things, to ride our highways, to be protected against fires at home and conflagrations abroad, and to pay taxes into the great open maw of governments: Federal, State, county, municipality, and to forth. These 26 million more people make us a bigger country with greater promise and greater responsibilities.

While we grew, the rest of the world grew, indeed at a much more rapid pace. And if this Nation is to fulfill its responsibilities to a large and growing world it needs an increasing infusion of new blood and new ideas.

Unfortunately too many of our citizens would prefer to heave that comfortable moist sigh of relief and let some one else enthuse, plan, and work for the public good, let others assume the increasingly complex responsibilities of the U.S. citizenship.

We are back now to the dictionary meaning of commencement. May each of you here step out from under the academic robes with firm intent to accept the responsibilities of citizenship.

Use the thinking man's intellectual filter: Challenge the obvious. By all means, prepare to challenge the type of dogmatic thinking which characterizes the right and left colorations of the politico-economic spectrum.

Entrenched along the right flank is bourbonism—not the kind you drink, but the kind you think. The term, of course, referred originally to the Bourbons who once ruled much of Europe, of whom it was said, "They never learn anything and they never forget anything." One associates Bourbonism with an armor-plated defense of the status quo.

Bourbonism in the United States is exemplified by those who still fight social security, the right of collective bargaining, mutual security programs for our allies and friends abroad, and oppose such Government programs as support for research in medicine and fundamental sciences. There are still people in public life today who are carrying on love affairs with the past. Their defense of their status quo is in reality an attack upon yours since progress is your most important product.

Another roadblock to progress, manning the left flank, is the panacea of the green poultice, advocated by those who would cure everything by the application of more money. They rely increasingly upon Government-sponsored security as against the harder course of strong-fibered individual enterprise. The green poultice enthusiasts are encouraging the growth of governmental paternalism, the promise to vote benefits out of the pockets of some people into the pockets of others.

In Congress we think of them as rocket launchers. When President Eisenhower proposes legislation that is designed for the best interests of the country and has a reality of purpose, they do not bother to consider his proposals. They launch their bigger, noisier schemes which burst upon the front pages like so many Fourth of July rockets—and have about as much usefulness as a red-white-and-blue explosion. And one man's rocket is often the fire on another man's roof.

Both these schools of dogmatic ideas, bourbonism and green poultice, collapse when challenged by thinking people.

People who espouse such extreme ideas take advantage of Americans' tendency to disagree with what you say but defend to the death your right to say it. It is a national tradition that we tolerate extremism. But do not be trapped into believing that in tolerating you must also subscribe to extremist thinking.

I belong to the unsung school of moderates. So does almost every one of you. A moderate is not as spectacular as one who fires off rockets. He seldom seems as valiant as those who would die at Balaklava for outmoded issues.

But we do get things done. We try to enact legislation for all the people rather than for favored groups. We would have our Government provide for those in need, but not create new needy. We want our Government to conduct its affairs fairly and honorably. And we want our Government to be on a paying, rather than a subsidized basis.

We need people who want to get things done rather than merely get their names in print; people who want laws rather than political issues; people who would prefer to be public servants rather than public house heroes.

We need the support of you, the thinking people, who have the foresight, the education, and the civic motivation to support good government.

Will Forests Pay Off More in Future Through Recreation or Lumber?

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, July 9, 1959

Mr. NEUBERGER. Mr. President, on the recent Fourth of July weekend, millions of American families took to the highways to find recreation in State and National parks, forests, beaches, and waterways. Many found these areas crowded. Facilities in some places were greatly overtaxed. These were the conditions found by our citizens in the year 1959 when our Nation's population is 170 million. What will the July 4 vacationer find 40 years hence when our population is expected to top the 300 million mark, but the available land area will be the same as in 1959?

An approach toward forecasting these future conditions was discussed at the Citizens Conference on Pacific Northwest Forest Resources at Reed College on June 19, 1959, by Mr. George M. Henderson, vice president of the First National Bank of Oregon. Mr. Henderson is a serious student of the forest

products industry of the Pacific Northwest, and his talk at the Portland conference provided an especially penetrating analysis of how forests may be utilized in the future for recreational purposes.

Mr. Henderson pointed out that national parks, national forests, and State parks in Oregon and Washington attracted 10 million visitors by actual count in 1950; 29 million in 1958. By straight-line projection, he anticipates 300 million visitors to these areas by the year 2000. I was especially impressed by one of Mr. Henderson's conclusions:

When we think of trying to crowd 10 times as many people into these recreational areas 40 years from now as we have in them now, it indeed seems shortsighted for us to resist the protection and development of areas of outstanding recreational value.

I have introduced legislation to establish national seashore park areas in Oregon and elsewhere in the Nation because of my belief that lands should be dedicated now—while relatively undeveloped and unexploited—so that unique scenic and recreation areas will be available to meet the demands of future years. I think Mr. Henderson's talk before the Citizens Conference in Portland confirms the necessity for such action. He explains that the forest products industry is the largest source of employment in our home State of Oregon. Yet, there is evidence that by taking some small parts of our forests out of timber production in order to fully supply adequate recreational planning for the future, we actually will gain in economic values. Value of forest products in Oregon and Washington last year was about $2 billion, and estimated income from the tourist industry was $713 million. Mr. Henderson has said:

When we realize that the amount of log-cut cannot be increased, even though there will be a substantial increase in value of finished product, whereas the number of tourists can increase without limit during the next 40 years, it is entirely reasonable to suppose that the value of the tourist industry will far exceed that even of the timber products industry 40 years from now.

If we are to leave a heritage of natural resources so that they can be utilized for recreation in future years, steps must be taken now, today, to preserve the areas which afford possibilities for such future use. I ask consent to have printed in the Appendix of the RECORD some excerpts from the able and wise address by Mr. George M. Henderson of Portland, Oreg., delivered at Reed College on June 19, 1959.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

ROLE OF PACIFIC NORTHWEST FORESTS IN ECONOMY OF OREGON AND WASHINGTON

(Talk by George M. Henderson, vice president, the First National Bank of Oregon, Portland, Oreg., at Citizens Conference on Pacific Northwest Forest Resources, Reed College, June 19, 1959)

The purpose of this discussion is to take an objective look at these forests of ours and to relate the resources which they encompass to the daily lives of individuals, businesses and government functions of the States in which we live.

We all have seen reams of reports on how many logs are cut and boards are sawed each year, and how many people work in the woods and mills and other forest products plants. But to be useful, such figures must be related to the overall activities of our people in these and other fields of endeavor.

* * * * *

There are many ways of breaking down this forest area for reporting purposes. Probably the most common within the industry is to talk of the Douglas-fir region and the pine region, these dominant species do not occur with any regard to State or international boundaries.

Douglas-fir, the world's favorite construction wood, grows along the Pacific coast from British Columbia to northern California, where it blends into the redwood.

The pine forests extend from British Columbia and Alberta, down through eastern Washington and Oregon, into Montana and Idaho, and to the east and south, far beyond the geographical confines of the Pacific Northwest. There is an estimated 408 billion feet of Douglas-fir; 162 billion feet of pine, and 331 billion feet of secondary species in the forests of Oregon, Washington, Idaho, and Montana, for a total standing timber inventory of 901 billion feet of commercial saw timber in the Pacific Northwest States. This is 44 percent of all the standing timber in the 49 States. Oregon contains half of the Douglas-fir in the region, and more than one-third of the world supply of this fine timber.

Oregon also contains half of the region's pine timber, while secondary species, principally hemlock and true firs, bring Washington's total to about three-fourths of Oregon's. The two States together contain 72 percent of the Pacific Northwest total.

* * * * *

With 90 percent of the region's land which is above 5,000 feet elevation being in Federal ownership, skiers use national forest land very heavily.

Picnics probably account for more forest visits than any other, except plain sightseeing.

Wildlife is a great forest attraction for sightseers the year around, and hunters in season.

All of these recreational attractions of Oregon and Washington are almost wholly dependent on forest lands and their streamflow. How many people use our forests for recreation?

Growth of use in State parks, National parks, and National forests provides a good basis for evaluating the present interest and probable trend in recreational visits. In 1950 these developed areas in Oregon and Washington attracted 10 million visitors. By 1958 the visits had risen to 29 million. Dr. Richard McArdle, in his recent report, "Program for the National Forests," forecasts a doubling of recreational use of those lands in the next 10 years and a tenfold increase in 40 years. If we apply this same growth rate to our 2 States, we can picture almost 300 million visits to these State and Federal parks by the year 2000, with a similar increase in recreational pressure on all timberlands.

Translated into economic impact, we see that the tourist industry of Oregon and Washington has grown from a $331 million business in 1939 to $608 million in 1958, and an estimated $713 million this year, or about double in 20 years. Based on national population growth estimates, it is reasonable to conclude that the tourist business of the Pacific Northwest, which is inseparably related to our forest recreational resources, will be a many-billion-dollar industry 40 years from now.

One of the other great forest resources is grazing land. Often the significance of forests to the stock-raising industries is overlooked. Cash receipts of farmers from sale of sheep, cattle, and wool amounts to $150 million annually in Oregon and Washington, and forest rangelands contribute importantly both for grazing use and as sources of water supply.

Of the more than 2 million cattle and 1 million sheep in the two States last year, about a quarter of a million head ranged under national forest permit. In all, perhaps half of all stock animals grazed in high summer timber or protected low-country forests during the year.

Many ranches would not be profitable economic units if they did not have access to vast acres of forested grazing land, both privately and publicly owned, for use as a summer range.

One further forest resource should be called to mind in this brief evaluation of the economic meaning of our forests. That is our water supply.

Often we take for granted our seemingly limitless supply of pure, fresh water. Although there is justification for taking the rainfall for granted (especially during Rose Festival time in Portland), controlling the usefulness of that rainfall after it reaches ground is another vital forest function.

Another speaker will point out the tremendous value of forests in storing rainfall and releasing it during dry months to provide the year-round river flow that has made possible the present 8 million kilowatt power generation and the 30 million kilowatt power potential of the Columbia Basin.

The Columbia River system pours an average of 253,000 cubic feet per second of water into the Pacific Ocean; while hundreds of smaller streams flowing directly into the Pacific and Puget Sound carry another 165,000 cubic feet per second from the rain and snowfall of Oregon and Washington.

Combined, the terminal rivers of these two States carry 418,000 cubic feet per second—almost one-half million cubic feet per second, which is about one-quarter of the total volume carried by all the rivers flowing from the contiguous 48 States, the national total being 1.8 million cubic feet per second.

Irrigation and flood control combine with power to create a tremendous total value to the watershed control exercised by the forests of the Pacific Northwest.

The dollar value of these water resources cannot be calculated on a basis comparable with annual income from other forest resources. Water is the catalyst which makes every other function of the Pacific Northwest possible. Of course, forests play only a limited role in storing and regulating the supply, yet the prosperity of most other facets of our community life is closely related to sound, long-range planning in management of forests for water use.

Important as are these multiple other uses of forest lands today and tomorrow, the simple facts of our region's economic life are that $3 out of every $10 of income of persons living in the Pacific Northwest results from the wood industry—growing and harvesting trees and processing the wood into the thousands of end products which along with lumber provide an ever-growing demand for the forest crop.

In Washington, total income of individuals this year will reach $6.3 billion. Of this, $1.4 billion, or 22 percent will depend directly or indirectly on the wood products industry.

Oregon's dependence on wood is much greater because Oregon has a greater log-production capacity combined with a smaller population and less non-forest-manufacturing business. In Oregon, the 1959 total income probably will reach $3.7 billion, of which $1.6 billion, or 43 percent will depend on wood products.

So in the two States, $3 billion, or 30 percent of all individual income can be attributed to the business of growing and harvest-

ing timber. This method of presenting the relative importance of the industry is different from the more usual one of simply comparing employment and payrolls. In this review, we have given recognition to related service industries, Government employment and other manufacturing which exist because of the timber industry.

In Oregon and Washington, 151,00 persons are engaged directly in harvesting and manufacturing wood products. Another 13,000 work in industries directly supplying the loggers and allied manufacturers, for a total direct employment in forest-related manufacturing of 164,000. For each person employed in a basic industry, there are slightly more than two others engaged in economic functions which develop around the basic industries. Without basic industry, such service businesses would have no purpose; so if we consider that the "non-basic" employment is stimulated in direct relation to basic industrial activity, then there are 344,000 persons working in service businesses because of the 164,000 engaged directly in forest products manufacture, bringing the total employment impact of wood products businesses to 508,000, or 30 percent of all employment in the two States.

By comparison with agriculture, forest products directly employs 164,000 and agriculture 159,000.

Measured differently, the value of forest products in the two States is $2 billion; about twice that of agricultural products, according to studies by the Industrial Forestry Association.

An assignment of all employment in proportion to activity in basic industries, as has been done here, is not a precise calculation, but it is believed to be sufficiently accurate, and the most reasonable way of measuring the total impact of a particular industry. Failure to consider tourism as a basic industry could be questioned, yet there is no reliable measure of the employment in that highly seasonal business which is so interrelated with other service employment.

So to summarize, as we hear the speakers to follow at this conference, we may recognize that the industry which they are analyzing is one which accounts for $3 of every $10 of income to the people of the Pacific Northwest.

Application of State Antidiscrimination Law—The Issue of Federal-State Relationships

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
OF ALASKA
IN THE SENATE OF THE UNITED STATES
Thursday, July 9, 1959

Mr. BARTLETT. Mr. President, in a speech delivered on the floor of the Senate on June 4, I expressed my concern—both from the viewpoint of the Federal system we cherish and from the viewpoint of human rights—at the fact that the Department of State had advised the New York State Commission Against Discrimination, a public body with quasi-judicial functions, that a finding by the commission in legal proceedings pending before it to compel the Arabian American Oil Co.—Aramco—"to employ persons of the Jewish faith in Saudi Arabia" would adversely affect U.S. interests abroad. Since no party to the proceedings pending before the commission was seeking a finding by the commission to compel the employment of Jews in Saudi Arabia, I expressed the view that the Department was overstepping its proper role in a State proceeding in which the duty of the quasi-judicial body was to apply the law of a sovereign state of the Federal system, and that the Department was misconstruing—with possible consequent mischief—the nature of the New York controversy, which in fact was confined to whether Aramco's employment screening practices violate the law of the State of New York when those practices are applied within New York.

Since the June 4 speech, correspondence between the Department of State and myself indicates that the Department more clearly understands the nature of the New York action and recognizes the fact that a finding prohibiting Aramco from questioning job applicants on a religious basis in New York would not adversely affect U.S. interests abroad, assuming even the relevance of that consideration.

An article in today's New York Times indicates that the correspondence between the Department and myself constitutes new evidence which may cause the commission to vacate its ruling upholding the Aramco position on the basis of the Department's pre-June statements as the Commission understood them. Commission and Department officials meet tomorrow, and it is my hope that my letter to the Department of June 29 will elicit from the Department a clarification of the Department's position along the lines indicated in a letter to me on June 15 by Assistant Secretary of State Macomber.

I ask unanimous consent that the article in yesterday's New York Times, to which I have alluded, as well as a letter written to me on June 15 by Assistant Secretary of State Macomber, and my reply thereto of June 29, be printed in the Appendix of the RECORD.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

[From the New York Times, July 8, 1959]

STATE GETS DELAY IN SUIT ON OIL BIAS—CARTER WINS TIME TO ASSESS STATE DEPARTMENT POLICY TOWARD SAUDI ARABIA

Elmer A. Carter, chairman of the State commission against discrimination, won time yesterday to discuss U.S. policy toward Saudi Arabia with State Department officials in Washington before deciding what to do about the hiring practices of the Arabian American Oil Co.

Acceding to a request from Mr. Carter, Supreme Court Justice Henry Epstein gave the commission until next Tuesday to decide whether it would accept his suggestion to withdraw a ruling that exempts the oil company from certain provisions of the State Fair Employment Practices Act.

This was an extension of a 48-hour deadline laid down by Justice Epstein on Monday.

As matters now stand, Justice Epstein will rule on a motion by the American Jewish Congress unless the commission withdraws its ruling by next Tuesday. The motion accuses the company of discriminatory employment policies.

Shad Polier, counsel for the congress, said last night that he had no objection to the extension. On Monday he had argued successfully against a request by the commission for an adjournment to September 22.

In support of this request, Henry Spitz, general counsel for the commission, had told the court that new evidence—presumably of a toughening U.S. policy toward Saudi Arabia—had come to light. He had said this could be confirmed only through conversations in Washington.

On Monday, Mr. Polier produced a letter from William B. Macomber, Jr., Assistant Secretary of State for Congressional Relations, to Senator E. L. BARTLETT, of Alaska.

The letter seemed to indicate that the State Department was anxious to avoid a ruling that would compel the Arabian American Oil Co. to employ Jews in Saudi Arabia despite that country's refusal to accept them.

The implication was that the State Department's concern did not extend to the company's employment policies in New York State.

In a letter to Justice Epstein yesterday, Mr. Carter said he had just been informed that officials of the State Department would see him and Mr. Spitz at 3 p.m. tomorrow.

He told Justice Epstein that if the necessary extension of the deadline were not granted, he would be compelled to rest on the record that was before him at the time the original ruling was made and to ask the court to consider the pending petitions on the basis of the record.

Mr. Spitz said last night that the State Department officials referred to by Mr. Carter were Parker T. Hart, Deputy Assistant Secretary of State, and representatives of the legal adviser's office.

DEPARTMENT OF STATE,
Washington, June 15, 1959.

The Honorable E. L. BARTLETT,
U.S. Senate.

DEAR SENATOR BARTLETT: I have for reply your further letter of June 3 regarding the policies of certain of the Arab States which have the effect of restricting the trade activities and admission of persons of the Jewish faith. We appreciate the interest shown in your letter in resolving the very real problems created by these policies.

There is one point with respect to your comments on Mr. Rountree's letter to the commission on which we should like to add a word. Mr. Rountree's letter was in response to a specific series of questions from the commission, in accordance with a resolution of the commission to seek expert advice where matters outside the State of New York may be involved. The Department had, in 1950, similarly provided information with respect to the situation in Saudi Arabia when the problem faced by Aramco was previously examined by the commission. You will note that Mr. Rountree's letter did not refer to a "finding in the proceedings by the commission against Aramco," but specifically to "any finding by the commission which would compel Aramco to employ persons of the Jewish faith in Saudi Arabia." We assure you that the Department does not intend to inject itself in any way into the proceedings of a State court; at the same time, the Department does have an obligation, when requested to do so, to provide State authorities with information respecting the policies of other governments and of our own in foreign lands.

Thank you again for your close interest in this problem. Should you wish to have further information regarding it, the officials of the Department concerned would, of course, be pleased, at any time, to discuss the matter with you.

Sincerely yours,

WILLIAM B. MACOMBER, Jr.,
Assistant Secretary.

JUNE 29, 1959.

Mr. WILLIAM B. MACOMBER,
Assistant Secretary of State,
Department of State,
Washington, D.C.

DEAR MR. MACOMBER: Your letters of June 15 and June 19 are appreciated. This correspondence from you emphasizes the desirability of a meeting on the subject of Saudi Arabia's successful efforts to promote the imposition of economic sanctions against certain American citizens. Accordingly, Mr. Joseph Josephson of my staff will meet with Deputy Assistant Secretary Parker Hart tomorrow, at my request.

I take this opportunity to comment upon your letter of June 15. I have understood that Mr. Rountree's letter "was in response to a specific series of questions from the commission" in New York. Nevertheless, Mr. Rountree's introduction of a reference to "any finding by the commission which would compel Aramco to employ persons of the Jewish faith in Saudi Arabia" was not a response to a specific question from the commission. The possibility of such a finding was not before the commission, as I have indicated previously. Such phraseology obscurbed the issue and reflected the Department's misunderstanding of the nature of the New York proceedings.

The American Jewish Congress directed its complaint before the New York Commission to the employment screening practices of Aramco—practices which the American Jewish Congress believes are prohibited by New York antidiscrimination law. The complaint was not directed to Saudi Arabia's visa policy. Obviously, New York authorities could grant the relief sought by the American Jewish Congress in the Aramco case without prejudicing or adversely affecting U.S. interests in the Middle East, for the point of reference for Mr. Rountree's remark that U.S. interests might be affected adversely was a wholly hypothetical finding, not sought by the American Jewish Congress nor raised by the legal issues, to "compel Aramco to employ persons of the Jewish faith in Saudi Arabia."

I was pleased to note in your letter of June 15 that the Department recognizes a distinction between a "finding * * * against Aramco" and a "finding (to) compel Aramco to employ persons of the Jewish faith in Saudi Arabia." We are in agreement that Mr. Rountree's expression of opinion was in reference only to the latter hypothetical finding. Since such a finding was never involved in the New York proceedings, I assume that the Department now shares my observation that New York authorities could grant the relief sought by the American Jewish Congress without prejudicing or adversely affecting U.S. interests in the Middle East. The sole issue in the New York proceedings now pending is whether the antidiscrimination law permits Aramco to screen applicants for jobs by religious criteria applied in the State of New York. Whether the antidiscrimination law compels Aramco to employ Jews in Saudi Arabia is not the issue.

It appears to me that irrespective of the Department's intentions, the Department is injected at this moment into the New York proceedings because of Mr. Rountree's letter, which provided the express basis of Commissioner Carter's finding. This involvement of the Department has occurred notwithstanding the fact that the letter by Mr. Rountree was not responsive to the legal issues in the Aramco case and, indeed, had as its reference matters which are outside the provisions of the New York law, the nature of the pleadings, and the inquiry from Commissioner Carter.

Thank you very much for your continued cooperation. You may be assured of my interest in efforts of the Department to resolve the problem of Saudi Arabia interference in the domestic affairs of the United States.

With best wishes, I am,
Sincerely yours,

E. L. BARTLETT.

Voters Want H.R. 7848 Enacted To End the Farm Mess

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mr. HOSMER. Mr. Speaker, H.R. 7848 calls for legislative implementation of my four-point program to end the farm mess. The four points: First, stop all subsidies right now—they will cost almost $6 billion this year; second, hold a fire sale to get rid of the $9 billion in surpluses U.S. taxpayers have been forced to buy, and pony up another $1 billion in taxes to store each year; third, use part of proceeds of fire sale to buy out or relocate small farmers; fourth, use remaining proceeds to reduce the national debt and reduce taxpayers' burdens.

The small amount of publicity the plan got brought into my office an overwhelming amount of mail. Not one single letter of disapproval was among this mail. It came from rural and urban areas all over the country. I believe this program has the overwhelming support of the American people and would be enacted immediately if the Congress followed their wishes. This specifically includes the Nation's farmers, 55 percent of whom voted in a recent poll to dump farm subsidies completely.

Over the last 3 weeks I have spread on these pages extracts from the various letters I have received. For those who have any lingering doubts about the will of the American people to rid themselves of taxes to finance farm subsidies, I have asked that the following additional extracts be here printed in the RECORD:

I hope your farm bill carries. That bill should have been adopted years ago.

I'm in full accord with your remedy for the farm mess, let's get at it.

Your program to end the farm mess (and how apt the description is) meets with my wholehearted approval.

High commendation is due for your stand on getting rid of farm subsidies now. The wrong should be stopped immediately.

If you can do anything to end the farm mess I shall be grateful to you.

Please continue to do everything within your power to promote your program to end the farm mess. In my opinion, the present program is a ridiculous, asinine waste of taxpayers money.

We are solidly in favor of your program to end the farm mess. We have long deplored this most unrealistic plan as being not only contrary to the natural law of supply and demand, but also another step in the direction of Government control, and a vital one indeed. This we are unalterably opposed to. (These are the views of 10 individuals who signed the petition.)

I think your idea for a solution to the farm problem is a good one.

We are interested in your program to end the farm mess. It certainly is time to stop the farm subsidies, reduce the national debt and start tax reduction.

I am glad to hear you are trying to do something about the farm program. We have tried it too long and it is plain to see it is not the answer. I would like to see your suggestion carried out.

The farm surplus idea is surely meritorious. I wish it could be enacted into law.

Let me say I am firmly behind you on your farm program. Any other approach is simply not feasible.

Cut out the farm subsidy. A farmer is in business like I am and should take his profit or loss.

I am 100 percent behind you with respect to the farm mess, it's outrageous to waste the taxpayers cash, without their permission, in the bargain, and then let millions of pounds of wheat rot, after paying millions to store this, in my opinion is a heinous wasteful crime and should be stopped at once.

My husband and I agree on your views about the farm mess.

I wish to commend you for the first sensible program to end the farm mess that I have heard of. I think that your plan will be fair to the farmers as well as much needed relief to the consumer.

I agree with your program to stop all farm subsidies now, and get rid of the huge surpluses, as a start toward reducing the national debt and taxes.

Stalling on a Civil Rights Bill

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, July 9, 1959

Mr. PROXMIRE. Mr. President, I ask unanimous consent that an editorial published in the Milwaukee Journal, calling for a civil rights bill this year, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STALLING ON A CIVIL RIGHTS BILL

The promise of Senator JOHNSON, Democrat, of Texas, majority leader, early last January that the Congress would act on a civil rights bill still hasn't been kept. The Senate got into a long argument the other day on why this is so.

Senator JAVITS, Republican, of New York, blamed the Democrats. JOHNSON retorted that the fault lay with Republicans. After hearings ended on civil rights bills last May there were seven attempt to hold meetings by a subcommittee headed by Senator HENNINGS, Democrat, of Missouri, for the purpose

of writing a bill. Six of the seven attempts failed. Four times, HENNINGS says, there was no quorum. Twice a southern Senator objected to holding meetings while the Senate itself was meeting. JOHNSON says that all the Republicans need do is get their subcommittee members to meetings so that there will be a quorum.

But the real trouble goes deeper than any of this. The fact is that there is woeful lack of agreement on what kind of a bill to consider. JOHNSON himself has proposed a compromise bill. The administration has proposed a weak bill. Southerners want no bill at all. And liberals, including JAVITS, want a strong measure giving the Justice Department the power to initiate suits to enforce school desegregation.

JAVITS' fight is as much with the administration as with anyone else if he would but admit it. The administration strongly opposes a strong civil rights measure such as JAVITS and his group want.

But, whoever is to blame for lack of action, lack of action there is. A promise is not being kept. A need is not being filled. The Civil Rights Act of 1957 has been shown up as weak. Events in the last several years have proved the need for legislation strong enough to get action. The Congress is not providing the tools for enforcing the law of the land.

Fourth of July

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, July 9, 1959

Mr. SALTONSTALL. Mr. President, on July 2, 1959, the Hellenic Chronicle, of Boston, Mass., published an editorial entitled "Fourth of July." This is a fine editorial, with great significance. I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOURTH OF JULY

Saturday this country observes the 183d anniversary of the Declaration of Independence and the Greek-Americans do not intend to let the date pass unnoticed and unhonored.

Leading their efforts in this direction will be Archbishop Iakovos, who in two letters has urged the million or so souls in his ecclesiastical jurisdiction to pay homage to the U.S. anniversary because of its deep meaning to Greek-Americans, in particular, and to the democratic world, in general.

His Eminence will be leading a special doxology on Saturday at Holy Trinity Cathedral. The half-hour service will be attended by leaders of churches in the New York area and by delegations of fraternal, church and other organizations. The archbishop has asked this.

The Greek Orthodox leader has also asked that every parish in the Archdiocese make efforts at similar observances and he puts forward the reasons why they should.

July 4, His Eminince emphasizes in his letter to his flock, is one of the most significant of anniversaries in the history of the world. He said the holiday has triple meaning for us all. He cited the tradition of principles that resulted when Americans decided they were entitled to basic principles of justice, liberty, and human rights and dignity under God. He cited also the historical significance of the day in which a nation was formed which has been dedicated to a continued struggle to spread justice, liberty and human dignity to all peoples, and said many nations are in danger of losing them and would lose them without America.

In conclusion, the archbishop said the date should be observed for its symbolism, which teaches by the American example that freedom, justice and human rights are attainable, serving as an inspiration, even for those under communistic dictatorship, to this enviable end.

Chances are the majority might still take the advantage of the long weekend and head for the shore, the lakes, the picnic grounds; but it will be possible for all who feel as deeply as His Eminence about the Fourth of July and its significance to attend church and offer prayers for America and its worthy objectives.

It may sound chauvinistic, but it was inspiring to read His Eminence's words on this greatest of American holidays. It is particularly fitting that Archbishop Iakovos makes this effort; for he is the first Greek Orthodox Archbishop to hold American citizenship.

Air Force Missions of Mercy

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, July 9, 1959

Mr. WILEY. Mr. President, in these challenging times—particularly when the arch enemy of freedom, communism, through its prime dictator, Mr. Khrushchev, intermittently utters war threats—it is especially important that we maintain a strong defense.

During consideration of legislation relating to the Armed Forces, we recall, however, that at home there are periodic volleys of criticism leveled at the administration of our defense program.

I am well aware, of course, that in administering a program of the scope of our Defense Establishment, it can be expected that human errors will occur. As these develop, corrective action should, of course, be taken. It is important, however, to keep each incident in proper perspective.

We are aware, too, that there are often honest differences of opinion on policies and administration. Acknowledging this, it is important that we arrive at the right kind of decisions by a positive—rather than a negative—approach.

Generally, I believe that our military leaders are doing an admirable job in providing the Nation with an effective defense, even though further improvements can and should be made in the overall program.

In view of the criticism, I am particularly gratified to find, from time to time, reviews of ways in which the armed services—sometimes acting outside of what may be considered a normal military mission—perform tasks that serve humanity and, as a result, create goodwill and respect for this country.

A recent edition of the Milwaukee Journal carried an editorial entitled, "Air Force Missions of Mercy." The editorial outlines a number of splendid ways in which the Air Force has engaged in a wide variety of activities—many of them mercy missions—with fruitful results for the unfortunate people involved, as well as for our Nation.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AIR FORCE MISSIONS OF MERCY

Now and then a particularly dramatic story of some American military mercy mission overseas drifts back to the home folks. Like this week's story from Naples, Italy, that the Air Force is lifting $400,000 worth of medical supplies to Dr. Albert Schweitzer in remote French Equatorial Africa. The airlift was arranged by Lt. Gen. Richard Lindsay, commander of allied air forces in southern Europe.

Actually, Army, Air Force, and Navy units the world around are helping out their neighbors, in projects large and small, the year around.

Last fall, visiting headquarters of U.S. Air Forces in Europe at Wiesbaden, Germany, we learned of a few mercy missions of this organization.

In 1956, 700,000 pounds of food and clothing were dropped to Italians, Sicilians, and Sardinians isolated by snowstorms. More than 100,000 pounds of food were dropped to snowbound Greeks. The following year 400,000 pounds of insecticide was flown in 3 days to Tunisia to combat the worst locust plague in north African history.

This summer, as in years past, the Air Force is transporting German refugee and underprivileged children from West Berlin to West Germany for vacations in the country. Last year 2,000 were given round trips in the Kinderlift.

These are big projects. There are hundreds of smaller ones. A prominent Turkish citizen was dying of fungopneumonia and Turkish medical resources had been exhausted. Americans were asked for help in obtaining a rare drug. The drug was flown from Wiesbaden to Istanbul in 5½ hours and the life was saved.

A United Nations soldier on duty in the Gaza strip suffered a serious head injury. At U.N. request he was flown to the Air Force hospital in Wiesbaden, where two operations were necessary to save his life. Swedish officials thanked the Air Force.

A Greek boy swallowed a screw. It lodged in his right lung. There were no facilities for its removal in Athens. The Air Force flew the boy to Rhein-Main Airbase in Germany, where the base hospital has one of the few thoracic (chest) surgeons in Europe. The screw was removed.

Our military forces overseas are trying hard to be good and helpful neighbors. The reward, for their country, is good will, gratitude, and respect.

Material and Social Progress in the United States

EXTENSION OF REMARKS
OF
HON. RICHARD B. RUSSELL
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Thursday, July 9, 1959

Mr. RUSSELL. Mr. President, there has come to my attention a very thrilling patriotic column written by Mr. George

Todt and published in the North Hollywood (Calif.) Valley Times of July 4, Independence Day.

He precedes his column with the following statement from John Stewart Mill, which seems to me to be in complete conformity with my concept of a proper political and social order in this country:

The only freedom which deserves the name is that of pursuing our own good in our own way, so long as we do not attempt to deprive others of theirs or impede their efforts to obtain it.

I ask unanimous consent that the column by Mr. Todt be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THIS DAY, A DAY OF CHOICE

Today is America's Independence Day and a splendid time to wave our Nation's flag in earnest. Why not? Where has Old Glory ever demeaned herself? Who is ashamed of the Stars and Stripes?

Let's display our national colors, wherever we may be able to do so, with the utmost of honorable pride.

Frankly, we have something there of which we can well afford to be proud. What other nation on the world stage has ever accomplished so much as ours, and all in such a relatively short period of time?

Here we are not referring to materialistic accomplishments, although we may be said to lead the entire world in this respect—both now and in the past.

However, it isn't materialism—dialectic or otherwise—that makes man great or sets him apart from the lower forms of life which inhabit our planet.

Neither the pyramids of Egypt nor the grandeur that was Rome could ever hope to match the sheer power of the intellectual ideas of our Founding Fathers who gave the world their truly American concept of responsible political freedom for mankind under the moral rule of God.

They said, in effect, that, since we were all the spiritual children of the Creator, He had consequently given to us certain inalienable rights which no mere government comprised of mortal men had either legal or moral prerogative to take away from us in the future.

Therefore our early American Government was set up more as a practical means to guarantee these same inalienable rights—many of them to be found in the first 10 amendments of the Constitution of the United States—than to merely perpetuate a ruling power clique in office.

Because of this new approach to government, in which we indicated that the rank and file of the human family was perfectly capable of governing themselves without recourse to the idiotic notion of rule by "the divine right of kings" or other types of tyranny imposed from above by totalitarian oligarchs of varying descriptions, this land of ours has been choice above all other lands upon the earth.

We have been the envy of most peoples of the world in modern times. Much of their admiration stemmed from the fact that we placed moral and spiritual values first in our scheme of things in former days.

More than 50 millions of Europeans and large numbers of other peoples left their homes abroad, in the course of time, to become American citizens.

They came here because we stressed the dignity of the individual and gave more copiously of the draught of human freedom than men and women had ever before obtained for themselves anywhere else on earth.

This provided, in its turn, tremendous incentive for our people and it acted upon their productive powers like an immense catalyst.

How else explain the rapidity with which we grew from a small country of 3 millions of population on the Atlantic seaboard 175 years ago to a great Nation of 175 million today?

How else explain the fact that the Republic of the United States, with only 7 percent of the world's population in 1959, now owns 50 percent of the world's wealth?

How else explain the fantastic transformation of the American Republic in less than two short centuries of historical time from a rank political upstart into the most powerful Nation on the globe?

The facts are before us to observe and wrestle with, each one according to his or her own intelligence in the matter.

But it ought to be easily apparent, to those who are the most discerning among us, that real freedom and liberty for mankind produces its own special kind of reward. Where man is allowed to push forward under his own power, instead of being pushed along by despotic controls, he produces far and away more for all us than would otherwise be the case.

Man is by nature a competitive entity and nowhere is he capable of thriving better than under the free enterprise system of the United States. Let's keep it if we can. Can we meet this challenge in the future?

Or do we prefer the dictatorship of proletarian mediocrity?

Alaska Rate Regulation

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
OF ALASKA
IN THE SENATE OF THE UNITED STATES
Thursday, July 9, 1959

Mr. BARTLETT. Mr. President, even before Alaska became a State, the problem of transportation rate regulation there was complex and important to the economy in a very particular way. Alaska is largely dependent upon marine transportation for the importation of all products consumed there. A very small amount of freight is hauled by truck over the Alaska Highway and some moves by aircraft. People desiring to go to Alaska or to leave there must do so by airplane, since American-flag maritime passenger service was discontinued in 1954.

The Alaska Statehood Act provided that regulatory control of marine transportation should remain within the jurisdiction of the Federal Maritime Board. The Civil Aeronautics Board, of course, is the Federal agency having to do with the regulation of aviation and it will continue in charge of intrastate flying until the State is prepared to take over, as well as ruling in respect to interstate aviation.

The Interstate Commerce Commission regulates intracoastal and intercoastal maritime transportation in the other States. Because of the peculiar nature of the Alaska trade—and this is doubtless so of Hawaii also—it has been proposed that a joint board be established.

To me, this makes good sense. It would include representatives of the three regulatory agencies named above. Such a board would be in an advantageous position wihch could not be reached by the three groups working independently. It is my hope that such a board will be established by law and that as a result there may be achieved, among other things, a reduction in Alaska's high freight rates.

In this connection, there was printed in the Journal of Commerce for July 2 an editorial on this subject, which I ask unanimous consent to have printed in the Appendix.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JOINT BOARD FOR TRANSPORTATION

Because Alaska has become the 49th State while Hawaii is getting ready for admission as the 50th, Washington officials are rightly giving some serious thought to problems of regulating transportation between these two areas and the mainland. In the process they are brushing up against some regulatory issues of broader import.

If domestic precedents are followed, the Maritime Board will lose its control over rates in these trades, just as its predecessor, the old Maritime Commission, was compelled by the Transportation Act of 1940 to surrender to the Interstate Commerce Commission its reign over coastwise and intercoastal shipping rates. The argument is that there is no reason why the interstate commerce of the two new States should be governed by practices any different than those prevailing in the other 48.

On the other hand, the conditions that produced the Transportation Act of 1940 do not exist in the Alaskan and Hawaiian trades. Railroads do not compete with water carriers on hauls to and from these areas; consequently there is no question of putting the rates of two competing transport systems under one Federal agency—especially when it is considered that no move is apparently being made to include in the regulatory merger the only other transport system that does compete with shipping lines (though to a limited degree), namely, the airlines.

The administration apparently recognizes this. What it favors, according to a report published in this newspaper yesterday, is a sort of joint board which needs only to be called into play in the event that some conflict develops between the policies following by ICC with regard to continental traffic originating in or destined to Alaska and Hawaii, and the Maritime Board, which would be left in control of shipping rates.

This seems to us a reasonable suggestion. Since the Coastwise Shipping Act prohibits foreigners from carrying any goods between any U.S. Territories or between any U.S. Territories and the mainland, both Hawaii and Alaska are compelled to utilize U.S. carriers entirely for their trade with the mainland. Moreover, their economies are highly sensitive to any changes in freight rates—much more so than those of other States.

Hence, it is important that the Government keep close tabs on these rates, not only as they apply to traffic moving by ship, but as they affect its surface movement, by rail, truck or barge, before leaving or after entering ports on the mainland. A joint board (which ought also, we think, to represent the Civil Aeronautics Board) ought to provide a good way of ironing out regulatory conflicts—provided it is properly staffed and run. It need not be large, it need not meet often and it need not add much to the complexity of transport regulation.

What strikes us, though, and what is apparently striking other people, too, is why the operations of such a board should be limited to Alaska and Hawaii. There are conflicts on the mainland it could help to solve, too.

On several occasions recently, the U.S. Maritime Administration has found it necessary to go hat-in-hand to the ICC and ask that coastwise and intercoastal carriers be given a little better break on rates vis-a-vis the railroads.

There is, of course, nothing spectacularly new about one Federal agency taking the witness chair in a hearing before another. The old Office of Price Administration argued long and fervently against general rate increases before ICC during the war. Both the Agriculture and Justice Departments argued before the Maritime Commission against dual rates in the ocean conference contract system. And so on.

Another consideration to be kept in mind, is that the MA is charged with promoting American shipping, just as the Civil Aeronautics Administration is charged with promoting aviation. No agency has been directed to promote railroads, or trucks, or pipelines. ICC merely regulates.

Yet it is quite possible that it may not be long before two purely regulatory agencies find themselves pursuing different policies as regards movements that, for some distance at least, are directly competitive.

Take, for example, an export shipment from Chicago to Hamburg. If it goes entirely by ship via the Seaway, whatever rate practices are involved fall under jurisdiction of the Maritime Board—to the extent that U.S. law is applicable. If it goes by rail or truck for transshipment at New York, it is under ICC jurisdiction for that distance and under FMB's more limited control for the rest of the way.

It is quite true that shipowners may protest to ICC if they feel that agency is giving the rails too much of a break on rates, while rails may send their grievances to the FMB where the reverse is the case. But is there no way by which the two agencies can rationalize their policies except by the somewhat comic expedient of appearing as participants in proceedings before the other?

A joint board might not provide the whole answer, but it would offer at least the hope of a move in that direction.

Area Development Essential for Connecticut

EXTENSION OF REMARKS
OF
HON. CHESTER BOWLES
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mr. BOWLES. Mr. Speaker, the Connecticut Department of Labor has just released figures showing that unemployment in Connecticut has increased from 57,600 in mid-May to 60,500 in mid-June. Connecticut thus has the dubious distinction of being the first State in the Union to report a reversal in the seasonal recovery trend.

Last month there was a decrease in unemployment due to the entrance into the job market of students and graduates looking for both temporary and permanent employment. But now we have the disheartening figures just mentioned.

Overall, 5.7 percent of the working population of Connecticut is now unemployed as opposed to 5.5 percent last month. These figures indicate that the current economic recovery will not bring lasting relief to chronically distressed areas. Indeed, 13 of the 18 labor market areas in Connecticut have recorded increases in unemployment in the last month. In eastern Connecticut alone, unemployment in Middletown has increased from 2,200 to 2,300, in Norwich from 1,500 to 1,600, and in Willimantic from 940 to 1,000.

All 10 Connecticut labor markets with more than 6 percent unemployment are now classified as distressed, meaning that they have maintained this level for at least 18 months. These 10 areas include 40 percent of the State's working force and 51 percent of the jobless. Their average rate of unemployment is 7.7 percent. The Danielson area in my own district has the longest tragic history of substantial unemployment in the State, having topped 6 percent ever since March 1955.

Mr. Speaker, these distressed areas in Connecticut, like the other chronically underemployed areas across the country, are unlikely to regain prosperity and vitality without the kind of assistance provided in the area-redevelopment legislation which is still awaiting action in this House. Pockets of distress in almost every State remain to defy the rosy figures of recovery which are given to us daily on such a reassuring basis by the administration. The Connecticut figures just in demonstrate that in some of these distressed areas there is an actual rise in unemployment despite the general economic recovery.

Mr. Speaker, I think it is essential that this Congress act on area-redevelopment legislation this session, despite the threat of a Presidential veto. Under leave to extend my remarks, I include the latest Connecticut statistics, based on figures from the Connecticut Department of Labor:

Connecticut—Labor force and unemployment in labor markets June 1959

Labor market area	Civilian labor force (total)	Unemployment (total)	Unemployment as percent of the labor force	Number in excess of 6 percent	Most recent date of start of substantial labor surplus
A. State, total	1,067,200	60,500	5.7		
B. Distressed areas (11) [1]	405,300	31,200	7.7	6,882	
Major (2)	188,300	14,600	7.8	3,302	
Bridgeport	140,700	11,000	7.8	2,558	November 1957.
New Britain	47,600	3,600	7.6	744	December 1957.
Smaller (9)	217,000	16,600	7.6	3,580	
Ansonia	20,300	1,800	8.9	582	August 1957.
Bristol	20,300	1,900	9.4	682	July 1957.
Danielson	15,900	1,200	7.5	246	March 1955.
Meriden	39,400	2,600	6.6	236	October 1957.
Middletown	30,800	2,300	7.5	452	November 1957.
Norwich	21,900	1,600	7.3	286	July 1957.
Thompsonville	27,100	2,300	8.5	674	November 1957.
Torrington	25,700	1,900	7.4	358	Do.
Willimantic	15,600	1,000	6.4	64	December 1957.
C. Nonsubstantial labor surplus areas (7)	652,200	29,300	4.5		
Major (5)	580,900	26,800	4.6		
Hartford	249,800	11,500	4.6		
New Haven	146,300	7,700	5.3		
Norwalk	36,100	1,300	3.6		
Stamford	70,100	1,900	2.7		
Waterbury	78,600	4,400	5.6		
Smaller (2)	71,300	2,500	3.5		
Danbury	29,600	1,300	4.4		
New London	41,700	1,200	2.9		

[1] Eligible for assistance under the House Banking Committee recommendation: i.e., unemployment of 6 percent in at least 18 of the previous 24 months, 9 percent during at least 15 of the previous 18 months, 12 percent during the previous 12 months or 15 percent during the previous 6-month period.

Bicentennial Celebration of New Marlboro, Mass.

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mr. CONTE. Mr. Speaker, the beautiful town of New Marlboro, Mass., is celebrating its bicentennial. The town has honored me by asking me to offer some remarks at the bicentennial celebration this weekend, and under leave to extend my remarks, I include the text of my prepared address:

NEW MARLBORO BICENTENNIAL ADDRESS

It is surely a wonderful honor to be asked to speak to you here briefly on the occasion of the bicentennial celebration of New Marlboro. Too much, we live in a modern world with little or no appreciation for our heritage and the history of our land. For this reason it is heartening indeed to see that you in New Marlboro are taking note of your

rich historical tradition on this 200th anniversary.

In preparing for my remarks today, I discovered a little book in the Library of Congress which may well be worth its weight in gold to any antique book collector you may know. If you are so fortunate as to possess a copy, it may pay off the mortgage on the old homestead. The book was published by a Pittsfield man, Samuel W. Bush, back in 1829 and has a title typical of those days: A History of the County of Berkshire, Mass., in Two Parts. The First Being a General View of the County; The Second, an Account of the Several Towns, by gentlemen of the County, Clergymen and Laymen. The task of compiling this book had been entrusted by a group of interested congregational ministers to the Reverend Mr. David D. Field. The Reverend Field gathered a fascinating group of reports, which have come down to us in this little volume. We learn—as the book itself boasts—of "everything important * * * whether natural or artificial, civil, literary or religious, about the settlement of towns, the formation of parishes and churches, the settlement, dismission and death of ministers, revivals of religion, and sketches of the lives of eminent men."

Of course I was particularly interested in what Dr. Field's book had to tell the reader about New Marlboro. Reverting back to the earliest days of these settlements, the book tells us that in the year 1735 the General Court of His Majesty's Province of Massachusetts Bay ordained that "there be four towns opened upon the road betwixt Westfield and Sheffield," that they be contiguous to each other, and each be six miles square.

Two years later, on June 24, 1737, the necessary surveying had been accomplished and a plat of new townships, numbered 1, 2, 3, and 4 respectively, were presented to the assembly which confirmed them to a large group of grantees. The new towns were to be named Tyringham, New Marlboro, Sandisfield and Becket. And so the legal groundwork was laid for the founding of this beautiful town.

We learn from Mr. Field's history that the first improvements in New Marlboro were made by one Benjamin Wheeler, who became the actual original settler. He must have been made of stout stuff, for Mr. Field's book tells us that during the winter of 1739–40, which has to be recorded as one of the memorable hard winters, Wheeler remained the only white inhabitant of the town and continued to fell the forest.

There was an Indian family living at the outlet of Six-Mile Pond, which was generally friendly to Benjamin Wheeler during that first hard winter. But the Indians were afraid that the sound of Wheeler's gun would frighten the deer, so that he could not shoot for game in order to sustain himself. The Indians lent him a bow and arrow, but it appears that Wheeler never mastered that art and spent a rather hungry winter.

We are glad to learn that some of the men in Sheffield, 10 miles distant but the nearest town, came over to see Wheeler on their snowshoes, giving our friend, as the book puts it, "such proofs of their friendship as his circumstances required."

A Berkshire philosopher, drawing on his pipe, fell to meditating on this lonely pioneer. "Picture the fellow," he mused, "sitting all alone in the forest, thinking of the hills back of hills that cut him off from his folks. There must have been times when he felt like running back, but he didn't, and the only thing that ran was the silvery brook near his first rude cabin. They even named the creek Anthony's Brook, after the last Indian to live in the town, and poor old Benjamin Wheeler didn't get so much as a brook named after him, much less a township, like ought to have been done."

But if he didn't get a brook or a township named after him, at least he had the honor of founding this beautiful town, and as we celebrate New Marlboro's bicentennial today we salute your earliest community ancestor.

During the summer of 1740 Benjamin Wheeler, who by that time had doubtless felled enough of the forest to build a cabin, returned to New Marlboro and brought his family to their new home. The history tells us that he lies today in the old burying ground of the town he founded.

Other settlers followed the Wheeler family into this community, and in 1759 the town was incorporated—just 200 years ago, in honor of which we are gathered here today.

As for the part that New Marlboro has played in State and national history, it is gratifying to learn that it was well represented in the Revolutionary War, in the War of 1812, and in the Civil War. In connection with the Civil War we read in a later work that "The town's expenditure on account of the late war, which was never reimbursed, was $25,778.53. The soldiers' record of the town bears the name of 202 men, 21 of whom were killed, or died of wounds, during the service." We may be sure that the town performed its part with equal credit in the modern wars.

So as we stand here today, surveying a history extending through two centuries, we all have reason to be proud—and I hope that although not myself a native of this community, you will allow me to share that pride—in a long, stanch and honorable record. May our descendants, two centuries hence, whatever world they are fated to look upon, have cause for equal pride and rejoicing in the patriotism, happiness and prosperity of this dear and beautiful little community tucked into the Berkshire hills.

Livingston Ludlow Biddle, Sr.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of Thursday, July 9, 1959, which reports the passing of Mr. Livingston Ludlow Biddle, Sr., member of a long-prominent Philadelphia family:

L. L. BIDDLE, SR., 80, A PATRON OF ARTS—WORLD TRAVELER AND HUNTER DIES—POET HAD ONE-THIRD SHARE IN $3 MILLION TRUST

PHILADELPHIA, July 8.—Livingston Ludlow Biddle, Sr., world traveler, big-game hunter and patron of the arts, died yesterday in Bryn Mawr Hospital. He was 80 years old and lived at Westview, an estate on Highland Lane, Bryn Mawr.

Mr. Biddle bore the name of one long-prominent Philadelphia family and was reared in the household of another—the family of his mother, a Drexel. He was born in Atlantic City, where his parents, Edward and Emilie Drexel Biddle, had a summer home.

Having shunned the limelight, Mr. Biddle was not so well known as his two brother. The younger, Anthony J. Drexel Biddle, Sr., was a prizefighter, Bible teacher, concert singer and colonel in the Marine Corps. The other, Craig Biddle, was a noted sportsman and international tennis player.

Mr. Biddle's mother died when he was 5. His father was a descendant of Nicholas Biddle, the financier. The youth was sent to live with one of his mother's eight brothers, George W. Childs Drexel, who had no children.

Mr. Biddle Biddle lived with them until he married Miss Rosalie Eugenia Carter Law of St. Davids on January 4, 1917. Their home, Westview, was built as a wedding present for them by the George Drexels.

After attending St. Paul's School, Concord, N.H., and graduating from Princeton University, class of 1900, Mr. Biddle became interested in the arts and tried his hand at many of them. He also learned to play the piano and violin, and was the author of a volume of verse, "The Understanding Hills," published in 1916.

But he shunned the world of business. With his two brothers he shared in a $3 million trust fund set up by his maternal grandfather, Anthony Joseph Drexel, financier and founder of Drexel Institute of Technology.

Mr. Biddle did much of his traveling on the *Alcedo*, the large yacht of the late George W. Childs Drexel, onetime publisher of the old Philadelphia Public Ledger. Together, they took several cruises around the world and Mr. Biddle hunted big game in remote regions. He also had a smaller yacht of his own.

For many years Mr. Biddle was president of a hunting club near Stroudsburg in the Poconos. He also served for many years as a trustee of Drexel Institute. He was accounting warden of the Protestant Episcopal Church of the Redeemer in Bryn Mawr and a member of the Gulph Mills Golf Club and the Philadelphia Club.

Besides his wife, he leaves two sons, Livingston L. Biddle, Jr., a novelist, and Ernest L. Biddle, a portrait painter.

Some Wise and Moderate Recommendations for the House Armed Services Subcommittee Investigation of the Actions of Retired Military Personnel

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mr. STRATTON. Mr. Speaker, the able subcommittee on Investigations of the House Committee on Armed Services is currently investigating the actions of retired military, naval, and civilian personnel in connection with the awarding of defense contracts. This is an unfortunate investigation and one to which great public interest has been attached. It is important that the deliberations of the subcommittee be carried out in such a way as not to impair our national defense in the face of a great and continuing Soviet threat.

In that connection I would like to bring to the attention of the House some very thoughtful, helpful, and moderate recommendations as to the course of the inquiry which the subcommittee should follow offered by the very distin-

guished military critic of the New York Times, Mr. Hanson W. Baldwin, which appeared in that great newspaper on July 7, 1959. The article follows:

SPOTLIGHT ON EX-OFFICERS—HOUSE INQUIRY INTO MUNITIONS LOBBY EXPECTED TO FOCUS ON JOBS IN DEFENSE

(By Hanson W. Baldwin)

An investigation into an alleged munitions lobby by a House committee, which starts today, will center on the conflict-of-interest laws governing the employment of retired officers.

The study will be conducted by a Subcommittee for Special Investigations of the House Committee on Armed Services. Representative F. EDWARD HÉBERT, Democrat of Louisiana, heads the subcommittee. Its scope, unlike that of the far-ranging, politically tinged investigations of the so-called merchants of death in the early 1930's, is expected to be somewhat restricted.

The subcommittee's advance billings emphasize that major attention will be paid to the problem of retired officers who hold jobs with defense industries. The somewhat unfair implications of this concentration of the retired officer have been tempered by Mr. HÉBERT. He did this by announcing that he expected to extend his investigation to include former Federal civilian employees and former Congressmen in defense jobs.

There is, nevertheless, a danger that some Congressmen, piqued over recent exposures of congressional nepotism, may distort and reduce the value of an investigation that should be far broader than a conflict-of-interest study. Defense industry, particularly the aircraft and missile industry, is a multibillion-dollar business. Hundreds of thousands of people, entire towns and regions and whole industries are now wholly or largely dependent upon defense contracts.

Government-owned arsenals and laboratories complement industries that in many respects are privately owned in form, but could not exist without public moneys in the form of contracts, loans, fast tax write-offs, and other forms of Government aid.

COMPETITION ON WEAPONS

In some cases the two forms of defense facilities—the wholly owned Government arsenal, and the privately owned, Government-supported industry—have vied with each other in the manufacture of competing weapons systems. Thus, it was not only service pride and sponsorship that played a role in the rivalry between the Air Force Thor and the Army Jupiter intermediate-range ballistic missiles. Competition between the arsenal concept and the privately owned but Government-supported industry, also played a part.

The pressures generated within the Pentagon and in Washington by the billions of dollars expended annually for defense are enormous and have been growing. Hence the charge of a munitions lobby.

Local chambers of commerce, municipal and State officials, labor unions, industrial associations, the industries concerned and the Congressmen representing the affected areas all combine to exert pressures in favor of their own areas.

A CALL TO ARMS

When a missile may be threatened with cancellation or cutback, the call-to-arms is like a tocsin.

The missile's value is advertised—sometimes at the expense of the taxpayer. Congressional delegations and public opinion are mobilized, and economic bogeymen are invoked. Calm, nonpartisan, and technical judgments become difficult.

Therefore, the conflict-of-interests statutes involving retired service officers constitute far too narrow a frame for the pending investigation, as Mr. HÉBERT is undoubtedly aware. So far, however, congressional discussion of the problem has focused attention only upon this phase of the problem.

Senator PAUL H. DOUGLAS, of Illinois, for instance, has produced a list of 721 retired officers who are employed by 88 companies that have defense contracts. An accompanying statement by the Democratic Senator had overtones that seemed to imply some sinister intent lay behind the facts.

It is possible that some of these officers have utilized their service associations too zealously on behalf of their employers.

Yet Mr. HÉBERT's investigation will show that existing conflict-of-interest laws discriminate against the retired service officer. In the first place, none of them can work—after retirement—for other Government departments without giving up their service retirement pay.

By this provision of the law, the Government loses the services of able men who still have contributions to make in the fields of administration, technology, intelligence and other skills.

RULE HELD DISCRIMINATORY

In the second place, existing laws single out retired officers of the regular uniformed services—but not retired members of the reserve components—for special discriminatory treatment not accorded any other type of Federal employee.

The retired regular officer is subject not only to the criminal code that contains provisions to punish those who conspire against the Government's best interests and are guilty of fraud, bribery or deceit. He is also subject to a plethora of other laws, regulations and decisions of the Comptroller General. Many of these inhibitions are dated by the years or were passed decades ago to cover special circumstances now ended.

There is also discrimination within the services. A retired Navy or Marine Corps officer, for instance, is more severely restricted in terms of his private employment than an Army or Air Force officer.

Mr. HÉBERT's committee, therefore, can do the nation a service if it keeps its investigation in perspective. It should recognize that the retired officer is only a very small part of a much bigger problem; that the retired officer's services are needed both by industry and government; that very few, if any, are guilty of any improper acts, and that a clarification, modernization and codification of the conflict-of-interests laws and regulations—with discrimination eliminated—is in the public interest.

Public Buildings Act of 1959

SPEECH
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 7645) to provide for the construction, alteration, and acquisition of public buildings of the Federal Government, and for other purposes.

Mr. SMITH of Mississippi. Mr. Chairman, I wholeheartedly endorse H.R. 7645. I want to congratulate Chairman JONES and the members of his subcommittee for their successful effort in working out a bill which will allow a reasonable public buildings program and at the same time keep it fully under the control of the Congress. I am very pleased to join in sponsorship of this legislation. I hope the Congress will pass this bill without any delay.

Congress Has Duty To Curb Courts

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, July 9, 1959

Mr. THURMOND. Mr. President, the public demand for congressional action to curb the usurpations and excesses of the Warren Court continually grows stronger. The people of the country are now aware that the Supreme Court shows no inclination to limit itself to a judicial function. As a result, the public looks to Congress to reinstitute by legislation the proper balance of power between the judicial branch on the one hand and the executive and legislative branches on the other. The general concern over this question is evidenced by the increasing number of editorials on this subject, one of the most able of which appeared in the Greenville News of Greenville, S.C., on July 1, 1959, entitled "Congress Has Duty To Curb Courts." I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONGRESS HAS DUTY TO CURB COURTS

The U.S. Supreme Court, which has been known to keep an eye on the political weathervane, seems to be showing signs of carrying out, with all deliberate speed, something of a strategic retreat.

We have known for some time that at least a few members of the Court were concerned over the popular reaction to the 1954 decision against school segregation. The Court obviously did not anticipate the difficulties that would be encountered in enforcing that decision.

Also, there is a faint hope that the Court is trying to wigwag a signal to some of the lower Federal courts that they, especially the circuits courts of appeals, are moving a bit too rapidly in some instances in reversing district court decisions allowing certain school districts additional time in which to make a reasonable start toward ending racial discrimination in the assignment of pupils.

One such faint sign appeared some 6 months ago when the Court upheld the legality of the Alabama pupil assignment law. Still another appeared when within the last 2 or 3 weeks the Court ruled, in an integration case in Virginia, that State laws should first be construed by State courts before plaintiffs could appeal to the Federal courts.

In this instance, the Court plainly went against several Federal court precedents.

In more recent decisions the Court modified to some extent the precedents it had set in other decisions holding that State laws were invalid in fields in which Congress had legislated. It also modified previous decisions relating to the investigative powers of Congress.

It could have been coincidence, although we doubt it, that these decisions were handed down at the time Congress was debating the Smith bill.

This bill is aimed at curbing the power of the Court to do what it refrained from doing in the last two cases, but which it had done in previous cases. This was to invalidate appropriate State laws and to attempt to tell Congress under what circumstances it could question witnesses in congressional investigations.

The House last week passed the Smith bill by a healthy margin. What the Senate will do is uncertain. The Senate last year rejected by a one-vote margin a similar bill passed by the House, but conservative Senators are sure to make a fight of it.

The leftwing elements, naturally, are opposing it both in and out of Congress. Labor unions and the NAACP are lobbying against it and leftist Senators are saying it would open the way to endless litigation and might lead to the reversal of certain Supreme Court decisions they cherish.

But something must be done to slow down the runaway Supreme Court. A way must be found to persuade or force it to stick to interpreting the law as written and to respect the obvious intentions of Congress rather than taking off on sociological tangents and construing the law according to what the Court thinks it should mean rather than what Congress intended it to mean.

The leftists say the bill goes too far. Actually, it doesn't go far enough in the direction of protecting the rights and powers of the State governments.

But it is a start, and it should be enacted.

In the long view, of course, the answer to the problem of the Court must come from the Court itself. Acts of Congress may provide a stopgap here and there, but only the judiciary can confine the courts to their primary function of interpreting the law as written instead of changing the meaning of the law to fit a pre-determined conclusion as to what is desirable in a given set of circumstances.

This may come about, for eminent judges and some of the most distinguished lawyers in the country have openly expressed their concern over the trend toward the Supreme Court's making law as opposed to merely interpreting the law. This seems to be having its effect.

But, meanwhile, Congress should exercise its power and responsibility to regulate the jurisdiction of the courts.

Slowing Down Security Nonsense

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks I include herewith an editorial written by Mr. Fred Andrus in the Astorian-Budget, Astoria, Oreg.:

SLOWING DOWN SECURITY NONSENSE

The Supreme Court has handed a rebuke to our security-happy Government by holding that some 3 million civilian employees of contractors on military contracts don't have to meet Government security standards.

This rebuke might have a healthy effect on a government that carries the security screening of people to ridiculous extremes. How could the Government possibly make sure of the loyalty of 3 million people. It would take about 300,000 watchdogs to do the job right.

There's a lot of other nonsense in the Government's security program which the Supreme Court decision didn't touch. Too much information is classified. Secrecy cloaks activities of some agencies having little or nothing to do with military matters.

The whole security program needs a complete review and modification. Maybe this Court ruling affecting one phase of it will inspire a whole new look at the situation.

Certificate of Recognition Awarded to Mr. Max Abelman by the Brooklyn Academy of Music

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mr. ROONEY. Mr. Speaker, at a meeting of the Brooklyn Academy of Music held on Wednesday, June 3, 1959, at the Equitable Savings & Loan Association, Brooklyn, N.Y., a certificate of recognition was awarded to Mr. Max Abelman who, for many years, was secretary of the Jewish Hospital of Brooklyn. The Honorable J. Vincent Keogh, chairman of the awards committee of the centenary dinner of the Brooklyn Academy of Music, and the brother of our distinguished colleague, the gentleman from New York [Mr. KEOGH], made the presentation. Mr. Justice Keogh's remarks on this occasion were as follows:

Not because his name is first on the list, but because he is first in our hearts, I should like to present a beautifully embossed certificate of appreciation to a great friend not only of Brooklyn but particularly of the Brooklyn Academy of Music. Since so many distinguished bankers are present at this meeting held at one of our most progressive banking institutions, the Equitable Savings & Loan Association, it is interesting to learn that our awardee started his career with the Manufacturers Trust Co. He is, therefore, at home with you bankers. Of course, we particularly associate him with his unselfish work at the Jewish Hospital of Brooklyn. Through his personal efforts, kings, queens, premiers, presidents, and persons of high renown, from the four quarters of the globe, autographed the walls of the children's ward at the hospital. All communal activities of varied interests in our great borough were beneficiaries of the tireless, dynamic zeal and enthusiasm of this man whom we honor today by having him accept this certificate as the symbol of the presentation of all the certificates to all you good people whose efforts made the centenary dinner of the Brooklyn Academy of Music such a glamorous social and financial success.

First on the list, first in our hearts, it is a real pleasure to present the certificate of appreciation to one who we pray will long be with his Brooklyn neighbors, a philanthropist, humanitarian, and true gentleman, Max Abelman.

The certificates of recognition awarded to Mr. Abelman read as follows:

The Brooklyn Academy of Music presents this certificates of recognition to Max Abelman for outstanding efforts in furthering the development of culture, education, and the arts, and for strengthening the position of the Brooklyn Academy of Music so that it may better serve the community's needs in the years ahead, as it has so effectively done through the past century.

Through your efforts and those of other public-spirited volunteer workers, the centennial gala banquet was a notable success. The benefits therefrom will give new strength and importance to this distinguished institution of which Brooklyn is justly proud. Its presentation of lectures, discussions, travelogs, and distinguished artists from many lands brings enlightenment and understanding to our fellow citizens. Your help in the effort to provide our neighbors with an enriched life and significant cultural opportunities is gratefully acknowledged in behalf of the centennial gala committee, the governing committee of the Brooklyn Academy of Music, and the trustees of the Brooklyn Institute of Arts and Sciences.

ROBERT E. BLUM,
President, the Brooklyn Institute of Arts and Sciences.
MAXIMILIAN MOSS,
Centennial Gala Chairman.
A. S. ROSCOE,
Centennial Gala Cochairman.
E. J. LIVESEY,
Chairman, Governing Committee Brooklyn Academy of Music.
W. B. HENDAR,
Vice Chairman, Governing Committee Brooklyn Academy of Music.

The Less Than 90 Days of Service Veterans

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter of transmittal and a statement from Mr. George Dreisbach, of Freeland, Pa., regarding the less than 90 days of service veterans:

FREELAND, PA., *July 2, 1959.*

Hon. DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: Enclosed is a letter concerning the less than 90 days of service veterans.

It would be helpful if a copy of the letter could be placed in the hands of each member of the House Committee on Veterans' Affairs, and each member of the Senate Committee on Armed Services.

Perhaps, the best thing would be to have the letter inserted in the Appendix of the CONGRESSIONAL RECORD, where it would—I hope—be seen and read by the committee members of both Houses.

Would it be asking too much to have this done, Mr. FLOOD?

Your views and suggestions will be greatly appreciated.

Thank you very much.

With best wishes I remain,

Sincerely,

GEORGE DREISBACH.

THE LESS THAN 90 DAYS OF SERVICE VETERANS

I was a permanent employee in the U.S. Mint, Philadelphia, Pa., and retired on July 1, 1950, after 33½ years of service. I am 73 years old.

When the draft call came in 1918 for men in my age bracket (I was 32 then) I was placed in deferred classification (not at my request) by the draft board. Sometime later on a call was issued by the War Department for volunteers to serve in the Motor Mechanics Division, I applied, was accepted, and sent to Camp Pitt, University of Pittsburgh, Pittsburgh, Pa. I was in the Army from October 15, 1918, to December 10, 1918, just 57 days. The ending of the war prevented further service in the Army.

All bills that are introduced in the House and Senate contain the 90 days of service limitations. I would like to offer the following comments in favor of the less than 90 days of service veterans, and offer two suggestions.

All soldiers were in the same Army, regardless of the number of days of service, ready to fight for the same cause; protect the same flag; serve the same country; and every soldier took the same oath to defend the United States of America.

The lives of the more than 90 days of service veterans was disrupted to a greater extent than was the lives of the less than 90 days of service veterans, of course, but the latter would have served days, weeks, months, more than they did if the war had not ended.

Just what is wrong with the less than 90 days of service veterans? What is the magical difference between 90 days, or more, of service and 89 days, or less, of service?

It is hard to understand the discrimination against the less than 90 days of service veterans because the high cost of living; the prices of commodities; sickness, and the excesive medical costs involved, affects the one group as much a it does the other group.

May I repectfully offer the following suggestions: (1) That all veterans who served 89 days, or less, be granted the full annuity and benefits when they attain age 70, or have already passed that age; or (2) all veterans who served 29 days, or less, be granted one-third the full annuity and benefits; and all veterans who served 30 to 89 days, inclusive, be granted two-thirds of the full annuity and benefits.

Respectfully submitted.

GEORGE DREISBACH.

Khrushchev's Economic Offensive

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, July 9, 1959

Mr. HUMPHREY. Mr. President, 5 years ago Carroll Kilpatrick wrote an article entitled "Malenkov's Trade Weapon." That was before most Americans took seriously the Soviet economic offensive. Today this distinguished correspondent of the Washington Post and Times Herald brings his thesis up to date in an article, "Khrushchev's Economic Offensive," which appears in the summer number of The Virginia Quarterly Review. I ask unanimous consent that this thoughtful article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Virginia Quarterly Review, Summer, 1959]

KHRUSHCHEV'S ECONOMIC OFFENSIVE

(By Carroll Kilpatrick)

I

Nearly 5 years ago, I argued, in an article entitled "Malenkov's Trade Weapon," that the free nations should coordinate their foreign economic policies as a bar to Soviet economic penetration. At that time, the Russian trade offensive was in its very early stages; almost no one envisioned the possibility of a serious Chinese Communist trade drive. Now, with both having moved into high gear, and with the Eastern European satellites having become major Communist trading powers, the free nations are confronted with a complex and far-reaching challenge.

In recent months, three related developments of great significance have emphasized the significance of this challenge. The first is that Premier Nikita S. Khrushchev has relaxed the old Stalin policy of economic self-sufficiency. The second—possibly a major reason for the first—is that the Communist world's spectacular economic advances have made it necessary to look abroad for new equipment and raw materials to feed its vast industrial machine. Finally, the bloc's aid program has been accelerated.

For the West to fail to note the significance of what is happening would be to make the same mistakes that were made in discounting Soviet scientific and technological advances in the presputnik days.

II

During his visit to this country earlier this year, Deputy Premier Anastas I. Mikoyan repeatedly said that Russia wanted to expand its trade with the United States but that American Government restrictions stood in the way. In reply, American officials said that Miyokan was not serious about a desire for increased trade. If the Soviet Union wants to trade with the United States, the officials said, all it has to do is, quite simply, to start trading.

To understand Mikoyan's motives, it is necessary to understand the new role which trade has assumed in the Kremlin's scheme of things. For a Communist state, trade is always a means to an end, not an end in itself; in other words, trade is an instrument of policy. Yet we have often been misled with respect to Soviet trade policy because we have insisted that it was carried out only for devious and harmful political ends. The "Great Soviet Encyclopedia," faithfully expressing the Leninist doctrine, has helped to confuse us with its often quoted statement that "the foreign trade policy of the U.S.S.R. is part of the overall foreign policy of the U.S.S.R."

Today Russian trade involves more than that. It also is part of the overall domestic economic policy of the U.S.S.R. Without discounting the important and often controlling foreign policy aspects, particularly as they relate to underdeveloped countries, it is clear that domestic considerations are increasingly important. In all probability, domestic considerations will receive a higher priority in both Russia and China as Communist industrialization proceeds.

An example was the Russian dumping on the world market last year of tin and aluminum. There was serious distress in the West, especially in some Latin American countries, as a result of the price declines that followed. We may expect similar moves in the future, as Communist countries develop the capacity to allocate more goods for export. But we deceive ourselves in attributing every such action to a desire to make economic warfare on the capitalist countries. It is fairly well established that Moscow had another motive: to obtain pounds sterling for purchases in Malaya, Ghana, South Africa, and New Zealand. The Kremlin looked around for something it could spare which could be sold for sterling; tin and aluminum were found to be available.

This is not to say that Russia does not use its expanding economic power for political ends. The recent experience of Finland is instructive and should be a warning to all countries not to let themselves become dependent upon Communist trade. By a simple turn of the economic screw, Moscow caused considerable economic dislocation in Finland and brought about the fall of the Finnish Government. Although Russia seemed to be primarily upset becauses its trade relations with Finland had not worked out satisfactorily, there were also political considerations. In the first place, Moscow never liked the Fagerholm government, a coalition of all non-Communist parties, which took office on August 29, 1958.

For the first time since the war, the government included Finland's Conservative Party—a businessman's party, with 29 seats in the 200-man Diet, which favored closer economic ties with the West. Also for the first time since the war, the coalition government showed potential signs of real strength, capable of attacking Finland's economic problems on a realistic basis. That was as disturbing to Moscow as to Finland's Communists.

Most experts now think that the decisive factor resulting in the cancellation in the fall of 1958 of all trade relations and the withdrawal of the Soviet Ambassador was more prosaic. The Finns were losing interest in Russian imports. The independent Finnish businessmen and consumers found that imports from Europe and the United States were more attractive in price and quality. The most notable example was automobiles. After the war, when no other cars were readily obtainable, the Finns purchased all the Russians cars possible.

By 1958 the Finns began to show a marked preference for European cars, and Russian cars could be seen piling up unsold on the docks in Helsinki. There also was trouble over steel. Under the Soviet-Finnish trade agreement, Finland agreed to purchase a specified amount of Soviet steel in 1958. But during the course of the year, Finnish manufacturers found that they could purchase steel cheaper in Europe than in Russia. Russia would not meet the world price, and so the Finns did not buy all the Russian steel they had originally agreed to purchase. They offered instead to take Russian raw materials like petroleum, cereals, cotton, sugar, and coal.

Moscow, however, insisted that the agreement be carried out to the letter. When Helsinki could not force Finnish shipbuilders to buy steel they did not need or to pay the higher price for Russian steel, Moscow canceled the trade agreement, leaving the Finns, who do 25 percent of their foreign business with the Russians, in an extremely difficult position.

At the heart of the problem was the fact that Finland was selling more to Russia than Russia was selling to Finland. Hence, Russia was going into debt to the Finns to finance its purchases in Finland. That was particularly galling to a big country with ambitions to become a leader in world trade. Moscow forced the Finns to form a new government as the price of renewing the trade agreement.

The world's neutralists who are interested in increased trade with the Soviet Union or Red China would do well to study the history of Finland's recent experiences with her big neighbor.

Both Russia and China, as well as the eastern European satellites, are moving forward industrially with great determination, energy, and skill. As their domestic economic power grows, their power as traders will increase. They will require more imports to satisfy the demands of their industrial enterprises. They will find it necessary—and easier—to allot a larger part of their production for exports to pay for needed imports. Already China is cultivating the markets of southeast Asia because it sorely needs the benefits it can derive from foreign trade. Almost at the same time that Russia canceled its trade with Finland, China canceled its trade with Japan, in an attempt to embarrass the Japanese Government during an election campaign; but because Japan was in no way dependent upon China's trade the cancellation had little or no political or economic consequences in Japan.

III

Premier Khrushchev outlined the Soviet's primary domestic eocnomic aim when he told the 21st Soviet Communist Party Congress this year that the fundamental economic task is to overtake the most highly developed capitalist countries in per capita production. Not only Khrushchev but other Soviet leaders have said that the basic economic task of the U.S.S.R. is to surpass the industrial lead of the United States at the earliest possible moment.

While virtually all the experts regard these claims as exaggerated, particularly as to overcoming the United States in per capita output, they take Khrushchev's ambitions seriously. With Russia's larger population, its rigid discipline, and its intense concentration on essential production, it is moving from a position of a poor second to the United States to that of a strong second. As Russia and its allies grow industrially, they will become an increasingly serious threat to free world trade relations.

Since Stalin's death, there has been a sharp increase in the foreign trade of the Communist countries. This has been notably true with respect to trade between the Eastern European satellites and the Middle East.

The story of the Eastern European satellites—which had a stronger prewar trade history than Russia—suggests that both foreign policy and domestic economic considerations are involved. The satellites have been the spearhead of the Communist trade drive in the underdeveloped areas. Between 1954 and 1957, for example, the satellites showed a 90-percent, or $400 million, rise in trade with less developed countries.

In 1955, the satellites outranked Russia in trade with the Afro-Asian countries by about four to one and in 1957 by about three to two. The satellite trade drive, according to a study by Jan Wszelaki for the National Planning Association, has evolved as much from the area's large-scale industrialization program and consequent need for primary products as from political motives—if not more.

Soviet imports from Eastern Europe, as Wszelaki found, have allowed the Soviet Union to relieve many of its shortages, to speed its economic development and to concentrate upon high priority targets, "including production of expensive modern armaments and, lately, deliveries of equipment to uncommitted parts of the world." Like the Western Powers, Russia increasingly requires imports. No doubt a study of Russia's long-range needs would show the importance of imports in the future just as similar studies have shown the need in the United States.

Between 1955 and 1957, total Soviet foreign trade increased from a total of 26 billion rubles to 33 billion. Soviet trade with nonbloc countries increased at a faster rate—from 5.7 billion rubles to 9.3 billion. Soviet trade with the United Kingdom between 1955 and 1957 rose by about 33 percent, by about 60 percent with West Germany, by nearly 20 percent with France—and by 2 or 3 percent with the United States. With Canada, the increase was by about 300 percent, but it was from a very small base.

American officials are entirely justified in saying that Russia is not concerned with establishing "normal" trade relations, that it is interested in trade with America only for what it can get out of it and that it has little or no interest in buying consumer goods. Khrushchev said last year, in talking about the need for chemical factories, that it would be "expedient" to order the equipment in capitalist countries. In that way, he said, the Soviet Union would be given the opportunity "for quicker fulfillment of the program for the construction of new chemical enterprises without wasting time on creation of plans and mastering the production of new types of equipment."

That comment alone should be sufficient argument for the West to coordinate its foreign economic policies. Certainly chemical factories should not be sold to Russia without a quid pro quo. If Russia wants to buy our technical know-how, it should be permitted to do so only in exchange for economic or political considerations important to our side. In other words, if Russia seriously wants to trade, as Khrushchev and Mikoyan have said, trade in other than consumer goods should be permitted only after negotiations and concessions.

IV

Early last summer Khrushchev wrote to President Eisenhower proposing an increase in trade between the two countries. He said it could amount to "several billion dollars over the next several years." Mikoyan apparently convinced some American businessmen that there were real opportunities for trade but for the stringent controls the Government puts on exports to Communist countries.

But both Khrushchev in his letter to the President and Mikoyan in his talks at the State Department said that trade could be expanded only if the United States would grant long-term credits. Thus, they acknowledged that Russia is short of foreign exchange and also short, for the time being, of goods it would like to sell abroad. The suggestion for credits "was presented to me as an absolute precondition to increased trade during my talks with Mr. Mikoyan," C. Douglas Dillon, Under Secretary of State for Economic Affairs, said after the Mikoyan visit.

Since the Soviet leaders must know that the Johnson Act forbids the extension of credit to a country that has defaulted on its debts to the United States, American officials concluded that the Soviet appeals were hollow and designed for propaganda purposes. The appeals were almost certainly designed to try to destroy this country's restrictions on strategic trade with Russia. Dillon reminded Mikoyan that during World War II the United States shipped some $11 billion of lend-lease goods to Russia and that it is the only important country that has not settled its lend-lease account.

It is important to remember that the United States made no claim for payment of war goods shipped under lend-lease, but it has claimed $2.6 billion for civilian-type goods. In 1951, this country offered to settle the entire claim for $800 million over a long period. Russia offered $300 million. Mikoyan showed no inclination to revive the talks—possibly because Russia still has serious foreign exchange difficulties and does not want to use its gold hoard.

Russia's foreign exchange problem is best exemplified by its determination to export automobiles—one of the commodities in shortest supply in the Soviet Union. Although it produces only about 125,000 cars a year, it has allocated about a fourth or fifth of this number for export, primarily for prestige and political purposes but also to obtain foreign exchange. The extreme difficulty of doing business with Russia on normal pricing terms is shown by the fact that although the cars sell for 10,000 rubles or more in Russia, they have been marketed in Greece for 3,300 rubles, in Iceland for 4,700, in Sweden for 4,400, and in Argentina for 2,500 rubles. As long as such discrepancies exist, Russia cannot be accepted as a reliable trading partner. If Russia wants to improve its trade relations with the United States, its pricing policies suggest an avenue for negotiation. Likewise, if negotiations should start, the United States should insist upon some kind of assurances against haphazard dumping operations such as those last year in tin and aluminum.

If Moscow were interested in trade for its own sake, it would not find the West's strategic controls onerous. Dillon invited Mikoyan to begin trading but of course the Russian visitor was not interested in buying refrigerators, automobiles, and other consumer goods. Mikoyan was more interested in wrecking the strategic controls so that he could purchase chemical factories and other technological developments.

"When we hear the Soviets complaining about our export controls," Dillon said, "we must remember that the Soviet Union, through its state trading monopoly, maintains complete control over all exports, permitting only those which are considered to suit the Soviet objective of the moment."

Actually, the United States is buying more from Russian at present than Russia is buying here, with the Soviets probably using the dollars obtained from this favorable exchange for purchases in other countries. Russia's difficulties in selling here are partly the result of the abrogation by Congress at the time of the Korean war of most-favored-nation treatment. The denial of most-favored-nation treatment means that tariffs on Russian goods brought into the United States often are higher than those charged on similar goods from other countries. Mikoyan complained bitterly about this to Dillon and at length in his report on his visit to the 21st Party Congress. Nevertheless, most-favored-nation treatment certainly should not be given to Russia without concessions of equal value on her part.

As for controls, they are a proper if not complete protection for American technology against Communist pirating practices. The difficulty is that many of our allies, notably Great Britain and West Germany, have less stringent controls and are much more eager to encourage unrestricted trade with the Communist nations. Nevertheless, the controls have bought the West time and they should not be abandoned simply because Moscow complains or because some business is lost.

Overly restrictive enforcement of controls on our part, however, sometimes plays into the hands of Russian propaganda unnecessarily and denies business that might as well go to American as to European firms. The recent case of the steel pipe order is an example of bungling on our part. Although steel pipe is not on the prohibited list, the Commerce Department, despite mild objections from the State Department, denied a license for the export of $2.6 million worth of steel pipe to Russia. The order then was placed in West Germany. A more flexible approach to the problem on our part would have been more realistic.

While the least developed countries should view any trade deals with the Communists with great suspicion, and all countries should avoid becoming dependent upon Communist trade, a powerful nation like the United States should not fear trade with

the Communist bloc per se. Our objective is to protect our interests and to obtain political and economic concessions from a powerful antagonist for the trade arrangements we enter into. We recognize that Russia has more to gain from the trade relation than we do, and we should be wary. We want to be sure there are compensations to us.

V

Trade is, after all, a two-way street. In order to import, the Communist countries must export. In other words, they must produce goods for export to pay for goods received. We should not be afraid of trade when the rules are followed, and we have much to gain in seeing to it that the Communist countries grow in their dependence upon trade. In the long run, trade may help to relieve tensions, and Paul-Henri Spaak may be right in saying that "a rich Communist is probably less to be feared than a poor Communist."

Nevertheless, our immediate interest is not in making the Communist rich but in preventing him from using his expanding economic power to disrupt the Western alliance. We shall probably need to use a pragmatic approach for a number of years. We know that the Russians and the Chinese want expanded trade. We have already said that we have no objections to virtually unlimited trade in consumer goods, except with the Chinese Communists, with whom all trade is barred. We are now in the process of expanding the trading lists, which should not be cause for alarm if we drive hard bargains and negotiate political and economic points in dispute as we move toward fewer restrictions. The way in which the Soviets act and in which they live up to their trade agreements should prove invaluable tests of the Kremlin's good intentions. If there are other moves toward more normal political relations, the stage would then be set for additional trade negotiations.

We should take care, however, to see that Russia does not make any free country dependent, as Finland has become, upon its trade. If necessary, we should be willing to make uneconomic deals to take Egyptian cotton or Ceylonese rubber to enable such countries to maintain their economic independence of the Communist orbit. At the same time, we must at all times work to enlarge the area of free world cooperation in economic and political matters, doing all we can to strengthen the economic unity and cooperation of the friendly nations.

Wilkes-Barre's Irem Temple Wins Acclaim in Parade at Atlantic City

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wilkes-Barre Record of Wednesday, July 8, 1959:

IREM WINS ACCLAIM IN PARADE AT SHORE

Irem Temple won acclaim from the many thousands who lined Atlantic Avenue and the boardwalk and filled Convention Hall yesterday morning for the 85th imperial council sessions which got underway with the escort parade.

Parade honored Imperial Potentate George E. Stringfellow, of Crescent Temple, Trenton, N.J., who 10 days ago made an official visitation to Irem Temple at the outdoor ceremonial at the country club.

Headed by Potentate David N. Schooley, Irem had approximately 400 members in the line of march with its brass band, bugle corbs, Arab patrol, legion of honor, chanters, police, ceremony producers, stagecrafters, string band, appointive officers, and members of the divan. Irem was 25th temple to pass in review in the 5-hour parade of uniformed organizations of 47 temples.

Specifically acclaimed were Irem's band of 60, one of the largest musical organizations in the parade, and the string band in feathered mummers' costume, the military pomp of the bugle corps, the precision marching of the Arab patrol and legion of honor, and the singing by the chanters.

Irem will participate with all units in the spectacular illuminated parade tomorrow night on the boardwalk to welcome the incoming highest officer of Shrinedom, Dr. Clayton F. Andrews, of Sesostris Temple, Lincoln, Nebr. Again Irem will be 25th in the line of march in a parade expected to take 5 hours to pass the reviewing stand. R. Lanning Ransom will be parade marshal for tomorrow night's parade, filling the same capacity he held yesterday.

T. Edison Cooke, president of Irem Temple's oriental band and bugle corps, has had his name proposed as a candidate for an office in Association of Shrine Oriental Bands with representation from 141 temples. Business meeting of the association will be held this morning.

Irem caravan of nine buses will return Friday morning, leaving Madison Hotel at 9 a.m. and arriving in Wilkes-Barre about 3 p.m.

Automotive Legislation Is Needed—H.R. 880 and H.R. 883

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mr. MULTER. Mr. Speaker, I have been attempting, for the last 6 years, to have reform legislation enacted for the automotive industry.

On January 7, 1959, I introduced H.R. 880 and H.R. 883. The first is a measure to require certificates of fitness in the sale of automobiles and the other prohibits tampering with speedometers.

On July 7, 1959, it was my privilege to appear before the Health and Safety Subcommittee of the House Interstate and Foreign Commerce Committee in support of these bills.

The following is a transcript of my testimony:

STATEMENT OF THE HONORABLE ABRAHAM J. MULTER, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEW YORK, JULY 8, 1959

Mr. MULTER. Thank you, Mr. Chairman.

May I at the outset thank you for the opportunity of being invited here to express my views on this important legislation you are considering. At the same time I want to take a moment to commend the distinguished chairman and his distinguished colleagues on this subcommittee for their continuous and continual attention to this very important subject of attempting to make our highways safe and, as a necessary coincidence of that, to try to make automobiles safe and to make automobile drivers do their share, as well as the automobile manufacturers, in improving the safety of our highways.

If it is agreeable to the chairman, I will submit my formal statements for the record in support of H.R. 880 and H.R. 883, and ask that they be made a part of the record.

I will briefly summarize them for the committee. I think that in that way we can save some time.

Mr. ROBERTS. Without objection, those statements will be filed for the record.

(Mr. MULTER's statement in support of H.R. 880 is as follows:)

Mr. Chairman and members of the committee, I appreciate the opportunity afforded to me to submit to you my views in support of my bill, H.R. 880.

The bill as introduced requires a certificate of fitness by the manufacturer of any motor vehicle which is shipped, sold, transported, et cetera, in commerce. Such certificate of fitness must state that (1) the motor vehicle and all parts and accessories have been inspected and found in good working order, safe and ready for operation on the public highways and in complete accord with all specifications as set forth in all descriptive and advertising matter; and (2) the vehicle has been road-tested for at least 100 miles and found in good operating condition after having been so road tested. The bill prescribes a fine of not more than $10,000, or imprisonment for not more than 1 year or both. The act shall take effect 90 days after enactment.

If this bill is enacted into law, it should prevent "lemons" from getting into the hands of customers. You, gentlemen, are familiar with the District of Columbia case in which a dissatisfied customer painted lemons all over his new automobile and drove it through the streets of Washington. This is not good for the customer, the car dealer, or for the manufacturer. It is, indeed, poor public relations.

As we understand the law in the District of Columbia as it stands today, there is nothing to prevent a dissatisfied customer from painting lemons on a new car. In this case the car dealer sued for an injunction under a District of Columbia traffic regulation prohibiting the painting of articles on automobiles. On appeal the traffic regulation was declared unconstitutional on the grounds that it was an infringement of free speech. It is hoped that such dissatisfaction by all concerned would be obviated by the enactment of this bill.

The requirement that the vehicle be road-tested for 100 miles assures tht the vehicle will be in good operating condition when it is sold to the customer. The bill also requires that all parts be inspected, including vital parts such as the transmission, steering gear, etc. We all have heard of those fantastic cases where the steering gear has come off in the hands of the operator, or the motor has literally dropped out of the car, or a defective wheel has collapsed as in the case of *MacPherson* v. *Buick Motor Co.* (111 N.E. 1050 (1916).

Another important aspect of this legislation is the requirement that the motor vehicle and its constituent parts be in complete accord with all specifications as set forth in all descriptive and advertising matter. There is no doubt that some advertising has gone beyond "mere puffing" and does not truly represent the product.

It goes without saying that this bill is in the public interest. It is also in the interest of the manufacturers, the car dealers, and car purchasers.

A somewhat analogous situation may be pointed out in the certificate of air worthiness required by the Civil Aeronautics Authority before a plane will be allowed to take to the air.

It is true that special provision is made for the required inspections, and that air-

planes have not yet reached the volume output of motor vehicles. But motor vehicles, of present power, are still a dangerous instrumentality, and some more effective measures must be found to insure that mechanically, at least, the likelihood of danger from inherent defects is reduced to the minimum. My bill is a step in that direction.

Clearly, my bill will, if enacted, help to prevent automobile accidents due to defective cars and parts. It will protect the public from physical injury, instead of forcing them to seek redress through legal process by tort action for money compensation. No amount of money can ever compensate for a maimed human body or for the death of a loved one.

This bill will take the doctrine of caveat emptor—let the buyer beware—out of new-car sales. In other words, if an unfortunate new-car buyer now, perchance, draws a "lemon," the attitude is that he is just "unlucky." The new-car dealer finds it difficult to iron out the mechanical "bugs" in a "lemon." This bill would take the onus off the dealer—the present 90-day warranty—and place it on the manufacturer, where it should have been all of the time. Obviously, it is easier for the manufacturer to check for these defects through the course of the manufacture of the vehicle, and after its completion by the road test, than it would be for the dealer. Under the present procedure, we are locking the barn door after the horse has been stolen.

It is most unfair to the dealer to require him to correct inherent mechanical weaknesses in the manufacture of an automobile, lemon, or otherwise. It is not fair to subject a dealer's reputation and name to the painting of lemons on a car purchased from him and parade such car through the streets of any community.

It was Mr. Justice Holmes who said that an automobile was potentially a lethal weapon. It is just that when in good condition in the hands of a poor driver. It is the more so when in bad condition in the hands of the best driver.

In conclusion, I want to emphasize the public interest aspect of this legislation, and the safety feature. I repeat, if this bill would save just one human life, it is worthy of enactment. Some of you may know that I have been interested in the enactment of this legislation for a number of years.

I thank my distinguished colleagues for the kind of attention they have given me today.

(Mr. MULTER's prepared statement in support of H.R. 883 is as follows:)

Mr. Chairman and members of the committee, I appreciate the opportunity afforded to me to submit to you my views in support of my bill, H.R. 883.

H.R. 883, 86th Congress, requires the manufacturer of a motor vehicle to seal the speedometer thereof so as to prevent tampering therewith or to prevent its operation. The bill defines terms used, namely, manufacturer, motor vehicle and commerce. It prescribes a fine of not more than $10,000 or imprisonment of not more than 1 year or both.

It is commonly believed that it has become the practice for some used and new car dealers to tinker with the speedometer of their cars before placing them on the market. This has become so commonplace that it is almost considered "caveat emptor." Some car dealers feel that it is "mere puffing."

Let us examine this procedure of turning the speedometer back. Is it not really dishonest and morally indefensible even if considered on the same level as "the morals of the market place" in the words of Justice Cardozo? It is closely analogous to the sharp horse traders practice of a bygone era of doping horses to prime them for a particular trade or sale. If my bill is enacted it will be a step in the direction of probity in new and used car sales. I believe that we all agree that that there is a need for a step in this direction.

Frankly, gentlemen, if I personally were going to buy a used car or a new car, I would want to be assured of the "correct" mileage on the speedometer, be it high, or be it low, before purchasing such automobile. I think I am entitled to know the correct mileage on the speedometer when I purchase an automobile, as this is a primary consideration in determining the remaining useful life of the vehicle.

If enacted, this bill would do just that. Is not the public entitled to this protection? Is not this bill in the public interest? Is not this bill long overdue? Is it not a fraud to tell a customer that the mileage of a car up for sale is 30,000 miles when in fact, and the seller knows as a fact, the mileage of such automobile is 60,000 miles?

Can such a deliberate and intentional falsehood going to the heart of the consideration be classified as "mere puffing"? If the mileage is not a primary consideration, why do some car dealers practice this deceit of turning the speedometer back? Surely, it is done for the purpose of misleading and influencing the customer to buy when he has relied on the low-mileage reading.

Certainly, if the representation as to mileage is not already a material representation—as I believe that it is—the fact that the Federal Government would see fit to regulate such mileage by Federal law would make such representation a material fact without a shadow of a doubt.

It has been held that the setting back of an automobile speedometer to deceive customers as to material facts constitutes fraud. *Lizana* v. *Edward Motor Sales Co.*, 141 So. 295 (1932). The court in that case said:

"It is established in decisions in this State that the setting back of speedometers for the purpose of deceiving customers as to material facts constitute fraud. In the case of *Nash Mississippi Valley Motor Co.* v. *Childress*, 156 Miss. 157; 125 So. 708, it was held that representations by a seller of an automobile with reference to the mileage of such car constituted representations of a material fact on which the buyer had a right to rely, and that it is a matter of common knowledge that machinery of all kinds depreciates in value from wear and tear, and that the value of a secondhand automobile is largely dependent upon the number of miles it has been driven."

In regards to a new car, it has been held that the buyer of an automobile was entitled to rely on the representations of the seller or his agent that he was getting a new automobile, and he was not required to make a careful examination which might not have disclosed even to a mechanic that the automobile was not new, but had traveled about 1,500 miles, or that it had been in use by another buyer for 2 months.

In *District Motor Co.* v. *Rodill*, 88 A. 2d 493 (1952), a District of Columbia case, the court held that a buyer is entitled to rely on a speedometer reading to determine the all-important factor of mileage unless he has been put on notice, and the dealer is therefore under a duty to disclose his knowledge relating to the falsity of what the speedometer shows.

I say to you gentlemen at this hearing that such sales methods are nothing more than pure fraud, as indicated by the above three cases. It should be outlawed by a Federal statute without delay.

Now, I do not want to imply that all car dealers engage in this type of practice. It is the old story of the sharp operators which require policing in order to protect the reputable dealers and, of course, the public.

I think that the reputable dealers will support my bill. In fact, I think that my bill will aid used and new car sales because of the rehabilitation of buyer confidence which will be gained by the knowledge of customers that they can rely on the speedometer reading of a given car.

I am sure that you can see the need of legislation to correct this loophole in the law. We lawmakers have a public trust to enact just such legislation as this. If a positive attitude is adopted toward this legislation, this bill will be enacted into law and will be an instrument for accomplishing an enormous amount of good.

I have stated that it is a fraud to tamper with the mileage of a speedometer. Some of you gentleman may be thinking at this moment, why is this bill then necessary, as there are already laws punishing fraud, as indicated by the cited cases. The answer is that the ordinary law of fraud is not doing the job because of the difficulty of detection and proof. There is a dearth of cases as compared to what we have good reason to believe goes on in practice. It is required in this bill that the speedometer be sealed, thereby preventing tampering in the first instance without the necessity of catching the culprit redhanded, which is always very difficult.

I thank you for the kind attention you have given me today.

Mr. MULTER. Mr. Chairman and members of the committee, I am sure that you know I have been interested in this subject for a long time, and I have testified before this committee in previous sessions as well as on the Senate side. Directly in line with what the chairman said in his opening statement, is a clipping I have in front of me from the Wall Street Journal with the headline, "Shake, Rattle, and Roll—Ailing Autos, Shoddy Service Anger Owners, Bring Wrath on Dealers," and so on.

It goes on to tell the story about the automobile and the manufacturers of automobiles and the service of automobiles so well known to all of us. Strange enough, this clipping is dated July 19, 1957.

Of course, there are many others who could provide and my files are full of clippings to the same effect.

The first of my bills would seek to require a certificate of fitness to be issued by the manufacturer of any motor vehicle which is shipped, sold, or transported in interstate commerce.

The necessity of that, I think, is almost self-evident. The manufacturers for years have been delivering automobiles to the dealers under an agreement requiring the dealers to put them in shape for delivery to the purchasers. The dealer, because of the economic conditions involved, or other considerations, will then deliver the car, too frequently, after a superficial inspection and then stall the purchaser until the guarantee has run out. Then he will undertake to make the repairs or the corrections in the automobile that should have been made at the factory before it was sent on to the dealer. You cannot blame the dealer too much for that operation, because the economics of the situation probably require it. It is bad business ethics, of course, but bad business ethics many times will give way to the need to make a profit in order to stay in business.

Instead of spending his own labor and time and energy to put a machine in good shape for delivery ready for operation on the road, he will wait until he can make a charge for it. The certificate of fitness to be issued by the manufacturer will put the burden where it belongs, on the manufacturer of the automobile to make sure that it is fit for use before it leaves his place of assembly or manufacture for delivery to the dealer. Today the manufacturer requires the dealer to deliver the car in good condition.

I also provide in the same bill that there should be a road test of at least 100 miles by the manufacturer before he delivers that automobile to the dealer for sale to the ultimate consumer.

The other bill, H.R. 883, would seek to prevent one of the frauds that is perpetrated on the buying public almost every day in the week, in connection with the sale of either a new automobile or an old automobile. The purchaser today too frequently has no means of knowing how far or how long, or how many miles, that automobile has traveled before it is delivered to him. You probably know that many automobiles are delivered from the manufacturer, from his point of assembly to the dealers, by driving them over the highways and delivering them for sale to the customers as new cars.

Of course, the abuses are even more frequent in the used car trade where, no matter how far the car has been driven before it is put on the used car lot for sale, one of the first things done by most used car dealers—not all of them though—is to turn back the speedometer. Instead of showing that it has been driven for 60,000 miles, it shows that it was driven for 20,000 miles. Many times the speedometer is not connected at the factory before the automobile is put on the road for delivery to the dealer. When it gets to the dealer's shop, the speedometer is connected. It may run 100 or 200 miles and then, too, many of these cars will be used for demonstration by the dealers with the speedometers disconnected until they are ready to make the sale.

The speedometer may run 100 miles or 2,000 miles. It may be used 1 month or 2 months before finally delivered to the customer as a new car. Whether it is a new car or used car, the fraud is just as great and I think that my bill, H.R. 883, by requiring the speedometer to be sealed and with a provision to prevent tampering with the speedometer, will eliminate that fraud. There is not any doubt that there is a civil remedy. If the purchaser of the car, used or new, can find out and adduce proof in court that the speedometer was rolled back, he can get damages in a civil court.

My bill contains penal provisions and it will not be necessary to prove the person rolled back the speedometer or prove, by calling witnesses, that the speedometer was actually rolled back. My bill will prevent tampering with the speedometer in the first instance and require it to be sealed. If the seal is broken it has been tampered with.

The dealer, as well as the customer, will get some notice that there is something wrong with that car so far as the speedometer is concerned.

That, in brief, gentlemen, covers the proposals that I submit to you for consideration in connection with any legislation you will report to the full committee, and which your full committee may then see fit to report to the House.

I will be glad to try to answer any questions that any of the members may have.

Mr. ROBERTS. The Chair would like to thank the gentleman from New York for his interest in this subject and to thank him for his appearance before the committee.

The effects of your two bills are understood by the committee and I would say that your bills will certainly receive the interest and consideration of this subcommittee.

Are there any questions, gentlemen?

Mr. SCHENCK. Yes, Mr. Chairman.

First, I would like to make a very brief statement of commendation to our chairman. It has been my very distinct privilege and pleasure to work with him ever since the beginning of the former Subcommittee on Highway Safety and I have been pleased to continue that association. I want to commend him most sincerely for his continual interest in this very vital question of highway traffic safety and to commend him for his work as well as to share with him in the expression of the very splendid statement he made at the opening of this hearing.

Mr. Chairman, I would also like to commend our colleague, the gentleman from New York [Mr. MULTER], for his long interest and efforts in behalf of highway safety and for the legislation he has presented.

Specifically, I note that in H.R. 880, page 2, lines 3, 4, and 5, Mr. MULTER proposes that the vehicle be road tested for at least 100 miles prior to sale and found to be in good operating condition after having been so road tested.

I am assuming, Mr. MULTER, that you are referring to a road test by the factory?

Mr. MULTER. Yes, sir.

Mr. SCHENCK. Do you have any information, Mr. MULTER, as to the possible cost in time or money of such road tests and how they will affect the price of the automobile?

Mr. MULTER. No, I have no estimate of what that would cost. You may recall that in 1957, when I testified in support of a similar bill, I required in that bill much more extensive testing. Then the automobile industry did come forward and indicated that that would run the cost of an automobile so high that it would be impossible to sell an automobile at a reasonable price if they had to comply with all of the road testing required.

I am sorry that they did not come forward at the same time and tell us what kind of road testing, or to what extent they could afford to engage in road testing. When I introduced this bill, I took the minimum of 100 miles for road testing. If that is going to be too costly, I think the burden is on the manufacturers, the automobile industry, to come forward and tell us what kind of road testing they can afford to give us.

As Mr. Justice Holmes said, an automobile is a potentially lethal weapon. In the hands of a good driver, a bad automobile is certainly just that. Of course, in the hands of a bad driver, even a good automobile becomes a dangerous weapon.

Let us assume that we are only going to have good drivers. We cannot afford to let them be driving bad automobiles with defects that can be traced directly to the manufacturer. They ought to come forward and say, if this 100-mile provision for road testing is going to be too expensive, first, what it is going to cost and if that is too expensive, arrive at some medium or something that will be fair to them and at the same time fair to the consuming public so that we can get a good automobile coming from the manufacturer in the first instance.

Mr. SCHENCK. Mr. Chairman, if I understand correctly the total production of automobiles in the current year would be somewhere between five and six million new cars to test each one of them 100 miles would require a good many millions of miles of road work and a considerable number of man-hours by experienced drivers.

At the risk of indicating my age, may I call attention to the fact that in Dayton, Ohio, there was a time when we built an automobile known as the Speedwell and the Maxwell, and the Stoddard-Dayton. At that time each of those cars was road tested before the body was applied and I recall some of the road testing difficulties even under those conditions without crowded highways.

Probably Mr. MULTER would feel that the thorough inspection system now being used by most manufacturers would give adequate assurance for the condition of the car or would he still feel it ought to be actual road testing?

Mr. MULTER. Mr. Chairman, I do firmly believe that only the road test, whether the 100-mile test, or something less than that, only the road test will do the job. The inspection can only indicate to the eye that each of the parts is in place and unless he is going to take the trouble to test each bolt, nut, and screw to make sure that it is firmly fastened, and operating properly, visual inspection will never do the job.

Mr. SCHENCK. Mr. Chairman, if I may just ask one other question regarding H.R. 883 which proposes a complete certificate upon delivery of the car, what happens on the so-called bootleg car about which we have heard a great deal? That is, the car which is not sold by an authorized factory representative or dealer; who would be responsible for such certification?

Mr. MULTER. I think the certification in the first instance or the responsibility for the certification should be that of the manufacturer. I think to a large extent it would stop some of that bootlegging because the manufacturer will deliver his certificate to the legitimate new car dealer. It is possible that the new car dealer, if he is going to engage in bootlegging and turn that car over to somebody else, will probably turn the certificate over along with it. If the bootlegger cannot deliver the certificate at least the purchaser is on notice that something is wrong.

My bill requires a certificate to go along with the new car. If I do not get a certificate, I should assume I am not getting a new car.

Mr. SCHENCK. I appreciate my colleague's answer to that question and perhaps there could, or could not be, a transfer of certification. If there were such a transfer, it might be meaningless because of alterations?

Mr. MULTER. I think that is so, sir.

Mr. SCHENCK. Do you believe that this same certification should follow the so-called used-new car?

Mr. MULTER. A used-new car?

Mr. SCHENCK. Yes. In other words, any used car or so-called new car, at a lesser price on the basis that it was used—this may or may not be true—but that brings up a difficult situation, I think.

Mr. MULTER. Yes; it does present a somewhat difficult situation. However, again there, if it is a used car it should not have a new car certificate. If the man is willing to go to a used-car lot and take the chance of buying a new car slightly used, he is on notice as to what he is getting. If he is stuck, it is his own fault. If he is looking for a new car, he should not go to a used-car lot. It is just another method of bootlegging.

The dealer says, "This was just run around the corner by one of the executives of the manufacturing company and I got it at a low cost and you can have the advantage of that."

Then the buyer is on notice that he is getting something less than full value.

Mr. SCHENCK. Therefore, he should not expect service on a so-called nearly new car?

Mr. MULTER. That is right.

Mr. SCHENCK. On this same situation, how would you propose to administer the sealing of the speedometer and maintaining the seal? Would that be done by authorized speedometer service stations or authorized car dealers or authorized repair shops? Just who would have authority to unseal a speedometer, correct its operation and seal it back again? Who would administer that program? Who would police the program and see that these provisions were complied with?

Mr. MULTER. You have touched on a very important phase of the situation which is not covered by my bill. The speedometer, like any other part of the automobile, may get out of order and may require repair or may not be working properly and must be

reset. Again, somebody will have to do the job and somebody will have to work on it. I do think that it would require some further study and probably an additional provision added to the bill so as to indicate who would be authorized to make those changes, repairs, and who would be authorized to do the resealing. If the burden is to be on the manufacturer in the first instance, he complies when he delivers the car to the new car dealer. As to what happens to it after that, of course, I think we would have to put the responsibility on someone, or set up some method where there would be authorized persons to make those changes and repairs.

Mr. SCHENCK. Mr. Chairman, I appreciate the splendid answers of our colleague from New York [Mr. MULTER] and his long interest in these very important problems and his splendid cooperation. I surely hope that he will continue in his efforts to give us the benefit of any additional information or ideas he may have as to the changes he may want to recommend.

Mr. MULTER. Thank you, sir.

Mr. ROBERTS. I thank the gentleman from Ohio and I would also like to thank him for his gracious and generous statements and the way he has devoted himself to this problem. He has worked very hard in the past 3 or 4 years in trying to find some solution to this problem.

Are there any further questions?

Mr. DEVINE. Yes, Mr. Chairman.

Mr. MULTER, in your studies on this general subject have you come up with any percentage figures that would indicate the number of new cars involved in accidents or fatalities as a result of lack of certification or defective parts in processing?

Mr. MULTER. I have no figures I can give to the committee that would be of such a nature that you could rely on them. Unfortunately, so many accidents occur with the driver being killed where we just do not know what the cause was. We do not have a system, as we do have with the airplane, so that when there is a serious accident we immediately send out a corps of investigators to determine what happened; whether it is human failure, mechanical failure, or something foreign to the machine. We do not have anything like that and I do not suggest we can have anything like that with reference to the automobile. There are just too many on the highways to try to go to each scene of an accident and find out precisely why the accident happened. I am sure that from the reported cases that have gone through the courts over the years there are any number of accidents that are due to mechanical defects inherent in the machine before it was delivered but there is no way of proving that with exactness.

There are cases like the Buick case that went all the way to the U.S. Supreme Court where they held the manufacturer liable because of an inherent defect as a result of which the wheel fell off. There are any number of other cases of that kind but we just do not have the statistics because you cannot put your finger on it and say that the manufacturer is responsible for the accident.

Mr. DEVINE. Would you say then that the need for this legislation which you propose is based on a lack of quality and workmanship on the part of persons manufacturing these cars and no longer taking pride in doing a good job, and just throwing them together?

Mr. MULTER. I would not like to make the charge that broad. I do realize that the manufacturers by and large are trying to do a good job and by and large they are delivering good automobiles to the dealers and to the buying public. I will go into any new dealer's showroom or service station with any member of this committee—you pick out the service station, and I do not care what the manufacturer of the car is or whether the service station is in Washington or in any other metropolitan community—it is not quite as bad in the smaller communities—but I will go to the floor of that showroom or into the service station where he has a new car ready for delivery and go through that car with you and point out manufacturing defect after defect which has not been corrected.

Mr. DEVINE. Of course, we are getting into a small segment of automobiles that are brandnew, going from the manufacturer to the dealer that we are trying to take care of in this legislation.

I think you should be commended for your interest.

I do know, however, that across the United States there are 16 or 18 States now that have compulsory vehicle inspection which does not necessarily relate to you, but all automobiles.

If my recollection is correct, it is variously predicted that from 4 to 9 percent of the motor vehicle accidents and fatalities are the result of defective equipment. We understand that, in that connection, it is very difficult to determine what defect caused an accident but I wonder if we are not referring here to the 1 percent and not the other 5 or 6 or 8 percent that do involve mechanical defects?

Mr. MULTER. I concede that it is a small percentage we are addressing ourselves to but that small percentage affects human bodies and human lives. If we can save one life by the enactment of a bill like this, I think we will have done a good job. Incidentally, with reference to inspections I think the laws of most of the States—I am not familiar with those outside of New York—but in New York that inspection is required after the automobile has been on the road and used. It is not required of the new car. If it is required of the used car, the car that has been driven around, why should not inspection be required in the first instance before the car gets out on the road? That is what my bill would seek to do, require the manufacturer to certify that he has really driven this car, or had it driven, and that it is now ready to operate on the road.

Mr. DEVINE. In connection with your provision in this one bill relating to the sealing of speedometers, I do not quite follow your testimony—I have not examined the bill too closely—but in the event it is discovered that the seal is broken, who is going to be prosecuted?

Mr. MULTER. I think that anyone can file a complaint. I am sure that the prosecutor would not act on his own but almost anybody could file a complaint, either you or I, as the purchaser of the car, could file a complaint.

Mr. DEVINE. The same rules of evidence would apply. You have to prove beyond a reasonable doubt that a certain individual is responsible for tampering with the speedometer.

Mr. MULTER. I think that both Mr. Schenck and you are making a good point as to the tampering with the speedometer. It may be that the bill goes too far in trying to prevent tampering. I think everybody would agree that we should prevent it, but in attempting to prevent it, we want a good bill to do the job and not one which will just stir up a lot of litigation.

It may very well be that that part of the bill requires considerable study and improvement.

Incidentally, I do not pretend that either of these bills is the last word. I hope that the committee can improve them and I hope that the bills can be improved upon by those who testify, particularly those representing the manufacturers, the automobile dealers, and so on. They can give you some ideas as to how to improve these bills. I think that we go a long way if we just take that part of H.R. 883 which calls for the sealing of the speedometer at the factory. That will eliminate one of the evils.

Mr. DEVINE. Thank you, Mr. Chairman.

Richard Nixon: A Political and Personal Portrait

EXTENSION OF REMARKS

OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 9, 1959

Mr. SCOTT. Mr. President, I call the attention of the Senate to a new book, a national bestseller, that should be of interest to every American.

The book is "RICHARD NIXON: A Political and Personal Portrait," by Earl Mazo. This is an important book about a very important man, which has been written with care and integrity by the national political correspondent for the New York Herald Tribune.

Of the many fine reviews I have seen, I would like to have printed in the RECORD two which are particularly thought provoking. One is by William S. White, nationally syndicated columnist and Washington correspondent for Harper's magazine. The other is by Max Freedman, Washington correspondent for the Manchester Guardian of Great Britain. Both these correspondents are well known and highly regarded by Members of the Senate.

I ask unanimous consent to have these reviews printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune, June 28, 1959]

VICE PRESIDENT NIXON: FAIR VIEW OF A COMPLEX MAN

("RICHARD NIXON: A Political and Personal Portrait," by Earl Mazo; 309 pp.)

(Reviewed by William S. White)

There are, in the journalistic-literary sense, many Richard M. Nixons. Indeed, he has never been quite real; he has been put forward as rather more or very considerably less than human.

Earl Mazo's biography is, accordingly, an extraordinary achievement, and it makes all previous explorations in "Nixoniana" look quite puerile. Indeed, it is a distinguished contribution to the practical letters of politics and no small service even to politics itself.

True, Mr. Mazo has not wholly explained this infinitely complicated politician, this public man who alternately turns a harshly combative and a coolly philosophic face to the country. No one anywhere, not even the Vice President himself, I suspect, could quite do that. But Mr. Mazo has produced a Nixon who is on the whole believable, if still enigmatic in details of character and personality. He has provided what has never been remotely provided before: a calm, a rational, and a fair frame of reference within which the people can judge the man who may well be their next President.

This is a straightforward job by one of the best of American political reporters. Though it involves a vast clutch of facts these, happily, are facts laid out with the movement and color of life still in them. There is, too, an occasional cool humor and a faint touch of that restrained and agreeable cynicism which divides the men from the boys in political writing. The tale runs strongly from start to finish, and it runs with sustained suspense, even to one who had felt reasonably familiar with the fantastic career of RICHARD MILHOUS NIXON.

Mr. Mazo gathered up his material with earnest care. And he has also put this material down with high respect for, and perceptive use of, the English language. You will never yawn, I think, as you read this basically dispassionate but knowing work about a strange man and a strange political era.

For there is much here beyond RICHARD NIXON; there is an evocative recapture of the real history and the real mood of the Eisenhower-Nixon tenure and of its odd impact upon the Republican Party—a party which the President has yet to carry, though twice he has carried the country.

What emerges, to one reviewer, are some things that are arresting and quite certain and some other things that are arrestingly speculative. As for the sureties: RICHARD M. NIXON is a tough, profoundly able, politician; certainly the ablest in every measurable way that the GOP has developed in these past 20 years. He understands his profession as few have done—and about 10 times as well, one would say offhand, as his nominal chief, Mr. Eisenhower. He is a man of a chill courage and of a great loneliness; a politician of far more candor than many credit; a politician with a bleak special awareness of the role of blind fate in all careers—including his own.

As for the uncertainties: Is NIXON a basically fair politician—specifically, is he, at bottom, a divisive politician? Is he big enough to be big in great power; say, in the Presidency? Is he a man of deep convictions? Mr. Mazo does not attempt explicitly to answer these questions. My own notion, at first and before I had quite finished the book, was that this was a pity; that he had deliberately turned his eyes away from anything that might be described as editorial, and so has avoided any personal and final evaluation. Later on, I felt that his restraint here had been right after all. By this at least he avoided the good-guy-or-bad-guy implications which stick like damply foolish labels on much of our political literature. And, better yet, having marshaled the evidence he simply left it for the reader to bring in the ultimate verdict.

It should not be supposed, however, that there is no indication at all as to how Mr. Mazo feels. His treatment of NIXON's history suggests, for example, that he believes Mr. NIXON was hardly more sinner than sinned against in his California Senate race against Helen Gahagan Douglas. The NIXON participation in the Alger Hiss affair appears as an honorable and useful one. What Mr. NIXON said in the 1954 congressional campaigns—and I, for one, have felt that this wildly and bitter partisan passage raised a far more serious question of his Presidential availability than any other—is not deeply treated. There is, however, not the slightest suggestion that this omission (as I see it, at any rate) has any motive of protecting NIXON. More probably, Mazo simply thought he had dealt sufficiently with the issue of divisiveness. If the book has a shortcoming, this is it.

All the same, this work is urgently recommended to all open-minded people; it raises a powerful question against the simple, automatic reckoning of many men and women that "NIXON won't do." It skillfully, and for the first time, appraises the record, and this it does, on the whole, fairly and competently. It is no ecstatic NIXON campaign biography, as some other books have been, and it is no shrill emotional attack. It is a first-class work, an honest work, and it ought to have a wide hearing.

[From the Manchester Guardian Weekly, June 25, 1959]

A NEW STUDY OF MR. NIXON

(By Max Freedman)

WASHINGTON, June 23.—Mr. Earl Mazo is a brave man. He has written a biography of Vice President NIXON without once suggesting that he is a devil or a saint. The result is easy to predict. For the next few months his mail will quiver with abusive letters, friends will ask him if he really meant what he wrote, and his more sensitive colleagues will allow the whole episode to rest in a chivalrous silence. Most people look at Mr. NIXON not with their eyes but with their prejudices. The usual comment moves between the extremes of generous praise and calculated abuse. Balanced judgment is regarded as a kind of inexcusable neutrality in a conflict between right and wrong.

Mr. Mazo, the national political correspondent for the New York Herald Tribune, knew all about these hazards before he began his task. He was resolved to write an honest, penetrating, measured study of one of the most memorable political careers of our time. This certainly is no campaign biography written to glorify its hero as a leader without blemish or fault. Nor is it the ultimate account, based upon the private papers of Mr. NIXON and expressing the final verdict on his story. Mr. Mazo has admitted the faults and pointed to many of the mistakes. But out of a knowledge of Mr. NIXON's career that surpasses the work of all previous biographers or critics who have touched this controversial theme, he has written incomparably the best book on Mr. NIXON and crowded it with insights invaluable to the understanding of today's political debate.

The figure that emerges from Mr. Mazo's analysis must be treated with respect by anyone who values the arts of leadership. Curiously enough, the final estimate is not very different from the private assessment of the most important Democrats in Washington. They may think they could defeat him next year in the presidential race. But they have no illusions about Mr. NIXON's robust and resourceful campaign if he should be their opponent. Mr. NIXON often wonders if the Democrats are wise in saying that Governor Rockefeller would be harder to beat. Suppose the Republicans come to believe them. What happens then? The Democrats might find themselves opposed by the new star of the Republican Party instead of by the battle-stained veteran. This would be a strange sequal to the "hate NIXON" campaign.

Except for an occasional frigid episode, relations between Mr. NIXON and Mr. Rockefeller have been cordial and generous. The book is sprinkled with tributes to the Vice President from Mr. Rockefeller. On foreign policy the two men have the same outlook and philosophy. They are not divided by the differences which separated Senator Taft from Mr. Eisenhower. Nor does Mr. NIXON conceive it to be his duty to speak for one political group or one economic philosophy in the Republican Party. He sees himself as a unifying force in his party, eager to organize its fighting faith for every national campaign. This loyalty to the party's cause is known and respected by Republicans in all parts of the country. It helps to explain his popularity with the men who control the Republican organization. Mr. NIXON believes that the Republican candidate for President in 1960, no matter who he may be, will have to run on the record of the Eisenhower administration. That partly explains the zeal, sometimes the excessive zeal, with which he threw himself into election campaigns. The rest of the explanation can be found in the amazing and unprecedented fact that he had to do most of this campaigning by himself. Never in American history has any Vice President carried so vast and so controversial a burden.

In 1950 Mr. NIXON entered the Senate by defeating Mrs. Helen Gahagan Douglas by a majority of 680,000 votes in California. It was a dirty campaign—dirty on both sides. Mr. Mazo shows in a masterly political analysis that Mrs. Douglas' supporters started many of the rough and shameful practices which later were developed with dexterous ruthlessness by Mr. NIXON. This section of the biography will bring a sense of justice to an impartial minority; but Mr. Mazo had better brace himself for an avalanche of protests from California.

In pitiless detail Mr. Mazo exposes the blunders of Mr. Harold Stassen's campaign in 1956 to remove Mr. NIXON from the vice presidential nomination. This tale has never been told with such exact and punishing accuracy. Every mistake made by Mr. Stassen is recorded with icy precision, down to the last incredible demand that the Republican National Convention postpone its nominations for the Vice Presidency for 24 hours to give his faltering campaign another chance. Perhaps the most valuable new material in the whole book is contained in the chapters describing Mr. NIXON's ordeal in his most recent trip to Latin America. Mr. Mazo produces unanswerable evidence to prove that Mr. NIXON was the victim of a Communist campaign of violence and intimidation. It must be added that several of the Governments were shamefully negligent or cravenly neutral in the face of this Communist conspiracy. It is impossible to deny, when confronted with Mr. Mazo's impressive evidence that Mr. NIXON was in alarming danger of assassination. Knowing these risks, Mr. NIXON might have shown greater restraint in arranging the details of his tour. That remains an open question. What is beyond all dispute is the mixture of courage and composure displayed by Mr. NIXON during every phase of this tragic experience.

Mr. Mazo, a distinguished reporter, has not tried to emulate the arts of the missionary. He is not seeking to convert anyone. But in this book, published by Harpers, he has set down the facts with courage and honor, separated myth from reality, and given us a portrait of the actual man instead of feverish glimpses of a hobgoblin. It is an admirable achievement.

Back-Door Financing

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, July 9, 1959

Mr. MUNDT. Mr. President, South Dakotans were glad—and taxpayers in general ought to be glad—last week when the junior Senator from South Dakota [Mr. CASE] centered the national spotlight on the practice of "back-door raids" upon the Treasury of the United States.

During debate on the mutual aid bill Senator CASE made a point of order against giving the Development Loan Fund a 5-year blanket authorization to borrow $5 billion from the overburdened Treasury and lend it for uncertain repayment in the soft currencies of underdeveloped nations.

Senator CASE took the position that this was, in effect, an appropriation and should receive the scrutiny of the Appropriations Committee.

As a result of his point of order, a compromise was worked out which makes the authorization for the Development Loan Fund subject to review by the Appropriations Committee. In addition, the committee is to conduct a study of the whole concept of "back-door financing" carried on by some two dozen agencies and is to make recommendations.

Senator CASE's successful fight brought much favorable comment from newspapers and other media across the land. But probably the most succinct comment appeared in an editorial in the Scripps-Howard newspapers, including the Pittsburgh Press of July 6.

I ask unanimous consent that this editorial, captioned "One 'Back Door' Locked," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Pittsburgh Press, July 6, 1959]

ONE "BACK DOOR" LOCKED

Temporarily, at least, the Senate has restored the lock on one of the "back doors" through which many, many billions of taxpayer dollars have been siphoned out of the Treasury in recent years without any check by the Appropriations Committees of Congress. Or much of a check by anyone.

In the obfuscated lingo of Washington, this particular "back door" is known as "authorizations to expend from public debt receipts." What it means is that Congress simply orders the Treasury to go out and borrow however much money some agency wants and thereafter the agency is on its spending own.

Although the Constitution forbids drawing money from the Treasury except via specific appropriations, passed on by Congress, this ban has been violated for 20 years in the case of 2 dozen or more agencies.

These agencies now owe the Treasury upward of $25 billion. This accounts for that much of the national debt.

Well, the Senate Foreign Relations Committee wanted to add another $5 billion to the debt by giving a proposed new agency, the Development Loan Fund (DLF) a blank check for this amount. No appropriations. No controls. In effect, the DLF would have had this money in perpetuity, to use as it pleased without question from Congress.

Senator FRANCIS CASE, of South Dakota, pulled the string on this gimmick, by raising a point of order. He cited the constitutional mandate. If somebody had raised the point years ago, the national debt would be a lot less.

As a result, the Senate compromised. It agreed to appropriate directly to the Development Loan Fund $750 million for 1960, $1,250 million for 1961.

In the words of Senator BYRD, "nothing could be more fiscally irresponsible" than the Foreign Relations Committee's proposal. Now that the Senate has slammed that door, would it be too much to hope that it might padlock some of the others?

Piggyback: New Concept Applied to an Old Doctrine

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 9, 1959

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a very informative address "Piggyback: New Concept Applied to an Old Doctrine" made by Morris Forgash, president of the United States Freight Co. before the San Francisco Bay Area Chapter, National Defense Transportation Association, at Fort Mason, San Francisco, Calif., on June 25, 1959. Mr. Forgash is one of the outstanding businessmen of our country. There is no one better qualified to discuss the subject of his address than Mr. Forgash. He is also a great American and a businessman and a citizen who looks to the future of our country with faith, confidence, and vision.

PIGGYBACK—NEW CONCEPT APPLIED TO AN OLD DOCTRINE

(Address by Morris Forgash, president United States Freight Co., before San Francisco Bay Area Chapter, National Defense Transportation Association, Fort Mason, San Francisco, Calif., June 25, 1959)

I am happy to have the opportunity to meet with you—to shake hands and chat with you informally—and to make this formal appearance on your program.

Though I traveled across the continent to get here I could very well, in lieu of the customary greeting, have addressed you as "friends and neighbors." The jet age has shrunk the Nation and the world, and made neighbors of the cliff dwellers of New York City and San Francisco.

We have another thing in common—we are fellow members of the National Defense Transportation Association. As members of that organization we have come together—from industry and Government—from the military and the various modes of carriage—because of our common interest in the defense aspects of transportation. And yet we all realize that transportation cannot be maintained in a strong defense posture unless its various segments find and occupy their most useful roles in the domestic economy of the Nation. It is in recognition of this fact that the national constitution of National Defense Transportation Association states as one of its basic objectives—"to sponsor and encourage the promotion and progressive development of scientific and practical improvements in all forms and phases of transportation and related communications, especially as to all military and defense requirements."

That is a splendidly conceived objective. It has meat in it. The words "sponsor and encourage" imply action—not mere lipservice to the things in which we believe. The words "progressive development" and "practical improvements" show that as an organization National Defense Transportation Association realizes our goals will not be achieved by wishful thinking or high sounding theory. We must be concerned with practical things if we are to achieve defense preparedness.

I do not know what you are doing here in your chapter to implement the objectives of National Defense Transportation Association. Certainly by inviting persons to come here and discuss with you their ideas about improved transportation you are fostering understanding and only understanding can breed progress. I am known to have some very decided views about current developments in transportation and I am not so naive as to believe that they are entirely noncontroversial. You may disagree with some of the things I have to say, and you are free to form your own opinions, but if I can cause any of you to want to go out and do something about the "status quo" I will be fully compensated for my trip. For whatever else we may think about our transportation system, we know that it cannot stand still.

You and I belong to a very fortunate generation of traffic and transportation people. More change, more progress has taken place in transportation during our lifetime than in all of the centuries since the invention of the wheel. And yet the past is only prologue. We stand on the threshold of developments so revolutionary that we can hardly afford to go to sleep lest we wake up as outdated as Rip Van Winkle.

The wisdom and understanding with which we solve the issues in transportation that right now are literally knocking at our door will profoundly affect the economy and security of the Nation—even of the world. As Chairman OREN HARRIS of the House Interstate Commerce Committee recently said, we must be visionary about transportation. Engineering and technology are only tools by which transport progress can be achieved. The tools are ready to our hand, but vision is necessary in their application. It has always been thus.

It is a paradox of human nature that visionaries always have had to run the risk of being called fools by their contemporaries. That may be one reason why steamboat navigation, demonstrated workable by Basco de Caray in 1542, waited nearly three hundred years for "Fulton's Folly" to make it an acceptable media of transportation. It could, in part, account for the fact that the visions and inventions of Leonardo da Vinci yellowed on the drawing boards for hundreds of years before most of them were put to practical use in the nineteenth and twentieth century.

I am here to talk to you about another modern development in transportation that is new only in its concept—piggyback. Piggyback, as a practice, is very old. More than a hundred years ago, in the middle 1800's, sectionalized canal boats were transported on flatcars between points in Pennsylvania. Establishment of through rail service between the points involved dried up that early form of piggyback.

Dun's Review recently carried a reproduction of an old print showing the piggyback service pioneered by the Long Island Rail Road in 1884. It consisted of the moving of farmers' produce-laden wagons between points on Long Island and the East River—four wagons to the flatcar. The teams hitched a ride on the same train in specially built boxcars.

A more modern version of piggyback—the transportation of steel containers on flatcars—was inaugurated by the railroads in 1921. This was widely hailed as a sound and progressive idea in transportation. It caught on with the shipping public and looked as though it had a great future. But theory, in the form of prescribed formulas of rate-making, collided with practicality, and the service died for lack of customers.

The railroads experimented with several rate bases for the early container service. They discovered that rates on a per-mile basis, with a minimum charge per container, was the most practical basis. This basis of rate publication was drawn into litigation before the Interstate Commerce Commission

and the Commission, in 1931, prescribed a new formula, based on classification of the freight in the containers. That was the end of the container service of that era, for the shippers simply would not buy it on the basis prescribed.

In the 2 decades that followed the container experiment, various other limited excursions in the piggyback field were made by individual railroads. For example, the Great Western began hauling trailers on flatcars between Chicago and St. Paul in 1936 for a charge to the public of $42.50 per trailer, minimum 20,000 pounds. Shortly thereafter the Great Western established the same charge for hauling the trailers of motor common carriers. The Commission approved the charges involved, but said that when they were applied to loaded trailers tendered by the motor carriers they were, in legal effect, "divisions" and not "rates."

From the decision in the Great Western case there evolved the so-called "substituted service" arrangement, which is the basis of what we now call "plan I" piggyback. The motor carrier simply substitutes a rail movement, in trailer-on-flatcar service, for a part or all of its highway movement, and pays the railroad a flat charge which, in legal theory, is called a "division". The railroad "concurs" in the motor carriers' tariffs.

The New Haven Railroad was among the carriers that experimented with piggyback in the doldrums decades and, in 1954, it petitioned the Commission to settle certain legal questions which had arisen with regard to the service by means of a declaratory order. All types of carriers, as well as shippers, participated in the formal proceedings which ensued. The motor carriers strongly contended that railroads might not handle their own freight in trailer-on-flatcar service without obtaining a certificate to operate as a motor carrier. The Commission rejected this argument.

The Commission also held, in the New Haven case, that motor carriers may not utilize rail piggyback service at published rail rates. It said that to do so the motor carrier would have to act in the dual role of common carrier and shipper, which it could not lawfully do. However, the Commission said that the substituted service plan, which it had previously approved in the Great Western and other cases, could be employed by the motor carriers.

While the Commission thus has several times approved the so-called substituted service plan, or plan I piggyback, the legal basis for such plan, in the opinion of many astute lawyers with whom I have talked, is subject to serious question. Under such plan the motor carrier solicits, bills and rates the traffic and he may not, consistent with the decisions, take the freight beyond the scope of his own operating authority. He utilizes the railroad, in substitution for his own over-the-road haul. The railroad does not know or care where the freight comes from or where it goes—it deals only with the motor carrier, and the motor carrier is, in fact, the only shipper which the railroad knows in the transaction.

The term "coordination" unfortunately seems to mean different things to different people and as a result is creating a great deal of confusion, which may tend to slow up this vitally important development. The confusion that I am referring to is the loose manner in which the term "substitution" is used synonymously with "coordination." The fact of the matter is that they represent two separate and distinct concepts. As I have stated, plan I represents a service performed by a railroad in substitution for highway service, and does not constitute a coordination of the two forms of transportation. Substitution of one form of carriage for another is clearly not coordination. Coordination is a combination of two or more services in a conjunctive sense. If such a practice is to serve any useful purpose, the combination must have as its objective the attainment of the maximum advantages inherent in each mode of transportation. One should be the extension of the other and not a mere substitution. There is a natural reluctance on the part of managers of different modes of carriage to admit that there are limitations on their particular media, and thus the give and take necessary for effective coordination has not voluntarily come about.

At all events, following the New Haven case, plan I arrangements were established on a fairly extensive basis, primarily in the East. It received a good deal of publicity but it has not lived up to its advance billing. In fact, it is on the decline, particularly on some roads. The Pennsylvania Railroad handled fewer truckers' trailers in 1958 than in any year since 1953. This plan can obviously not be depended upon to fulfill the promise of coordinated service which piggyback holds for the shipping public.

Plan II piggyback—the railroad's own service—which also was given the Commission's blessing in the declaratory order proceeding in the New Haven case, has been established on a much more extensive basis than plan I. Under this plan the railroads simply transport the freight tendered by their own shippers in trailers on flatcars instead of in boxcars. Their rates for this service are generally on a basis comparable to the truck rates.

Plan III and plan IV piggyback are the most recent applications of this new concept to an old service. They were, by all odds, the fastest growing of the plans until their expansion was arrested by the Interstate Commerce Commission which, beginning early last Summer, has suspended all new plan III and IV rates and placed existing rates under investigation.

As a lifelong student of transportation, and as one who has devoted perhaps as much time and study to the potentials of piggyback as any other man in the country, I see in these plans the answers to questions about coordinated transportation that have been sought for generations. I so advised the Commission in testimony which I presented in support of the plans in the pending cases.

Plan III, as you may know, involves the transportation of freight in trailers that are owned by the shipper and tendered by him already loaded and ready to be placed on a flatcar. The railroad places the trailers on and takes them from the flatcar. Under plan 4 the flatcar as well as the trailer is shipper-owned. The railroad's function under this plan is simply to pull the flatcar, loaded with trailers, from ramp at origin to ramp at destination.

There is a physical resemblance between all four of the piggyback plans, but plans 3 and 4 are so advanced in their concept that to draw comparisons we might as well go all the way back to Long Island's wagon train in the 1880's. The boldness of these latter plans is that they break with traditional methods of pricing carrier service. Because the service performed by the railroads is stripped of all non-essentials—the expensive terminal services—and reduced to pure transportation, it has been possible to discard the cumbersome and antiquated formulas of rate-making and fixed charges on a simple, sensible, and profitable basis.

Rates for plan 3 and plan 4 piggyback are stated in flat amounts per movement, terminal to terminal, loaded or empty. To arrive at the amount per movement all the railroad has to do is to determine how much it must charge per car mile to cover its costs and meet its revenue needs. The freight classifies itself based on the simple factor of how much you can load in a car. Almost all of the elements that complicate the pricing of rail service for movement in box-cars—terminal handling, transfers, empty car mileage, freight loss and damage—are either eliminated or performed by the shipper.

To some people this break with tradition in the manner of fixing freight rates may seem like killing a sacred cow. Because it is new it will be suspect. Because it is simple, whereas we have been conditioned to think of rate-making as complex, this innovation in pricing will be, in fact has been, attacked as unsound. It will "break down" the rate structure, you will hear some people say.

These bogeymen are made of straw. The fact is that the simplified plan of rate-making makes sense to the shippers and makes money for the railroads. And it is the most significant movement in the direction of self-help that has been taken in decades. The Senate Interstate and Foreign Commerce Committee, in reporting the bill that became the Transportation Act of 1958, said:

"There has been a failure (by rail management) to recognize changing conditions, times, and tastes. A failure to compete aggressively for business by use of modernized equipment, by adjustments in plant and financial structures, as well as failure to adjust rates to compete effectively for traffic."

Piggyback plans 3 and 4 are an answer to the foregoing charge and challenge.

The Senate Committee, in the same report, said:

"The enormous growth of commercial private carriage of property by motor vehicle in recent years, resulting as it has in a continuing erosion of huge volumes of traffic that would otherwise be available for transportation by public carriers, is a serious problem for the railroads and other common carriers."

As long ago as 1956 it became apparent to thinking men in transportation that shippers, in increasing numbers, had discovered they had another choice in the selection of a medium to move their goods—their own trucks. No need to talk to such shippers about traditional ratemaking concepts—what the traffic will bear—value of service—common carrier liability. They could figure the cost of providing their own trucks in the only terms that had any significance to them—total dollars. They could compare the standards of service with that offered by common carriers. What they wanted to know from common carriers was how much and how fast. And in their choice of taking public transportation or leaving it lies the real problem of the transportation system of the United States.

Under Piggyback plans 3 and 4 the railroads, for the first time, have offered the shippers a service and a price both of which can be realistically compared with the alternative of private carriage. This is not only the most practical—it is the only effective means that has been devised for stopping the erosion of common carrier tonnage to private channels, and from that standpoint alone it could be the salvation of the common carrier system.

Important as it is, the redirection of the transportation of freight into professional and more economic channels is not the only cardinal virtue of piggyback plans 3 and 4. The simple and sensible method of pricing which they represent is of enormous advantage to all shippers, whether or not they have a choice of public or private carriage—and of course not all shippers have that choice. Without hiring experts or anaylsts shippers can figure their transportation costs with certainty and budget them with confidence for management purposes.

Because piggyback offers almost damage-free transportation shippers can depend on selling all of their product to customers

without figuring on collecting damages for a significant amount of their freight. Expensive and totally unproductive claim departments can be reduced or eliminated.

The greatly increased speed in transit which is possible by use of piggyback plans 3 and 4 wil produce benefits in several ways. Goods tied up in transit are dead inventory. Delayed or unpredictable arrivals cause dissatisfaction, loss of sales, and economic waste. The ramp-to-ramp movement of piggyback cars, without unloading, transfer, or terminal delays, will shave days from transit time and enable completely dependable scheduling of deliveries.

Benefits accuring to the railroads from the use of piggyback plans 3 and 4 are equally spectacular. Because the charges apply whether the trailers are loaded or empty; a 100-percent load factor is guaranteed for the first time in history. For the first time the railroads can, through use of these plans, concentrate on the business of railroading and quit worrying about the incidentals of transportation. They have little or no switching, labor, or material costs in the conditioning of cars—no car distribution cost. And they can measure their costs of producing service against their revenues with a degree of certainty never before possible.

Finally, these plans result in benefits to the transportation system, to the economy of the country, and to the national defense, that are of immeasurable value. Take the long-sought, eloquently praised, but always elusive matter of coordination of transportation. Coordination is the only designated end goal of our national transportation policy that has completely evaded the grasp of carriers and regulators alike.

Piggyback plans 3 and 4 provide an economic approach to the problem. Since the containers or trailers employed are interchangable, and can move with equal facilty on rubber tires or steel rails, the choice of movement reduces itself to practical and economic rather than artificial standards. The choice of services, and the extent of use of each, thus becomes a rather simple choice, and under plans 3 and 4 it remains with the shipper.

Compare this with piggyback plan 1, where there is a substitution of one form of carriage for another, but the service itself, and the price exacted, are the service and rates of motor carriers. The choice is not that of the shipper at all, but of the motor carrier, and if there are economic advantages involved they do not reflect themselves in what the shipper pays. This, to my way of thinking, is not coordination at all, but substitution.

It will occur to you that not all shippers are or will be in a position to use piggyback plans 3 and 4, no matter how widespread the service might become. That affords me an opportunity to say a word about how the freight forwarder fits into the picture. It is a pleasant duty which I undertake, because I am connected with the forwarding industry both in an individual and in a representative capacity.

For more than a hundred years—since before the railroads had through service and through rates—freight forwarders have been recognized as coordinators of transportation. They have fitted each innovation and development in transport, as it came along, into the plan of their service. Their function as a coordinating medium is recognized and protected by law.

Freight forwarders thus are in a position to make fully available to the whole shipping public, the economic advantages of piggyback. As a separate, independent, specialized carrier, endowed with a free choice of underlying media of transport, the forwarder can extend the advantages of piggyback plans 3 and 4 to shippers wherever they are located. Forwarders are, or at least are in a position to be, the catalytic agent in the picture, and if they are not artificially restrained in the use which they can make of this new concept of transportation there is no end to the public advantages which we may expect with the march of time.

Now when I come to speak of the defense potentials of piggyback I must ask you to be a little visionary and look beyond the present uses of plans 3 and 4 which I have described. Piggyback and its relatives, sometimes called fishyback, birdyback, or something else, embrace the entire field of containerized transportation. We have been using our transportation systems as warehouses, as packing stowage concerns, and for almost everything else, with transportation as a by-product of their effort. The tremendous duplication of labor, of materials, and of transportation facilities has made transportation the costly product that it is today, fighting to protect its traffic against complete amateurs who provide their own service. We simply have to start thinking in terms of developing completely interchangeable units of equipment that can move over the highways, the rails, the waterways and high seas, and even in the air, without rehandling of cargo.

One of the most cogent reasons for standardization was stated by Commissioner Winchell of the Interstate Commerce Commission in a recent speech, as follows:

"In a competitive transportation system such as we have in this country, one might expect that the purchase of containers would be dictated by the individual needs of the purchasing carrier, with little thought to whether the container could be interchanged with the representative from another mode of transportation. It must be recognized, however, that to secure the fullest advantages from containerization, all transport agencies must agree upon a program for standardizing containers, especially in such essentials as tie-down and lifting devices. Carriers investing large sums in so-called captive containers may, a few years hence, find themselves burdened with obsolete equipment. The genius of this country has been in the way in which it has been able to take new concepts and employ them in a manner which brings out their fullest practical use. There is no reason to believe that the development and use of containers will prove an exception."

Many organizations and groups have been studying the problems of containerization but until recently they have been moving at a rather leisurely pace, at least insofar as any tangible evidence of their activity was concerned. Recently the National Defense Transportation Association sparked activity in the field by appointing a special subcommittee, of which I have the honor to be chairman, to explore means of crashing through some of the barriers in the field of containerization.

Industry, the carriers, and the military are all well and ably represented on our subcommittee and it has been a working subcommittee. We have held a number of meetings and, considering the tremendous scope and knotty complications of the subject, we have made astonishing progress. Our conclusions are pretty well firmed up, but we will not release them until we have done some checking with other agencies or groups concerned with the problem. I can tell you at this time that the thinking of our subcommittee is pretty well focused on a 40-foot unit as a maximum, with a limited number of multiples thereof, and that a public announcement of its definite conclusions may be forthcoming within the next 30 days.

In considering the standardization of any type of equipment we must consider the problems and the requirements of the basic interests involved—those of the shipper and those of the transportation agencies. The interests of the shipper revolve around the prime objectives of economy in material handling and the physical loading and unloading at various transportation facilities and the transfer of the container to and from his place of business. These interests find greatest expression in a container which he can utilize for his exclusive needs and the only remaining requirement is the publication of a freight rate under which to move it economically. It is readily apparent that the interest of the shipper dissolves most abruptly if, after making large capital commitments, he cannot move about the loaded and empty containers under rates, rules and regulations which can reflect or give promise of reflecting a reasonable economy in the overall operation. A proper freight rate is, therefore, the only proverbial "bridge" which can breathe life and reality into this revolutionary development. This is indeed the critical area within which the Interstate Commerce Commission has the opportunity of playing the deciding role.

On the other hand, the interest of the transportation agency not only parallels those of the shipper, but goes several steps beyond—the carrier requires a container which is compatible with the handling of almost any type of freight tendered for carriage—small l.t.l. lots as well as large ones short of a full truckload. He must look for and expect reduction in platform and other handling costs, the elimination of the physical transfer of the freight itself at terminals, and reduction in cost of local pickup and delivery, particularly in the case of the large lots, by elimination of breaking bulk at origin and/or destination freight house.

The concern of the military with standardization of containers and with effective implementation of means for their complete interchangeability among types of carriers, is understandable. We have the most massive and comprehensive transportation system on the face of the globe, but we must remember that France once had the most massive fortification system ever devised by man, and when the Maginot Line crumbled under, what was then modern warfare France fell. We cannot afford to let our transportation system become our maginet line for lack of modernization and imagination.

Modern warfare cannot be waged with yesterday's weapons, and we cannot modernize our transportation plant on the eve of Armageddon. Flexibility—speed—interchangeability will be as important as capacity—in fact may be the measure of capacity in any present day defense effort. To the extent that we can provide for the transfer of lading from rail to truck to vessel, or the reverse, or any combination thereof, we will help to revitalize the facilities and lifelines of transport. Freight in interchangeable containers can be kept moving while a railroad track or yard, or a bridge or highway are being repaired.

The standardization of containers and the practical adaptation and encouragement of their use through plans such as piggyback Plans 3 and 4, will increase not only the utilization but the capacity of our overall transportation plant. By encouraging private acquisition and ownership of trailers and flatcars, these plans will result in the building up of vast pools of equipment at no expense to the carriers. Even in peacetime we are periodically plagued by car shortages and, from a defense standpoint, the situation at present is frightening. The Chairman of the Interstate Commerce Commission, in testimony just a few days ago before a Senate subcommittee trying to find the solution to freight car shortages, said that there are just two principal causes of car shortages—inadequate car ownership and failure to utilize existing equipment efficiently. Piggyback Plans 3 and 4 should go

a long way toward relieving both of these causes.

Chairman Tuggle pointed out in his testimony that the ownership is actually less today than it was during World War II, despite the generally expanding economy. In the 10-year period, 1949–59, freight car ownership declined by almost 60,000 cars. This poses a serious problem from the standpoint of trade and commerce—the problem is critical from the standpoint of national defense.

Even in the short time and to the limited extent that piggyback plans 3 and 4 have been in effect, the trailer and flatcar fleet has been materially increased and the builders are working at top speed. The public has dared to risk money in the purchase of equipment even with legal questions about piggyback service still unanswered. Given a green light, and with the expansion of the service that is bound to come because the shippers are clamoring for it, the privately owned equipment fleet will grow to enormous proportions and stand as a defense reserve that nobody has even suggested we can otherwise obtain.

As to the failure to utilize existing equipment efficiently, of which Chairman Tuggle spoke, his fellow Commissioner, Arpaia, in a speech last March, said that flatcars in piggyback service were reported to be averaging 175 miles a day, and that some were being used as much as 450 miles a day. I don't know the source of his information, but I can tell you my experience is closer to the 450-mile figure. And that compares with an average of 47 miles a day for all freight cars in 1957. Piggyback has thus literally added a new dimension to transportation, and a new weapon to our arsenal of defense.

Old and accepted ways of doing things, like old shoes, are comfortable and we are loathe to discard them. But we cannot afford the luxury of rejecting this new and revolutionary concept of transportation. It was a hundred years between the first application of piggyback that I mentioned to you and piggyback plans 3 and 4. We cannot afford to wait another hundred years for a new idea to evolve.

In the interest of more efficient and economical service to the general public—in the interest of strengthening and coordinating the transportation system—in the interest of a dynamic, flexible, and adequate defense transport plan, we must nurture, encourage, and support this adventure in progress.

Science and engineering, teamed with the productive genius of America, will solve the mechanical and technological problems I have outlined—the standardization of equipment, the mechanics of interchange, the perfection of techniques. But we must depend upon vision for acceptance of the idea involved, and upon wisdom and understanding and patience to carry us through the experimentation to the ultimate perfection of that idea.

Senator Morse, a One-Man Team When Necessary

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, July 9, 1959

Mr. PROXMIRE. Mr. President, I hold in my hand an editorial entitled "A One-Man Team When Necessary," published in the Greater Oregon, a weekly newspaper published in Albany, Oreg. It is a very unusual kind of editorial. It is unusual because it discusses in warm, friendly, and complimentary terms the man who is the most controversial man in the U.S. Senate, and a man who has undoubtedly received more newspaper criticism, certainly in recent months, than any other Member of the Senate.

I should like to read a few paragraphs from the editorial before I ask to have it printed in the RECORD. The editorial reads in part:

What will our history books tell of this era in which we are now living Well, we are willing to make a prediction as to what they will say about one man—and that is Oregon's Senator WAYNE MORSE.

Here it is. We predict that our senior Senator will be referred to in history books as "WAYNE MORSE, a one-man ball team when the need arises, playing all the positions and making a minimum of errors.

This excellent editorial goes on to develop the baseball analogy in very interesting terms, and concludes with this paragraph:

The only position our Senator MORSE does not play is that of umpire. The people of Oregon act in the capacity of umpire. They call the plays as they see them, and they always call him safe.

I ask unanimous consent that this excellent editorial about a really great U.S. Senator be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Greater Oregon, June 5, 1959]

A ONE-MAN TEAM WHEN NECESSARY

We like to make predictions in our editorial columns, and we want to make an early one in this month of June. This is the month our State's centennial exposition opens, when we will relive our historical past. Seldom do we stop to consider that we, too, are making history, right now in the present.

What will our history books tell of this era in which we are now living? Well, we are willing to make a prediction as to what they will say about one man—and that is Oregon's Senator WAYNE MORSE.

Here is it. We predict that our senior Senator will be referred to in history books as "WAYNE L. MORSE, a one-man ball team when the need arises, playing all the positions and making a minimum of errors."

Sometimes people are too close to the present to assess the ability of others with the proper perspective. Some no doubt will think this is true of us. However, we are confident that Senator MORSE's record of home runs will win him recognition as an outstanding all-around player. Some people are good ball carriers, which may be good enough for some events. But it takes more in top league competition; a man must have a lot on the ball and not count on the rest of the players for that extra effort which may be the margin of victory.

As a pitcher, MORSE has a fast ball he can send over home plate at a sizzling speed. He also has some tricky curves and slow drops that are hard for opponents to figure out but are a big help to his team. As a catcher, no one will deny that he catches more criticism from the press than any other Senator. That may be due in great measure because he never hesitates to speak out when he feels it is in the best interests of the home team, and he is always in there pepping up the other players.

At shortstop, MORSE also is a whiz and at least once he kept us out of war with Red China. Even when a long fly ball is knocked into left, right, or center field our Senator gets under the ball and hauls it safely in. He is an excellent long stop as well as shortstop.

Politics is one of the toughest games we know of, but when Senator MORSE is running in an election he never fails to touch all the bases and has never been thrown out. He is a good batter, too, and bats as good as he gets. He never gets caught off base, or put out in a double play.

It matters little to Senator MORSE that the Portland dailies and others of the one-party press may boo, throw pop bottles, and hurl insults at him. He doesn't let criticism bother him, but keeps in mind the goal that must be achieved if his team of State and country is to triumph.

The only position our Senator MORSE does not play is that of umpire. The people of Oregon act in the capacity of umpire. They call the plays as they see them, and they always call him safe.

Help for the Cities

EXTENSION OF REMARKS

OF

HON. GEORGE M. WALLHAUSER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 9, 1959

Mr. WALLHAUSER. Mr. Speaker, I believe that the editorial in the Newark (N.J.) Star-Ledger, published under date of Wednesday, July 8, is so well written and to the point that I hope my colleagues will take the necessary time to read it and understand the hope of those of us who live in metropolitan areas:

HELP FOR THE CITIES

President Eisenhower's veto of the housing bill emphasizes how dependent the rebirth of the Nation's cities is on Federal assistance.

The housing bill was an omnibus measure which included several programs connected with housing. Among these was the program under which urban renewal projects were made possible through help from the Federal Government.

With that help cut off, the cities would be left stranded without the funds necessary to continue the rebuilding programs. Actually, the urban renewal program is more than a housing program. It is a program to create new life in the cities, to rescue them from the deadening encroachment of deterioration. While it does provide housing units, it provides much more. It can change the entire character of wide areas—economically and culturally.

The aims of other programs in the housing bill are not nearly as broad and would not have the impact of urban renewal.

Newark, along with several other cities in New Jersey as well as the rest of the country, has been looking forward to Federal aid for several projects which will mean a great deal to the city's future. It would be a severe blow if these had to be abandoned.

Fortunately it is not likely that this will happen. While there are sharp differences of opinion on housing projects, there is general agreement on the value and the need for the urban renewal program. There is criticism that it fails to meet the needs of the smaller cities and that the cost could be pared down.

But the fundamental concept of the Federal Government assisting the cities has not been challenged. That being so, an acceptable program undoubtedly will emerge. Perhaps it should be divorced from a catch-all housing bill and be considered on its own merits as a city assistance measure.

Productivity Challenge From Abroad

EXTENSION OF REMARKS
OF

HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 9, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, in these days of high speeds, growing complexities, and rapid outbreak of varied events we find little time to review, analyze, and cast an appraising eye over some of our long-term programs and the long-range developments affecting them.

We come to take for granted situations to which we have become accustomed; and may be partially blind to developments that have been working silently while we have been otherwise occupied.

Our trade agreements program is a case in point. I do not say that we have failed to give attention to it, but some of the developments in the background have been passed up without sufficient notice. I am impressed, for example, with the fact that this country seems suddenly to be confronted with an outflow of gold, a decline in exports, an increase in imports, and a scramble by many of our exporting industries to find in oversea countries facilities for manufacturing the goods for export that they have been accustomed to make in the United States.

This is an alarming development, not because it represents a flight of capital but because it reflects a deep, underlying change in our international competitive situation—not something temporary or hardly worthy of attention. There can be little question that, after many years of economic policy pursued in one direction at home and in the opposite direction abroad, we now face a virtual crisis in our foreign trade situation.

We no longer have the comforting thought that has always come to our support in the past, namely, that we have nothing to worry about because of our vast lead in technology over other countries. The day is gone when we can be indifferent to the fact that our wages are several times higher than those of our competitors. We no longer enjoy the lead in productivity per man-hour that once formed the bulwark of our defense; nor are we likely to regain it.

Mr. Speaker, this is a fact of the first magnitude and should arouse use to an early and thorough reexamination of our position. Recently an examination of our current position, contrasting it with the accustomed situation of past years was made by one who has devoted much time and labor to the foreign competitive situation. Mr. O. R. Strackbein, who is chairman of the Nation-Wide Committee on Import-Export Policy, spoke before the Drop Forging Association in Spring Lake, N.J., presenting a long-range review of this country's international economic position.

I commend Mr. Strackbein's analysis and views to all members of this body as worthy of perusal and most serious consideration. Under leave to extend my remarks in the RECORD, I present his address:

PRODUCTIVITY CHALLENGE FROM ABROAD

(Address of O. R. Strackbein, chairman, the the Nationwide Committee on Import-Export Policy before the Drop Forging Association, Spring Lake, N.J., June 22, 1959)

For many years since the advent of mass production in this country American industry stood in the forefront among the industrial nations of the world in point of productivity per worker. The moving production line, interchangeability of parts, labor-saving machines and finally automation were American developments in response to a mass market. The fast-growing population and the gospel of high wages as practiced by Henry Ford opened the way to a torrent of goods and gadgets such as no one in the Old World had dared entertain even in dreamland.

In American technology achieved such wonders of production that within a generation our crates and packs, bales and barrels spilled over our outer borders, across the seas and found their way into markets all over the world. Our industry, armed abundantly with ingenious machines and devices, heavy crushers and grinders, singing gears and screeching saws, turned out pieces and parts in fast tumbling succession. There was nothing like it elsewhere in the world.

In the United States wages rose to a high level but so did output per man-hour, particularly in the mass production industries. This higher productivity kept unit prices low. In fact, the high productivity made possible the high wages. As a result the much lower wages prevailing abroad were no source of worry to the giant producers in this country. Foreign productivity was relatively low and therefore no great threat. Even some of our smaller industries were able to hold their own in competition with the wage-starved countries overseas.

Obsessed with the notion that this was to be the permanent order of the universe and assuming that we had no real need of much competitive insulation against the rest of the world, while at the same time hungering for markets that would absorb our burgeoning surpluses, we began 25 years ago a program of economic disarmament. Pressed as we were by heavy economic frustration during the depression and the consequent high emotional buildup, we characteristically jumped in with both feet. We thoroughly hated the tariff and turned upon it the usual outpourings of wrath and ridicule; and went after it with muscle and meat ax. We felt very virtuous as we cut and ripped the tariff wall to pieces.

We moved rapidly in the direction of free trade and sought to liberate world trade in the image of Adam Smith's philosophy of 1775, while at home we ran in the opposite direction as fast as we could to upset the free market, by interfering with nearly all factors of production through public controls and forced inflation of prices and wages. To date we have lowered the average protective effect of our tariff approximately 80 percent. This we did while we were creating high vulnerability by raising cost burdens at home through legislative enactments such as farm price supports, minimum wages, obligatory collective bargaining, etc. Meantime the combined forces of the State Department and the White House virtually nullified the relief measures provided by Congress as remedies against individual cases of severe injury caused by the exposure.

In very recent years, i.e., since the cumulative effect of the Marshall plan made itself felt, the United States has come into a new world economic position. This position differs greatly from both our prewar position and even from the first 10-year postwar period; but the seeds of the change were sown throughout those years.

A world technological transformation has erupted on the scene and the end is not yet. This transformation has far-reaching economic implications for the United States and American industry, agriculture and labor. It would be inaccurate to refer to it as an overseas industrial revolution since it lacked the characteristics of a revolution, industrial or otherwise. Nevertheless the results, as they are bearing in upon us, have much of the impact of a revolution.

What has really happened has been a great technological leap by many foreign countries, especially in Europe and Japan. This leap was fomented, nurtured, financed, or underwritten by the United States. Since 1949 when foreign aid began to function on a grand scale we have shipped, inclusive of commercial exports, $30 billion worth of machinery and equipment to other countries. This represents a vast amount of mechanical installations, equal to more than half of the new machinery added by industry in the United States in the same period.

This crowding into one decade of a technological advancement that otherwise would have required a generation or more plus billions of dollars in research and development for its achievement has shaken and reshaped the world of trade and foreign competition.

No longer is the United States the great technological center of the world nor the sole source of mass-produced goods. We are being challenged by our foster children in nearly all quarters. Just as we once outgrew the tutelage of the mother country, to her everlasting amazement and irreversible loss, so our technological offspring in a number of other countries no longer need us. Thanks to our generosity they can outdo us almost at will, in many instances meeting and easily defeating us on our own home grounds.

How could such a result spring from the well-meaning policies of so strong a nation as the United States? As well ask, how could Rome have fallen? How could England lose her empire and mastery of the seas?

The makings of our present discomfiture have unfolded before our very eyes; but people with their eyes wide open often will not see.

There is no mystery. We have systematically handicapped our production with increasing cost burdens while extending our technology abroad free of much of this burden.

To be sure, our own productivity has also risen; but it has not jumped as it has in many, though not in all, lines in foreign countries. We too have installed much new machinery and equipment; but we merely substituted better machinery for existing machinery in most instances. There was no great leap in productivity. Beyond that we had powerful labor organizations that were ready, willing, and able to call for higher wages in proportion to increased productivity. Foreign labor organizations are behind ours in bargaining capacity for reasons that show little likelihood of an early catch-up.

Thus while we improve our productivity we did not achieve lower prices for reasons that must be very obvious, but not at all limited to high wages and high profits. In other countries the exchange of modern machinery for handicraft production or for a low order of mechanization, in many instances meant a remarkable leap in productivity; and the labor unions did not wrest the gain from the owners in the form of proportionately higher wages. Thus was the competitive position of the foreign producer improved in his contest with American producers.

Of course, this was not all. The machinery that we shipped under foreign aid was subtracted from the tax burden of the receiving countries and added to ours. In the total, including all other taxes, this, however, did not play a heavy role but was part of a pattern. Many other cost burdens that found no counterpart or equal in other countries were heaped on our producers.

Our farm price support program was one. Here the discrepancy became very clear because of the water-edge competition. Our higher domestic prices attracted imports in swiftly rising volume in such cases as potatoes, cheese, and cotton. When imports rolled in, our domestic products were bought up by our Government at support prices and the Treasury stood the loss. In short order we imposed restrictive import quotas. Otherwise our cotton production would have been driven off the map. Even so we have lost heavily in our share of the world cotton market; and we have not recovered despite our sale in foreign markets at world prices in recent years. Our domestic cotton prices are 25 percent above the world price. Our cotton textile manufacturers pay this higher price while our foreign competitors pay the lower world price. This is an odd but little-known fact. Foreign countries then manufacture our cotton and ship back textiles at lower prices than our domestic industry can meet.

We would also have been overwhelmed with wheat from Canada and elsewhere but for the imposition of a highly restrictive import quota. Of this there can be not the least question. Canada alone would have routed us. The same would be true with respect to dairy products. Denmark, France, Holland, Italy, Switzerland, New Zealand, Canada, and perhaps others would have destroyed our dairy industry. It too is price supported. We saved the industry through import quotas.

However, in the case of industrial products the Government has steadfastly adhered to a tariff-cutting program while refusing import quotas, except recently in the case of oil, where the national defense factor won the day. Yet in industrial products we have become no less vulnerable than in agricultural products; in fact more so in recent years because of the foreign technological buildup. The only difference is that the Government is not committed to a price-support policy or a guaranteed price on industrial products as in the case of agricultural products. Nevertheless many of our industrial products suffer from as much incapacity and handicap in competing with imports as do farm products; but "no import quotas" is the cry; and even now a new tariff-cutting conference has been scheduled in Geneva for 1960.

Our obligatory collective bargaining law, minimum wages and time and a half for overtime, paid vacations, old-age benefits, unemployment compensation, etc. have also contributed to increased production costs to a degree not found in most other countries, if any.

These observations and those relating to agriculture are made with no reflection on the merits of the legislation involved. We are concerned with the byproducts.

Atop of these various cost-raising measures fell the costs of World War II and the postwar heavy defense expenditures. Probably more than the others, these war and defense outlays put us on a plateau of prices and costs.

To be sure, ours is a lusty and powerful economy. Possibly it was able to carry the burdens; and possibly it could continue to do so, provided it were maintained in balance and provided we were still the island we were, the center of technology, the invulnerable and incomparable world industrial leader, the one place where the much vaunted know-how of the world was held in monopoly.

This, we must acknowledge, is no longer the case; and this fact puts us in a different world from the accustomed one. We can no longer ignore the changed competitive facts without great peril.

The difference between domestic and foreign costs is so distinct in numerous lines, including the mass-produced items such as automobiles, iron and steel, textiles, etc., that our exports are shrinking while our imports rise. Since the beginning of 1958 our exports have dropped 20 percent. On the other hand, imports have increased in the first quarter of 1959 compared with the first quarter of 1953 by some 6 percent. Also, since the beginning of 1958 we have lost $2.6 billion in gold; i.e., we have been running a deficit in our total foreign account.

Hundreds of American companies are today making preparations to meet this situation. Some are expanding foreign manufacturing facilities; others are arranging for foreign production, either in the form of foreign branch plants, foreign licensees or partly or fully owned subsidiaries, while yet others are making import arrangements for parts to be used in their domestic assembly plants.

These are but the natural symptoms of a deep-seated condition that will not likely yield to an early change. On the domestic side we moved toward high prices, high employment, high consumer purchasing power for years, all buttressed by governmental policy; whereas in the foreign trade field we worked toward free trade, unhampered competition, and a general free market policy, the very opposite of the domestic goal. Then we outfitted the world or at least our most competent competitors technologically.

So have we painted ourselves into a corner.

Our wages and prices are high for obvious reasons. Their inflation is the fruit of national policy, war costs, unparalleled defense outlays and, to a much lesser degree, foreign aid.

High wages, high profits, and high prices, all going hand in hand, have made us vulnerable to import competition and have begun seriously to shrink our foreign markets, for reasons already set forth. Our capital seeks two goals: (1) Automation in the technological field, to keep costs down, and (2) refuge in other countries in order to find cheaper labor.

Automation, in the short run, at least, creates unemployment. It may also reduce the amount of plant expansion that otherwise would be necessary. Thus, with more than half a million new workers coming on the scene each year, unemployment will tend to become chronic, except for possible spurts.

Migration of a part of the export departments of many of our industries overseas will bypass labor, suppliers, and services, and will shrink our exports. In some cases our expatriated capital will turn on its own source and compete right here at home with our domestic producers.

All this drift overseas will not and cannot correct the situation. At home we will push automation to keep costs down, thus shrinking employment without correcting the situation because other countries will also continue to mechanize and the gap will widen. Foreign technology, we must remember, has been catapulted onto a new dimension. In the past 6 years alone we have exported $21 billion of machinery, including foreign aid. This compares with about $40 billion of new manufacturing equipment added by our own industry in this country in the same years. In the past 10 years thousands of productivity teams from abroad have been invited into our factories and shown the very entrails of our technological system; and they have not gone away without notes and images. They now have the means of making greater technological gains than we because they work from a lower base.

Even this is not the whole story. Perhaps the most important of all is the breaching of the psychological barrier against mass markets in Europe. The Europeans, long wedded to a compartmentalized market and relatively small production units, have had a taste of our system and they have bought it. Not that there will not be difficulties with the Common Market and the proposed Free Trade Area. That is to be expected. Disagreements have already erupted; but we must assume and even hope that they will succeed.

Europe and Japan, too, now have the underpinnings of mass production. They are both launched on the mass production plane. They have labor and technological skills equal to ours. Their labor organizations on the other hand are weak; and this fact will assure further competitive advantages from technological advances as they take place.

Before long these countries will be in full cry on our trail, having just recently, as industrial history goes, got our scent. The race is not that of the hare and the tortoise. We ourselves grafted long legs on the slow-moving creature; and we do not now need to loiter or go to sleep in order to be overtaken; for even if we do our dead level best we will learn that we have already squandered much precious time.

There are those who in recent times have recognized the uncomfortable position in which we find ourselves in the matter of international competition; but so irrational has been the condemnation of the tariff, one of the great stirrups of our national ascendancy, that in a chorus these people say "but tariffs are not the answer."

Tariffs or quotas, to be sure, are not the full answer, but I would say that they are the minimum point of departure. It is imperative, if we are to get out of the corner, that we make available the flexible use of the tariff and import quotas as they may be needed as a holding operation. In my judgment we proceed at our own peril if we refuse to recognize the international competitive realities and fail to face them.

Bunion Derby

EXTENSION OF REMARKS

OF

HON. J. ERNEST WHARTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 9, 1959

Mr. WHARTON. Mr. Speaker, one of my constituents has been so kind as to send me a copy of an editorial which appeared recently in the Rhinebeck Gazette under the above caption.

It will be of interest to each and every Member of the House and many others, I am sure.

[From the Rhinebeck Gazette, Rhinebeck, N.Y.]

BUNION DERBY

The great, domed, U.S. Capitol—probably the best-known building in the world—rests on a human anthill whose subterranean traffic is rapidly approaching that of New York's Times Square.

To add further to the simile, Capitol Hill also has its subways—one with electric

monorail cars which have been long in use connecting the Capitol with the old Senate Office Building—the other still a hole-in-the-ground that fails by 300 feet (and $4 million) to link the new Senate Office Building with the legislative chambers.

But, for the 436 Representatives, their hundreds of aides, secretaries and clerks, official visitors and the ever-growing volume of folks-from-home, transport to and from the Capitol and the two House office buildings (soon to be three), and over longer distances, is still strictly heel-and-toe. And traffic generated by the House is estimated at 7 to 12 times that of the Senate. Also, its mighty wearing on the solons who aren't as young as they used to be.

The time-honored hiking that can waste as much as 2 hours of a Representative's day is not only extravagant, but the thought of a bunion-bound space-age Congress is more than slightly ludicrous. To surround our solons with elegance, yet provide no transportation is something like buying a suit without pockets.

Stored Grain Not Our Only Surplus

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mr. HOEVEN. Mr. Speaker, pursuant to my remarks in the RECORD on July 7 and 8, I include the third in a series of articles prepared by Mr. Alvin F. Bull, managing editor of Wallace's Farmer, dealing with the farm problem. The article appeared in the July 4, 1959, issue of Wallace's Farmer:

STORED GRAIN NOT OUR ONLY SURPLUS

(By Al Bull)

Suppose, by saying some set of magic words like hocus-pocus, we could cause the mountainous surplus of feed grains to vanish.

This would make a lot of folks happy—for a while. But it wouldn't solve the farm problem.

The same productive capacity that built the surplus would start turning out another one.

The surplus isn't due only to bumper crops like in 1957 and 1958. We've added at least 4 million tons of feed grains to carryover each year since 1952.

This doesn't even include the tremendous stockpile of wheat which is destined for feed use eventually.

The full impact of this excess hasn't been felt because most of it went into CCC storage. It's still there waiting for a chance to come back to market and be turned into livestock.

Let's go back a few years and see what would have happened if we had been feeding up the grain as we went along. In 1953, hog prices averaged $21.40. We added 4.7 million tons of feed grains to the carryover that year. But if that grain had been turned into hogs, slaughter would have increased about 12½ percent.

Each 1 percent increase in hog numbers drops prices by 2 to 3 percent. Using 2 percent, the national average price would have skidded to about $16.

With corn at $1.49 average, few hog men could have made a profit.

In 1956, hogs averaged $14.40. Corn was $1.29. Feeding the 1955 crop carryover to hogs would have dropped prices to about $11.50. Again, no profit for the year for hog men.

Now, what about this year? Feeding the expected carryover from only the 1958 crop would cut prices about in half.

Let's look a little closer at use of feed grains in 1959.

We're feeding about all the hogs we can at a reasonable profit for the average producer.

There's certainly no room for more layers. Egg prices are already low.

Feeding many more cattle would knock profits out of the beef business. Prices are propped up by a shortage of cows and grassfeds for slaughter. Supply of fed beef is actually high.

In short, we're using up nearly a maximum amount of feed grains. And there's still likely to be 11 million tons left over from the 1958 crop. That would make a big start on a new surplus.

The story is much the same for the years just ahead. Projections by agronomists and economists at the Agricultural Adjustment Center at Iowa State University indicate a continued overproduction.

Why do grain stocks keep building up? Not because of increased acreage. We're growing fewer acres of feed grains than in the 1940's. That's still true when soybeans and wheat are included.

But yields continue to climb. And we're using our grains more efficiently in production of meat, milk, and eggs.

Corn yields, for example, are up 50 percent since 1940. During that time population increased 30 percent, but stomachs did not increase in capacity.

Other crops, too, show upward yield trends. Oat yields are up about 12 percent since 1940.

The end is not yet in sight. Fertilizer use can still be expanded. Hybrid sorghums show further promise. Continued but generally slow gains are expected from improved breeding in other grains.

Improved machinery and better management can increase yields through timely operations and lower harvest losses.

On top of this, the big supplies of oil meal from expanded soybean acreage encouraged feeding of protein supplements. This both added to the total feed supply and stretched it by improving the efficiency of feed use.

Broilers provide a spectacular example of increased feed efficiency. In 1940, it took 4.9 pounds of feed to give a pound of gain. Now 3 pounds does the same job. And USDA expects 2.2 pounds of feed to give a pound of gain by 1975.

Similar gains, though not so striking, are expected with other livestock.

Meat type hogs, for example, are more efficient in use of feed. Lardy hogs needed 40 pounds more feed to get market weight in Ohio tests.

Milk production per cow continues to grow faster than papulation. The nation's hens keep setting new records for rate of lay.

Beef production is getting more efficient, too. Stilbestrol alone brought a 12 percent cut in feed needed for fattening a steer.

Production testing to locate fast-gaining, efficient blood lines is gaining favor over the Nation. In years ahead, livestock is sure to use grain more efficiently.

At the same time, feed grain production promises to keep pace with growing population—and probably to grow even faster.

So, in summary, the present surplus is a big worry to all who are concerned with farming. But it's not the only problem we face.

Ability to overproduce, perhaps at an increasing rate, means that time alone is no solution to the farm problem.

The Housing Bill Veto

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mr. WIDNALL. Mr. Speaker, the long expected Presidential veto of the omnibus housing bill has caused wails, of anguish from a number of Members of Congress, as they had stated they had submitted a compromised vetoproof bill. This connotation was that of the sponsors, even though it was as unrealistic as could be. There should be no surprise occasioned by the veto. The President clearly stated the serious objections to the vast new spending obligations it contained. The President has also made recommendations for a sound program that will provide jobs, business and good housing for all our citizens. I believe such a program is necessary and will support its enactment in this session.

Under leave to extend my remarks I am including an editorial from the New York Times dated July 9, 1959, and also a column by Arthur Krock in the same paper that day.

[From the New York Times, July 9, 1959]

THE HOUSING BILL VETO

The congressional managers of the vastly complicated housing bill took a gamble and lost. Far from watering down the bill, as some of the raw dollar figures might have indicated, they actually made it the vehicle for some major innovations. The departures from current law and practice included in the bill would have meant new Federal intervention in sectors of the economy where there has never been intervention before. Most of these innovations were objectionable to the President on philosophical as much as fiscal grounds.

It is doubtful that the President would have vetoed the bill simply because it contained slightly more spending authority for slum clearance than he asked, or even because of its provision reauthorizing the unused portion of the 1949 public housing law. But when Congress threw in completely new programs of Federal loans, subsidy prices for mortgage purchasers and a new device for pumping Federal funds into the private mortgage market, a veto became inevitable. A combination of political good sense and an awareness of the Government's very real fiscal problems should have made the bill's managers more cautious.

The Democrats can still emerge from this fray with a victory of sorts—both for themselves and for the Nation's cities. We share their belief that the President's original proposals for slum clearance and public housing were too small.

There is every prospect that, in the spirit of compromise he has often shown in the past, the President would sign a bill limited to meeting the urgent needs of the present, even if it contained slightly more dollars in the slum-clearance-public-housing sector than he proposed. But he will not sign a bill that make radical changes in our housing laws. If the key men in Congress approach the question in the next few weeks in a spirit of trying to get done what needs to be done, there may yet be a progressive and satisfactory housing bill in this session.

[From the New York Times, July 9, 1959]

CONCERNING WHAT IS MORE THAN HALFWAY

(By Arthur Krock)

WASHINGTON, July 8.—The vetoed omnibus housing bill, of Democratic origin, was modified by the Senate-House conferees in some respects from the drafts separately approved by the two branches of Congress. But the specific features listed by the President as the reasons for his veto certainly do not sustain the implications of this passage in Senate Majority Leader JOHNSON'S protest of the President's action:

We on this side of the aisle * * * will try to meet those who differ more than halfway.

In its final form the measure was one of those legislative packages which are accurately called "omnibus" because they are common carriers. This package lumped such diversified projects as nursing homes, college housing and classrooms, slum clearance, and scholarships. The public expenditures it authorized tripled those proposed by the administration. They would have lengthened the road to a balanced budget, discouraged private financing by furnishing direct public funds and, by providing for Treasury borrowings for housing in a boom period, fed the forces of inflation. As the President pointed out, "The way the bill is written a few large cities, by making early application, could tie up all the funds available under the urban renewal program." Finally, the measure included provisions which carry out New-Fair Deal economic concepts the President has opposed ever since he campaigned in 1952, and added some new ones.

SHRUNKEN TAPE MEASURE

If a bill with these aspects is an example of Senator JOHNSON'S measurement of "more than halfway" toward the accommodation of fundamentally opposed principles, his legislative tape measure has shrunk badly from the times earlier in this session when he used it for more accurate calculation. But the majority leader, in his criticism of the veto, made another measurement of the President's message which cannot be rejected until it is tested by subsequent events in housing legislation.

"We are told in effect," the majority leader said to his colleagues, "that the program of the executive branch must be accepted without the crossing of a 't' or the dotting of an 'i.' * * * Congress and the country are now confronted with an all-or-nothing attitude (by the President)." This was his estimate of a message which, though it specifically cited 13 of the 50 provisions of the bill as the basis of disapproval, did denounce the complete product as "defective," "excessive," "extravagant and inflationary," and listed 6 definite provisions as "the sound basis" for revised housing legislation.

HE MAKES AN OFFER

But Senator JOHNSON'S impression of an "all-or-nothing" position by the President was immediately challenged by two Republican colleagues, one of whom had voted for the conference report, and the other against it. And this challenge produced a proposal by the majority leader that not only was novel but suggested that JOHNSON is prepared to use a more accurate tape to measure what is "more than half way" to the President's position.

Senator KUCHEL of California, the Republican who opposed the bill as Congress sent it to the President, prophesied "we can go forward now and draft a long-overdue housing bill which will be written into law." Senator JAVITS of New York, who voted for the bill the President vetoed, expressed the belief that "the differences can be compromised [in a new draft adhering strictly] to the facts and merits of a housing program." Very interesting, said the majority leader, and "I appeal to my friend from New York to attempt to ascertain what might be achievable." This put it up to JAVITS to discover how the President and the supporters of the bill he vetoed can reach agreement on what are the "facts and merits" to which the next draft can be "strictly" limited.

Democratic National Chairman Butler's criticism of JOHNSON'S philosophy of leadership will not be allayed by the Texas Senator's expressed willingness to make another try for what is "achievable" by compromise with the President. But at one point in his protest JOHNSON sounded much more like Butler than himself when he predicted that, if an "all-or-nothing" veto "appealed" to one-third of the Senate, this one-third would not "be here next year to be appealed to." That's the way the Chairman talks all the time.

World Refugee Year

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 9, 1959

Mr. FULTON. Mr. Speaker, under leave to extend my remarks I am including an excellent editorial which appeared in the Pittsburgh Post-Gazette of Wednesday, July 1, 1959:

WORLD REFUGEE YEAR

Today marks the beginning, for the United States, of the World Refugee Year, an international effort aimed at improving the lot of the more than two-and-a-quarter million souls who are now homeless or rootless owing to war and other catastrophe.

In Western Europe there are some 130,000 such refugees, 30,000 of them still in camps. The most pitiable are the so-called hard-core cases, victims whose age or whose varying disabilities have impaired their chances for permanent settlement. In the Middle East there are a million Palestinian Arab refugees. In the Far East, more than a million refugees from Communist tyranny and aggression, most of them in Hong Kong, but many too in South Korea and Vietnam. To this list must be added a couple of hundred thousand Algerian refugees now in Tunisia and Morocco; and, as the latest unfortunates, refugees in India from Tibet.

The World Refugee Year was established by a U.N. resolution which had the sponsorship of the United States and eight other nations. The year is intended to tie together efforts of the U.N. itself, national governments, private agencies, and individuals in dealing with the problem of refugees, and to dramatize their plight. The problem calls for differing answers: more liberal immigration policies, instruction in employable skills, economic development of host countries, increased aid in food and clothing, and, in the overall, plenty of money.

Much has been done to settle refugees since World War II. West Germany itself has absorbed some 12 million refugees into its economic and political life. But the problem is global; and it did not by any means end with World War II, no more than did totalitarian aggression.

"This is a year," President Eisenhower recently told a group of distinguished Americans who conferred in preparation for the World Refugee Year, "to focus the concern and the ingenuity—and the generosity—of the world on the continuing problem of refugees. Perhaps, with such a mobilization of effort * * * it may even be possible to resolve some particular refugee problem. This would be a great step forward, and we can all hope for such progress. In any event we must further our efforts to create lasting international understanding of and concern for this problem, which I fear will be with us for a long, long time."

Freedom of Space

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 9, 1959

Mr. HOSMER. Mr. Speaker, the vital problem of freedom of space has been ably analyzed by the distinguished international lawyer, Chester Ward, in the following article found in the July 1959, issue of Navy magazine:

FREEDOM OF SPACE

(By Rear Adm. Chester Ward, USN, Judge Advocate General of the Navy)

Space is much like the sea. Just as a tiny island is surrounded by the vast reaches of the Pacific Ocean, so does cosmic space surround our tense and troubled world. The scale of space and its dimensions are infinitely greater, but the analogy remains sufficiently close to have deep significance from a legal viewpoint. From a strategic standpoint also space is much like the sea, in that it has its own unique military significance. As explained by Lt. Gen. Bernard A. Schriever, U.S. Air Force, Commander of the Air Research and Development Command.

"Space * * * is a medium in which many military missions can be accomplished more effectively than in any other. * * * When viewed as a medium, in which freedom to operate will have decisive military significance, space assumes critical proportions. This fact becomes doubly important to national security—indeed even to national survival, when we relate to this medium the military role of present and future space vehicles."

Centuries of experience of seapower, and the mature law of the sea, are the major realistic guides we have in entering the age of space vehicles and in developing the law of space. Applying the legal technique of reasoning by analogy, we can project the wisdom and experience of the law of the sea into the law of space.

Freedom of the seas is a rule of the law of nations. For two centuries the United States has supported this rule of freedom. It has been good for us and good for the whole world.

Let's look at the record of the past to see what this rule of freedom of the seas has meant to us. Then let's look ahead to see what a similar rule of freedom of space can mean to us in the future. National extinction may be the penalty for failure to develop and to understand space power the way we have developed and understand seapower.

Freedom of the seas has fostered international commerce, friendship, understanding and prosperity. It supplied the legal support for worldwide deployment of British seapower to build and maintain the pax Britannia—longest period of peace since the fall of the Roman Empire.

In the cold war of Communist aggression the doctrine of freedom of the seas has become critical to the preservation of peace without appeasement. It helps to assure the survival of the United States, of our people, of our free Government, and of our allies of the free world. We have staked our survival on collective security.

The strength of our collective security depends largely on the effectiveness of U.S. seapower in binding together the nations of the free world. The effectiveness of our seapower depends in turn upon its mobility and deployability. Adm. Arleigh Burke links together the three key words: "Seapower, mobility, and freedom." Explaining this relationship, he says:

"Naval forces are more important in the missile age than ever before. Mobility is a primary capability of navies. Support of our free world allies depends upon the ability of the Navy to move, unhampered, to wherever it is needed to support American foreign policy. This is the great contribution of U.S. seapower toward the progress of free civilization."

The rule of international law recognizing freedom of the seas is vital to the mobility of our seapower and to the ability of our Navy to move unhampered throughout the world.

Like most good things, like our other freedoms, we are inclined to take freedom of the seas for granted. We assume that it will be always with us—without any effort on our part—without cost or sacrifice or even intelligent interest. Like our other freedoms, however, freedom of the seas is in danger.

As they do with our other freedoms, Communist aggressors seek to whittle down its scope and effectiveness. The threat to this freedom is not merely theoretical—it is actual and imminent. Last year at Geneva the United Nations held a Conference of Plenipotentiaries of 86 nations of the world to codify the law of the sea. At this conference nations led by the Communist bloc attempted to restrict the freedom of the seas in three different ways. Each one of these restrictions would advantage the Communist colonial empire and disadvantage the United States and the free world.

How is it possible for the same rule of law restricting the freedom of the seas or freedom of space imposed by international law or established by international agreement, to advantage the Communists and disadvantage the free world?

The answer lies in the magnitude of the land mass dominated and enslaved by communism, plus their gigantic force of conventional land-based military power. Their 13,385,368 square miles of land mass threatens to swallow our mere 3,082,809 square miles. That vast disproportion in their favor gives them many strategic advantages. All of their communications and logistic supply lines are internal, and do not depend upon freedom of the seas in peace or control of the seas in war. Their advantage in land mass in which to disperse ballistic missile launching sites could become decisive if we do not adequately pursue our counterbalancing advantage of superior sea-based missile power. They can and have, however, dispersed both their industry and their population much more effectively than we ever can. They have vast land areas in which to test missiles and nuclear and hydrogen warheads.

To offset these strategic advantages the United States has relied on freedom of the seas in peace and control of the seas in war. In the future we may have to rely equally upon freedom of space to assure our own survival in freedom.

The three restrictions on freedom of the seas the Russians sought to impose on us at Geneva were: (1) To expand national sovereignty over the high seas from the traditional 3-mile limit out to 12 miles; (2) to deny the use of space over the ocean for the testing of nuclear devices; and (3) to restrict the high seas as areas for military maneuvers. All three propositions sound—at first—harmless and fair. But look at them more closely. The apparently slight extension of national sovereignty from 3 to 12 miles along the 280,000 miles of coastlines of the world would remove 3 million square miles from the high seas where freedom has heretofore prevailed. Furthermore, these particular 3 million square miles would be critical in many strategic areas of the world. Many international rights would be wiped out completely and large areas of high seas squeezed into national lakes. Russia has the longest coastline in the world and would gain most geographically as well as strategically. The restrictions would hamper the movement of free world seapower which Admiral Burke holds so essential to bind together the oceanic coalition of countries upon which our collective security depends.

Not only the mission but the constituency of Russian seapower would be advantaged, since their approximately 500 submarines would be given a potential haven 12 miles wide stretching the hundreds of thousands of miles of the coastlines of the world. Our surface and surface airpower could not hunt and kill Communist subs in these super "covered ways" (as Winston Churchill called even the 3-mile limit neutral havens) without violating the sovereignty of neutral nations. We obey international law.

The second Communist attempted restriction is fairly transparent. Because we are a have-not country as to land areas in which to test nuclear weapons, we have had to resort to ocean areas for some of our major tests. The Russians, of course, can test behind the privacy of their own curtain in the vast land areas which they dominate.

The third attempted Russian restriction—that of limiting naval maneuvers on the high seas—presents one of the most immediate analogies to our space problems. After our President and our Congress had both officially issued declarations and resolutions expressing our desire that outer space be reserved for peaceful uses, and after our delegation in the United Nations had proposed and strongly promoted United Nations action, not only for the peaceful use of outer space but also for international cooperation in peaceful uses to benefit all mankind, then the Russians came along with a proposal in the United Nations that the use of outer space be restricted to nonmilitary purposes. To understand the true significance of this, let's look at what could have happened, if ever since the end of World War II, freedom of the seas had been abolished and use of the high seas had been restricted to nonmilitary purposes under an international agreement similar to the one presently proposed for space. Under traditional international law—as shown in the accompanying illustration [not printed in RECORD]—the right of naval forces to concentrate in international waters is unquestioned. The presence of the 6th Fleet in the Mediterranean has been an important factor in U.S. and U.N. efforts to preserve the peace during the various crises in that area, especially in Lebanon last summer. In each case the forces of aggression were held back. In the Pacific, the 7th Fleet has done the same.

Now it sounds very peaceful to propose to restrict the use of the high seas to nonmilitary purposes, but without the 6th and 7th Fleets, peace could not have been so effectively stabilized over the past 14 years. Time after time since World War II, incipient small wars could have spread into world wars, or else small strategic nations would have been forced into virtual surrender by the overwhelming land mass power of the Communist colonial empire.

Thus the seapower of the United States—although representing tremendous and effective military power—is a great force for peace without surrender or slavery; and is a powerful deterrent to war and aggression. But an international agreement restricting the high seas to nonmilitary uses would have paralyzed its power for good.

Just as it is necessary to make nonaggressive military use of the high seas, under the doctrine of freedom of the seas, to preserve the peace and to insure the survival of the free world, it may and very probably will be necessary to make such use of freedom of space until the Communists give up their continuously asserted objective of world conquest and world communism, or certainly until the Soviet Union displays a sincere interest in promoting the bona fide peaceful use of space.

Both the President of the United States and the Congress of the United States have long ago officially enunciated their deepest desires and determinations that outer space be preserved for peaceful purposes.

Exclusively peaceful uses cannot be assured prior to meaningful and enforceable disarmament agreements. Meanwhile, the United States can, will, and is advancing the United Nations program for international cooperation and international programs in the peaceful use of space. But, to deter war and to secure national survival of the United States, we cannot foreclose ourselves against reliance on the new resources of space to strengthen our deterrent posture and thus preserve both peace and freedom.

To take just one outstanding example, Lieutenant General Schriever, referred to above, in his recent testimony before the Subcommittee on Governmental Organization for space activities of the Senate Committee on Astronautical and Space Sciences, discussed the possibility of the "massive, annihilating, sneak attack" and pointed out that with the advent of multimegaton space weapons, the advantage of striking the first blow will be so great that "not merely security but national survival too might well be at stake." Then, making his point that in the face of this threat, "the opportunities of maintaining and strengthening our deterrent posture lie principally in the space vehicles," General Schriever explained:

"The roles of the reconnaissance satellite and of the warning satellite, strangely enough, are not often identified with our deterrent posture. Yet it is obvious that, with ballistic missiles traveling 5,000 miles in approximately 30 minutes, the value of intelligence and of early warning of missile launchings has assumed unprecedented importance. Satellites will provide us a manifold means of extending our present military capabilities in these areas. Security does not permit detailed discussion of these programs. It is clear, however, that if warning of Soviet missile launchings exceeded in minutes the reaction time of our own missiles, they would be strongly deterred from initiating such an attack. Satellite warning system makes this possible. It should also be pointed out that these surveillance systems are passive in nature and will be powerful servants of world peace and security.

"Ballistic missiles, reconnaissance and warning satellites are by no means the only space systems now under development. There are others which will also more effectively perform military missions. To name a few—there are the communications, the weather, the navigation and the mapping and charting satellites. These will perform important military functions for all three services. They will also have important nonmilitary applications."

Thus, we should all realize that like freedom of the seas, freedom of space is vital to U.S. survival. If, to preserve the peace, to secure the necessary warning against a massive surprise attack, and to save the lives of scores of millions of Americans, it turns out to be necessary to set up in space a system of early warning statellites, then the United States should be free to do so. National self-preservation is the first principle of international law.

Unsafeguarded international agreements restricting the use of space might well fore-

close us from taking steps necessary to preserve our national existence. Nor can we afford to forget the double danger that in addition to the risks of terms in any agreement which would advantage the Communists and disadvantage us, we are bound by international agreements, whereas the Communists historically violate their obligations under such agreements.

In this connection we must keep constantly in mind the warning stated by the President of the United States in his most recent state of the Union message to Congress:

"We cannot build peace through desire alone. Moreover, we have learned the bitter lesson that international agreements, historically considered by us as sacred, are regarded in Communist doctrine and in practice to be mere scraps of paper. The most recent proof of their disdain of international obligations, solemnly undertaken, is their announced intention to abandon their responsibilities respecting Berlin.

"As a consequence, we can have no confidence in any treaty to which Communists are a party except where such a treaty provides within itself for self-enforcing mechanisms. Indeed, the demonstrated disregard of the Communists of their own pledges is one of the greatest obstacles to success in substituting the rule of law for rule by force."

Space is free now—the way the high seas are free. Practically no two legal theorists on the law of outer space agree as to just where national sovereignty in air space ends and outer space begins. Some theories range from 10 miles out to 30 miles out to 1,000 miles out. Other theories are based on velocity and orbit of space vehicles or termination of the drop hazard. But wherever it begins, the consensus of authority is that space is free. One very good reason for this is that thus far no one has devised an effective method for making cosmic space unfree.

Space is free now: let's support this essential freedom—which may mean national survival in the future—the way we have and will support freedom of the seas.

Italian Descendants Fight the Smear

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Titusville Herald of Titusville, Pa.:

ITALIAN DESCENDANTS FIGHT THE SMEAR

Some law-enforcement agents and other Government officials who are careless with their words would have us believe that crime in this country is run by the maffia. Because the original maffia existed in Italy, this assertion, for which so little proof appears to exist, is a smear on all Americans of Italian descent.

This is resented, and justifiably so, by the Order Italian Sons and Daughters of America. They have taken up the challenge tossed to them by Harry Golden, famous Carolina editor, in his best-seller, "Only in America." Wrote Mr. Golden:

"In crime books and in radio and TV dramas the Italian has become almost a stereotype for the gangster and mobster. This, of course, is not only unfair, but untrue. Yet what makes it remarkable is that the Italians do nothing about it."

The Order Italian Sons and Daughters of America has come forward with a course of action which asks the President and other top officials to stamp out relentlessly any nationwide organization of criminals of Italian origin, if they find that such exists. If none is found, the order wants an official statement to that effect. It also asks that full civil rights protection be given to all Americans of Italian origin; that newspapers, radio and television stations observe the same code for Americans of Italian origin in news stories relating to crime as they do to other minority groups; and that all law abiding loyal Americans of Italian origin support this program.

These are reasonable requests, and the Herald strongly urges their fulfillment.

Send Me a Letter—Send It by Mail

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 23, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Newsweek magazine, page 22, for July 13, 1959:

THE MAIL MUST GO THROUGH, BUT CAN IT PLOW THROUGH THIS OBSOLESCENCE?

Early on the morning of June 20, 1860, a bronzed, muscular youth strode out of the post office at St. Joseph, Mo., with a leather mail pouch, swung into the saddle, and set off westward at a full gallop. Riding hard, stopping only to change horses, the youth covered 75 miles before he passed the mail pouch to a fresh horseman. Riders changed, horses changed; but the new Pony Express moved steadily on, day and night, across the Great Plains, out through the Indian country, over the Rockies, through the desert, and across the High Sierras. On June 28, a rider brought the dusty pouch from St. Joe into Sacramento, Calif.—almost 2,000 miles away. The U.S. mails had traveled across the West at an average speed of better than 10 miles per hour—a record that was to stand until the Union Pacific drove a golden spike at Promontory, Utah, and spanned the continent with a railroad.

Today, in an age of supersonic aircraft and the instantaneous transmission of messages from outer space, the U.S. mail often travels no faster than it did on the Pony Express more than 99 years ago.

It can still take 8 days for first-class mail to go from St. Joseph, Mo., to Sacramento. Slow mail is a problem that jumps geographical borders, crosses party lines, ignores social distinctions, and hits every literate citizen in the Nation.

The Post Office Committee of the U.S. Senate recently ran a series of tests to find out just how bad the service is—and found it took 2 days for a letter to cover the 370 miles between Bristol, Va., and Washington, D.C. (average speed: 8 miles per hour), and it took almost 6 days for one to cover the 3,000 miles between Forest Grove, Ore., and Washington (average speed: 23 miles per hour).

The Senators on the committee thought the test mailings were bad enough, but some of their personal experiences were worse. During the congressional debate over Hawaiian statehood, a group of Hawaiians sent Washington's Democratic Senator HENRY JACKSON an air shipment of 5,000 letters endorsing his support of the bill. JACKSON received the shipment 15 days after they were mailed and 5 days after he had successfully maneuvered the bill through the Senate. The committee chairman himself, South Carolina's Senator OLIN D. JOHNSTON, recently received an invitation to attend the opening of a new pier near Charleston—7 months after the letter was mailed.

Is the U.S. mail service all that bad? The answer, in a word, is "No."

Without any question the great bulk of the Nation's first-class mail is processed and delivered in 1, 2, or 3 days. A continuing series of nationwide tests conducted by Newsweek since January shows that about three out of four first-class letters will arrive on time. A broad rule of thumb is that a first-class letter will be delivered in 1 day, plus 1 day for every 500 miles it has to go. But the Newsweek survey turned up scores of exceptions. Among them:

New York, Times Square–New York, Fifth Avenue (two blocks), 3 days.

Los Angeles-New York (2,450 miles), 8 days.

New York–Detroit (628 miles), 3 days.

Palo Alto, Calif.–San Francisco (31 miles, 4 days.

Columbus, Ohio–Washington, D.C. (392 miles), 4 days.

Portland, Oreg.–New York (2,990 miles), 5 days.

San Diego, Calif.–Lemon Grove, Calif. (10 miles), 4 days.

Atlanta–Denver (1,440 miles), 5 days.

Such exceptions—frequent, inexplicable, and inexcusable—are bad enough, but there are any number of experts in and out of the post office who worry that the American postal system may get worse. For the U.S. mail is growing faster than human hands and existing machines can handle it.

Considering the built-in handicaps, the wonder is not that delivery of a letter may take 3 or 4 days, but that delivery is made at all. The truth is that Arthur Summerfield, the 58th U.S. Postmaster General, must operate one of the world's biggest businesses with hand tools and hand labor; many post-office methods stand untouched from the day when Benjamin Franklin was sworn in as the 1st Postmaster General in 1775.

Since then, the U.S. Post Office has expanded into colossal proportions, and become a catchall for all kinds of stray Federal activities. It registers aliens, takes the deer and grouse census, and provides flags for funerals of old soldiers. It is banker ($5 billion annually in money orders alone), detective agency (50,000 investigations of mail burglary and theft last year) and seamstress (8 million mail bags sewed up in 1958).

For its main business, carrying the mail, the Post Office covers millions of miles of highway, railroad, air, and water routes—from the Arctic almost to the Equator. It operates helicopters, and has tried, at considerable expense, mail-by-missile. But it still operates 103 horseback routes, too (e.g., from Sumerco to Sod, W. Va.), 7 foot routes (e.g., from Pippa Passes to Mallie, Ky.), and 1 dogsled route, on St. Lawrence Island in the Bering Sea. All in all, the Post Office employs 538,000 postmen; spends $3.5 billion yearly; and carries two-thirds of all the mail in the entire world.

The Post Office's job is herculean; its methods, however, are incredibly old fashioned. For 150 years, while private industry put itself through the industrial revolution, turned machinery to the tasks of drudgery, and made or moved its products better, faster, and cheaper, the U.S. Post Office looked firmly the other way. Now the whole system is nearing its inevitable crisis. The volume of mail has jumped in 20 years from 26 billion pieces to 61 billion pieces. In the next 15 years, it will double today's total.

VOTES

Part of the Post Office's problem lies in the political nature of the system. Local post-

masters are appointed not to deliver mail, but to deliver votes. Almost every new administration in Washington appoints its party chairman as Postmaster General. There is little incentive to replace postal clerks, who can vote, with machines, which can't vote.

"The idea has been that if you have a mass of bodies you can smother the mail, and get it delivered by the sheer weight of numbers," says Maurice B. Feimster, who has seen nine postmasters come and go during his 40 years at postal headquarters.

Neither the politicians, who sit in for a few years at a time, nor the bureaucrats, who actually run the Department really wanted a change, especially after the depression began. Then, instead of cutting personnel and stepping up efficiency, the Post Office launched makework projects—opened new mail routes, built new post offices.[1]

At the end of World War II, the Post Office found itself in deepening trouble. A flood of new cars and the switch to air travel altered national transportation patterns, forcing the railroads to drop 7,800 of the 10,000 trains the Post Office had relied on to carry the mail. The mass movement to the suburbs placed heavy new demands on mail-delivery systems geared to cities. And the letters piled higher and higher. Postmen could no longer smother the mail; now the mail was smothering the postmen.

DO SOMETHING

How did the Post Office react? In the spring of 1945 its representatives asked a House Appropriations Committee for money to buy 1,500 stamp-vending machines. Sitting around the table later, Representative CLARENCE CANNON, chairman of the committee, warned them: "You had better do something about research and modernization before it's too late."

Three years later, the Hoover Commission on Governmental Reorganization emphatically urged the Post Office to get a move on for its recommendations. And in 1949, Congress appropriated $150,000 to help the Post Office figure out where to begin; and Jesse M. Donaldson, first career postman to serve as Postmaster General, set up a five-man engineering staff. But as it turned out, service actually deteriorated during Donaldson's regime. He cut residential deliveries from two a day to one a day in April 1950, and he later began cutting business deliveries.

After the GOP won the White House in 1952, President-elect Eisenhower handed Arthur E. Summerfield, his campaign manager and Postmaster General-designate, a three-part directive which instructed him to: Improve service, cut deficits, and raise morale.

FIRST PRIORITY

To Summerfield, the No. 1 directive was "cut deficits." And he did make a great show of doing this. He closed down some small and inefficient post offices, and he abolished many backwoods mail routes. During his first 3 years in office, he was able to return $250 million of his appropriations to the Treasury. (He had to get part of the money back from Congress, later.)

Mostly, though, Summerfield attempted to cut deficits by increasing revenues. Year after year, he asked Congress to boost rates—on first-class mail, on airmail, on second-class mail (magazines and newspapers), on third-class mail (advertising circulars).

Since the earliest days of the Republic, since 1789, in fact, when George Washington complained about the first post-office deficit, Congress, which holds the constitutional authority over the post office, has insisted that the post office is not primarily a business—but a public service. In 1799, Congress formally ruled that postal expenses were a legitimate cost of government. Again and again—from 1845 to 1958—Congress consistently spelled out the same message: Never mind the deficit, give the people service.

UP, UP, UP

Summerfield steadfastly refused to accept this philosophy. And, finally, in 1958, Summerfield won out. Congress raised the rates on second-class and third-class mail; it boosted first-class mail to 4 cents and airmail to 7 cents. Summerfield still wasn't satisfied. He is now asking for a 5-cent rate for first-class mail.

When it came to improving the service, however, Summerfield followed the policy of making haste slowly. He painted the mailboxes red, white, and blue; put ballpoint pens in the post offices, and decentralized operations to give 15 district postmasters the power to make routine decisions—but, at the same time, he cut down further on business deliveries.

And yet, the post office was so backward until Summerfield came along, that, even though he made haste slowly, Summerfield has done more to modernize it than any of his predecessors. Senator OLIN D. JOHNSTON, who heads the Senate Post Office Committee, concedes that the system now is at least "moving in the right direction."

All of the post office's present mechanical innovations, and some still under development, will be installed in a $20 million super-post office now being built in Providence, R.I. When this new post office goes into operation next year, mail will come in by helicopter and truck, move—untouched by human hands—into the building on conveyors, and be culled, faced, stacked, canceled, and sorted into bundles—all in a few minutes. The Providence post office is part of present plans to build 12,000 new post offices and distribution centers over the next 5 years.

CONFORM OR PAY

In the post office, as in industry, automation is sure to bring changes. Postal clerks will have to be upgraded, and paid more money. And mail must be, to some extent, standardized. The automation engineers are already insisting that everybody use the same, long legal-size envelope for letters. What they hope to do eventually is eliminate present classes of mail. All standard envelopes would be charged the same rate and sent, air or rail, whichever was faster. Everything else would be charged a higher rate. But Congress will have plenty to say about that.

When Postmaster General Summerfield leaves in 1961, mechanization and modernization will have gained a foothold in the U.S. postal system. What happens after that is problematical, for the Post Office remains a political structure and the cost of modernization will be enormous, well into the billions.

Is it worth it? Representative MURRAY, House Post Office chairman, thinks not. "The public doesn't really expect fast service," MURRAY said recently. "If it did, the people would be willing to pay more money for it. If you or I want to get a message across in a hurry, we reach for the phone or send a wire."

So long as mail continues to be delayed, and it will be, recent efforts and expenditures may seem wasted. But Summerfield has at least roused the system and taken steps to get it moving. F. L. Elmendorf, president of Robert Heller & Associates, Cleveland management consultants who have been working with the Post Office for a decade, believes that Summerfield's biggest accomplishment has been to put down a solid foundation for future progress.

THE ONLY HOPE AUTOMATION

Mechanization and automation offer the only real hope for improvement in the U.S. mail service. At present, the Post Office's use of hand labor is staggering: Every single letter, postcard, package, or whatever—61 billion pieces yearly—must be picked up, read, and put somewhere an average of 12 times. To eliminate hand labor, the Post Office has installed conveyor-belt systems in Washington and six other big-city post offices. Now mail is stacked in baskets, placed on the conveyor belt with a guide card, and an electronic eye trips a robot-like arm that pushes each basket off in exactly the right place. The Post Office is also experimenting with many other ingenious, laborsaving devices. Among them:

Transorma: This Dutch-built mail sorter was on display at the World's Fair in New York in 1939, but not until 1955 did the United States decide to try one out. With the one Transorma now being tested (in Silver Spring, Md.), 5 operators can sit at keyboards and sort 15,000 letters an hour against 7,500 an hour by hand.

The Bell: Designed and built in Belgium by a subsidiary of International Telephone & Telegraph Co., the Bell went into operation in the Antwerp post office more than 5 years ago. Early last year, one was set up in the main Washington post office. The result, this machine also enables post office workers to sort twice as fast as they could by hand.

The Boxer: Still under development, the Boxer will be the first American-made mail sorter. A joint project of Rabinow Engineering Co. (a Post Office consultant), Burroughs Corp., and Pitney-Bowes, Inc., the Boxer will come in several sizes, for large and medium post offices. The biggest model will have 12 keyboards, and will be able to sort up to 36,000 letters an hour, to 300 cities.

The Greller: This is the post office's first semiautomatic parcel post sorter, now in operation in Baltimore. As each package moves by on a conveyor belt, an operator punches a keyboard, and a memory unit follows the package and pushes it off into any one of 21 package chutes. A similar package sorter, the Webb, has been installed in the main post office in Washington.

The Eye: Intelligent Machines Research Corp., of Alexandria, Va., has built an electronic scanner that can actually read typewritten addresses. The Eye may be the big breakthrough in the post office's sorting problem. A pilot model of the Eye can read 18 destinations and drop each letter in the proper slot. Future models of the Eye may take over all mail sorting in major terminals.

At every step in its progress, however, the post office must still contend with human error. When Detroit's postmaster proudly announced the opening of a new, semiautomated mail conveyor system in late 1956, scores of public officials turned up for the unveiling. With public attention focused on the new "Mail-Flo System" that would speed handling of Detroit's main mail terminal, little had been said about the fact that some of Wayne County's tax bills were at that moment lost in the mails. But on the big opening day, as the shiny new conveyor system hummed along reassuringly, an alert Detroit Free Press reporter spotted the missing tax bills, collecting dust in a corner of the building. A postal clerk had evidently dumped the bills there and forgotten about them.

[1] In one hasty project, a Pittsburgh post office was built without a single letter drop in it.

Statement Commemorating the Opening of World Refugee Year by the Right Reverend Monsignor William F. Kelly, S.T.D., Director, Diocesan Resettlement Council, Diocese of Brooklyn, N.Y.

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mr. ROONEY. Mr. Speaker, under the permission heretofore granted by unanimous consent of the House I am pleased to include with these remarks the following learned statement commemorating the opening of World Refugee Year made recently by the Right Reverend Monsignor William F. Kelly, S.T.D., director, Diocesan Resettlement Council, diocese of Brooklyn, N.Y.:

During the 1957 International Migration Congress held in Assisi, the Right Reverend Monsignor Edward E. Swanstrom, executive director of the Catholic Relief Services (NCWC), suggested there be an international population year to direct worldwide attention to the acute problems of peoples who were refugee, displaced or surplus.

A group of British Parliamentarians made a proposal limiting it to refugees. Subsequently, on June 5, 1958, the General Assembly of the U.N., with only the Communist nations opposing, adopted the United Kingdom resolution for World Refugee Year, June 1959–June 1960.

President Eisenhower issued a proclamation from the White House on May 19, 1959, inviting all citizens to support accredited programs developed to assist refugees during World Refugee Year. Congressman FRANCIS E. WALTER and Senator JOHN F. KENNEDY have introduced identical measures to implement U.S. action in this matter.

Pope John XXIII, on June 28, 1959, broadcast a worldwide appeal particularly asking Catholics to aid their unfortunate brothers uprooted by war or political changes. The Pope called upon world governments to throw open their frontiers ever more generously and speedily to bring about the human and social resettlement of so many unfortunate people.

The word refugee accurately pinpoints the temporal conditions of men and nations, of freedom and things human. It would seem to be a litmus test whether society is built for man or man for society.

The word "refugee" apparently entered the English language through the French from the Latin. Originally it appears to have been one who sought shelter or protection, thus refuge, from danger, for which reason he fled. Hence a refugee is ordinarily one who flees persecution, or who feels compelled to flee because of fear of persecution, on account of race, religion, or other human circumstance. In our days it is usually limited to political refugees, in sharp contradistinction to economic refugees (those who flee to improve the opportunities for their economic livelihood).

Refugees, unfortunately, cross the pages of history as far back as it is recorded. It is sometimes difficult in history to distinguish refugee movements from simple migration movements. It is generally accepted that the refugee, as David or Coriolanus, as Einstein or Sturzo, is dependent upon the mercy of those who receive him. The early pilgrims, for the most part, are properly classified as refugees as were also the Quakers who settled in Pennsylvania. It was left to our modern era, however, for the first time to witness this phenomenon on a worldwide scale. It is in the historic political tradition of the West to offer political asylum. Americans, alive to their history, will recall their own glorious tradition, an apt expression of which is found in Emma Lazarus' immortal inscription on the base of the Statue of Liberty.

Christians, as their spiritual forbears the Jews (who were a nation of refugees), have an especial openness of heart to refugees. As a people we began with our infant Christ, in exile with His virgin mother and foster father, fleeing the wrath of Herod. The Holy family, as Christian refugees, found refuge in pagan Egypt where peace and bread through work was made available to them. In this matter, Pope John recently declared that "The lot of those who live in exile far away from their homelands has always evoked in a very special manner the motherly solicitude of the Catholic Church, which could not forget the words of Christ, its divine founder, 'I was a stranger and you took me in; naked and you covered me; * * * in prison, and you came to me'."

Where are the refugees? The worldwide range of refugees includes, among others, Tibetans in India, Indonesias in Saigon, Chinese in Macao. Then there are Palestinians in Transjordan, Pakistan, and Tunisians of Italian ancestry in addition to many other groups. Finally, there are the multitudes of east Europeans who have fled beyond the Iron Curtain.

In this total picture of refugees, it will be seen that they come from the diverse nations and languages, cultures and religions of the earth and are scattered in vast numbers across the hemispheres. For one should recognize that beyond the frontiers of communism, there is also, in large sections of the Western World, as Dawson notes, a movement in revolution. This results in a vast uprooting and dispossession of enormous numbers of people whose courage and fidelity, in many instances, move them from home into an unknown land and a dark future.

Why is this World Refugee Year? Unfortunately, what is out of sight is often also out of mind. The utterly miserable conditions of fellow humans who suffer because of their convictions or because of their race or religion or being out of step with tryannous regimes, affronts the human spirit. If an ancient Carthaginian born Latinist, Terence of Rome, could properly declare that "nothing human is foreign to me," one may reasonably ask how can any informed person remain complacent today unless he abdicates his conscience.

Unfortunately, very few Americans have actually witnessed the conditions of life in a DP camp, or have actually worked with refugees. It is understandable that, being unaware of the plight of their fellow humans, so many seem indifferent. It is a tragedy that many people are unmoved by worldwide poverty, hunger, and distress.

The purpose of the World Refugee Year is to awaken interest in all people through widespread accounts of refugee problems which, actually, are the problems of all. What is often the problem of all becomes the problem of none. Hence the voluntary agencies of the land, Catholic, Protestant, and Jewish, are undertaking an extensive campaign in this matter.

The World Council of Churches stated in a recent message that "We are convinced that in our day and generation our greatest human tragedy is that of the refugee—homeless people all around the world. The refugee and his family have, for more than a decade, been a challenge to our confession and compassion, and must be a first call on the ministry of those whose Lord had nowhere to lay His head."

What can be done for refugees? The worldwide refugee problem is an international problem that requires an international solution. The United States, as a member of the family of nations, in addition to making funds available to help alleviate the conditions of misery, will be expected to admit a token number, its fair share, of the small number of refugees that have to be resettled. The vastly larger number of refugees will be indefinitely resettled in or near areas where they are now located.

The refugee question is part of the larger question of contemporary demographic problems. The world population is expanding at a faster rate in the underdeveloped than in the industrial areas. If this continues without positive correlative increase at a more rapid rate in the production of food and fiber, of goods and services, it is already apparent that there impends the danger of widening and intensifying world poverty and misery. National security as much as Christian principle urge Americans and other well-off nations to attend to the demands of social justice as well as the needs of human misery. We must learn that we cannot hope to survive unless we learn to share.

It is too often ignored by us Americans that, in the words of a good friend, Premier Ali Khan of Pakistan, we live on a fabulously prosperous island in a vast sea of misery in which hundreds of millons of people are trying to keep their heads above water. Through the bounty and mercy of God, and the industry and ingenuity of our citizenry, we in the United States are singularly blessed and therefore heavily obligated. As is well known, our annual per capita income is above $2,000, while for two-thirds of humanity it is $100 or less. It is said that America's increasing wealth is such that the average American is happily able to save more in a year than the average person elsewhere unhappily earns in a year.

What can be done to help resolve or at least alleviate refugee problems? Governments, we are informed, should make additional financial contributions toward the permanent solution of refugee problems; they should also make reasonable relaxations of their immigration regulations to make possible admission into their lands their fair share of the smaller numbers of refugees who have to be resettled elsewhere; and they should also include provision to care for some of the sick and aged.

What can the individual do? He should encourage his government to pursue indicated policies; he should help individuals such as Father Pire, O.P., and others who are helping to establish the refugees where they are now located; he should help the voluntary agency of his choice, such as the Catholic Relief Services (NCWC) and the Diocesan Resettlement Council, or other appropriate agency in his own area; if possible, he should seek to learn at first hand from one of the locally resettled refugees some of the harsh realities confronting refugees; he should promote discussions, conferences, and other suitable means to achieve the aims of the World Refugee Year, contribute to support their programs, and, finally, pray to the Holy Family in Exile for the restoration of all things in Christ and thus bring to an end the need for refugees.

Not a few observers expect world conditions may yet become worse, that we shall be called to assume heavier burdens. Though the challenge is formidable, there is also great hope and great opportunity. Christopher Dawson reminds us how effective was the early preaching of the Gospel in the cosmopolitan centers such as Corinth, Ephesus, and Rome, where numerous uprooted, denationalized people huddled with great spiritual hunger. We today witness ominous movements of people, with many flocking into urban areas, such as Calcutta, Hong Kong, and Tokyo. From these centers

will emerge, in God's own time, new apostles of Christ.

This is the time for planting; the harvest will come later. Christian aid to the uprooted refugees across the world will surely open the door of Christian vision to them, of Christ and the dignity of man in freedom, eventually to the triumph of Christian ideal and principle.

Pope John XXIII invokes from his heart the protection and special favor of the almighty and merciful God upon all those individuals and groups who hasten the fulfillment by participating in any way—as we ourselves will do according to our means—in the success of the World Refugee Year.

Bastrop County (Tex.) Has Great Industrial Potential

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 16, 1959

Mr. THORNBERRY. Mr. Speaker, Mr. Weldon D. Mays, president of the Smithville, Tex., Chamber of Commerce, has sent me an excellent article published in the May 7, 1959, issue of the Smithville Times describing the great potential of Bastrop County. The article refers to a discussion of the resources existing in central Texas, in which Bastrop County is located, by Mr. E. M. King, past president of the Colorado River Industrial Development Association. Mr. King calls attention to the great opportunity to develop and use the resources for the benefit of all the people living within that area.

The article is as follows:

BASTROP COUNTY HAS GREAT INDUSTRIAL POTENTIAL.—E. M. KING CITES DAM POSSIBILITIES

Exciting possibilities, just short of astounding many people, exist in central Texas of which Bastrop County is the main focal point. This has been revealed in a somewhat recent civil engineering survey of Bastrop County in particular, and few counties in Texas surpass central Texas' natural resource potential, according to E. M. King, past president of the Colorado River Industrial Development Association, often referred to as CRIDA.

"Many undeveloped resources," continued Mr. King, "are to be found all through central Texas. These rich industrial resources are such as water, mineral deposits, electrical power production, cheap fuel such as lignite, together with flood control, irrigation, fish and wildlife conservation.

"Bastrop and Lee Counties possess a wealth of lignite for industrial purposes. It is abundant from one end of the counties to the other, and makes available cheap fuel for factory consumption or electrical power production. Various clays and timbers are found throughout Bastrop County.

"Some 1,500 square miles of territory watershed empty the waters of streams into the Colorado River between Austin and Smithville. Seven surging streams such as Bartons Creek, Onion, Wilbarger, Walnut Piney, Cedar, and Alum Creeks extend many miles into the interior of central Texas and in times of excessive rainfall pour their turbulent and raging soil-enriched waters into the Colorado River, to be carried on into the Gulf of Mexico. A rainfall of 5, 6, 8, or 10 inches between Austin and Smithville will cause untold damage. With Bastrop County receiving the full impact of this devastating flood and passing it on to all of the low-lying rich valley region of La Grange, Columbus, Wharton, Bay City, the loss is staggering.

"Vivid is the memory of the devastating floods of the past which had their origin between Austin and Smithville. The several dams of the Highland Lakes region are doing an excellent job of holding back the waters of the far western region, but nothing has been done for central Texas when heavy rains and cloudbursts occur in the 1,500-square-mile area below Austin. The foothills of Bastrop offer a natural for flood control. With the 38,000 square miles above Austin protected by great dams of Buchanan, Lake Travis, Granite Shoals, Inks, Marble Falls, and Lake Austin, it is neither feasible nor understandable to ignore—and continue to ignore—the value of flood control below Austin. To allow the destruction of thousands of acres of rich, productive farmland all along the Colorado River to the Gulf of Mexico when the hills of Bastrop offer sites for flood control is not compatible with intelligent reasoning.

"The civil engineering report previously mentioned specifically cites the mouth of Alum Creek, 3 miles upstream from Smithville on the Colorado River, as a site for such a dam. Data provides information that such a dam at the mouth of Alum Creek will impound some 65,000 acre-feet of water, and will provide power for the production of some 65 million kilowatt-hour units of electrical power annually. In times of power shortages this is no small figure, coupled with hydroelectrical power, lignite for the production of electrical power is likewise available.

"Built in the foothills of Bastrop County, a dam impounding some 65,000 acre-feet of water, a minimum number of acres of farmland would be affected or removed from crop production. It can easily be seen that Smithville at 270.14 feet above sea level and Austin at 407.27 feet there exists a difference of 137 feet. With Alum Creek at 280 feet and a safety flow line of 318 feet, a dam height of only 38 feet is needed, resulting in a savings of thousands of acres of farmland. This dam will provide not only an ample supply of water for the irrigation of 23,000 acres of irrigable land in Bastrop County, but irrigation and soil conservation go hand in hand. Only a small effort so far has been made to conserve and utilize one of our greatest natural resources—water. With both the State and Federal Governments becoming acutely aware of this problem, water commissions have been set up for the study of this problem. It is a known and recognized fact that in times of excessive rainfall below Austin thousands of acres of rich farm soil are carried on into the Gulf of Mexico, and that in times of deficient rainfall this same soil is parched and nonproductive.

"Proper water conservation will also provide excellent fish and wildlife conservation. This can also be an important factor in central Texas. The impounding of surplus water can create an industry of far-reaching effect. Summer camps and summer homes on both sides of the river lake from Smithville to Bastrop, with fishing and resort recreation will bring many people from hot crowded sections of our cities. It could become an asset of enormous value to Bastrop County and the surrounding area.

"It is time," concluded Mr. King, "for the intelligent, thinking people of central Texas to use the resources at hand and to bring to life a prosperity within their reach. Few places surpass or even possess the natural resource potential of central Texas, and all that is needed is intelligent action."

Sewage Contamination in Irrigation Water

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mr. JOHNSON of Colorado. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the major portion of the seventh in the Rocky Mountain News series published in Denver on June 27.

In this article, Bill Miller reports how secondary sewage treatment, which Denver fails to provide, is needed to remove such virus as polio, coxsackie, ECHO and infectious hepatitis from the effluent. Thus, my constituents beyond Denver's city limits are exposed not only to the nuisance of smelly, contaminated water, but also to a real health hazard.

Miller's last paragraph speaks eloquently for the wisdom of collective metropolitan solutions to water problems. I am happy to report that there is now a joint sanitation commission planning a joint attack on pollution. There will be no Federal support for cooperation, however, unless H.R. 3610 is approved by the Senate and signed by the President.

[From the Rocky Mountain News, Denver, Colo., June 27, 1959]

METROPOLITAN DILEMMA

By 1937 Denver had a primary sewage plant in operation.

But now, since the area's population has increased tremendously, this question has been raised:

Does primary (removal of solids from sewage) treatment completely remove disease-carrying bacteria?

Dr. Stuart G. Dunlop, associate professor of microbiology at the Colorado School of Medicine, has been researching the problem off and on for 25 years.

His answer:

"It would appear that the public health hazard associated with the use of sewage-contaminated water for the irrigation of truck crops to be consumed raw is not so great as has been assumed in past years."

This sound encouraging but Dr. Dunlop adds:

"Nevertheless, the fact that the water has been shown to be contaminated indicates that a potential hazard still exists. Every effort must be made to provide adequate treatment of all domestic and industrial wastes before these wastes are discharged into streams to be used later for irrigation purposes."

AGREE WITH DUNLOP

Officials of the U.S. Health, Education, and Welfare regional office agree with Dr. Dunlop about the potential health hazard.

As far back as 1956, Edmund C. Garthe, regional sanitary engineer, warned:

"Sewage emerging from Denver's present treatment plant is in almost as bad a condition as when it entered."

He added that the treated sewage, which is dumped into the Platte River and which soon enters irrigation ditches, has all the makings for causing many cases of diseases.

Denver answers by saying there is not a case on record where it has been proven that Denver's effluent has caused a single case of any disease.

The potential diseases the doctors are talking about are typhoid and gastroenteritis, an inflammation of the lining membranes of the stomach and intestines, both caused by the salmonella bacteria. Shigella, another strain, produces bacilliary dysentery.

GOOD EVIDENCE

"There is also fairly good evidence that primary treatment of sewage will not remove such virus as polio, coxsackie, ECHO, and infectious hepatitis," Dr. Dunlop added.

Dr. Dunlop also stressed the nuisance and mental health hazard of odors arising from sludge beds along ditches and streams.

He points out that where there is water there are children.

"You simply can't stop kids from going into streams and rivers," he said. "And when these waters are carrying bacteria, there's always the chance of direct infection."

But the question about contamination of vegetables continues to intrigue Dr. Dunlop's scientific mind.

From his research, he concludes that Colorado's climate and irrigation methods used by Colorado farmers are perhaps more responsible than sewage treatment for preventing spread of disease through vegetables.

"Enough research has been accomplished to show that this type bacteria does not survive in an area where the air is dry, the humidity is low, and there is plenty of sunshine," he said.

IRRIGATION METHOD

"In addition, the common method of irrigating in this area is simply to allow the water to flow in furrows between the rows of plants and not to flood the field.

"Thus any organisms in the water would probably have to be splashed onto the leaves and stems above the ground or be conveyed to the plant by some other means.

"Root crops, on the other hand, might be contaminated. Overhead sprinkling as practiced in some areas might present a different problem."

However, Dr. Dunlop continues, the organisms are present in water which receives effluent and are present in irrigation water.

"If the micro-organisms, to some extent, are being absorbed by the soil, is there a possibility of our underground water and our wells being contaminated?" he asked. Only further research, he said, will bring an answer to this puzzler.

U.S. Representative BYRON JOHNSON of Denver has charged that certain chemical operations at Rocky Mountain Arsenal already have caused some underground water pollution.

The potential health hazard, he said, will remain with us until the situation is cleaned up on an areawide basis.

COMPLETE TREATMENT

"This means complete treatment and chlorination of effluent before it is dumped into streams," he said. "It also means complete purification of all our water, including coagulation, sanitation, filtration through said and chlorination before the water is given back to the public."

He realized, he said, that this would be the ideal.

"But when we are dealing with the health of the public, why should we strive for anything less than the ideal?" he asked.

And the ideal cannot be achieved, he added, unless the entire area works together. One treatment plant dumping raw sewage into a stream can spoil the work of other plants which do an excellent job of cleaning up sewage.

Army-Navy-Air Force Register Pays Tribute to Sylvanus Thayer, "Father" of West Point

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mr. KOWALSKI. Mr. Speaker, the current issue of that excellent publication, the Army-Navy-Air Force Register contains an article by Col. R. Ernest Dupuy which pays deserved tribute to Sylvanus Thayer, often called the "father" of the U.S. Military Academy at West Point.

I call the attention of my colleagues to this splendid article, which relates the accomplishments of the outstanding educator and inovator who not only made West Point the center of American technology, but has properly been described as the founder of American technological education.

Colonel Dupuy's article is most timely, for Sylvanus Thayer has been nominated for membership in the Hall of Fame at New York University.

As a graduate of West Point myself, I find this article of exceptional interest. I commend it to my colleagues for their careful perusal.

THAYER OF WEST POINT FAME: HIS PUPILS SET THE PACE—FATHER OF MILITARY ACADEMY MAY WIN NEW HONORS

(By Col. R. Ernest Dupuy)

Sylvanus Thayer, West Point's "Father," and the founder of technological education in the United States, has been nominated for listing in New York University's Hall of Fame for great Americans. If elected, the great educator will find himself in the company of four of his most illustrious pupils already enrolled there—Grant, Lee, Sherman, and Stonewall Jackson.

One hundred and fifty-one leaders in American science, art, literature, education, law, and religion will weigh Thayer's qualifications for admittance in the 1960 quinquennial selection.

THAYER'S NOMINATION

Thayer's nomination, presented by Gen. Anthony C. McAuliffe (U.S. Army, retired), president of the Association of Graduates of the U.S. Military Academy, reads as follows:

"He transformed the U.S. Military Academy at West Point into the source of technology in the United States. During the formative period of the Nation—from 1818 to 1868—both Government and private industry called on Thayer's West Point graduates—their sole existing instrumentality—to harness the Nation's waterways, build its railroads, improve its harbors and explore and map its vast expanses.

"In the field of education Thayer's scientists, mathematicians, and civil engineers leavened not only all institutions of technological learning established subsequent to the Military Academy, but also many of those in the general educational field already in existence."

MILITARY LEADERS

"He evolved, through his pedagogical acumen and inspirational leadership, the West Point system which has produced military leaders from the War with Mexico to Korea. Four of Thayer's pupils are today in the Hall of Fame: Ulysses Simpson Grant, Robert Edward Lee, William Tecumseh Sherman, and Thomas Jonathan 'Stonewall' Jackson."

It was in 1817 that Thayer, then a brevet major of Engineers, was personally selected as Superintendent of the Military Academy, by President James Monroe. The young officer, a veteran of the War of 1812, had just returned from a 2-year tour in France, where he had familiarized himself with Napoleonic military history, studied the methodology of the famous Ecole Polytechnique, and collected more than 1,000 technical books which went to the West Point library.

At that time West Point, which had been created in 1802, was a struggling little school, with no established curriculum and but little discipline among the cadets.

SWEEPING REFORMS

Thayer at once instituted a series of sweeping reforms. The basis of his then revolutionary pedogogy was that the 4-year course he established would be a novitiate, in which the students would live in an atmosphere of Spartan simplicity and under impartial and impersonal character-forming discipline, both military and educational.

The honor system he established, which is still West Point's pride today, had as its basis, in his own words, the fact that "a cadet does not lie, cheat, or steal."

Thayer's new concept—a blending of liberal arts and science—was launched at the very moment that the demands of the industrial revolution and our own national expansion were calling for a new type of builder and teacher; a man who could solve the problems of a machine industry resting upon the practical findings of physics and chemistry.

So, while West Point graduates—between the years of 1818 and 1860—were pioneering in the fields of exploration, railroad building and metallurgy, others of them also were being drafted in the realm of education, particularly technological.

West Point books: The first civilian engineering school, Rensselaer Polytechnic Institute at Troy, N.Y., was founded in 1824. But not until 1835 was its first class of civil engineers graduated; four young men who had been instructed from the textbooks written by West Point professors.

In 1846 Harvard's Lawrence School of Engineering was founded; in 1847 Yale instituted its Sheffield School of Engineering, and in 1852 the University of Michigan established an engineering department. West Point graduates headed the staffs of all three of these schools.

Meanwhile the demand waxed for West Pointers as teachers of science and mathematics in our general collegiate institutions.

In 1839 Virginia Military Institute was established. Francis H. Smith, West Point 1833, was its first superintendent. Around him he gathered a select group of other West Pointers, among them Thomas J. Jackson, who would later go down on history's rolls as "Stonewall."

In 1845 the U.S. Naval Academy at Annapolis was founded. To its staff went Henry H. Lockwood, West Point 1836. He would remain at Annapolis until 1870, as professor of mathematics, gunnery and natural and experimental philosophy. Other West Pointers, too, served at the Naval Academy, but Lockwood in particular is remembered as the "grand old man" of Annapolis.

Early years: Through those early years of West Point the personal influence of Thayer on education in the United States grew to a remarkable extent. Two instances are especially worth notice, since they affected

the future of two of America's most prominent liberal arts colleges.

George Ticknor, one of Harvard's great educators, in 1821 led a campaign for rejuvenation of that university's curriculum and methodology.

The system then existing in the civilian colleges, Ticknor declared, "was no longer able to satisfy the requisitions of higher education which are now beginning to be made on all sides."

Ticknor's remedy was the adoption of Thayer's principles as used at West Point. Its graduates, Ticknor wrote, were sent out "at the end of 4 years instructed with a degree of thoroughness which would of itself cast a reproach on any of the colleges of the country."

Ticknor, who was a lifelong intimate of Thayer, based his recommendations on observation of the first 3 years of West Point's progress under his friend's control. By 1825 Harvard had adopted many of Ticknor's recommendations, including departmentalizing of the institution, splitting of classes into small sections "according to proficiency," and a recasting of its annual examinations.

Thayer remained at the head of West Point until 1833, when he resigned after refusing to compromise with President Andrew Jackson's political meddling with the careers of certain cadets.

Returning to line duty with the Corps of Engineers, Thayer was engaged in constructing coastal fortifications, particularly around Boston Harbor, until his retirement in 1863 with the rank of brigadier general.

BUILT WELL

Thayer had indeed built well. Up on the Hudson they call him "Father of West Point." He can with equal validity be called the father of the Nation's technological education.

Urban Renewal Stymied

EXTENSION OF REMARKS

OF

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 26, 1959

Mr. COHELAN. Mr. Speaker, under permission to extend remarks, I wish to call the following letter to the attention of my colleagues. This is one of a number of letters I have received expressing in simple terms the distress of responsible citizens with the President's veto of the housing bill. May I point out that the urban renewal program in the city of Berkeley which is referred to is one of two major slum clearance programs with communitywide support in the Seventh District of California which are now stymied:

Hon. JEFFERY COHELAN,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN COHELAN: I consider that the Presidential veto of the housing bill has done great harm to our domestic economy. I know that you have worked for passage of the housing legislation, and I appreciate your efforts.

I cannot measure from here the possibility that the veto can be overridden, but such an outcome does not appear likely. My point in writing to you now is to urge that you continue your work for housing legislation by seeking speedy passage of a bill which will sustain the urban renewal, college housing, and FHA programs.

You may have heard that the Berkeley City Council recently decided to embark on an urban renewal program, acting upon the recommendations of a large and communitywide citizens' committee which made a careful study of urban renewal and its possible usefulness to the city of Berkeley. I doubt that the months of work by these citizens and the positive action by the city council can be made effective unless and until Federal assistance is available.

I hope that legislation to continue these programs will have your support and that you will seek to secure passage of such legislation at an early date. I am still counting on meeting you when you return to California.

Very truly,

RICHARD B. MITCHELL.

The Challenge of Education

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 9, 1959

Mr. McCORMACK. Mr. Speaker, one of the most thoughtful and farsighted estimates of the national problems confronting our educational system was delivered by Gov. Foster Furcolo of Massachusetts at the commencement exercises at Harvard University on Tuesday, June 11, 1959.

It was a most important address because within it is expounded a most clear evaluation of our educational problems in the light of the threat of Russia to surpass America, and also most significant recommendations as to what the Federal Government should do to gain leadership in the modernization of our educational systems and the coordination of all of our educational systems into one comprehensive program.

Gov. Foster Furcolo, whom you will remember as a former Congressman from the First District of Massachusetts, is a distinguished scholar, a graduate of Yale University and Yale Law School, and an outstanding governor. He has always had a keen interest in expanding and developing more effective education for the young men and women of our country.

ADDRESS AT HARVARD UNIVERSITY BY GOV. FOSTER FURCOLO

President Pusey, fellows of Harvard College, members of the board of overseers, and distinguished guests, when I saw the motto "Veritas" it gave me a thrill to know I was once again at the greatest university in the world [applause] but the wind blew away the first two words which happen to be "Lux et." [Prolonged laughter.]

Once again it is my duty and also my privilege to address this distinguished company of the sons and daughters of Harvard at these exercises. In order to participate, most of you here had only to go through 4 years at Harvard. For me to participate, I had to go to the trouble of being elected Governor although I must confess it was not solely for that reason that I sought the governorship.

It seems there never has been a period in history when the cause of the advancement of learning was so imperiled—and when there existed, with all their dread implications, simultaneous challenges of such great consequence both to the Nation and to the great university.

I need hardly remind your distinguished President of the struggles which Harvard College itself underwent during its early days. But in those early days, the Legislature of Massachusetts, noting the financial distress of Harvard in 1652, recommended a system of voluntary contributions from the United Colonies to maintain "the President and certayne fellowes and poore scholers."

During the next administration, that of President Chauncey, the salary of the President was paid from the collection of an additional annual tax on the towns of the Bay Colony which was referred to as "The College Proportion."

It should be perfectly obvious, however, that an enlarged system of education is even now on the horizon. The farmers of New England "who gave wheat and corn to Advance learning and Perpetuate it to Posterity" will find their counterparts in the millions of American citizens who will be called upon to pay their "College Proportion" just as they pay their income taxes today for the services and security which are furnished by the Federal Government.

I think all of us here today will agree that the United States is racing against the stopwatch of history in a continental struggle to train and develop the best minds and talents of the Western World. If indeed, the United States is not so engaged—then certainly we should be.

We in this country pride ourselves on our leadership in education, but if we read the testimony before Congress we are taken aback at the charges of some of our greatest scientists and military leaders: to wit, that in 10 years we shall be pitifully behind the Soviet Union in the production of engineers and teachers—underscoring a solemn appraisal that the United States is today no longer the leader in mass education, but is simply living off its backlog of educated citizens.

What do we do in this situation? When the cause of learning is so imperiled, and when the Nation's security is endangered, how do we meet these dread challenges of overwhelming consequence to the Nation and to the university?

For its part, the great university will have to reexamine its role within the educational system, and it will have to adjust so that it may lead and assist at the same time. It must provide leadership not only for the private educational institutions but also for our whole public educational system. The excellent private colleges in America must not be permitted simply to become feeding grounds for the graduate schools of the great university.

The system of national public education, for which we have no alternative but to prepare, must be guided—nurtured—and protected by the great university.

I need only restate the wise words of former President Eliot of this university, which though spoken many years ago, are touched perhaps with a sense of what was prophetic not only in his time but in ours also: The actual problem to be solved is not what to teach, but how to teach. The revolutions accomplished in other fields of labor have a lesson for teachers. New England cannot cut her hay with scythes, or the West her wheat with sickles. When millions are to be fed where formerly there were but scores, the single fishline must be replaced by seines and trawls.

The hard fact of the situation is that our population is expanding so fast that certain results naturally follow, and must follow:

1. Our educational facilities, our classrooms, and our teachers, are insufficient to serve the entire mass of people.

2. For a public school population that has multiplied 80 times in less than 100 years, and is still growing, the cost of providing the necessary facilities is prohibitive except to the vast resources of National Government.

The most informed sources in this country estimate that our financial needs for education during the next 10 years will run to more than $40 billion. And I might add, parenthetically, that these same 10 years might possibly be America's last timetable if our estimates concerning Soviet progress in training Soviet youth are correct. It all means that some national system of education is on the horizon. And one reason is that any such sum involving billions of dollars will have to be provided by the National Government—there is just no other source. And even these vast funds will have to be used with all economies possible.

Our Nation has already committed itself to a multibillion-dollar program for Federal highways. Are we rich enough to provide money for roads but so poor that we neglect to provide the funds to educate our youth? Will we merely build roads, or will we also build our youth and build the Nation's security at the same time?

If we do not—one might wonder whether the words of one of your poetic sons, T. S. Eliot may not have had a bitter augury when he wrote, in "The Rock":

"In the land of lobelias and tennis flannels the rabbit shall burrow and the thorn revisit, the nettle shall flourish on the gravel court, and the wind shall say: 'Here were decent people: Their only monument the asphalt road and a thousand lost golf balls.'"

Now assuming the necessary costs of what I might refer to as the revolution in public education are to be met, then the greatest demand on all of us—State and university alike—will be to design an education which will make the most efficient use of teaching resources. And this is of paramount importance because teaching resources will inevitably be limited.

We will have to design an education that must not suffer any impairment of quality—an education of the highest quality but with perhaps a faculty only half as large in proportion as is now customary in our institutions of first rank.

It is inevitable that future mass liberal education in this country will have to be structured upon the base of a drastic increase in efficiency, an increase in efficiency that privately endowed institutions, by and large, have not as yet accepted.

If there must be an increase in efficiency in education—which calls for leadership in the educational field—whence will come this leadership?

It can come from government, but it would be better elsewhere. It can come from the masses, but it would be an unwise leadership in that event. It can come from the ordinary run-of-the-mill college or university, which would mean ordinary, run-of-the-mill leadership. Or the leadership could come from the great college or the great university, which would mean great leadership. That, properly, is where the leadership belongs.

Does that mean leadership in changes that are not necessary to the great university, itself—the adoption of an efficiency that it can afford not to have? We must understand that it is not a question of whether the great university can afford a luxury that others cannot. Rather, it is a question of leadership, and the great university cannot afford to lose leadership. The truth is that education, itself, cannot afford to have the great university abandon its leadership in any field pertaining to education—and the Nation itself cannot afford such a loss, either.

And when we think of sputnik and world peace, we come face to face with the sobering realization that the cause of world peace cannot suffer such a loss either.

Leadership is not always something to be attained by striving for it. Sometimes it is thrust upon us—perhaps inescapably, perhaps even unwanted. One phase of leadership will be to improve the quality of education. Another is to make that education available to constantly increasing numbers of students. Another is to furnish education as economically as possible without impairing its quality. In the long run, unless we have adjusted education to those goals, we will have failed.

Perhaps the chief factor in making possible savings in the operating costs of public institutions of higher learning will be an adjustment of the presently existing teacher-student ratio. A change in the existing ratio alone of 10 students to 1 teacher (which is the national average), to 15 or 20 to 1, would in the next ten years make possible savings of hundreds of thousands of teachers, and billions of dollars.

Some months ago, it was my pleasure to discuss the subject of teacher-student ratio with President Eisenhower, and to suggest to the President an exploration of the truth of the almost universally held premise that smaller classes resulted in higher pupil achievement.

I made this suggestion to the end that there might be greater educational opportunities for the youth of America—and at the same time the most effective use of the billions of dollars which we will have to spend.

Why should we examine the validity of the almost universally held teacher-student ratio theory? Because, and this will probably amaze you as it did me, when I first began my own study of it—it may not be sound, and I stress the word "may."

In making my own exploration of the subject some time ago, I found to my astonishment that the Encyclopedia of Educational Research reported, and I quote: "Among the more than 200 research studies of class size and pupil achievement that were undertaken in the past fifty years, it was found that 40 percent of the research reports favored large classes, and only 22 percent favored small classes. The more recent studies showed 50 percent favored large classes, and 21 percent favored small classes. The remainder felt there was no significant difference either way. Factual research studies found better than 2 to 1 that pupil achievement is higher in larger than in smaller classes."

Now all those studies may be wrong—but do they not at least indicate that a full and complete and authoritative review of the teacher-student ratio is warranted? By educational authorities—not governmental.

Incidentally, just two months ago, I received a letter advising me that the Department of Engineering Mechanics at the University of Kansas made a recent study and reported that students in classes of sixty, who have generally made A in previous college work, do just as well as the same group in classes of twenty, and the same is true for students with B, C, or D averages.

Since the meeting with the President, I have met with members of the President's Cabinet and some of the leading educators of America, and it has been informally agreed that a study of this important criterion for accrediting colleges and universities ought to be made, with the ends in view which have already been suggested.

I ought to emphasize what I have already stated before, that the highest quality of our educational process must be preserved. It is within such a frame of reference that we must take a second look at the most recent studies on this subject, all of which cast serious doubt on the widely held theory that the quality of education improves as the number of students to teachers decreases.

There are also two recent reports which have been financed by the fund for the advancement of education. The first of these was the new college plan, presenting a major departure in higher education and published in 1958; the other was memo to a college trustee, which is very recent and reports on the financial and structural problems of the liberal college. Both of these reports have recommended a teacher-student ratio of 20 to 1, or double the present national average.

What would result? Let me quote the last paragraph of my letter to President Eisenhower:

"If full and careful investigation by an unimpeachable survey establishes that the teacher-student ratio should be revised upward, resulting in more students per teacher, it will unquestionably mean:

"1. Greater educational opportunities for more students.

"2. Improved educational achievement by students.

"3. Better pay for teachers—and more effective utilization of qualified teachers.

"4. An easing of the teacher shortage problem.

"5. A saving to Massachusetts taxpayers and to every city and town in the State of many millions of dollars a year—and every year in the future—thus saving Massachusetts hundreds of millions of dollars.

"6. A saving to every State in the Nation, which means the taxpayers of the Nation will be saved billions of dollars."

Anyone who deals with budgets, local, State or national, knows that the greatest, or at least one of the greatest expenditures in any budget must go for education. And it will increase in the years to come. So the savings run to billions of dollars, billions every year.

It is difficult in the midst of these pleasant exercises to convey that sense of urgency which those of us feel who must help provide for the thousands of young men and women to whom no college doors will be open this fall. But if the great university does not become concerned, no one will.

Surely it is easier in terms of the condition of the world today, to rephrase again the goals of survival and improvement of human life which must be the necessary and parallel objectives of the entire free world.

The state, by which I mean the government in the classic sense, must look to the great university in this time of crisis, and the great university must look to the state—for we, through no fault of our own, and by dint of events which sweep today over the entire face of the earth, are put to the greatest test of our lives.

The state must provide the means, and the great university must give of its best efforts to provide the leadership, so that we may keep faith with those who follow us.

We in this country honor education, and, if I may paraphrase Plato: What we honor in our country—that we must cultivate.

More Than Money Involved in Battle of the Budget—"Life Line" Broadcast

EXTENSION OF REMARKS

OF

HON. KEITH THOMSON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 9, 1959

Mr. THOMSON of Wyoming. Mr. Speaker, the daily radio broadcast, "Life Line," is a patriotic and religious educational program produced in Washing-

ton and carried by many radio stations throughout the country. "Life Line" features the commentaries of Wayne Poucher, who appears to be a close and constructive student of public affairs.

I would like to call to the attention of Members a recent "Life Line" broadcast by Mr. Poucher on the subject of the Federal budget and what is involved in the effort to hold it in line.

His calling attention to the evils of overextending Federal aid programs is particularly significant. This is a favorite device of the spenders. Right-thinking people must overcome the spenders' efforts to plant the thought in the minds of American people that there is free money in Washington. The Federal Government has no money that it does not either take from the people in the form of taxes or borrow to their credit. There seems to be no suggestion on the part of anyone to raise taxes, and any responsible person knows that the borrowing has already been overdone.

One of the worst effects of the Federal aid approach is the further destruction of States rights and local control of local affairs. By dangling Federal aid money as the bait, they dictate how State and local governments will expend their resources. In many cases, this has created problems for the State and local governments in taking care of their more urgent responsibilities, rather than to help them in the solution of their problems.

I, for one, am more than just a little tired of small pressure groups attempting to use Congress as a vehicle for spending the people's money on programs which they cannot get the people themselves to support at home.

I have obtained a copy of Mr. Poucher's broadcast, which reads as follows:

The battle of the Federal budget has to do with money—a very great deal of money. But, at the same time, this battle is not concerned primarily with money.

More than money is involved. This battle is concerned with the survival of a design for our Nation's life, worked out over the generations—a design strong, delicately balanced, built to endure, if we will let it endure.

We, the people of the United States, will continue to be urged, by every kind of persuasiveness, to demand that the Federal Government adopt all sorts of new schemes for paying the States, with their own money, to take care of their own people.

The money will be taken from you. It will be red-ink money, of course. Its expenditure will further unbalance the budget, stimulate inflation, add to the national debt, increase the unbearable and growing interest burden. This added spending will lower the value and honesty of the American dollar, weaken us in trade with other countries, and leave us vulnerable to subtle Soviet attack through manipulation of gold or other economic pressures.

That is a long list of evils, all having to do with money. And yet, I repeat, the economic effect of this spending is not the most important effect.

If these new programs, presented so enticingly, for more Federal aid to the States are carried through, the greatest injury will be the injury to the sovereign freedom of our States and to the liberties which can be safeguarded only if that sovereign freedom is preserved.

The American principle that State and local governments should take care of the needs of their people is part of the traditional American emphasis on the individual and the family. Local governments are closest to the individual citizens and, thus, most likely to be answerable to them. Central governments are always farther removed from the individual citizens. They operate by mechanical rules, which treat human beings almost like things—whether the problem is education, medical care, welfare, or anything else that directly concerns people.

There is another strong reason why the sovereign freedom of your State is important to you and your family every day. It is the means, chosen by the Founding Fathers, to make sure that power is divided.

That is the first axiom of American freedom. The makers of the Constitution tried to insure, for all time, the division of governmental power. They were doing exactly what they thought the most important task of all when they placed strict limitations on the power of the Central Government.

We Americans have, in the sovereign independence of our States, a political design as beautifully fitted together and as delicately balanced as that God-made miracle which we call a bird. And our kind of government—like a bird—can live and soar, or it can be wantonly destroyed.

No more effective method has ever been invented to destroy the delicate harmony of our Federal-State system than that bribery of the States that goes under the name "Federal aid."

Do you, personally, want more such bribery? Are you willing to help destroy the beautiful design for balanced power, which the Constitution gave us in trust for future generations and which is our greatest gift to other peoples, who are yearning to be free?

We can nobly save or meanly lose our freedom from monopoly government. We can insist that our sovereign State must do its own work, and that local units do their own work, with no bribes from Washington asked for or taken.

Or, we can do nothing.

If we, the people, choose to do nothing, we will be acquiescing in the loss of the seeds of life and liberty for our children and our children's children.

Operation Bootstrap—Reservation Style

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 9, 1959

Mr. BERRY. Mr. Speaker, since the introduction of my Indian self-help bill, which I have termed "Operation Bootstrap—Reservation Style," I have received dozens of letters from Indians, organizations interested in Indian problems, industrial organizations interested in new locations, and chambers of commerce who see in this program a realistic inducement for industries to locate in areas which are presently nonindustrial.

In the preparation of the bill, I followed as closely as possible the commonwealth provisions of a similar program which has proven highly successful in Puerto Rico. There the commonwealth had entered into contracts with industry to construct necessary facilities and then lease or sell them to the company on a long-term basis. In addition, they have offered the company complete tax exemption for 10 years.

As a result of the program, some 600 industries have been located in Puerto Rico with the result that many thousands of people have obtained permanent employment. The standards of living on the island have materially improved, good housing has replaced slums, water and sewer facilities have been financed, and the people have been enabled to lift themselves up by their own bootstraps.

The same program can do the same thing for the Indian reservations of the Nation. One hundred years of effort to solve the Indian problem by attempting to make farmers and ranchers out of all of them, attempting to raise their standard of living through per capita payments, doles, and relief have only proven detrimental instead of beneficial. A full dinner pail, a weekly paycheck, and a church to attend on Sunday is as essential to the Indian as to the non-Indian. He will lift himself up by his own bootstraps if given freedom of opportunity, unhampered by Government regulation and controls.

The bill leaves the matter entirely voluntary with the tribes to accept or reject, but if they should accept the program it gives them the authority to contract with industrial organizations, and when such contract is approved by the Secretary of the Interior, the company would be eligible to fast tax writeoff and exempted from Federal tax for a 10-year period. The tribe is authorized to borrow money either commercially or through the Indian revolving fund for construction of the plant, selling or leasing it on a long-term basis.

Such partnership between the tribe and the manufacturer, designed to provide steady employment for the Indians, would be an incentive on the part of both to make the operation of the plant successful and continuing. Indians have demonstrated their ability and their skills. Absenteeism in industrial plants on reservations is, in every instance, lower than normal. When they have jobs and employment, they, too, have demonstrated their desire to lift themselves up by their bootstraps.

Federal housing programs and housing loans would be available in the communities around such a plant where the employees have a steady source of income. The accomplishments of Puerto Rico could be duplicated on many of the Indian reservations of the West. It is the only solution to the Indian problem and a means of industrializing nonindustrial areas.

Indian reservations are generally located in areas where industry is sorely needed to balance the economy of the area. Such a program would be as beneficial to the State and area as it is to the reservation. While the program is providing opportunity to the Indian people, it is, by the same token, providing opportunity for the community and State as a whole.

The American Bankers Association's Summary Report Showing How the Legislation Was Intended To Be a Giveaway of $16.8 Billion

SPEECH
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 1120) to amend the National Bank Act and the Federal Reserve Act with respect to the reserves required to be maintained by member banks of the Federal Reserve System against deposits and to eliminate the classification "central Reserve city."

Mr. PATMAN. Mr. Chairman, S. 1120 is a completely unnecessary piece of legislation. All members of the committee and all other Members of the House who have spoken on the subject have emphatically stated that it is not the congressional intent to approve or sanction the Federal Reserve's reducing the amount of Government securities it now holds, and not the congressional intent that the money-creating shares will be changed in favor of the private banks in allowing increases in the money supply.

So, since the House is on record as disapproving any change in the money-creating shares in favor of the member banks, for the member banks as a whole, and approves only certain adjustments in favor of the New York and Chicago banks to be offset by increases in reserve requirements of the Reserve city banks, then clearly there is no need to pass the bill. Everything the committee members wish to be done can be done under the present law.

NO GIVEAWAY, NO BILL NEEDED

The only thing of a practical nature which the bill will now do is to eliminate the central Reserve city classification for the New York and Chicago banks. And in doing this Congress is going against the advice, recommendations, and pleas of the Federal Reserve Board, which has said that this will take away a power which it needs to be able to prevent inflation. Furthermore, in doing this, the bill violates an agreement which the American Bankers Association made with the Federal Reserve Board which was that the bankers would support the bill as the Board was persuaded to recommend it, and not insist upon the elimination of the central Reserve city classification.

As I have pointed out, the Federal Reserve Board has complete authority under present law to remove either Chicago or New York, or both, from the central Reserve city classification. The Federal Reserve Board could remove both cities from the central Reserve city classification and leave the classification vacant. But it would have the classification there as a standby authority which it could use in the event that large inflows of credit into these money market centers made it essential that the Board raise reserve requirements of the banks in these centers. At least the Board would have a means of meeting such a situation without also having to raise reserve requirements of all of the Reserve city banks over the country, to which the New York and Chicago banks will now be wedded.

And as the gentleman from New York [Mr. MULTER] has admitted, the only reason for overruling the Federal Reserve Board's judgment as to what it needs to control inflation is that he and some of the other Members have been working on the Federal Reserve Board for several years in an effort to get the Board to take the New York and Chicago banks out of this classification, and the Board has steadfastly refused to do it. Since the Board has resisted the pressures for this so far, certainly it has felt very strongly that the central Reserve city classification is, as it has said, essential to its ability to control inflation.

As for allowing the banks to count their cash as reserves, as a means of helping the country banks, the bill is also completely unnecessary. As has been pointed out, the country banks have only $1.2 billion of cash. So if the Federal Reserve should decide to permit these banks to count all of their cash against reserves, the effect would be that of reducing their required reserves by only $1.2 billion. Yet the Federal Reserve now has authority to reduce the country banks' reserve requirements against demand deposits by $1.5 billion, and to to reduce the country banks' reserve requirements against time deposits by another one-half billion dollars. So the Federal Reserve has unused authority to reduce country banks' reserve requirement by $2 billion.

THE ABA'S REPORT WILL SHOW WHAT THE HOUSE HAS NOT APPROVED

Now, I have pointed out several times that the Members of the House would have been able to understand much more quickly what this legislation was originally intended to do, but which all the sponsors now say it will not do, if the committee's record had contained the report of the American Bankers' Association, which sets out the original legislative proposal and states its purposes. The committee's record contains a lengthy report prepared by the staff of the Federal Reserve Board which sets out the Board's recommendations and reasons for amending the ABA's proposal. It would have been much easier to comprehend the net effect of the bill if the Members of the House had been able to compare both the ABA's proposal and the Federal Reserve Board's recommended amendments, and I believe that the record which is now being made should contain at least the ABA's summary report.

The American Bankers' Association's report was prepared by its economic policy commission. This commission was composed of the deputy manager in charge of the economic policy commission, plus the secretary of the commission, plus 12 officers of private banks located in the East and Midwest, and as far West as Indianapolis. Their names will appear in the proper place in the ABA's report, which I will insert in the RECORD following my remarks.

The ABA's full report to the Federal Reserve Board setting out its proposals for this legislation is a printed document of some 166 pages. It is titled "Member Bank Reserve Requirements" and is dated February 1957. This is much too long a document for including in the CONGRESSIONAL RECORD. There is, however, a shorter document. At the same time the full report was submitted, the economic policy commission also prepared a summary of its report, which is titled "A Plan for Member Bank Reserve Requirements." This is only 38 pages long. It appears to have been prepared for wider distribution than the main report. I will insert this shorter report in the RECORD, after making a few explanatory remarks which may help the Members understand it more readily.

What, in the main, was the ABA's plan? First, it was to eliminate the central reserve city classification. Second, it was to reduce required reserves of all member banks—all three classes—to a uniform 10 percent against demand deposits. Third, it was to reduce required reserves of all member banks against time deposits to a uniform 2 percent. Fourth, it was to count vault cash against reserve requirements.

In addition, the ABA's proposal was to make these reductions largely mandatory.

In replying to this plan, the Federal Reserve Board made certain objections.

First, it objected to eliminating the central Reserve city classification because, as I have pointed out, it claimed that this will interfere with its ability to control inflation.

Second, it objected to a law which would make it mandatory that it reduce required reserves of the member banks by any predetermined date. The reason for this objection is, as the Board's report makes clear, the mandatory requirement would seriously interfere with the Federal Reserve's ability to transfer its securities, to offset the reductions in reserve requirements and thus prevent the reductions' causing a runaway inflation.

HOW THE ABA'S REPORT IS RELATED TO THE BILL AS REPORTED BY THE COMMITTEE

How closely is the ABA's report connected to the Federal Reserves recommendation's and to the bill as reported by the committee? Let me cite a few extracts from the record.

In his testimony before the subcommittee, Vice Chairman Balderston of the Federal Reserve Board said:

> The Board has given consideration to the careful and comprehensive study of the problem of reserve requirements and the proposals for changes made by the Economic Policy Commission of the American Bankers Association, and also to other plans for fundamental revisions in the reserve requirement structure. The Board has concluded, however, that far-reaching changes in the law are not necessary. In particular, the Board opposes, for reasons already stated, the abolition of the three Reserve classes of banks. It would also not favor a mandate to reduce reserve requirements to any predetermined level by a given time. With the amendments proposed, along with other provisions of existing law, the Board would have

adequate authority to make any changes in the structure and level of reserve requirements that are likely to be appropriated under present or foreseeable conditions. (Subcommittee hearing, p. 6.)

And almost identical language appears in the formal report which the Board submitted to the committee.

Representatives of the American Bankers Association appear to have negotiated with the Federal Reserve Board and obtained an agreement that it would recommend the ABA's proposed legislation, with modifications. And, as an incidential point, it also appears that the ABA agreed to support the Board's proposed modifications. This is indicated by the following questions and answers during the testimony before the committee by witnesses whom I might identify.

Mr. Daniel W. Bell, president and chairman of American Security & Trust Co., Washington, D.C., was a member of the Economic Policy Commission of the American Bankers Association which prepared the ABA's report originating this legislation. Just as he completed his prepared statement to the subcommittee of the House Committee on Banking and Currency, the following colloquy took place, with the subcommittee chairman, Mr. BROWN.

Mr. BROWN. Gentlemen, I think you have made a splendid presentation.

I would like to ask you a few questions. With the authority contained in the bill which permits the Board to fix lower reserves for banks in central Reserve cities or Reserve cities on the basis of character of business transacted, do you believe there is any need to continue the designation of central Reserve cities?

Mr. BELL. I did not get the last part of your question, Mr. Chairman.

Mr. BROWN. Do you believe there is any necessity to continue the designation of central Reserve cities?

Mr. BELL. Mr. Chairman, as I pointed out, the Economic Policy Commission of the American Bankers Association made quite a study of this subject and made several recommendations, among which was the elimination entirely of the classification of cities.

We do not feel that there is any logical reason for continuing the classification, and of course that applies to the central Reserve cities. However, in our conferences with the Federal Reserve Board in trying to come to some agreement on all of these matters, we agreed to support this bill even though it retains the central Reserve city classification. We do not think there is any logical reason to continue the classification, but the Federal Reserve Board feels that there may be some occasion when they will want to use that classification, so as to differentiate in the reserve requirements as between central Reserve and Reserve cities. (Subcommittee hearings, p. 198.)

It is Mr. Bell's statement that "in our conferences with the Federal Reserve Board in trying to come to some agreement on all of these matters, we agreed to support this bill even though it retains the central Reserve city classification" which leads me to state that the bill, as reported, violated that agreement. And I might add that I find this admission that the Federal Reserve Board negotiated an agreement with the bankers, as to what legislation it would recommend, a little shocking.

Then, turning to Mr. David M. Kennedy, who was also appearing as a representative of the American Bankers Association, the chairman asked the questions and received the answers cited below. Incidentally, Mr. Kennedy who is an officer of a Chicago bank, did not approve of the proposal to remove the central Reserve city classification:

Mr. BROWN. Mr. Kennedy.

Mr. KENNEDY. I personally would favor continuing the central Reserve city designation. I agree with what Mr. Bell said, as to the negotiations between the ABA and the Federal Reserve Board, that there was discussion leading to eliminating all the designations, and that would be all to the good if you could work out formulas that would give and take and equate the Reserve picture. (Subcommittee hearings, p. 198.)

So here, too, we find Mr. Kennedy agreeing to what Mr. Bell said concerning negotiations between the ABA and the Federal Reserve Board.

HOW THE BILL AS REPORTED COMPARED WITH THE ABA'S PLAN

How then does S. 1120 as reported by the committee compare with the ABA's original plan for required reserves? With a minor exception the bill would permit everything to be done, the ABA's report specified, though it stops short of requiring that every thing be done. The bill, as reported, would have permitted 10 percent reserve requirements against demand deposits for all member banks. It would have permitted the counting of vault cash against required reserves. The only thing requested by the ABA which the bill did not permit is reducing required reserves against time deposits to 2 percent. The minimum for time deposits would remain at the 3 percent, as in the present law. This difference of 1 percentage point amounts, however, to only one-half billion dollars of reserves. So, insofar as the Fed's holdings of Government securities is concerned, the total difference between S. 1120 as reported and the ABA's plan amounts to one-half billion dollars.

HOW THE ABA COMPUTED A $16.8 BILLION GIVEAWAY

I come now to the ABA's estimate of what the effects of its plan would be on the Federal Reserves' holdings of Government securities. The ABA's report called for its plan to be put into effect gradually, with the last installment to be made by June 1962, which is 3 years from the present time. All computations presented in the ABA's report are shown, however, with June 1956 as the starting point. In other words, the effects of the ABA's plan are presented as things that were to occur between mid-1956 and mid-1962. And the ABA report provides an estimate that the effect of the reduction in required reserves which it proposed would be that, by mid-1962, the Federal Reserve would have $16.8 billion less in Government securities, and the private banks would have $16.8 billion more in Government securities, than would be the case if required reserves were not changed.

The estimate is in two parts:

First. The additional amount of Government securities which the Fed would have to add to its mid-1956 holdings to provide for the increase in the money supply expected to take place by mid-1962, if no shift were made in the money-creating shares as between the Fed and the private banks. This is estimated to be $7 billion additional which the Fed would require, by mid-1962. The ABA's plan calls for the private banks to acquire this $7 billion instead of the Fed.

Second. A portion of the Government securities which the Fed had already acquired and was holding at mid-1956 to be transferred over to the private banks by mid-1962. The ABA report estimates this amount to be $9.8 billion.

Let me quote, now, from the ABA's report on these two components of its proposed transfer of Government securities to the private banks.

Speaking of the expected growth in the money supply between mid-1956 and mid-1962, the report states:

Looking ahead, it is clear that the needs of the public for currency and bank deposits will increase with the growth of the American economy. To meet these needs, it will be necessary to expand the reserve base of the banking system either by creating more reserves through open-market operations or by reducing reserve requirements.

* * * * *

To be more specific, if past relationships between production, currency, and deposits are approximated in the future, then over the next 5 years demand deposits will increase by something like $20 billion, time deposits by about $12 billion, and currency in circulation by more than $3 billion. If such an expansion were to be met without reducing reserve requirements, it would be necessary to supply the banks with about $7 billion of additional reserve balances by means of open-market purchases of Government securities by the Reserve banks.

It would be far better to provide for this growth by lowering the reserve requirements of member banks over the coming years. (ABA's report, pp. 12 and 14.)

So according to the ABA's estimate, its plan would have resulted in the private banks acquiring, without cost, $7 billion of Government securities which the Federal Reserve would have acquired, also without cost, between 1956 and 1962, if reserve requirements were not reduced.

Speaking of the amount of securities already in the Fed's portfolio by mid-1956 which the ABA expected to be transferred to the banks, without cost to the banks, by mid-1962, the ABA's report states:

If the Commission's proposals were in effect at the present time * * * required reserve balances that member banks must maintain at the Federal Reserve banks would be $9.8 billion lower (53 percent lower) than their actual current level. (ABA's report, p. 26.)

Thus according to the detailed estimates set out in the ABA's report, its plan for reducing required reserves would have the banks create the money to acquire $7 billion of Government securities which the Fed would otherwise be expected to add to its holdings between mid-1956 and mid-1962—many of which have now been added—and have the Fed transfer out to the banks $9.8 billion of the securities it was holding as of mid-1956—making a total of $16.8 billion.

THE ABA'S SLEIGHT-OF-HAND WITH ITS GIVE-AWAY ESTIMATES WHEN PRESENTED IN CHARTS

In reading through the ABA's summary report, however, it will be interesting to note some sleight-of-hand tricks that are played with these estimates at points where the report sets them out in charts which make the estimates conspicuous. At these points unexplained substitutions take place in the figures which tend to minimize the size of the ABA's proposed raid on the Treasury. This is a raid on the Treasury, of course, because the interest payments on all of these securities which the ABA proposed to take away from the Fed are paid back into the U.S. Treasury. If and when these securities are transferred to the private banks, the interest payments will go into bank profits. Furthermore, the amount of the principal of these securities would have to come out of the taxpayers' pockets if and when the Federal debt is ever reduced.

At page 28 of the report there appears a chart which purports to show the effect of the ABA's plan on "required reserves" as between mid-1956 and mid-1962. Unfortunately, the chart cannot be reproduced in the RECORD. But beginning at page 26 and continuing on page 29 the figures used in making the chart are specified. Here the $9.8 billion which was to be taken from the Fed's portfolio as of mid-1956 suddenly becomes, without explanation, only $8 billion. The report states:

On the basis of these projections, total required reserves (including vault cash) would be about $5 billion lower in June 1962 under the commission's plan than they are at the present time, and required reserve balances of member banks would be about $8 billion lower.

The difference between the $5 billion and the $8 billion appearing in this sentence is apparent. There is to be $3 billion in vault cash, which is to count against required reserves. But how the total "reserve balances" became $8 billion when it was previously $9.8 billion is not explained.

Similarly, in the chart the $7 billion of additional securities which the Fed was expected to acquire between 1956 and 1962, if reserve requirements were left unchanged, becomes, without explanation, only $4 billion. The report states:

Chart II also shows that if the existing reserve setup were to remain unchanged, required reserves would increase by about $4 billion by 1962.

Then the report continues, arriving at a total of $12 billion for the two figures:

Comparing this with what would happen under the commission's plan, it can be seen that the adoption of the plan would make a net difference of about $9 billion in the case of total required reserves and about $12 billion in the case of required reserve balances.

At page 31 of the report, however, there is a chart presenting the same data, or what purports to be the same data, but this time to show the effect of the ABA's plan on the Federal Reserve's holdings of Government securities. This is the other side of the coin; whatever reduction is made in the member banks' required reserves must equal the reduction made in the Fed's holdings of Government securities. So having arbitrarily reduced both components of its estimate to add to a total of $12 billion in the previous chart, the new chart adheres to the $12 billion total. Interestingly enough, however, this chart makes a further substitution of the figures which must add to the $12 billion. And it does so in a way which minimizes the amount of securities that are to be transferred from the Fed's already-existing portfolio at mid-1956. Apparently the report writers think it does not seem quite so bad to take away securities which the Fed would acquire in the future, as it does to take away securities which the Fed had already acquired and was holding at mid-1956.

So here the additional amount which the Fed was to acquire between mid-1956 and mid-1962, which had first been $7 billion, and then had become $4 billion for purposes of the previous chart, now becomes $7 billion again. Then by the convenient device of subtracting $7 billion from the previously determined total of $12 billion, the report arrives at a figure of only $5 billion as the amount which is to be transferred from the Fed's 1956 holdings. The report states:

Chart III gives an idea of the increase that might occur in Reserve bank holdings of governments over the next 5 years if present reserve requirements were to be retained and the reduction in these holdings that might be accomplished if the Commission's plan could be put into effect within that time. The estimated increase under the first assumption would be around $7 billion, whereas the estimated reduction based on the second assumption would be about $5 billion, a difference of $12 billion.

This juggling, then, provides a basis for the report to make a statement concerning the effect of the ABA's plan on Federal Reserve bank earnings which minimizes the loss in earnings in a most convenient way. The report states:

Such a decrease in the Reserve banks' securities holdings could easily result in a moderate decline in their income. On the basis of the 1955 yield and portfolio figures, a reduction of $5 billion in these holdings would reduce the banks' annual earnings by something like $85 million.

FOR BANKERS' INTEREST THE ABA LOOKS TO THE FUTURE; FOR THE PUBLIC INTEREST, IT LOOKS AT THE PAST

So we see a loss of a mere $5 billion from the Fed's 1956 portfolio, instead of the $9.8 billion which is the report's specific estimate, does not seem nearly so bad as the actual loss of $16.8 billion which the ABA's plan would bring about by mid-1962. And who would object to the Government's giving the banks a mere $5 billion? We may conclude that where their own interests are concerned, the bankers are looking to the future, but where the public interest is concerned, they look only to the past.

The ABA's report is as follows. I have inserted the original page numbers at the beginning of each page so that my quotations may be easily found:

[P. 4]

INTRODUCTION

There is widespread agreement that the present system of member bank reserve requirements is not well adapted to present-day conditions. In general, the existing setup is an anachronistic carryover from earlier banking practices and legislation. However warranted these requirements may have been in former times, they are now outmoded, illogical, and inequitable.

In the hope that it might be able to shed new light on the problems involved, the economic policy commission embarked 2 years ago upon a comprehensive study of this subject, the results of which are summarized and highlighted in this report. Those who wish to explore the subject in greater detail, especially if they are inclined to be dubious about some of the commission's conclusions, are cordially invited to examine the full text of the commission's study entitled "Member Bank Reserve Requirements."

In making its study, the commission has been greatly aided by the research and thinking that has been done on this subject within the Federal Reserve System and by the voluminous literature from other sources. The commission also wishes to acknowledge its debt to the many bankers, academicians, and Federal Reserve officials who have been extremely helpful in conducting this study.

The commission approached its task with considerable diffidence, wondering whether it might find itself bogged down in a morass of insoluble complexities. As the research progressed, however, more and more points began to emerge with considerable clarity. As a result, the commission has finally been able to formulate a concrete plan for reserve reform which, in its judgment, provides a satisfactory solution to this important problem.

While numerous differences of opinion have naturally been encountered, the commission has found, to its gratification and rather to its surprise, that there exists fairly general agreement on certain main propositions which underlie its plan, namely:

[P. 5]

1. That the chief function of member bank reserve requirements is not to contribute to bank liquidity but is rather to serve as a fixed part of the mechanism of monetary management.

2. That the present high requirements should be substantially reduced over the years ahead to enable the banking system to accommodate the monetary and credit needs of our growing economy.

3. That when reserve reform is undertaken, we should move in the direction of a geographically uniform system of reserve percentages.

4. That vault cash should be treated as a reserve asset.

On the other hand, the commission's proposal for a reduction to 2 percent in the reserve requirement for time deposits will strike many as rather novel, and its rejection of the idea of differential treatment of interbank deposits will doubtless encounter some disagreement.

On one point, the commission wishes to place particular emphasis, namely, the need for adopting an integrated program of reserve reduction and reform. From time to time since the establishment of the Federal Reserve System in 1914, various plans have been proposed to meet the recognized need for reform of the member bank reserve setup. These efforts have not met with much success, one important reason being that most of these proposals would have resulted in higher reserve requirements for many banks. Now, however, with total reserves far higher than they need to be, there is an excellent opportunity to work toward lower requirements for practically all member banks and to achieve reforms at the same time.

Overall reduction in legal reserve requirements and thorough-going reform of the reserve structure, therefore, are twin objec-

tives that should be pursued together. The commission's plan is designed to accomplish both of these two basic objectives.

The proposals outlined here should not be construed as implying any departure from the flexible monetary policy pursued by the Federal Reserve in recent years. The commission is in full accord with the Federal Reserve's objective of promoting stable economic growth without inflation and it believes that the proposals set forth in this report would make an important contribution to that goal. These recommended changes should be accomplished over a period of years in a series of steps so timed as to be in harmony with monetary policy. In this way, the necessary job of revamping our reserve setup can be accomplished without having any unstabilizing effects upon prices, production, or employment.

The commission believes, therefore, that it would be desirable to enact appropriate enabling legislation at an early date, so that the Federal Reserve will have the requisite discretionary powers to work toward a really logical reserve setup as economic conditions permit.

[P. 6]

THE PLAN IN BRIEF

The economic policy commission recommends the adoption of a specific program of reduction and reform of member bank reserve requirements. The nature and timing of the steps to be taken in accomplishing the plan would be entirely at the discretion of the Federal Reserve authorities. The program contemplates the following actions to be taken over a period of years:

Recommendation 1. Eventually reduce reserve requirements for demand deposits to 10 percent

The current high level of reserve requirements for demand deposits is the result of historical accident. The extraordinary circumstances which originally gave rise to it have disappeared. The reserve percentages should be reduced over a period of years from the present average level of 16.5 percent of net demand deposits to 10 percent, which is the approximate average level that prevailed prior to 1936. This would enable the banking system to meet the public's future monetary and credit needs that will be generated by our growing economy.

Recommendation 2. Eliminate geographical differences in reserve requirements for demand deposits

The 10-percent reserve requirement for net demand deposits should apply uniformly to all member banks. At present, requirements for various banks differ considerably depending on where they happen to be located. These distinctions are based on outmoded theories and are a source of inequity. As reserve requirements are reduced, we should move to a uniform system.

[P. 7]

Recommendation 3. Authorize the Federal Reserve to vary the reserve requirement for demand deposits over a range of 8 to 12 percent

The commission believes that the Federal Reserve should have authority to vary the reserve requirement percentage for demand deposits over a reasonable range in order to be able to cope with unusual developments that might conceivably arise. Opinions naturally differ as to how much latitude of this kind the Reserve Board should have; but it seems clear that the range of its existing authority, established more than 20 years ago, is considerably more extensive than is needed under present-day conditions.

The commission therefore recommends that, whereas the requirement for demand deposits should be reduced to 10 percent and maintained at that level except under unusual circumstances, the Federal Reserve should nevertheless have authority to raise this requirement to as high as 12 percent or to reduce it to as low as 8 percent of net demand deposits.

Recommendation 4. Eventually reduce the reserve requirement for time deposits to 2 percent

A legal reserve requirement for time deposits of member banks adds virtually nothing to the safety or liquidity of these deposits and is unjustified from the standpoint of monetary management. The present 5-percent requirement clearly discriminates against savings departments of member commercial banks in competing with other thrift institutions. For these reasons the requirement should be substantially reduced as conditions permit. When it has been reduced to 2 percent, it should remain fixed at that level for all member banks.

Recommendation 5. Permit the inclusion of vault cash in legal reserves

This is long overdue. There is no reason today for not allowing banks to count their vault cash as part of their legal reserves. Wide support exists among bankers and Federal Reserve officials for a more rational treatment of this item of banks' working reserves.

It should be emphasized that these recommendations are not a collection of isolated propositions but that they constitute a single integrated program. All of them are closely tied together in one package. To untie them and deal with them separately would destroy the commission's plan as a comprehenive program for accomplishing the twin objectives of reserve reduction and reform.

[P. 8]

THE PLAN IN DETAIL

The question of the role of legal reserves in our banking system is of fundamental importance. It has a major bearing on such problems as the amount of reserves needed, the form in which they should be kept, and how deposits should be classified for reserve purposes.

There are two basic views of the role of reserve requirements. The older view, still held by some, is that the primary purpose of reserves is to contribute to bank liquidity. The more modern view is that this is no longer the main function of reserve requirements and that they are important today primarily because of the function they perform in monetary management.

Credit-control function of reserves—a basic premise: Just how much do reserve requirements actually contribute to bank liquidity?

It is clear that required reserves cannot be used to any great extent to meet cash withdrawals, since they must be maintained. True, the law permits a member bank to let its reserve balance recede below the minimum level for a few days, provided the requirements are maintained on the average over the computation period. A bank also could run a small reserve deficiency for a while if it were willing to pay the legal penalty, and under some circumstances the penalty can be waived for a limited period. Also, of course, when deposits are drawn down, a small portion of the required reserve backing becomes excess and can be paid out by the bank.

These liquidity features of a bank's legal reserve provide some limited flexibility in managing the bank's money position from day to day. From a practical standpoint, however, required reserves are virtually immobilized and contribute to bank liquidity only to a negligible extent.

Cash needs of individual banks must be met largely by drawing upon excess reserves and other cash assets, by liquidating short-term Government securities and other secondary reserve assets, or by borrowing from the Federal Reserve. It is now universally recognized that for the banking system as a whole, liquidity depends, ultimately, on the ability and willingness of the Federal Reserve to supply additional funds to the banking system in periods of stress.

[P. 9]

Some bankers and others, although willing to concede that required reserves contribute little to the operating liquidity of going banks, continue to think of legal reserves as an important protection for depositors in liquidating institutions.

It is true, of course, that the required reserve of a liquidating bank will generally have been kept intact, whereas other assets could have shrunken in value or become frozen. In the days before deposit insurance, a bank's legal reserve did provide some readily available cash for making payments on depositors' claims.

While this limited protective aspect of legal reserves was no doubt of some importance before the advent of deposit insurance, it never provided anywhere near adequate protection for depositors in closed banks. In fact, it was for this very reason that a completely different approach to the problem was adopted, namely, Federal insurance of bank deposits.

Let us now examine the nature of the role performed by legal reserve requirements in the area of monetary management.

The key to general monetary control is the ability of the Federal Reserve to influence the reserve position of the banking system through its discount and open-market powers. Legal reserve requirements constitute a fixed part of the mechanism through which the influence of these instruments is transmitted to the member banks. They are the fulcrum on which these credit-control levers rest. If they did not exist, there would really be no truly reliable brake on the expansion of bank credit and Federal Reserve policy could not effectively regulate the volume of bank lending and investing.

In short, member bank reserve requirements today have little significance from the standpoint of contributing to bank liquidity but they have enormous significance from the standpoint of monetary management. It is obviously essential to keep this fundamental fact in mind in approaching the problem of reserve reform.

The commission's conclusions and recommendations are based squarely on this credit-control view of the function of legal reserves. This is a fundamental premise of our reasoning.

Criteria of a good system of reserves: Since reserve requirements constitute a vital part of the credit-control mechanism, it follows that the chief criterion for a good system of reserves from the standpoint of the broad public interest is that it should contribute as much as possible to the effectiveness of monetary management. Would various changes in the reserve arrangements weaken or strengthen the credit-control powers of the Federal Reserve authorities? As will be seen, this fundamental consideration is given major weight throughout this report.

[P. 10]

Another criterion is that the reserve arrangements should be administratively workable. They should be adapted to existing banking practices and should be reasonably easy to understand and apply.

If member bank reserve requirements are excessively high, they will unnecessarily restrict the flexibility of the banking system and impair its ability to serve the banking needs of the public. They will also discriminate against member banks as compared with other competing financial institutions. As a practical matter, too, they will discourage membership in the Federal Reserve System. It seems clear that required reserves should not be far in excess of the amount needed to enable monetary management to operate with maximum effectiveness.

Finally, the distribution of the reserve burden among the member banks should be fair and logical. Inequities and inconsistencies inherited from the past should be eliminated if possible.

These are the criteria that the commission has applied in working out its proposals.

Recommendation 1. Eventually reduce reserve requirements for demand deposits to 10 percent

There is noting sacred about the present reserve requirements; they are the result of historical accident. Other countries, such as England and Canada, do very well with substantially lower cash reserves. For more than half its history, the Federal Reserve System itself had much lower requirements than at the present time. The era of high reserve requirements was launched under very unusual circumstances and should not be considered permanent.

Prior to 1936 member banks were required to hold reserves of 13, 10, and 7 percent against demand deposits, depending on whether a bank fell into the central reserve city, reserve city, or country member bank reserve class (table I). In 1935 the Federal Reserve Board was authorized by Congress to double requirements and did so within 2 years. More recently, the Board has lowered requirements on several occasions but today, at 20, 18, and 12 percent for the three reserve classes, they are still far above their pre-1936 level.

High reserve requirements—and how they got there: The extraordinary events that led to the doubling of reserve requirements are worth examining. After the reduction of the gold content of the dollar in 1933–34, gold flowed into this country from abroad in huge amounts. During the years 1934–41 our monetary gold stock increased by $19 billion. As a consequence, excess reserves of member banks piled up to historically high levels and undermined the influence of the Federal Reserve over the banking system. The effectiveness of open-market operations was nullified because excess reserves were so large in relation to Reserve bank holdings of Government securities. Open-market sales of Governments by the Federal Reserve could have absorbed only a small portion of these excess reserves.

[P. 11]

TABLE I.—*Member bank reserve requirements*

[Percent of deposits]

Effective date of change [2]	Net demand deposits [1]			Time deposits
	Central Reserve city banks	Reserve city banks	Country banks	
1917—June 21	13	10	7	3
1936—Aug. 16	19½	15	10½	4½

1953—July 1, 9 [3]	22	19	13	------
1954—June 16, 24 [3]	21	------	------	5
July 29, Aug. 1 [3]	20	18	12	------
In effect June 1, 1956	20	18	12	5
Present statutory requirements:				
Minimum	13	10	7	3
Maximum	20	20	14	6

[1] Demand deposits subject to reserve requirements, which beginning Aug. 23, 1935, have been total demand deposits minus cash items in process of collection and demand balances due from domestic banks (also minus war loan and series E bond accounts during the period Apr. 13, 1943–June 30, 1947).

[2] Reserve requirements unchanged for 19 years—from June 1917 to August 1936.

[3] 1st-of-month or midmonth dates are changes at country banks, and other dates (usually Thursdays) are at central Reserve city or Reserve city banks.

[4] Under temporary authority granted by Congress in August 1948 and expiring in June 1949.

[5] Effective at central Reserve city and Reserve city banks.

[6] Effective at country banks.

Source: Federal Reserve Bulletin, October 1956.

[P. 12]

It was under these unique circumstances that reserve requirements were doubled to reduce the huge volume of excess reserves.

World War II changed this situation completely. The banking system was called upon to absorb large quantities of Government securities and to meet heavy demands for circulating currency. The surplus of excess reserves rapidly disappeared and in addition, the Federal Reserve pumped additional reserves into the banking system by purchasing Government securities on a vast scale.

Actually, reserve requirements could have been reduced during the war to meet some of these monetary and credit needs. Unfortunately, this course was not followed and the banking system emerged from the war with high reserve requirements and with the Reserve banks holding about $25 billion of Government securities.

The contrast between prewar and postwar conditions is shown by chart I. For the past decade member banks have had scarcely any excess reserves beyond the minimum amount now considered as normal for operating purposes. On the other hand, the Federal's holdings of Government securities have remained about 10 times as high as they were before the war and are obviously more than ample to absorb any increase in excess reserves that might result from gold inflows or other factors. In fact, they actually exceed the total volume of member bank reserves by $4.5 billion.

In short, the unique circumstances that induced the monetary authorities to move to high reserve requirements have long since disappeared. There is no longer any justification for maintaining requirements at such a high level.

Reserve requirements and the growth of our economy: Looking ahead, it is clear that the needs of the public for currency and bank deposits will increase with the growth of the American economy. To meet these needs, it will be necessary to expand the reserve base of the banking system either by creating more reserves through open-market operations or by reducing reserve requirements.

The first approach, that of augmenting the reserves of member banks, would commit the Federal Reserve authorities to a large-scale program of open-market purchases of Government securities designed to inject additional funds into the banking system. This would necessitate a further increase in the size of the Federal Reserve's portfolio which, it is widely agreed, is already excessively large.

To be more specific, if past relationships between production, currency and deposits are approximated in the future, then over the next 5 years demand deposits will increase by something like $20 billion, time

[P. 13 (chart I)]

[P. 14]

deposits by about $12 billion, and currency in circulation by more than $3 billion. If such an expansion were to be met without reducing reserve requirements, it would be necessary to supply the banks with about $7 billion of additional reserve balances by means of open-market purchases of Government securities by the Reserve banks.

It would be far better to provide for this growth by lowering the reserve requirements of member banks over the coming years. This would "unlock" a portion of what are now legal reserves and would free these funds to support an expanding level of credit and deposits. Banks could also utilize these newly-freed reserves to meet increasing demands for currency on the part of the public.

For member banks, legal reserves are barren assets. If reserve requirements remain unnecessarily high, they will inhibit the flexibility of the banking system and prevent it from performing the role it properly should fulfill in meeting the monetary and credit needs of our growing economy. Member banks obviously should be required in the public interest to maintain an ample amount of legal reserves. On the other hand, they should not be required to maintain an amount of reserves far greater than is necessary. This is the situation today and it will become even more aggravated over the years ahead unless reserve requirements are substantially reduced.

The Commission is of the opinion, therefore, that the reserve percentages for demand deposits should eventually be reduced to 10 percent for all member banks. A reduction of this magnitude would enable the banking system to meet the monetary and credit needs of our growing economy while still leaving the requirements high enough to enable the Federal Reserve to do an effective credit-control job.

Recommendation 2. Eliminate geographical differences in reserve requirements for demand deposits

The burden of carrying non-interest-bearing reserves should be distributed equitably and logically among the member banks. The present system of geographical distinctions in member bank reserve requirements is gravely deficient from this standpoint. It is characterized by numerous inequities and inconsistencies and is based on ideas that no longer have relevance. While it may have had some merit in the past, changes in banking conditions have rendered it obsolete.

Background of the geographical system of reserve requirements: Present member bank reserve arrangements are an offspring of the old pyramidal structure of national bank reserves. In 1864, New York and certain other cities were designated by law as redemption centers for notes of interior

[P. 15]

national banks. National banks not located in redemption centers had to have redemption agents in one of these cities and kept part of their legal reserves on deposit there. Banks in redemption centers other than New York, in turn, had to have redemption agents in New York and kept part of their legal reserves on deposit with national banks located there. Higher legal reserve requirements were imposed on redemption center banks than on interior national banks.

Although the system of redemption agents was dropped in 1874, the classification of cities for reserve purposes was continued—apparently on the theory that national banks holding redeposited reserves of other national banks should be required to hold larger reserves for reasons of safety.

This scheme may have been reasonable under conditions existing in the past but it certainly is not today. The establishment of the Federal Reserve System abolished the whole framework of redeposited reserves. The Reserve banks became the sole depositories for member banks' legal reserves. Nevertheless, the old reserve classes were continued. Apparently, the theory that a bank doing a large correspondent business should bear extra-heavy requirements became the new rationale for maintaining these distinctions.

What makes a Reserve city? Today the classification of cities as Reserve cities is not based upon any consistent set of criteria. Essentially, many cities are in this category

because at some time in the recent or distant past local banks desired to be so designated.

Originally, based on legislation enacted in 1864 and 1887, there were 16 Reserve cities and one central Reserve city. Subsequently additional cities were added to the roster of Reserve and central Reserve cities by the Comptroller of the Currency on the application of local banks. The only objective criterion that had to be met was a minimum city population.

The Federal Reserve Board, which now has the responsibility of classifying cities for reserve purposes, has also added to and subtracted from the list of Reserve cities. Currently, the Board considers a variety of factors, including city population, size of correspondent business, and the location of Federal Reserve banks or branches thereof, in reclassifying cities. Nevertheless, no Reserve city is downgraded if local member banks desire to continue as Reserve city banks.

Inequities of the present system: With this background in mind, let us examine our inherited reserve classifications in the light of modern conditions.

Currently, legal reserve requirements for net demand deposits are 20 percent for central Reserve city banks, 18 percent for Reserve city banks and 12 percent for country member banks. These distinctions supposedly implement the theory that banks holding large interbank deposits should be subject to higher reserve percentages than banks with small correspondent accounts. Assuming

[P. 16]

for the moment that this theory has some validity, is it in fact efficiently implemented by the system of geographical variations in reserve percentages?

As the Nation has grown, new financial centers have developed and old ones have declined in relative importance. The geographical pattern of interbank balances has shifted considerably. Many country member banks that have acquired large balances due to other banks have naturally been loath to accept the higher reserve percentages of Reserve city status.

Many Reserve city banks, on the other hand, have seen their balances due to other banks decline in relation to their other deposits but have resisted reclassification to country member status for fear that such action might disrupt their correspondent business, detract from their prestige, or deprive them of certain advantages with respect to deposits under applicable State laws.

It is true that central Reserve and Reserve city banks as groups still hold extensive interbank deposits and have higher ratios of interbank deposits to total deposits than country member banks as a group. However, the Reserve categories are so arbitrary and include such diverse banks that hardships and inconsistencies inevitably result. As indicated above, the selection of Reserve cities has not been closely geared to variations in the types of business in which individual banks are engaged. The Reserve classification of cities has lagged far behind fundamental changes in the banking structure.

Another inconsistency is that Reserve classifications are usually applied to all member banks in a given city or in outlying areas of central Reserve and Reserve cities. This discriminates heavily against many small neighborhood banks, located in central Reserve or Reserve cities, which have only negligible balances due to other banks.

Finally, the higher reserve percentages of central Reserve and Reserve city banks are imposed on all demand deposits, not just interbank deposits. Therefore, for example, the present 18 percent requirement for net demand deposits applies equally to Reserve city banks which have little correspondent business, or none at all, and to Reserve city banks whose interbank deposits are a substantial portion of total deposits.

A particularly illogical feature of the present system is the treatment of central Reserve city banks in New York and Chicago. Prior to the establishment of the Federal Reserve System, New York and Chicago banks were at the apex of the pyramidal structure of bank reserves. Today 85 percent of the resources of the banking system is held by member banks and these institutions must keep all of their legal reserves at Federal Reserve banks. Moreover, as new financial centers have grown up throughout the country, the position of the central Reserve city banks has been gradually transformed. While they still have very large balances due to other banks, these balances have declined in relation to their total deposits over the years. Many Reserve cities today have higher ratios of bankers' balances to total demand deposits than New York or Chicago. Yet the principle of a higher Reserve requirement for central Reserve city banks that was established many years ago still persists.

[P. 17]

Therefore, even if we were to accept the theory that reserve requirements should be higher for banks carrying relatively large correspondent balances, it is clear that the existing reserve setup implements this theory only to a limited extent and that it results in many inequities and inconsistencies.

Some who adhere to this theory have proposed that these defects be remedied by moving to a system of requirements resting squarely on types of deposits and by imposing a higher requirement on interbank deposits than on other deposits. This raises the basic question as to whether the theory itself actually does have validity under modern conditions.

Extra reserves for interbank deposits? Interbank deposits fluctuate more than certain other types of demand deposits. This is true because many transactions are cleared through these accounts and because out-of-town banks often draw on their city balances when funds are required to build up balances with the Federal Reserve, to meet local loan demands, or for other purposes. Some people have reasoned that because of their greater instability, interbank deposits should be subject to higher reserve requirements than other types of deposits.

Clearly, this idea is based on the outmoded theory that the main function of legal reserves is to provide liquidity. It is true that the more a bank's deposits fluctuate the greater are its liquidity needs. However, higher legal reserves are not the answer. Since member bank reserves cannot be drawn down extensively below the legal limit without incurring penalties, they cannot be utilized to any appreciable degree to meet deposit fluctuations.

A high reserve ratio for interbank deposits not only cannot be supported on liquidity grounds but would also present serious administrative problems. Difficulties would arise with respect to the treatment of cash in process of collection and balances due from banks, which may now be deducted from gross demand deposits in computing deposits subject to reserves. In addition, so-called livestock banks would present a perplexing problem, to which a satisfactory solution has never been found.

In 1948 a Federal Reserve staff committee advocated a high reserve requirement for interbank deposits as a transitional step toward a uniform reserve setup for all member banks and for all demand deposits. This was deemed necessary at that time because the Federal Reserve was then supporting Government bonds at par and it was not appropriate to reduce the overall level of required reserves. Under those conditions, the temporary provision of extra reserves for interbank deposits would have bridged the transition to uniform treatment of all demand deposits. Today, however, there would be no need whatever for such a transitional step which would be illogical and would create hardships for many banks.

The commission therefore recommends the elimination of the geographical differentials that now exist in reserve requirements.

[P. 18]

Recommendation 3. Authorize the Federal Reserve to vary the reserve requirement for demand deposits over a range of 8 to 12 percent

At present, the Federal Reserve Board may at its discretion vary reserve ratios for demand deposits for 13 to 26 percent for central Reserve city banks, from 10 to 20 percent for Reserve city banks and from 7 to 14 percent for country members banks. Should the Board have discretionary authority in this area, and if so, how broad should such authority be?

Changes in reserve requirements and monetary policy: The original reason for giving the Federal Reserve Board authority to vary reserve requirements was to enable the Board to cope with the large volume of excess reserves produced by the heavy gold inflow following the devaluation of the dollar in 1934. These were unmanageable by traditional methods of central banking control because at that time the Reserve banks' holding of Government securities were entirely too small.

It was intended that changes in the reserve percentages be restricted to emergency situations or other unusual conditions. In later years, however, more reliance came to be placed on changes in the reserve percentages as an instrument of short-run monetary policy. This was the case in the early postwar years when the Federal Reserve undertook to support the market for Government securities and thus could not employ open-market operations for purposes of monetary restraint.

There is widespread agreement that monetary policy should be effectuated primarily through the Federal Reserve's discount and open-market operations rather than through changes in reserve requirements. Open-market operations in particular are a far more flexible instrument of monetary control and, in fact, have usually been used to offset part or all of the impact of reserve requirement changes anyway.

In 1948, for example, virtually all of the increase in reserve requirements was counteracted by open-market operations and the chief result of the requirement increase was that member banks were forced to part with about $2 billion of their earning assets. Bankers naturally felt that they were being rather heavily penalized for the sake of very doubtful benefits to the economy.

Today, of course, the banks are far less liquid than they were in 1948 and there would be real danger that an increase in requirements would make bank credit entirely too tight in some areas. This is doubtless a major reason why the Reserve authorities have refrained from using an increase in requirements as part of their program for curbing credit expansion in recent years.

Under some circumstances, therefore, increases in reserve requirements may be ineffectual as an instrument of credit control and under other circumstances they may be entirely too effectual and dangerous. In

[P. 19]

either case they would penalize member banks and discriminate against them as compared with other financial institutions.

The commission concludes that increases in reserve requirements should not be utilized for ordinary credit-control purposes.

It would be unwise, however, to eliminate all of the Board's authority to raise reserve requirements for demand deposits. No one can foresee what conditions may lie ahead. The powerful impact on bank reserves that changes in reserve requirements can exert might be needed to deal with some future emergency. Moreover, if inflexible ratios were established by statute, there is a possibility that they would be set at an excessively high level.

Reductions in reserve requirements are in a very different category than increases because they do not involve the same dangers and inequities. In fact, they may be quite useful at times when it is desirable to make additional reserves available throughout the whole banking system.

How much latitude does the Board need? It seems obvious that the latitude of the Board's authority to vary reserve requirements should be ample but that it should not be far greater than would be needed to deal with an emergency situation. The mere possibility that the Reserve Board might raise the reserve percentages substantially at some future date is an element of uncertainty which forces the prudent banker to keep a larger proportion of his funds invested in secondary reserves than he would otherwise need.

Certainly, if new legislation were being written today, there would be no justification for establishing the wide leeway that was provided by the 1935 legislation. At that time, a doubling of the requirements for demand deposits would have meant an increase of only about $2.5 billion in required reserves. Today, due to the enormous increase in deposits, a change of as little as one percentage point would involve about $1 billion of reserves, and the range between the upper and lower statutory reserve limits is nearly $11 billion.

This range is far greater than would be needed to deal with an emergency situation. The development that would be most likely to produce such an emergency would be very large gold imports. It is hardly conceivable, however, that gold could come in so fast and in such vast amounts that the effects on excess reserves could not be offset by open-market operations. Since the end of World War II additions to our gold stock have never exceeded $2.2 billion in any 1 year, and the net increase for 1946–55 was only $1.2 billion.

If, however, by any chance, we were to gain huge amounts of gold over a period of years, there would be ample opportunity for the Federal Reserve to obtain any additional legislative authority it might need in order to cope with the problem. When we consider that total gold holdings outside the United States and Russia are only about $16.5 billion and that world gold production (outside Russia) has averaged less than $1 billion a year since 1950, the possibility of our running into such a situation seems remote indeed.

[P. 20]

The commission is of the opinion, therefore, that the proposed 8 to 12 percent range would be ample for any emergency that might arise.

Recommendation 4. Eventually reduce the reserve requirement for time deposits to 2 percent

Should member banks be required to maintain a legal reserve for time deposits? If so, how high should such a requirement be? Should it be fixed by statute and remain constant or should it be subject to change by the Federal Reserve Board?

To answer these questions, it is necessary to consider what functions, if any, a legal reserve for time deposits performs. Does it contribute to the liquidity of these deposits and is it useful from the standpoint of credit control?

What functions, if any, does such a requirement perform? As discussed earlier in this report, legal reserves contribute very little to bank liquidity. For an individual bank, liquidity for operating purposes is provided primarily by the bank's secondary reserves. As for closed banks, liquidity of deposits is assured chiefly by deposit insurance and the insurance coverage is particularly high in the case of time deposits.

As we have seen, the principal function of legal reserve requirements today is to serve as a basis for monetary control. From this standpoint, is there any justification for imposing any legal reserve requirement on time deposits?

Demand deposits of commercial banks are part of the money supply and are properly subject to control by the monetary authorities. The situation with respect to commercial bank time deposits, however, is clearly very different. They cannot be used directly as a means of payment. They are in the same general category as mutual savings bank deposits, U.S. savings bonds, and other liquid forms of personal savings.

In the past, some students of banking have suggested that the legal reserve ratio for time deposits should be set near the level established for demand deposits. They argued that the distinction between demand and time accounts was not sharp enough to warrant separate treatment under the reserve regulations. A wide differential betwen the reserve ratios for demand and time deposits, it was feared, would encourage some banks to evade the reserve regulations by indiscriminate application of the time label to accounts which were actually demand accounts in practice.

There is little or no basis for such fears today. The Federal Reserve Board has clearly defined the types of accounts that may be counted as time and savings accounts for purposes of computing legal reserves. Moreover, banks today are very careful in classifying deposits. Actually, the incentive for questionable practices in classifying bank

[P. 21]

accounts might well be reduced as a result of the adoption of the commission's proposals. If the reserve percentage for demand deposits were reduced to 10 percent and the percentage for time deposits to 2 percent, the differential would be smaller for central reserve and reserve city banks than it is today.

As far as credit control is concerned, the extension of bank credit based on commercial bank time deposits is no different from credit extension by savings institutions. In neither case is there any expansion of the money supply. There is merely a transfer of funds from savers to borrowers. From a credit-control standpoint, there is no more reason for having reserve requirements for commercial bank time deposits than for imposing such requirements on competing thrift institutions.

Discrimination against member banks: In view of these considerations, it seems clear that the present reserve requirement for time deposits discriminates against member banks. No other thrift institutions are required to keep this kind of reserve for this purpose.

Currently, for example, member banks are required to maintain reserves equal to 5 percent of their time deposits on top of the currency, working balances and secondary reserves of short-term securities that they keep for liquidity purposes. In contrast, savings and loan associations and mutual savings banks are required to keep reserves solely for liquidity purposes, not for credit control, and they can maintain these reserves largely, if not entirely, in the form of income-yielding securities. Nonmember commercial banks in a number of States can also count certain securities as part of their reserves for time deposits.

Over the past several decades, commercial banks have lagged behind their three major competitors for the public's savings—mutual savings banks, savings and loan associations, and life insurance companies. Since 1920 the total resources of these three noncommercial bank savings institutions have increased over eightfold, while commercial bank time deposits have increased only fourfold. The share of commercial bank time deposits of the public's savings has dropped sharply.

Among the factors contributing to this trend is the fact that commercial banks have not been able to match the rates of return paid to the public by other savings institutions. One reason for this is the burden of non-income-yielding reserve balances that member banks must keep against their time deposits.

Substantial reduction or elimination of the reserve requirement against time deposits would be a step toward putting member banks on a fairer competitive basis with other financial institutions.

The proposed 2 percent reserve for time deposits: From what has just been said it might be concluded that legal reserve re-

[P. 22]

quirements for time deposits should be eliminated altogether. Instead, the Economic Policy Commission proposes the adoption of a 2 percent legal reserve for these deposits.

This recommendation is tied directly to the commission's proposal that member banks be permitted to count their vault cash as part of their legal reserves. Member banks hold some vault cash to meet withdrawals of time deposits. If time deposits were completely exempted from reserve requirements, banks with large savings departments would benefit unfairly to a small degree by virtue of being able to count all their vault cash, including the portion held to take care of the operating needs of their savings departments, toward their required reserves for demand deposits. It would be neither logical nor fair to permit cash held in the savings department to constitute part of a bank's legal reserve against its demand deposits. A reserve requirement of 2 percent against time deposits would be more than adequate to avoid such an anomaly.

Should the proposed legal reserve requirement for time deposits be subject to discretionary change by the Federal Reserve Board? At the present time, the Board may vary the reserve ratio from 3 to 6 percent.

Since, as we have seen, a reserve requirement for time deposits is unwarranted from a credit-control standpoint, it follows that the proposed 2 percent reserve ratio should be fixed by statute and not be subject to change by the Federal Reserve Board. It should remain, as now, uniform for all member banks.

Recommendation 5. Permit the inclusion of vault cash in legal reserves

The present status of bank vault cash is one of the more conspicuous inconsistencies of the regulations governing member bank reserve requirements. Prior to 1917 vault cash was one of the specified legal reserve assets under the original Federal Reserve Act and, before that, under the National Bank Act. At the present time, at least part of the legal reserves of nonmember banks may be held in this form.

There is widespread agreement that vault cash should be counted as part of legal reserves of member banks. The Federal Reserve authorities have repeatedly gone on record as favoring this change.

Logically, vault cash should have the same reserve value as balances at the Federal Reserve banks. Most of the currency is issued by the latter or has to be obtained from the Federal Reserve by drawing on reserve balances. Federal Reserve notes and reserve

balances are equally liabilities of the Reserve banks.

Elimination of vault cash from member bank legal reserves in 1917 was prompted by a desire to concentrate more of the Nation's gold stock in the Federal Reserve banks under the unsettled conditions of the war period. During the 1920's it was feared by some people that permitting member banks

[P. 23]

to count vault cash as a legal reserve asset would result in the impairment of reserve positions and the lending power of the Reserve banks. This might have come about as a result of heavy withdrawals of reserve balances in the form of gold. Withdrawals of Federal Reserve notes would also have weakened the reserve position of the Reserve banks since at that time they were required to hold larger reserves against their notes in circulation than against their deposit liabilities.

Today these reasons for excluding vault cash from legal reserves no longer exist. Member banks cannot, of course, withdraw gold from the Federal Reserve. Nor would the conversion of reserve balances into currency have any adverse effect on the reserve position of the Federal Reserve banks since the law now prescribes the same reserve backing for Federal Reserve notes as for Reserve bank deposits.

Permitting member banks to count vault cash in their legal reserves would mean that part of these reserves would be held at the banks in the form of currency and part would be on deposit at the Federal Reserve. While there is an advantage to the Federal Reserve in having some of the required reserves of member banks maintained in the form of balances on its books, complete centralization of reserves at the Federal Reserve is unnecessary. Nor is there any likelihood that banks would convert a significant portion of their reserve balances into currency. Banks generally follow the policy of holding as little cash as possible.

Since there is no danger of large-scale withdrawals of currency by member banks, there is no reason for limiting the amount of vault cash that banks can count as legal reserves. Bank vault cash should have full reserve credit.

[P. 24]

PUTTING THE PLAN INTO EFFECT

Changes as far-reaching as those proposed in this report cannot be put into effect overnight, but will have to be accomplished over a period of years. The Reserve Board should have full authority with respect to the detailed execution of the plan, including the choice and timing of the various intermediate steps. By reducing reserve ratios whenever the Board believes it to be appropriate, fairly steady progress can be made toward a permanently lower level of reserve percentages. Similarly, the transition to a framework of uniform requirements and the inclusion of vault cash in legal reserves can be effected by a series of intermediate steps if the Federal Reserve authorities so desire.

It goes without saying that the phasing of the various steps should avoid interfering with current monetary policy. This aspect of putting the plan into effect will be discussed in a later section of this report.

It is impossible to say in advance just how long it will take to accomplish the commission's recommendations. The commission is of the opinion, however, that it might be desirable to set a tentative target date of 5 years with provision that the Federal Reserve Board have full authority to extend the target date by a year at a time if in its judgment such extension proves to be desirable.

Advantages of a target date: The establishment of a target date, even one that can be subsequently extended, should help the Federal Reserve authorities to attain the objectives of the plan within a reasonable period of time. For one thing, it would constitute the adoption of a clear-cut policy of achieving reserve reduction and reform as rapidly as circumstances permit and would give some indication of the general magnitude of the reductions in reserve requirements that might be expected to take place each year when circumstances permit. This would condition the financial community to regard such reductions as normal rather than abnormal actions.

[P. 25]

At present, reductions in reserve requirements are expected only under unusual conditions and are regarded by many people as signalizing an easy credit policy. If this view continues to be widespread, it could militate against making steady progress toward lower requirements.

A target date has the additional important advantage that it will give definite assurance that the two objectives of reduction in reserve requirements and reform of the reserve structure will be pursued simultaneously. No proposal for recasting the reserve structure can hope to win wide banker support unless it is combined with overall reserve reduction in a single legislative package.

The importance of adopting a concrete program designed to achieve definite objectives can hardly be overemphasized. Without such an overall plan, little or nothing may be accomplished in the way of reserve reduction and reform. If we are to make real progress toward an improved system of member bank reserve requirements, a definite plan, formally adopted and widely understood, is needed.

[P. 26]

EFFECTS ON THE MEMBER BANKS

If the commission's plan is adopted, what would be its effects on member banks' reserves? How would the reserve gain be distributed among the various classes of member banks, and how would the plan affect bank operations over the years ahead?

Efforts on total required reserves of member banks: If the commission's proposals were in effect at the present time, total required reserves (including vault cash) would be $7.7 billion lower than their actual present level of $18.4 billion, as of June 30, 1956). Required reserve balances that member banks must maintain at the Federal Reserve banks would be $9.8 billion lower (53 percent lower) than their actual current level. These computations may be seen in table II.

Actually, of course, the commission's plan could be put into effect only over a period of years and its ultimate effects on the amount of member banks' reserves will depend upon future changes in bank deposits and currency in circulation. As time passes, more and more of the reserves released through reductions in the requirement ratios will be required to support an expanding money supply.

Although it is obviously impossible to say just what these changes will be, some idea of their possible magnitude can be obtained by projecting past rates of growth into the future. On the basis of such projections, chart II shows the approximate changes that might occur over the next 5 years in total required reserves (including vault cash) and in required reserve balances if the commission's plan were to be put into effect within that time. The methods employed in making these projections are described in detail in the full text of the commission's study.

On the basis of these projections, total required reserves (including vault cash) would be about $5 billion lower in June 1962 under the commission's

[P. 27]

TABLE II.—*Required reserves on member banks, by class of bank, under present reserve provisions and under proposed economic policy commission formula*

[Based on deposit figures as of June 30, 1956; figures in millions of dollars]

	Central reserve city banks		Reserve city banks	Country banks	All member banks
	New York	Chicago			
Net demand deposits	21,044	5,504	38,282	34,495	99,325
Time deposits	3,438	1,314	16,803	19,986	41,542
Present reserve requirements:					
Against demand deposits	4,209	1,101	6,891	4,139	16,340
Against time deposits	172	66	840	999	2,077
Total	4,381	1,167	7,731	5,138	18,417
Required reserves under E.P.C. plan:					
10 percent of demand deposits	2,104	550	3,828	3,450	9,932
2 percent of time deposits	69	26	336	400	831
Total required reserves	2,173	576	4,164	3,850	10,763
Less vault cash (June 27, 1956)	151	31	684	1,302	2,168
Required balances with Reserve banks	2,022	545	3,480	2,548	8,595
Differences between present requirements and requirements under EPC plan:					
Reduction in total required reserves	2,208	591	3,567	1,288	7,654
Reduction in required balances with Reserve banks:					
Dollar amount	2,359	622	4,251	2,590	9,822
Reduction as percent of present requirements	53.8	53.3	55.0	50.4	53.3

NOTE.—Figures may not add to exact totals due to rounding.

[P. 28 (chart II)]

[P. 29]

plan than they are at the present time, and required reserve balances of member banks would be about $8 billion lower.

Chart II also shows that if the existing reserve setup were to remain unchanged, required reserves would increase by about $4 billion by 1962. Comparing this with what would happen under the commission's plan, it can be seen that the adoption of the plan would make a net difference of about $9 billion in the case of total required reserves and about $12 billion in the case of required reserve balances.

Effects on required reserves of various classes of member banks: An important feature of the commission's plan is that its effects on reserve balances would be distributed quite equally among the various classes of member banks.

If the plan were in effect at the present time, required reserve balances with Reserve banks would be about 50.4 percent lower for country member banks, 55 percent for Reserve city banks, and 53.7 percent for central Reserve city banks. This relatively even distribution of reserve gains results from the combined effects of the commission's proposals for the reduction of reserve requirements for demand and time deposits and the inclusion of vault cash in legal reserves. The computations may be seen in table II.

It should be emphasized that a reasonable equality of reserve gains can be achieved only if all the main elements of overall reserve reduction and reserve reform are handled together as an integrated program.

Effects on banking operations: The accomplishment of the commission's program over the years ahead would add to the flexibility of the banking system. In rapidly growing communities, the reserves freed by the plan would help banks to meet local demands for loans. In other instances, banks would be enabled to restore some of their secondary reserve assets which have been depleted in recent years. In either case the banks would be in a better position to serve their communities.

There would, of course, be some effects upon bank income, though it would be very difficult to estimate what these effects might be. Lower requirements would eventually enable the banks to expand the volume of their lending operations and to add to their holdings of securities. On the other hand, reserve requirement reductions could easily have some depressing influence upon interest rates—just how much, it is impossible to say. This would reduce the income of banks not only from their additional loans and investments but also from most of the assets they already hold.

The chances are that on balance bank income would probably be benefited. If this should turn out to be the case, it would be all to the good. Over the years ahead banks will require additional income to strengthen their capital accounts and to attract and retain the competent personnel they will need if they are adequately to serve the needs of the public for banking services.

[P. 30]

EFFECTS ON THE FEDERAL RESERVE SYSTEM

What would be the effects of the Commission's plan on the position of the Federal Reserve banks? And how might it influence membership in the Federal Reserve System?

The Reserve banks Government securities portfolios: There seems to be considerable agreement that the Federal Reserve banks should work toward a reduction of their enormous holdings of Government obligations. At the present time the Reserve banks hold about $24 billion of Governments, an amount far in excess of their needs either for earnings or for credit control.

The commission's proposals contemplate a moderate reduction of these holdings over the years. On the other hand, unless reserve requirements are reduced, the Federal Reserve will have to pump more reserves into the banking system to enable it to meet the growing monetary and credit needs of our economy. Thus the Reserve banks would be confronted with the necessity of engaging in large-scale open-market purchases of Government securities for an indefinite period ahead. This would not only result in further expansion of the Reserve banks' portfolios but it would also eventually put pressure on their own gold certificate reserve ratios, especially if there should be an outflow of gold from this country.

Chart III gives an idea of the increase that might occur in Reserve bank holdings of Governments over the next 5 years if present reserve requirements were to be retained and the reduction in these holdings that might be accomplished if the commission's plan could be put into effect within that time. The estimated increase under the first assumption would be around $7 billion, whereas the estimated reduction based on the second assumption would be about $5 billion, a difference of $12 billion.

[P. 31 (chart III)]

[P. 32]

Reserve bank earnings: Such a decrease in the Reserve banks' securities holdings could easily result in a moderate decline in their income. On the basis of the 1955 yield and portfolio figures, a reduction of $5 billion in these holdings would reduce the banks' annual earnings by something like $85 million.

Since 1948 net profits of the Reserve banks have averaged about $305 million per year. The statutory 6-percent dividend on capital stock has amounted to less than $15 million annually. Clearly, the Reserve banks' remaining Government holdings amounting to $18 billion or more would continue to provide them with far more income than they need.

It is true that the Government would lose a small amount of revenue, since about 90 percent of the Reserve banks' annual earnings after dividends are now being voluntarily paid over to the Treasury. However, the Reserve banks were never intended to be a source of revenue to the Government, and policy regarding the level of required reserves should certainly not be determined on the basis of the effect on Federal Reserve payments to the Treasury. * * * roughly half of the revenue loss would be made up by the increased income taxes paid by the new holders of the securities.

Membership in the Federal Reserve System: At present about half of the commercial banks in the United States have elected to stay out of the Federal Reserve System. High reserve requirements imposed on member banks discourage membership in the System. A substantial reduction in these requirements would largely eliminate this obstacle and encourage membership, especially if the ceiling percentages were lowered as well. Additional membership in the System would obviously enhance the Federal Reserve's usefulness, including the effectiveness of monetary policy.

[P. 33]

EFFECTS ON MONETARY MANAGEMENT

As we have seen, the main function of legal reserve requirements is to contribute to the effectiveness of monetary management. How would the commission's plan affect this function?

Effects of the lower ratio of reserves: As part of the mechanism for credit control, the essential role performed by reserve requirements is to serve as a fulcrum, a fixed point through which the effects of discount and open-market operations are transmitted to the banking system. Experience in the United States and elsewhere has demonstrated that requirements do not have to be high to perform this function. A fulcrum of 10 percent of demand deposits serves just as well as one of 16 percent.

To be sure, a lower level of reserve percentages would affect the ratio of monetary expansibility. Depending on what the reserve ratios are, each dollar of reserves can support several dollars of bank credit and deposits. Consequently, the creation or extinguishment of a given amount of reserves can lead to a potential change of several times that amount in bank loans and investments and in bank deposits.

At a lower level of reserve ratios, the potential leverage effect of a change in reserves is greater, of course, than at a higher level of reserve ratios. Hence, changes in reserves not initiated by Federal Reserve policy, such as shifts of funds from member banks by the Treasury, would have a greater potential effect on credit expansion or contraction. However, this would also be true of the countering effects of the Federal Reserve's open-market and discount operations. The increase in the potential leverage would therefore have no appreciable influence on the effectiveness of monetary policy one way or the other.

[P. 34]

Effects of the reduction in the Federal's portfolio: As mentioned earlier, the carrying out of the Commission's plan would result in some reduction in the Reserve banks' holdings of Government securities. Would this weaken the Federal's credit-control powers?

Definitely not. As already discussed, the Reserve banks now hold far more securities than needed for credit-control purposes. The sale of only a small fraction of the System's holdings would completely absorb all excess reserves. In fact, ever since the end of World War II, these holdings have been well in excess of total member bank reserve balances, required and excess.

In sum, the Federal Reserve's portfolio is today far more than adequate to cope with any possible gold inflows or other contingencies that might tend to create excess reserves. It could be substantially reduced without any risk whatever in that direction.

Uniform reserve percentages and deposit shifts: The Reserve authorities have at times complained that the existence of geographical variations in reserve requirements results in uncontrolled changes in required and excess reserves. When funds shift from banks with high requirements to banks with low requirements the result is an increase in the level of excess reserves in the banking system as a whole. Such an increase may have no relation and, indeed, may run counter to current Federal Reserve policy. Similarly, a shift of funds in the opposite direction may also have undesired effects from the standpoint of monetary policy.

Uniform reserve percentages for all member banks would eliminate these perverse effects of deposit shifts and would thereby ease the task of monetary managers.

Effects of counting vault cash as reserve: Permitting member banks to count vault cash as reserve would in no wise hamper the credit-control operations of the Federal Reserve. Since member banks reserve balances and Federal Reserve notes are equally liabilities of the Federal Reserve banks, and the Reserve banks are now required to maintain the same gold certificate reserve backing for both; it is a matter of indifference to the Reserve authorities whether the member banks keep all of their reserves in the form of deposits at the Federal Reserve or whether they keep part of them in their own vaults.

As a matter of fact, inclusion of vault cash as part of reserves would probably make very little difference in present banking practice. Most banks would still hold their vault cash to the minimum needed for operating purposes. Some banks, however, might be encouraged to hold unneeded currency over very short periods instead of returning it to the Reserve banks and having it shipped back to them a few days later. This would reduce currency shipments and save expense to the Reserve banks.

[P. 35]

Masquerade of demand deposits: Years ago, the argument might have been made that lowering reserve requirements for time deposits might induce some banks to disguise some of their demand deposits under the time label in order to evade the higher requirement for demand deposits. This argument has little or no application today. The Federal Reserve Board has clearly defined what are and what are not time de-

posits for the purpose of computing reserve requirements. Also, banks have far less incentive to induce depositors to shift their accounts to the time category than they did in the days when interest was paid on demand deposits. Today, the extra interest cost would far outweigh the benefit to the bank from a lower required reserve.

Moreover, if legal reserve requirements were reduced to a uniform 10 percent for demand deposits and to 2 percent for time deposits, there would actually be even less incentive to reclassify deposits than there is now, because the differential would actually be smaller for reserve and central Reserve city banks than it is under the present ratios.

The commission concludes, therefore, that its proposals would in no wise weaken the credit-control powers of the Federal Reserve authorities, and that they would serve in some respects to improve the efficiency of the reserve setup as part of the mechanism for monetary management. Of course, that still leaves the question as to whether the transition to the lower level of reserve requirements would complicate monetary control. This question will be discussed next.

Effects on the volume of money and credit: Would the transition to a lower level of reserve requirements entail serious risks of any kind? Would reserve reductions have any undesired effects upon the volume of money and credit? Would they perhaps have an inflationary influence?

It should be borne in mind, of course, that the proposed changes would be accomplished by intermediate steps over a period of years, with the timing left entirely to the discretion of the Reserve authorities. Also, a large part of the reserve funds released by these changes would be needed to accommodate the needs of our growing economy. Reserve requirement reductions would be the best way of meeting these normal growth requirements.

It should be emphasized also that it is not contemplated that all of the reserves released under the plan would be used as the basis for a multiple expansion of bank credit and deposits. If the reserves released at any time are excessive in the light of current monetary conditions, the Federal Reserve can easily absorb them by open-market sales of Government securities.

In short, there is no reason for assuming that adoption of the plan would result in any greater expansion of money and bank credit than would occur if reserve requirements were to be kept at their present high levels.

[P. 36]

The plan does not conflict in any way with the continuance of the type of flexible monetary policy pursued by the Federal Reserve in recent years aimed at curbing undue credit expansion or contraction. In general, it should be possible to make fairly steady progress toward the goals we recommend. For example, instead of using open-market purchases to meet seasonal needs for additional reserves or to facilitate Treasury financing operations, the Federal Reserve could release reserves by a small reduction in the reserve percentages or by permitting an additional percentage of vault cash to count as reserves. Such a policy should enable the System to work quite consistently toward a lower overall level of reserve requirements without inflationary risks. In the event of a recession, of course, reserve reductions might be speeded up considerably.

As mentioned earlier, there will be need for a clear-cut understanding on the part of the public as to just what the reserve objectives are, the reasons for them, and how they are to be accomplished. This is important in order to prevent reserve reductions from being misinterpreted as always being steps to promote credit ease. The adoption of a definite target date, even one that can be postponed, will make it easier to carry out the plan without any undesired effects on public psychology.

To be sure, there might be some periods when reserve reductions might have to be postponed to avoid interfering with monetary policy. However, even when the Federal Reserve is pursuing a really tight money policy, there are good arguments for meeting seasonal and growth requirements by reserve reductions or changes in the status of vault cash rather than by open-market operations—provided, of course, that it is made clear, as could easily be done, that the reductions do not indicate a reversal of monetary policy. One of these arguments is that it might enable the Federal Reserve to adhere to a restrictive credit policy with less danger that insistent demands for bank credit might produce a liquidity crisis in the banking system. This is an important point to consider at the present time when so many banks have used up most of their secondary reserves and are approaching a fully loaned up position.

In any event, the commission's plan provides complete flexibility with respect to the selection and timing of the steps to be taken and there is no reason why its implementation should interfere with the Federal Reserve's flexible monetary policy.

[P. 37]

CONCLUSION

The desirability of a substantial reduction in member bank reserve requirements over the coming years seems evident. Also, the whole reserve structure should be shifted to a more logical and equitable basis.

The commission's plan provides a method of accomplishing these two goals simultaneously. In this way, it will be possible to effect a smooth transition to a desirable reserves set-up without hardship to individual banks and, as we have seen, this can be done without weakening the effectiveness of monetary policy.

The plan is based on a broad and comprehensive approach to the whole problem of bank reserves. Only such an approach can insure that all the needed reforms will be accomplished and that a reasonable balance of benefits to the various classes of member banks will be achieved. If we were to approach the problem in a piecemeal fashion, seeking limited objectives, our efforts might well result in the perpetuation of many inconsistencies and inequities and perhaps the creation of new ones.

The commission's proposals would not only result in a much more equitable distribution of the burden of carrying required reserves, but would also improve the efficiency of the reserve mechanism as a credit-control device.

Another major virtue of the plan is its relative simplicity. In contrast with the complexities involved in many proposals, the suggested new reserve arrangements would be easy to apply and to administer. Moreover, the plan does not contemplate a sharp break with traditional banking concepts and practices.

Finally, we wish to emphasize that the plan can be put into effect without unduly benefiting some categories of banks or unduly penalizing others. One of the big obstacles to reserve reform has been that most proposals would have resulted in higher requirements for some banks. This can be avoided by coupling reserve reform and overall reduction of reserve requirements. In

[P. 38]

fact, if the problem were handled as the commission suggests, the resulting reductions in required reserve balances, as compared with present levels, would be just about even, percentagewise, for the various reserve categories of member banks. This is important from the standpoint of the acceptability of the plan to bankers, throughout the Nation.

The period ahead should afford a good opportunity to put into effect the proposals contained in this report. The commission is convinced that the accomplishment of this program would constitute a major improvement in the American banking system and that it would lead to important benefits to the Federal Reserve System and to the public.

[P. 39]

ECONOMIC POLICY COMMISSION, 1955–56

Evans Woollen, Jr., president, American Fletcher National Bank & Trust Co., Indianapolis, chairman.

E. Sherman Adams, deputy manager in charge of economic policy commission, American Bankers Association.

Murray G. Lee, secretary, economic policy commission, American Bankers Association.

The President's Committee

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 9, 1959

Mr. JUDD. Mr. Speaker, this Congress and the country face no more important decision than what to do about our programs of military assistance to other free and friendly countries, designed to increase their capacity to do what they most want to do, namely, to defend their national independence against Communist pressures from without and intrigue within. A special committee was set up by the President months ago to study this problem. The committee headed by the Honorable William H. Draper, Jr., and composed of 10 genuinely outstanding citizens, all with vast experience in this general field, has submitted its report. That report speaks for itself and must be studied soberly by each of us.

Under leave to extend my remarks, I include the letter to the President from Chairman Draper summarizing the committee's recommendations, the President's reply to Mr. Draper, and the President's letter to the Speaker, transmitting the report and the President's

concurrence in the committee's recommendations.

THE PRESIDENT'S COMMITTEE
TO STUDY THE U.S. MILITARY
ASSISTANCE PROGRAM,
Washington, D.C., June 3, 1959.

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: Based upon continued studies since our first interim report on March 17, 1959, we are submitting to you our second interim report. This report deals with "The Organization and Administration of the Military Assistance Program."

We expect to submit to you in the near future our recommendations on the economic assistance program.

We reiterate our unanimous belief that the United States and the free world are gravely threatened; that the military threat of the Communist dictatorships is greater than ever; that, likewise, the Communist economic and political threat and capability are increasing.

While there is at the moment no widespread military conflict with the Communist bloc, free world forces bolstered by our assistance are in fact confronting the enemy on many fronts. In certain areas, hostilities are suspended only by uneasy truces.

We have seen the development in recent years of a new dimension of the Communist threat: The effective use by the Communist dictators of military and economic aid programs. These dictators, not accountable to their people, move with great speed and flexibility in using their aid programs in support of their aggressive aims to take over or subvert additional free world countries.

The scope and purposes of our military assistance program have changed markedly since the program was begun some 10 years ago as a hastily instituted series of measures to meet Communist aggression in particular areas. Our programs have now grown to include assistance to nations which are clearly threatened with aggression or subversion. From mere reaction to overt actions our policy has developed into one of anticipation of threatened events and the building of collective security. It has thus become a basic portion of the defense structure of the free world and a bulwark of the long-range security interests of the United States.

Concurrently with the evolution of this concept, the nature and character of our military assistance program have undergone significant change. Our early programs consisted largely of shipments of conventional weapons drawn from post World War II stocks. Today, to meet the manifest needs of an adequate free world defense posture, new weapons having varying degrees of complexity appropriate to particular areas, are required.

Since many of the threatened free world nations are not capable of producing and paying for essential weapons, there is a clear need for military assistance. To eliminate or drastically reduce military aid to a country which is part of the present front line defense would constitute disengagement or withdrawal. This would, as certainly as in war, result in the loss of free world positions. And, since the threat will be with us for a long time, our planning and programing should be grounded on a long-term approach.

The administration of the military assistance program has greatly improved through the years. Nonetheless, there remain serious deficiencies in planning and execution. These require correction if military assistance is to make its maximum contribution. We are convinced that our assistance programs must be administered with increased speed and greater flexibility, and that this can be done effectively under our democratic processes.

An urgent need in this field is so to organize the administration of the military assistance program that our aid can be provided on a selective basis in timely anticipation of threatened aggression. Only so can we build the kind of collective strength that must underlie our efforts to deter or turn back those tempted to use force to achieve the subjugation of free nations.

By this, we do not mean to imply that all of our existing military assistance programs must be regarded as a permanent part of our national security position. For unless we do a selective job in this respect we surely run the risk of dissipating, in response to competing demands of many nations, the quantities of materials and support available year after year.

For this reason we recommend that there be reflected in the administrative process the substantive concept of selectivity, namely, that a continuing critical program review be provided in the executive department; that such review be made in the light of our basic national security strategy and that of the free world, that such review take into account the ability of other nations to provide their own share in the concept of true mutual security; and that any military assistance proposals which are not found conducive to the security interests of the United States be eliminated from our military assistance programs. Without such continuing reappraisal and evaluation, there is danger that such programs tend to continue simply through their own existing momentum as a drain on limited resources beyond the period of their real need. Without such technique of selectivity in its administration, even this essential program cannot long endure.

The Committee is convinced that the key to successful administration of the program lies in an effective working relationship between the Departments of State and Defense. This will require restraint by the Deparment of State against becoming involved in the details of operations, a willing acceptance by the Department of Defense of competent and timely foreign policy guidance, the development in the Department of State of a thoroughgoing capacity to provide this guidance, and a workable system through which proper execution of plans and adequate ability to effect necessary changes in programs is assured. The central role in such a system of meaningful and effective foreign policy guidance, utilized on behalf of the President and the Secretary of State, must be that of the State Department.

The Committee recommends acceptance of the following two basic concepts:

(1) The strengthening of the position of the State Department on the policy level of military assistance planning and an increased assurance of the conformity of the Military Assistance Program to foreign policy and to related assistance programs.

(2) The focusing of responsibility on the Department of Defense for planning, programing and execution of military assistance within the framework of policy guidance laid down in the National Security Council and by the Department of State.

Our principal recommendations giving effect to these two concepts are:

Military assistance should be planned and programed on a long term basis, covering a period of three and ultimately five years.

There should be a continuing authorization for the military assistance appropriation, in order to provide a sound legislative framework for multi-year planning and programing.

The military assistance appropriation should be placed in the Department of Defense budget, in order to center responsibility for administering the program more positively in the Defense Department.

Military assistance plans should be formulated within order of magnitude dollar guidelines to insure feasibility and should be approved by the Secretaries of State and Defense before implementation.

The Department of State and the Ambassadors should participate at an earlier stage in the development of military assistance plans.

Military assistance planning and programing should be further decentralized to the U.S. Unified Commands overseas and to the Military Assistance Advisory Groups.

Provision should be made for more adequate consultation with recipient countries during military assistance planning.

The Department of Defense should have clearer operational responsibility for planning, programing and execution of military assistance.

The executive branch should assure that funds for the procurement of military assistance material are made available to the military departments more promptly after appropriation; the military departments, in turn, should accelerate procurement and supply actions to expedite actual deliveries overseas of military end items.

There should be established within the Defense Department a Director of Military Assistance.

There should be established within the Defense Department an independent evaluation staff.

Highly qualified and experienced personnel should be asigned to the program.

Most of the changes we recommend can be carried out by actions within the executive branch. However, two of our recommendations are dependent directly or indirectly upon legislative action. They are:

(1) That you include the request for the military assistance appropriation for fiscal year 1961 in the Defense Department budget and submit it to the Congress in a separate title of the regular Defense Department appropriation bill, with the appropriations to be made directly to the Department of Defense; and

(2) That at the current session of Congress you request a revision of the Mutual Security Act of 1954 to place the authorization for military assistance on a continuing basis.

Our recommendations are set out in greater detail in the report we are submitting to you. The remainder of our report consists of a discussion of the background of our recommendations and specific procedures for putting them into effect.

In our judgment, acceptance of our unanimous recommendations should lead to substantial improvement in the administration of the military assistance program. The extreme complexities of the program are such, however, that maximum results can be obtained only with the continuous command attention of all top level personnel in the executive branch responsible for the various parts of the program.

Respectfully submitted.

DILLON ANDERSON.

JOSEPH T. MCNARNEY.
ARTHUR W. RADFORD.
JAMES E. WEBB.
WILLIAM H. DRAPER, Jr.,
Chairman.

THE WHITE HOUSE,
Washington, June 24, 1959.

The Honorable WILLIAM H. DRAPER, Jr.
Chairman, the President's Committee To Study the U.S. Military Assistance Program, Washington, D.C.

DEAR BILL: I want to thank you and the other members of your Committee for the thoughtful Second Interim Report of the President's Committee To Study the U.S.

Military Assistance Program, which was summarized in the letter of June 3, 1959, submitting the report.

Let me say first that I fully concur in your Committee's judgment as to the high importance of assuring that the military assistance program is organized and administered as efficiently and effectively as possible. Your exploration of these aspects of the program has been most useful and timely.

Your Committee in its June 3 letter unanimously recommends acceptance of two basic concepts:

(1) The strengthening of the position of the State Department on the policy level of military assistance planning and an increased assurance of the conformity of the military assistance program to foreign policy and to related assistance programs.

(2) The focusing of responsibility on the Department of Defense for planning, programing, and execution of military assistance within the framework of policy guidance laid down in the National Security Council and by the Department of State.

I am fully in agreement with these concepts.

I also consider the principal recommendations outlined in the letter of the Committee for effectuating these basic concepts to be valuable and well reasoned. Two of these recommendations, providing for a continuing authorization of military assistance and appropriating for military assistance as part of the Department of Defense budget, require legislative action. In transmitting copies of your report to the Congress, I am indicating my support of these proposals. I have also approved the substance of a legislative proposal to clarify the respective responsibilities of the Departments of State and Defense in the military assistance program.

The remainder of the principal recommendations contained in your letter of transmittal largely pertain to administrative actions which could be taken within the executive branch without additional legislative authorization. These proposals as I interpret them are acceptable to me, and the appropriate executive agencies are now making a detailed study of these proposals and will give to me, for my early consideration, recommendations with respect to their implementation.

I am in complete accord with your conclusion as to the necessity for continuing reappraisal and critical evaluation of our military assistance programs to assure that such programs do not tend to continue simply through their own existing momentum beyond the period of their real need.

May I once again thank you and the members of your Committee for the earnest study of and constructive suggestions about our vital military assistance program. In these troubled times I can think of no more important problem upon which the devoted attention of outstanding citizens is needed. As I have noted many times, our military assistance program is a vital part of our total security effort.

Sincerely,

DWIGHT D. EISENHOWER.

THE WHITE HOUSE,
Washington, June 24, 1959.

The Honorable RICHARD M. NIXON,
President of the Senate,
U.S. Senate, Washington, D.C.

The Honorable SAM RAYBURN,
Speaker, House of Representatives,
Washington, D.C.

DEAR MR. SPEAKER: I transmit for the consideration of the Congress a report on the organization and administration of the military assistance program, submitted to the President on June 3, 1959, by the President's Committee To Study the United States Military Assistance Program.

I am in full agreement with the basic concepts enumerated by the Committee in its letter, and urge that the Congress provide for continuing authorizations for the military assistance program, and hereafter make appropriations for military assistance to the Secretary of Defense under a separate title in the Department of Defense budget. In addition, I believe that legislative action along the lines suggested by the executive branch is necessary to clarify the responsibilities of the Departments of State and Defense in the administration of the military assistance program.

The remainder of the principal recommendations in the Committee's letter largely pertain to administrative actions which could be taken within the executive branch without additional legislative authorization. These proposals as I interpret them are acceptable to me, and the appropriate executive agencies are now studying them and will make appropriate recommendations for my early consideration and approval with respect to their implementation.

Sincerely,

DWIGHT D. EISENHOWER.

Our Nation Should Not Help Other Nations To Raise Their Standards by Lowering Ours

---

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

Mr. DENT. Mr. Speaker, the headlines in today's papers should be the subject of serious study and congressional action. The President of the United States has announced a public threat to call Congress into a special session if it fails to give him the amount of money he is demanding for so-called foreign aid.

This comes within 48 hours after his veto of a public housing bill which contained in it urgently needed housing for our educational system, housing for the aged, slum clearance, and urban redevelopment, designed to make our crowded cities a healthier and better place in which to live.

It is inconceivable that this Nation must continue its shameful neglect and starvation of public education, indifference to the need for adequate medical care, the crowded and blighted areas in our big cities which cry aloud for remedy, the inadequacy of our airport system, the needs for stream clearance, flood control, and the need for public facilities which are so demanding that a nation must be at its lowest ebb of national pride and public ambition to allow such conditions to exist and, in fact, to grow. We talk about foreign aid no longer on the basis of military necessity, but rather from the high plane of Christian principle and humane considerations, while at the same time, the facts as contained within the reports of our own congressional committees show that while the talk is on a high plane, the actual operation of our economic aid is one motivated by economic greed, and the desire for exorbitant and untaxed profits.

How can any person, with any knowledge whatsoever of the situation, seriously believe that this ticker-tape prosperity, heralded by this administration as the sign of an industrial boom, has any sound foundation under it?

One of our leading colleagues in the Congress, CHESTER BOWLES, of Connecticut, has this to say about the Eisenhower "boom":

> Statements by Ike and others have caused a rush from bonds into stocks and real estate by investors. As a result, prices of common stocks and real estate have increased by tens and tens of billions of dollars. If this continues, these so-called values will eventually collapse, as they have collapsed in the past. When this occurs, it will be the millions of small investors, many of whom were frightened into the market by irresponsible fear talk about inflation, who will be hurt most grievously.

CHESTER BOWLES is not alone in his fear of the future under the present economic "dream-walking" policies of this administration.

One of the outstanding economists in the country, Leon H. Keyserling, former chairman of the President's Council of Economic Advisers, said:

> In the face of the current economic recovery, we are now threatened by redoubled revival of the regressive (Government) policies which converted the recovery of 1955 into the stagnation of 1956 and 1957 and the recession of 1957–58.
>
> The Federal Reserve Board is now reactivating with a vengeance the tight-money policy. In accord with the misguided Federal Reserve Board policies, the administration is asking for the removal of ceilings on interest rates. Budgetary retrenchment is again being given precedence over the neglected priorities of our national needs.

At this very moment in the economic struggle between the steel workers of this Nation, and the steel mill operators of this Nation, the President by indirect interference in talking of economy at home, budget balancing, vetoing of legislation designed to aid the economy of this country and to continue the upward climb of our standard of living, while at the same time, pouring billions of dollars into the economic blood stream of competitive industrial nations, talks glibly about holding the line, freezing wages, and in a grand gesture, calls upon the steel workers to continue to negotiate at their present level of income.

Walter Reuther, head of the giant United Auto Workers, whose union's welfare fluctuates with every pulse of the economic bloodstream of America, has this to say, as he struck hard at the policy of tight-money, high interest rates, cutbacks in Federal spending for public needs, and curbs on wage increases advocated by Ike, in the name of fighting inflation:

> These economic policies have plunged the Nation into recession twice in 5 years and have sowed the seeds of a third recession after a brief period of relative recovery.

Those of us who try to keep an even balance in our regard for the need of international friendship and international well-being, without neglecting the necessities of our own economic welfare, watch with great apprehension, the little publicized reports, statistics, and findings of various State governments

and Federal Departments, as our economic life flows back and forth across the lines of prosperity and recession.

Robert M. Shaw, a Labor Department expert, made this blunt statement last week:

> Many factory workers laid off during this recession may never get their jobs back—improved technology has made it unnecessary to continue these jobs.

The figures back up Shaw's statement for factory output, for May reached its highest peaks. But factory jobs were still 600,000 fewer than in May 1957. Likewise, on our national railroads, and if we are to believe the letters that we receive as Congressmen from our great national railroad system, the railroad industry is a sick, and failing economic enterprise, and yet—there has been a sharp contrast between the soaring traffic loads being carried by the railroads, and the very slow dribble of rehiring of furloughed workers.

On another front, and one that has too long been neglected because we are in the position of having a "bull by the tail" and not knowing how to let go, the economic front controlled by our international trade is a trade that is no longer based upon the needs of nations, but rather has been perverted into an economic tool in an attempt to control the policies and political climate in the nations of the world. It is estimated that the trade balance this year will show a drop in exports from a high of the last fiscal year of $23 billion to approximately $16 billion in exports—and an increase of $19 billion to somewhere around $21 billion in imports. It does not take an expert economist to figure out that we are trading raw goods, which produce a minimum of payroll jobs, for finished manufactured goods, which demand a maximum of man-hour and payroll production.

I have tried on numerous occasions, to point out to Congress that this Nation, with its high standards, will be hopelessly lost in a trade war with nations having low standards, low wages, corporate combines without restriction, little or no minimum guarantees in wages, working hours, living conditions, and educational facilities.

There was a time in the beginning of this generation, and later a little over a decade ago, when lowering of tariff walls, giving military aid, and economic assistance to many of the nations of the world, was a proper and much-needed governmental expenditure on our part. However, that day has reached its climax—that period belongs to the past. We are faced now with the realities of the situation, and we seem to lack either the mental capacity, or the moral courage to cope with the situation.

While leading economists publicly state that there is a serious and growing crisis in our Nation because of the drying up of investment spending for productive facilities in our Nation, this President and profit-seeking big business and moneylending banks are demanding that this Congress pass legislation giving even greater incentives and concessions to those who have already, and are planning in the future, to curtail their American production and to produce their products in foreign countries to be shipped back into this Nation under the same trade and brand names, while their former employees walk the streets in despair, and in many instances, become the objects of charity.

There can only be one answer if this Congress fails to look into the billions of dollars being expended to build up competitive enterprise abroad from the viewpoint of economic realities and that answer will be more unemployment, greater taxes, and a definite lowering of the American standard of living for those who depend upon payroll jobs for their livelihood.

If ever a single amendment to a major bill pointed up the weakness in the whole subject, an amendment added to the foreign aid bill by the Senate of the United States ought to cause every person with any awareness whatsoever of the precarious position we find ourselves in economically, to become concerned over the change in the philosophy behind foreign aid today and what it was at the beginning.

That amendment says in part, that aid will be withheld from any nation whose government expropriates the investments of American citizens in corporations, or enterprises within this Nation. This, then, is the crux of the situation. If economic and foreign aid is a matter of life and death for the American people, how then, can we say that stopping the profits of American investors in any country negates the necessity for this country a requirement of their help and friendship.

Is anyone so foolish as to believe that our national security depends then upon the sanctity of profit-making investments abroad? I condemn the philosophy and the logic which puts profit for personal and corporate gain above the welfare of our Nation and its people.

I condemn the philosophy and the logic which justifies the vetoing of expenditures for housing in our own Nation, while at the same time, expending millions of dollars under the President's directions for housing and educational facilities abroad. I condemn the philosophy and the logic that promotes the construction of production facilities abroad under the guise of mutual aid, which, in turn, shuts down our factories, and creates unemployment.

These things I condemn, and not because I am unmindful of the needs of others, but somehow, I cannot believe that nations that have been in existence for centuries, whose cultures, arts, and sciences go back into antiquity, should be classified as needy and underdeveloped nations.

I have, and will, support my Government in its efforts to help peoples of other countries to better their conditions, but I refuse to stand by idly and watch this Nation help other nations to raise their standards by lowering ours.

Has the West Lost Its Soul, Its Will To Live in Freedom?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mr. JUDD. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following challenging article from Western World by Mr. Michel Didisheim, a Belgian writer who is also a businessman serving as head of the economic research and planning division of Sabena Airlines. While probably no one of us would agree with all Mr. Didisheim writes, his article sounds two very greatly needed notes. It shatters the complacency and unjustified optimism still found in so much of the West. And it demonstrates that courage and willingness to sacrifice are present in abundance among people who stand undaunted under the direct threat of Communist power. Such calls to discipline may yet save us—if heeded.

THE DEBASEMENT OF THE WEST

(By Michel Didisheim)

Is anyone today still unaware of the debasement of the free world? Is there one honest man who at the bottom of his heart is not at times ashamed of belonging to the West?

Public opinion, too often aroused by crises that are far too numerous, has grown utterly indifferent to the ballet of the Big Four. The helplessness of governments, their endless beating around the bush, their pettiness and their refusal to face the facts have led to a great weariness. Is this a prelude to surrender?

For 10 years, the Koreas and the Dien-Bien-Phus led us to believe that the threat was purely military. For 10 years a divided West thought in terms of defense, in terms of square miles that must not be lost. Self-satisfied and smug, the West assumed an attitude of aristocratic condescension, not for a moment thinking of the economic and psychological aspects of the struggle.

The Suez crisis confirmed the progressive attrition of the preceding years. The paralysis of Western leaders when faced by the Hungarian crisis, the Syrio-Egyptian Anschluss and the launching of the sputnik left us bewildered. And the Baghdad coup sanctioned the failure of our foreign policy, and started the West on the way to general breakdown and surrender.

Since the West's intervention in the Near East and the show of strength at Quemoy last year, it would have been reasonable to expect a recovery. But the last chapter in the tale of suspense, the Berlin crisis, has shown how divided we really are, notwithstanding apparent unanimity.

What emerges is not so much our decision as our lack of initiative; none of these crises was engineered by the West. We are satisfied to plug up a leak here or there, leaving the general flood unchecked. We refuse to mend our ways, and concentrate on rearguard action, instead of on reorganization.

In his recent warning to Red China, President Eisenhower recently stated that there would be no more Munichs. But we go from one Munich to another. Since the criminal policy of Yalta, we have gone from one with-

drawal to the next, losing our honor, our very reasons for existence. After that, what remains?

At one point, the Western World held all the winning cards. It was strong and rich, it controlled most of the means of production and even had absolute military strength. This it refused to use. Its component states were all intent upon their private interests, at the expense of the commonwealth of free nations. The old states were bogged down in the routines of a superannuated policy and succumbed to systematic immobilism.

And now, suddenly, we wake up to face Russian science, to face the colossus China and the fait accompli of an Arab world. And we are surprised.

The time is ripe for us to consider the conditions of our survival, to pass in review the criteria to be demanded of a policy pro bono publico.

Some clear minds have understood the danger and have succeeded in convincing the West that, in the future, the struggle would be an economic one. Even the Russians have confirmed this. And what have we done to take up their challenge? Have we mustered our forces? Have we braced ourselves for this new type of competition? And do we really understand that we have been outdistanced in this race?

The same lucid minds have shown the meaning for us of the awakening of the African and Asiatic nations. The importance of the underdeveloped countries has become clear: they could constitute the strongest instruments in the hands of the Reds if an anti-Western solidarity emerged from their common feeling of frustration. At Cairo, the Soviets even proposed to the underdeveloped countries that they stop exporting their raw materials to the Western powers. This plan has not succeeded so far. Then Western diplomacy fell into the clumsiest trap set in the past few years: Berlin. For the last 6 months and for God alone knows how many months to come, Berlin has been and will be our leaders' one concern. The Russians are delighted. Time works for them.

"WE WILL BURY YOU ALL"

The overt purpose of international communism is and remains the domination of the world. Any doubt on this score can be dispelled by Khrushchev's jokes and epistles. When, after a few vodkas, from behind his notorious "hearty good fellow" mask, he told Western diplomats, "We will bury you all." He was very serious indeed.

Our leaders make the great mistake of never reading. The Communists have set down not only their aims but their methods. Marx, Lenin, and Stalin have written voluminous works whose doctrines are applied to the letter. And all this has been published and is available to all.

This makes very instructive reading. It foresees everything: The cold was as well as the policy of smiles, gentleness as well as violence, how to exploit nationalisms, to sow doubt and discord, and to wage local wars. Tactics may vary, but the strategic aim remains the same. Chapochnikov modernized von Clausewitz and explains the cycle of wars and peace.

The Soviets deliberately bring about crises adapted to their needs of the moment, with certain precise aims in mind. They seek:

To create a diversion, to fix our attention on a question of secondary importance.

To destroy the myth of intrinsically superior states by forcing them to negotiate with lesser powers, and thus causing them to lose face.

To undermine the opponent's morale by threatening him with the nightmare of total war.

To spread discord among allies if these do not agree on common action.

To weaken the adversary by forcing him to keep up heavy military expenditures.

How well all this applies to the Berlin crisis, a crisis that is obviously artificial. It was devised in order:

To divert the attention of the West so that it would not be able to take advantage of the explosive situation that existed in China last fall after the launching of the communal program.

To use this diversion as a cover for Communist penetration into Iraq, into Syria, and who knows, into north Africa.

To keep the spotlight, as popular interest in scientific competition began to flag.

To create a belief in coexistence, in the possibility of permanent disengagement and even the hope of a solution of the German problems, all this with the obvious goal of dividing and weakening, of spreading doubt and confusion.

To keep alive the ghost of permanent threats so as to hide internal or economic difficulties.

If we consider how literally the Soviets apply the recorded principles of their international policies we cannot but be convinced that permanent coexistence is a delusion and that any long term agreement is unthinkable. For these imply a minimum of equity and respect for the pledged word, and neither of these terms has any meaning in Russian. To them coexistence is a way of putting us to sleep, a delayed, peaceful annihilation.

The question is how long the Soviets will be able to continue in this manner. For while the West may be threatened, there is no doubt that the Russian Empire is threatened likewise. The rising standard of living and the higher level of education will cause the masses in Russia gradually to become bourgeois and consequently more demanding. Public opinion will have to be taken into account. In the long run, and however much those in power try to check it, a liberalization will inevitably occur.

The satellites and the other customers of the U.S.S.R. represent a permanent danger to the Soviets. On the one hand the U.S.S.R. can trust them only so far, and on the other hand they are more open to Western influence.

China, one would like to believe, may become a real rival if not an enemy. We must exploit this rift. We have here a clear indication of our first objective: though coexistence, as it is considered at present, cannot be permanent, it will at least allow us to gain time and perhaps to get over the present cirtical moment. It will give us leisure to organize and make plans for our survival, while expecting, not a military elimination of Russia, but a transformation, a liberalization of the regime that is certain to take place notwithstanding the periodical tightening up with which we are familiar.

We must take time to meditate. We must learn anew how to think and to think in new terms, in a constructive way, putting aside our pride of old nations that have been insulted and belittled. Above all we must plan far ahead and stand firmly by the goal we will have set ourselves. Me must not follow the Russians.

We must substitute a dynamic and enterprising policy for the present one which is static and defensive. We must recover the initiative which we have left too long to the Kremlin. We must exploit its weaknesses, make use of its dissensions with other countries, and invent courageous and novel policies.

To begin with let us draw up demands as unacceptable as theirs, such as the evacuation of the countries of Eastern Europe. Let us make them as uncomfortable as they make us, when they bring about a situation to which any reaction on our part will turn to our disadvantage. Let us make more and more demands, insist more and more, wear out the enemy and keep him off balance. All this without ever forgetting our aim, to gain time. For whatever the Soviets think, if time does not work in favor of the capitalist regimes, it is less harmful to capitalism than to totalitarianism.

THE ACHILLES' HEEL OF THE SOVIETS

There is another area in which we can seize the initiative. It is the very one in which the Russians believe themselves the strongest and it concerns the peoples of Asia and Africa; of South America too, perhaps.

In this age of simultaneities, men have come to understand in relative terms the sort of conditions in which they live. They feel a resentment against rich nations, comparable to that which, within the nation, the have-nots feel toward the haves. From this feeling of frustration, itself often legitimate, may well spring an international class-consciousness that may prove fatal to the West.

The Soviets have made clever use of this powerful ferment to further their ends. They have been successful in an experiment in accelerated social and economic transformation and are ready to let others profit from what they have learned. They have launched a program of economic and technical aid which is very expensive, but to which no obvious political strings are attached.

In the eyes of the peoples of densely populated and underdeveloped countries, the Chinese experiment is still more fascinating. First of all, because it is truly Asiatic. Secondly, because the Chinese started from scratch, as most of these peoples will have to do. They faced, at the same time, both the problem of feeding themselves and that of building up capital. We must understand that the problem of the West's conflict with the East is one with that of its relations with the underdeveloped countries.

How can we win over the proletarian nations? The financial aid of the United States as it has been distributed up to now is both insufficient and badly used. It has not raised the standard of living of the masses. From this fact to the conclusion that the only possible successful method is that of communism, there is only one step.

Thus, it is most important that the Western nations counter the Communist program with national ones, with programs that will be able to electrify and spur the nation and make it willing to undertake the necessary effort.

Only then will the West be able to intervene discreetly. But, first of all, it must rid itself of its prejudices: it must give up belief in its own superiority; it must give up the idea that democracy is universally applicable.

Right now what can we do? We can help economically, financially, technically. We can welcome Afro-Asiatic students to our universities, we can bring our great productivity into play. We can help the underdeveloped countries to political, material, and spiritual independence. But our help must be free from the tinge of politics.

Later, when we have recovered our prestige and regained the respect of the world, when we have done what Christian peoples should have done long ago, we will be able to go on to a second stage, to turn the weapon of anticolonialism against those who are now brandishing it, and show them up as the only true imperialists, as the most reactionary regime in the world, which they certainly are.

To carry out our policy we must create a set of conditions that do not exist at the present time. It would take an article, or even 10 volumes to describe each of the elements of the environment that we must create.

First, we must learn to work together; divided we will surely fail. The lack of agreement during the Suez crisis made this truism all too clear.

We must create a political NATO. All nations must agree to delegate full powers in matters of international politics to a supranational Organization for Public Safety. This authority will have to plan, to take decisions and to act as executive. This is the only way to agree on one policy.

In the second place it is imperative that the West create a united Ministry of Information. We do not know how to sell what we have, and think propaganda the exclusive privilege of dictatorships.

We forget that we are dealing with a totally unscrupulous power. We can no longer oppose it with only the traditional arguments of good faith and objectivity.

On the home front there are two jobs to be done: First we must put an end to the illusion of peace at any price.

The Soviets are as afraid of us as we are of them, but we are playing into their hands when we fail to oppose thoughtless trends that repeated threats have imposed upon the masses.

CAN A DEMOCRACY MEET THIS CHALLENGE?

The second task is related to the first. It is certain that, in the years to come, as one crisis follows another, we will have much need of restraint and austerity. For one thing, assistance to the underdeveloped nations will be very costly. How shall we explain to the taxpayer that he is paying for his survival? Will the democracies be able to convince contending private interests to submit to the general good?

These different factors imply a certain danger. As always in times of crisis, democracies risk losing their liberty when trying to defend it.

This trend has started. During the coming critical years, the democracies will have to be careful not to sink into dictatorship while adapting themselves to new conditions.

When we consider the failure of our foreign policy, when we think of how the West betrayed the White Russians and abandoned the countries of Eastern Europe, when we think of how the West has failed in Africa and Asia, we may well ask: "Is the West still worth fighting for?" Are we not living in the past? Is it not part of normal evolution for the world of tomorrow to be a world of robots?

In conclusion, why must the West necessarily survive—by the grace of God?

Marxism—in outward appearances, at least—has something to offer which is certainly attractive to peoples which are not so prosperous or so wary of traps as we. As an alternative, we offer very vague notions such as liberty and equity. Men in rags have no use for these notions: they are a luxury which awakens no echo.

To combat an ideology, a pseudoreligion, we propose a way of life: Democracy.

The world, in spite of temporary quarrels, is moving toward political unity; it has been shaped on a Western pattern, even according to a European pattern. It has adopted our techniques, our form of government, our parties. Communism and materialism, science and the arts, are all the products of Western thought. The code of values which the world observes, at least in form, is a Christian one.

And yet, the West has no soul. In the eyes of Asia and Africa it merely represents fat living, a sickening opulence, a shameful materialism and selfishness.

Will the West be able to spread a doctrine other than that of the belly? What message will it bring? Our dollars alone will be unable to finance our survival.

And why survive?

Because the West is the only universal civilization with a conscience; today it is ashamed and wants to reform.

Because theoretically at least, the rule of law has replaced the arbitrary rule of force.

Because the world of tomorrow will be characterized by a certain giganticism, and only the West, with its public opinion, its conscience, its wealth, will be able to keep it from becoming monstrous.

Because soon, in this world of oppression and conformity, in this world without poetry where treason and falsehood have become common coin, the West will be the only place where man can still breathe freely.

Plan for a World Science Youth Conference

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mr. ANFUSO. Mr. Speaker, in the ideological struggle between the free world and the Communist-dominated world, the efforts to influence the minds of the younger generation are of paramount importance. While the spokesmen for communism seek to confuse youth and to hold out false hopes for them, it is our task to keep our young people informed and to get the truth across to them.

It was the great English statesman Burke who said:

Tell me what are the prevailing sentiments that occupy the minds of your young men, and I will tell you what is to be the character of the next generation.

This is as true today as it was in Burke's day. No one is perhaps more aware of it than the leaders of the Kremlin who utilize every opportunity to exploit the enthusiasm and the energy of youth, as well as its lack of experience in world affairs and in the ways of certain conspiring men. Lenin, the archconspirator of them all, once said:

We need young forces. The youth will decide the issue of the whole struggle, the student youth and still more the working class youth.

I believe it is high time for us to recognize the importance of youth—and especially its natural thirst for knowledge, its idealism, and its universal desire for greater opportunities—so that these qualities can all be utilized toward keeping the free world in a true state of freedom. We must encourage and help guide our youth toward a better understanding of world problems, an appreciation for international amity, and a desire for international cooperation.

One of the primary ways to achieve this is by providing youth with wider opportunities in the fields of science, scientific research, and technology for the benefit of all mankind. Young people must be given the opportunity to acquire broad knowledge in these fields and to apply this knowledge in the interests of humanity. They must also have the freedom to exchange their knowledge and their findings in science and technology with youths of other countries, so as to obtain the best possible cooperation and understanding which would also help promote better human relations in other endeavors.

I am, therefore, introducing a concurrent resolution authorizing the President to issue a call for a World Science Youth Conference, to which are to be invited youth and youth leaders of all countries, including the Iron Curtain countries, who have demonstrated an interest in science, scientific research, and technology. This World Science Youth Conference is to be held in 1961 in Seattle, Wash., at a time when the World Science Pan-Pacific Exposition, also known as Century 21 Exposition, is in progress in that city.

On May 21, 1959, President Eisenhower submitted a message to Congress pertaining to U.S. participation in the Century 21 Exposition and requesting certain funds for use primarily in connection with exhibits which are planned to promote greater interest and understanding of certain basic science areas on the part of young people and adults. This matter has been referred to the House Committee on Science and Astronautics, of which I have the honor to be a member.

U.S. participation in the Century 21 Exposition was established under Public Law 880 of the 85th Congress, approved on September 2, 1958. Of the three purposes listed for the exposition, the second one is described as follows:

(2) Depict the role of science in modern civilization.

Under the circumstances, I believe that a World Science Youth Conference to be held in conjunction with the exposition would be most appropriate and an excellent way to promote interest in science among youth.

Specifically, my resolution proposes that the youth conference shall afford the young people and youth leaders participating therein an opportunity to exchange views and opinions on the following problems:

First. The development of science for peaceful purposes, rather than for war or destructive purposes.

Second. Scientific and technological developments in the fields of agriculture, industry, and commerce, which can be used to assist the underprivileged and underdeveloped countries of the world.

Third. The adaptation of scientific and technological advances to improve health and education and raise the standard of living in all countries.

Fourth. Seek ways and means of providing a greater incentive to the youth of the world to acquire scientific and technological knowledge, as well as the needed educational opportunities to acquire such knowledge.

The resolution further provides that the World Science Youth Conference should submit specific recommendations for an international program designed to encourage the youth of the world to pursue scientific and technological projects and research for the benefit of all mankind.

I should like to suggest that, when the call to the youth conference is issued, invitations should also be sent to youth representatives of Iron Curtain countries so that they and the nations they represent may have the opportunity to see for themselves that the free world is earnestly interested in the peaceful develop-

ment of science and technology, and that it genuinely desires for all mankind to live in peace. I am naive enough to believe that perhaps some good may come out of this effort.

It is my feeling that an international youth conference devoted to scientific progress would serve as a great boon to the cause of freedom. It would demonstrate to the newly independent nations of Asia and Africa, large and small, neutral or friendly to either West or East, that the Western World is truly aiming to achieve world peace and human progress, not war and destruction. Freedom-loving peoples everywhere would be quick to realize that we are seeking to help all youth and to provide them with greater opportunities for a better life.

Mr. Speaker, I firmly believe that we stand to gain a great deal through this proposal in winning moral support, greater prestige, and worldwide recognition of our efforts. Congress can launch this effort by prompt passage of my resolution.

Presbytery of San Joaquin Resolution

EXTENSION OF REMARKS
OF
HON. JOHN J. McFALL
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. McFALL. Mr. Speaker, under leave to extend my remarks, I would like to include in the RECORD today and call to the attention of the Members of Congress a resolution recently adopted by the Presbytery of San Joaquin approving our Government's position on recognition of Red China.

The resolution prepared by the social education and action committee, headed by Rev. George W. Chrichton, reads as follows:

RESOLUTION

"We, the committee, move adoption of the following resolution:

"No. 1. That we approve the action of our President and Department of State and our Government in general in refusing to recognize the Government of Communist China or her admission to the United Nations.

"No. 2. That we approve the action of our Government in endeavoring to place our country in an adequate state of preparedness to combat any further armed aggression by any Communist country, the supporting of other countries, willing to assist us, with money and arms.

"No. 3. That we urge representatives of our denomination in the National Council of Churches to oppose any effort on the part of the council or its departments or committees to recommend the recognition of Red China or her admission to the United Nations or any similar action contrary to the spirit of this resolution."

ACTION CONCERNING PETITION OF THE FIRST PRESBYTERIAN CHURCH OF EXETER, CALIF.

The presbytery by a unanimous vote approved this petition and all of its provisions: "Whereas the deliverances of the Fifth World Order Conference of the National Council of Churches, in session November 18 to 21, 1958, proposed the admission of Red China to the United Nations; and

"Whereas the News, a newsletter published and distributed by the National Council of Churches, in its new release dated November 26, 1958, and immediately following the deliverance of the fifth world order conference, gave support to the proposal of admitting Red China to the United Nations; and

"Whereas the wide dissemination of this deliverance and support by the National Council of Churches on this news release created the opinion that the member churches of the National Council of Churches had or would give approval to this proposal; and

"Whereas the Exeter Presbyterian Church, through its session and with the approval of its congregation, strongly opposes any proposal that would support Red China or its admission to the United Nations: Therefore

"The Exeter Presbyterian Church respectfully petitions the presbytery of San Joaquin to enter a strong protest to the seemingly untimely distribution of the report of the fifth world order conference and apparent endorsement of the proposal by the National Council of Churches, and that this protest, when approved by the presbytery of San Joaquin, be delivered to the General Council of United Presbyterian Church in the United States of America and a copy of the protest, and the action of the presbytery concerning the protest, be delivered to the office of the National Council of Churches in New York City. This protest was approved by the session of the Exeter church December 10, 1958, and by the congregation January 13, 1959."

The report, as a whole and all of its recommendations were adopted.

Hard Money Policy

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, July 9, 1959

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "'Administered' Cost of Money—High Interest—Is Cause of Inflation," published in the newspaper Oregon Farmer-Union of June 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"ADMINISTERED" COST OF MONEY—HIGH INTEREST—IS CAUSE OF INFLATION

What about this issue of inflation and the "sound dollar"? What is the cause of inflation? And are the proposed remedies fair to farmers, wage earners and small business men?

The subject of money has many pitfalls. Ever since William Jennings Bryan fought it out on a platform of free coinage of silver, money has been a favorite subject of American politicians. It is again projected as a leading issue in the coming campaign by President Eisenhower's call for a "sound dollar."

At the risk of getting out on a limb, here are a few unorthodox thoughts on inflation and its causes.

Demand and supply are no longer reliable guides in determining prices. This is because prices are now administered by hugh monopolistic corporations, such as the motor companies, irrespective of demand and irrespective of supply. Even when demand was falling, as in the recent depression, prices of automobiles were raised. This completely ignores the so-called law of supply and demand. The auto companies could do it—and get away with it—solely because they are so big and because they have nearly an airtight control of the market.

The same thing is true of the price of steel and many other basic commodities in the economy.

Why cannot the same rule be applied to the price of money, otherwise known as interest? We think the same rule is being applied to money. The cost of money or credit today is just as much an administered price as the cost of other monopolistically controlled commodities in the market.

A few days ago, the great New York banks which largely dominate the credit market in the United States, raised the price of credit—the prime interest rate—to 4½ percent. That meant that those borrowers with the highest credit rating in the Nation had to pay 4½ percent. Other banks all over the Nation have followed—or will follow—this pattern. Lesser borrowers will, of course, pay much more than 4½ percent.

As this administered price of money is raised, and all interest rates go up, their effect on inflating prices all through the economy will soon be felt. Homebuilders will have to pay higher interest rates. Farmers borrowing money to harvest their crops will pay higher interest. Businessmen borrowing to expand their business will pay more for interest. And worst of all, the cost to the Government of borrowed money will go up and up and up. There is now talk of raising the interest rate on Government bonds to 4½ percent. A raise of 1 percent on Government bonds adds nearly a billion dollars a year to the interest bill of the Federal Government.

It is this monopoly control of credit which is the prime factor in causing inflation. Not higher wages but higher interest is the real villain.

What is the remedy for this higher interest rate—this administered cost of credit?

The remedy is a comparatively simple one—if the right political forces are in power. That remedy is for the Federal Government to furnish real competition in the money market to this monopoly control of credit. In other words, let's have a little mixed economy applied to money. Let's have some credit yardsticks just as we now have electric power yardsticks in the form of Federal dams which tend to keep down the cost of privately generated electricity. If the Federal Government would again institute the direct loaning of Federal credit to farmers and homebuilders, as it did during the forties and to some extent until 1952 when Eisenhower became President, you would see the interest rates fixed by private banks drop in a hurry.

This policy of having the Federal Government furnish part of the credit needs of the Nation would not undermine the free enterprise system. As a matter of fact, it would tend to strengthen the free enterprise system. For it is an axiom of the new economics that the free enterprise system cannot survive unless the Central Government actively intervenes to assure adequate purchasing power, competitive prices where monopolies would otherwise take over, and low interest rates to maintain an expanding economy.

This may be very painful to certain groups in the population. But it would be very helpful to the vast majority. And in the long run, it would assure a healthier free enterprise economy. It is the real answer—the only answer—to the kind of inflation which faces us today.

Appendix

Communist Psychological Warfare Against the United States and the Rest of the Free World

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, July 13, 1959

Mr. JOHNSON of Texas. Mr. President, it has long been recognized that Communist tacticians utilize insidious techniques in their campaign of psychological warfare against the United States and the rest of the free world. These techniques are frequently veiled, disguised, and camouflaged.

Maj. Gen. Lewis S. Griffing, Deputy Commanding General, 4th U.S. Army, Fort Sam Houston, Tex., has thrown the light of expert comment on these techniques in a recent speech.

Because of the timely and continuing importance to the Nation of this subject matter, I ask unanimous consent that the speech be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

ADDRESS BY MAJ. GEN. LEWIS S. GRIFFING, USA, DEPUTY COMMANDING GENERAL, 4TH U.S. ARMY, FORT SAM HOUSTON, TEX., AT FOURTH OF JULY PROGRAM, FORT SAM HOUSTON, TEX., JULY 4, 1959

We are met here today to commemorate one of the most significant days in world history. It is the anniversary of the official beginning of the American Revolution, the day on which that great document, the Declaration of Independence, was formalized. On that day our national existence began. Think carefully what that has meant to the world in the 183 years since that great event.

From the 4th of July 1776, when those great founders of our country declared to the world our Nation's independence, to the 4th of July 1959, this country has moved to the pinnacle of world leadership. It is an amazing record—from a mere handful of courageous leaders and volunteers to the mightiest Nation in the world in a comparatively insignificant fraction of the span of the history of mankind as we know it.

We may well be proud of that record, and for its many facets which together present a picture of unparalleled progress. It is a picture of a people who have gained unprecedented power—politically, financially, and militarily—almost overnight, so to speak, and who have used that power not for world conquest or domination, but to rescue and assist and lead by christian example the weak and the helpless everywhere.

We are a people who cannot be led into war by our friends, but who can be provoked into it only by the overt acts of international criminals who seek world conquest or domination by force. We do not have to beat our breasts and proclaim it—we have lived it during the period of man's greatest progress in material things. And our form of government insures that this moral code will continue.

We take pride in our military history, which has insured, often against tremendous odds and at great sacrifice of life and national treasure, the preservation of our revered form of government.

The 145 streamers on the Army flag represent not only great sacrifice, but great honor to the U.S. Army and the heroes who gave it soul and body. They were not mercenaries, or blind slaves of tyrants. They were champions of the right—champions with a mission—champions of the present and the future generations who, God willing, will live in freedom.

Each streamer contains a thrilling story of men who did not want to go to war, but who were willing to sacrifice all they held dear in the unceasing struggle to develop a world in which the individual will be free from injustice—from either his own or another government.

The world recognized, and we marvel today, at the courage of those signers of the Declaration of Independence and the volunteers of the Army who fought to insure a place in history for that Declaration. The odds against their fortunes, their lives, and their sacred honor were tremendous. It must have presented an almost impossible situation, facing the world's mightiest army and navy with nothing but raw courage and faulty flintlocks.

But we are now engaged in just as deadly a war. Here in the middle of the 20th century the weight of tyranny—political, economic, social, and military—is still heavy on the shoulders of men. It is unceasingly engaged in maneuvering by any means—mostly foul—to bring about the opportunity of crushing all men with its killing weight.

Its name is communism—and its slaves are legion. And it is a greater tyrant than George III ever thought of being.

Our military forces, like the Minutemen, are faced with almost impossible odds, if one considers just the number of men in uniform. So we must, like the Minutemen, be versatile. We must be prepared to fight an all-out nuclear war. At the same time, we must be prepared to fight any type of war, anywhere, to keep the Communist tyrant from his goal of world conquest.

In the field of military power the United States has made significant strides. We have been and are continually improving our physical preparedness with new ground, sea, and air vehicles, weapons, methods, and equipment. But we need also mental preparedness—an understanding of what faces us and the mental fortitude to meet that threat.

Let me speak frankly. We and the other free people of the world are engaged in mortal struggle with the Communists. To the Communists the cold war is not a holding operation, nor a prelude to a hot war. The current struggle is the main bout, the decisive offensive, conducted on an unlimited scale, with total victory as the goal.

Right now—this very moment—the Communists are aiming a barrage of propaganda and espionage at freedom-loving countries the like of which we have never seen. We can talk about total war or the "big kill" and take great satisfaction in reading about the invention of more and more destructive and ultimate weapons against which there is no defense. The Communists, nevertheless, have brought one-third of the world under their iron control. How have they done this? Not by total war. They have accomplished their ends by shrewd diplomacy, propaganda, deception, the blackmail of threats, fifth-column subversion, guerrilla forces, and, where expedient, localized shooting wars.

Witness the fact that now with Tibet 18 limited war situations have occurred since the end of the shooting in World War II in 1945.

Is anyone here so optimistic as to believe this piecemeal aggression will stop?

We are engaged in a psychological war with the Communists. Are we prepared to fight this psychological war? Are we aware of the symptoms of this type of warfare? Do we recognize them? Have we the mental ability, resourcefulness, and determination to resist Communist propaganda, to identify it, to denounce it, and to fight back?

What are the signs of psychological warfare in which we are engaged?

If we pause long enough to analyze what's going on in the world today, the method of attack is obvious. It consists of two basic objectives of the Kremlin, as far as the United States is concerned.

The first may be called the economic strangulation of the United States. Some of the symptoms are to cut us off from raw materials from abroad, to destroy markets for our manufactured goods, to stop the flow of U.S. capital abroad—to drive away friends and allies.

The second objective is aimed at crippling the United States from within. The way of life we have built up over generations comes under attack. Our institutions, our industrial structure, our culture, our ideals, and our great free-enterprise system which has produced the highest standard of living the world has ever known are the prime targets.

They promote strife and dissension among labor and management, or among races, creeds, and classes. They discredit our customs and culture. We are painted to the rest of the world as the warmongers, they as the peace seekers.

Also used are the "trojan horse" technique which penetrates, subverts, and gradually takes over weak governments and countries; the "big lie" and "red herring" methods which consume our attention and energy in refuting something which was never true in the first place; treaties, agreements, promises are kept or broken as they fit the Communist overall assault. The "now-you-see-it—now-you-don't" or "shell game" method, which alternately raises false hopes and frustrations among free people, hoping to undermine our will to resist.

"The "wrong ball" system in which the Communists very adroitly build up a crisis in one place and while everyone is alarmed and concerned about it, quietly move into a completely different place and take over. Berlin and Iraq may be current examples.

These insidious techniques employed by the Communist tacticians are numerous and used with skill, deception, and foresight. They are mixed with the soothing ointment of peaceful coexistence. Other examples of their deception are: "Let's end the armament race"; "Let's prohibit the atom bomb"; "Let's pull our troops out of Korea and Germany"; "Let's disengage in Europe."

Look at the evidence so that we may stay mentally alert and avoid getting caught in these pyschological traps.

Mental preparedness is just as vital to our survival as physical preparedness.

It concerns me and I know it does you also that we are weak in this area. Certainly we are reminded of our obligations often enough but are we getting the idea across to all the people?

When we look at the trend in juvenile delinquency, hoodlumism, and general disrespect for law and order, it gives us cause to wonder. There seems to be a certain lethargy and an unwillingness to face up to what is happening to and in the United States and the free world. In other words, our fourth weapon or the psychological weapon is by no means comparable to our physical capability.

Today we should look into our hearts and make sure we do not fail to keep that faith. On each Fourth of July we should read again those words which proclaimed liberty throughout the land in our Declaration of Independence and which have since served as inspiration to the oppressed everywhere.

Unlike the Constitution, the Declaration of Independence provides no frame of government. It offers no pattern of human society, no specific blueprint for the future. But it contains a body of abiding truth. Lenin and Stalin lie embalmed in Moscow, symbols of Communist tyranny. Our own Constitution, by contrast, is enshrined as a symbol of our devotion to a government of laws, not men. The Declaration of Independence is a perpetual reminder of the purpose of these laws—of the only valid purpose of all laws—to provide and perpetuate a society within which all men can enjoy the largest feasible degree of liberty and attain the fullest measure of happiness.

The Declaration is revered in all corners of the earth by the free and those who would be free. Their hearts are stirred by it partly because of its historic associations and its success, partly because of the beauty of its phrases, but chiefly because men perceive that it is as universal as it is national. Its historic American faith can be simply stated in dateless language.

By birth all men are equal, not in ability or condition, for that has been untrue in all the ages of which we have any record, but in the possession of fundamental rights. Life, liberty, and the pursuit of happiness are mentioned in the great charter; but more important than any list is the "truth" that men possess these rights, not because of race or creed or station, but because they are human beings. Here is the eternal answer to bigotry and intolerance of any and every sort.

Government and other form of public control is a means to human well-being, not an end in itself. Man is not made for the state but the state for man, and it derives its just powers only from the consent of the governed. In extreme cases, like the one in 1776, this "truth" justifies political revolution, and in all cases it provides the criterion by which any government or institution should be judged. No sort of rule can justly rest on power alone, and here is the eternal answer to all forms of tyranny over the persons, the property, and the minds of men.

The wondrous phrases which were written on our first Independence Day into the official creed of the newborn Nation were an expression of ideals, not immediate realities. In every generation since, some men have scoffed at them, some have given only lip service to them, and others have been distressed by the slow and imperfect attainment of them. But the gradual realization of the wisdom of the great Declaration has inspired American citizens, soldiers, and statesmen to their noblest actions.

The Declaration's most eloquent testimony was that given by Abraham Lincoln on the anniversary of Washington's birthday in 1861, when he said:

"I have never had a feeling politically that did not spring from the sentiments embodied in the Declaration of Independence. I have often pondered over the dangers which were incurred by the men who assembled here (in Philadelphia) and framed and adopted the Declaration. I have pondered over the toils that were endured by the officers and soldiers of the army who achieved that independence. I have often inquired of myself what great principle or idea it was that kept this Confederacy so long together. It was not the mere matter of the separation of the colonies from the motherland; but that sentiment in the Declaration of Independence which gave liberty, not alone to the people of this country, but, I hope, to the world, for all future time."

On the 4th of July 1795, 11 years after the historic struggle for American independence began, a Dr. Samuel Willard, who incidentally was one of General Meloy's forebears, made what was then called an oration. I can do no better than to quote briefly from it. To me it stated then our case for today as clearly as words can:

"On this joyful, this memorable day how ought our hearts to glow with gratitude towards that Almighty Being, who appeared for us in our darkest scenes of adversity and danger, and has conducted us to a state of unequalled happiness and prosperity. Let us evince the grateful feelings of our hearts by acting in correspondence with the dignity of our natures, and agreeable to the strictest rules of morality and religion.

"Happy are we as a nation and happy shall we continue to be, if we have only the virtue to know and prize the source from whence our happiness proceeds. And here let me ask: are there any who would knowingly prefer licentiousness, anarchy, and confusion, before peace, harmony, and good Government?—we would hope there are but few but very few among us, who would answer in the affirmative. How pleasing would it be should the several republics and the individuals who compose them, cordially harmonize under our present form of civil Government. In the meantime we may do much to render ourselves and our acquaintance happy in the prospect. Let us attend only to fair and rational arguments. Let us not be led astray by idle harangues or by objections without any foundation. Let us exert ourselves to sow the seeds of harmony and concord; and let us adhere to our Constitution as the rock of our political salvation. Should our Government continue stable and energetic—should piety, virtue, industry, and frugality be encouraged—should luxury and vice be discountenanced: America may then hope the continuance of those blessings which she has already realized, and which luxuriant imagination has heretofore painted out. Her estimation with foreign nations will increase. Her arts and manufactures will flourish. Her husbandmen will find a ready vent for the productions of their farms. Commerce will spread her whitening sails to the four winds of heaven. The remotest regions of the earth will be visited by her ships and benefited by her exportations. Her free-born sons will enjoy the sum of human felicity and transmit it entire to the latest posterity."

In a few moments our current version of Old Glory goes down and in its place will be raised the 49-star flag—the additional star for our new great State of Alaska. In another year Hawaii will be added.

Fix your eyes on that grand old flag, and take from that look the inspiration which is always there. Nothing must ever take away that symbol which is the United States of America.

Study of Poison Spray Effects Overdue

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 29, 1959

Mr. METCALF. Mr. Speaker, on June 21, 1959, the Department of the Interior endorsed legislation, which I have cosponsored in the House (H.R. 5813), to increase the scope and value of the research now being conducted to determine the effect of pesticides upon fish and wildlife resources.

Pointing a finger at the need for such legislation is the Salt Lake Tribune in its editorial of June 29. The editorial follows:

[From the Salt Lake Tribune, June 29, 1959]

STUDY OF POISON SPRAY EFFECTS OVERDUE

The Interior Department's recent appeal for a greatly expanded research program into the effects of pesticides on fish and wildlife surely will be echoed by concerned organizations and individuals throughout the country.

The problem has proved of much greater magnitude than originally believed and the research program should be permitted to expand as wisdom dictates, Ross Leffler, Assistant Interior Secretary, said in a report to Congress.

It should not be too much to hope that the program will be expanded even beyond the recommendations of the Department and also include a thorough study of the effects of insect poisons on humans and domestic animals.

The Interior Department estimates that the use of pesticides will increase so greatly that by 1975 the wholesale value of such materials used each year will approach a billion dollars. That would compare with $40 million worth used in 1940 and $290 million worth in 1956.

"One-sixth of all the croplands and millions of acres of forests, rangelands and marshlands are treated annually with these chemicals," Leffler said.

"Most of these areas are important wildlife and fish habitats. Some chemicals persist in the soil for periods of 3 to 5 years or longer.

"Certain food chain organisms, such as earthworms, living in treated soil or waters, tend to concentrate poison in their body tissue. Hence, birds, fish, and other aquatic creatures are affected when they feed upon the contaminated organisms," the report said.

"Studies made to date have shown that DDT may kill fish and other aquatic life when applied at dosage rates in excess of one-quarter pound per acre. Two pounds per acre will kill birds and cause heavy mortality among mammals."

Pheasants, quail, and other species exposed to amounts which do not cause death suffer delayed effects in the form of reduced reproductive capacity and survival of their young.

"Persistent high levels of DDT have been found in the bodies of fish months after temporary concentrations in the stream had dissipated," Leffler reported. "Bird numbers in several of the areas treated with Heptachlor for imported fire-ant control have been found to be reduced 75 to 85 percent. Populations of quail, wild turkey, and rabbits also were decimated in some of the areas."

It would also seem reasonable that DDT and other chemicals ranging from mildly toxic to dangerously poisonous might be passed on to human consumers through veg-

etables or fruit which have been sprayed or through concentrations in milk and meat.

After a great deal of soul searching and debate, Congress last year tightened regulations empowering the Food and Drug Administration to control flavorings, sweeteners, and a host of other chemical agents known as food additives. The law applies chiefly to chemicals deliberately placed in food going into commercial channels. The teeth in the law require pretesting by manufacturers before an additive is placed on the market.

Poisoning through accidental or deliberate heavy use of insecticides remains largely in a no-man's land of controversy and confusion. Powerful conservation organizations are fighting vast aerial spraying programs such as that for fire ants in the southern States, but what of the lowly homo sapiens whose strawberry beds happen to be in the way of his neighbor's spray gun?

It is time a thorough study was made of what conceivably could prove to be a mammoth self-poisoning program being carried on by the American people.

Getting the Job Done

EXTENSION OF REMARKS
OF
HON. J. ALLEN FREAR, JR.
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Monday, July 13, 1959

Mr. FREAR. Mr. President, the delegates to Delaware's annual convention of Federation of Democratic Clubs were recently given an opportunity to hear one of our distinguished younger Members, Senator VANCE HARTKE, deliver an enlightening address on affairs in Washington.

Senator HARTKE's able analysis and presentation received widespread comment throughout the First State.

In order that others may benefit from his observations, I ask unanimous consent that his timely and interesting message entitled "Getting the Job Done," be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

GETTING THE JOB DONE

(Address by Senator VANCE HARTKE, Democrat, of Indiana, to annual convention of Federation of Democratic Clubs, Dover, Del., Apr. 25, 1959)

Nearly 3 years ago I was at the Democratic National Convention in Chicago as an observer, the young mayor of a struggling industrial city down on the Ohio River in southern Indiana. Here, I met representatives of the great State of Delaware.

My associates and I struck up acquaintances with several men from the State in which I appear tonight. Since then many things have happened to the country, to your State and mine, to our party, to me personally. In a sense, they are interwoven.

They form a part of the tapestry that is the state of the union, 1959. The central theme of that tapestry is largely that of our party.

In the heat of the summer of 1956 I could not know that your great Senator, ALLEN FREAR, and I would become friends and associates in the U.S. Senate. It is, in part, this association which brings me here tonight.

But before I discuss any further the things I have come to talk over with you, I want to say some words about your distinguished Senator. He is one of the most respected and best liked men in the Senate. Even when someone has differences of opinion with him his opponent acknowledges the intelligence and the sincerity of the Senator from Delaware. I know Delaware is proud of ALLEN FREAR as I am to serve with him.

So we are together tonight in part because of ALLEN FREAR—my friend and yours. We are together in part because of the failings of our opposition. We are together in part because of our Democratic program and leadership. We are together because of our mutual success.

It is a success upon which we draw for for inspiration for the future. Ours never was a party to promise rather than perform. Or to look backward and not forward. Or to be content with a record of the past.

You and I know and glory in the record of past achievement by Democrats in the White House, on Capitol Hill, in your own State capitol, and in mine. But this is not enough.

With victory have come obligations and responsibilities. I report to you in all sincerity and humility. We are accepting them.

We cling to the ideas and ideals of a party devoted to service, a party concerned with the welfare of the people who together make up this Nation.

If I have learned anything in Washington, it is that not everything is clearcut right and wrong, black and white, good and evil. People of differing views—even within our party—can have equally deep convictions. These keep our party healthy as different views have kept our Nation healthy.

To find common ground among these differing views is not compromise of ideals or principles. It is, rather, getting the job done.

There are those in politics who play to the grandstand rather than work with the them to get the job done. I heard an old hand ask one day, "Do you want us to make a lot of noise about this or do you want to get legislation passed?"

I am proud to report to you that most of the Democrats on Capitol Hill want to get legislation passed. And this was the mandate of the voters which last fall gave us almost a 2 to 1 majority in the Congress—and if the recent polls are correct, that majority would be larger if it were election day today.

They saw in our party the doers. We seemed to have the new young faces. We seemed to have the vigor and the program—the ideals and the ideas. We seemed to be willing to work to get the job done instead of just talking about it.

And what have we done to carry out the mandate we were given?

In the Senate we have passed—

A bill to help areas with heavy unemployment to help themselves.

A new housing bill, which includes funds to revitalize our large cities, clear slums, help ordinary people own homes and assist our veterans.

An airport construction bill designed to get caught up with the jet age.

Hawaiian statehood.

Assistance for educational TV.

Continuation of jobless benefits for those out of work long periods.

An extension of the draft.

Participation in the world bank monetary fund.

A workable labor reform bill which, while it does not contain everything that everybody believes should be in such a bill, was approved by committee 13 to 2 before winning a floor okay this week.

A plan for a study of unemployment and how to lick this problem which today finds some 4½ million Americans out of work.

Considering that we have been in session only about 3 months and considering that there has been a flood of minor legislation, I believe the record we are writing in Washington is one of which all Democrats can be proud.

It is being done with thorough investigation, adequate debate and due deliberation.

This is the trademark of real leadership. The U.S. Senate is blessed with many great Democratic leaders. But a great deal of the credit for our record must go to our majority leader, LYNDON JOHNSON.

In view of some of the things which have been said about the leadership, I would like you to know that the majority leader has never been too busy to discuss legislation with me, to listen to my ideas and to trade information and ideas. Senator JOHNSON has made this a practice with anyone who seeks him out.

I wonder if we have not come so far in recent years that we Americans have forgotten what real leadership is.

If there is anything for which we may indict the Republican Party on a national level, it is for not doing what has been necessary for the well-being of the vast majority of the people. There is great fear right now, for instance, whether there may be some vetoes of our work in Congress.

Unfortunately, when we received our mandate last November, the White House and the administration did not go with it. If the people could have had it within their power to do so, I feel certain they would have given us this additional authority.

Instead of leadership in the administration, however, we continue to have sham—study, stall, and stumble.

More than a year ago we were told that the unemployment problem was improving. The tune remains the same. Not long ago Labor Secretary Mitchell said he would eat his hat if unemployment did not drop below 3 million by October.

And what about the 3 million who are left? There seems to be no concern for them among the stalwarts of the administration.

Some weeks ago Secretary Flemming of Health, Education, and Welfare announced a program of assistance for better schools. He proposed—in all seriousness—that we pass the program now because it is needed now, but postpone putting it into effect for a year or two.

Meantime, the administration asked Congress to pay certain bills due next year this year.

Now, this is foolishness.

If we Democrats would propose anything like this, we would be held up for national ridicule in the newspapers of the country.

But I suppose we have come to expect not alone lack of leadership and lack of concern, but often a lack of good commonsense as well.

Our administration has now embarked on a program of bungled budget balance. In the first place, this so-called balanced budget is a fairy tale.

If we raise taxes and fees of seven different kinds—and if business improves some 30 percent, and fail to assume our proper responsibility—then the President may have sent us a balanced budget.

But balance itself is not the test. If it were, then the sure method would be to remove all taxes and spend nothing. Result: Income 0, spending 0.

Government is designed to accept responsibility and to do a job. If we are attacked or if your friends are attacked, we will fight. This is our resolve.

Of course, we must work to keep our spending within balance of what we expect to take in. But you can balance your budget at home by buying yourself a new car instead of food, or a fur coat for the wife instead of milk for the children, or a new roof on the house instead of new lights in the living room.

What we Democrats have said thus far is that we are concerned that there is unemployment and a need for so many things here at home. We are worried about the state of our Armed Forces and our defense research and production. We are worried about an adequate farm program. These things cost money. So do airports, hospitals, roads, houses.

Every spending proposal that comes before Congress is getting careful scrutiny because of this. We are going to decide that we need food and milk before a new car or a coat. We are going to decide whether we should rewire the living room or fix the roof. And we believe we can probably do both.

We are determined to balance the budget, not because this is an end, but because it is the right way to proceed.

We are equally determined to bring back prosperity because this is right and because we know recession is something we cannot afford.

We are determined to have better education, less sickness, more and better housing, a better defense, a workable farm program, hospitals, parks—new tomorrows, greater futures, better living for all of us.

The people have confidence in us.

We are going to perform—just as we have been performing in the past.

Contrast the performance of the past 6 years in Congress with that of the past 6 years of the Republican national administration—or for the moment go back more than 6 years. I recall too well during the recent recession the attempt to pacify the fears of the people held out these reassuring thoughts: Have no fear. Everything is going to be all right. Prosperity is just around the corner. We will not have another depression like the thirties. And here is why: We have fouhd built-in economic stabilizers. They are:

1. Unemployment insurance.
2. Social security programs.
3. Bank deposit insurance.
4. Stock market controls.

These built-in economic stabilizers will prevent another depression.

And they probably did.

But where did these far-reaching, forward-looking programs originate? Did they come from the Madison Avenue slogan masters? No. They came from clear-thinking Democratic administration. When they were proposed, they were violently objected to by the Republicans. Yet, in time of stress, danger and fear, the Republicans reassuredly pointed to these Democratic measures as the safeguards of the Nation. And as I said a few moments ago, during the past 6 years contrast the forward-looking programs of the Democratic-controlled Congress with the inept administration, the same clear contrast of action compared to inaction, retrogression compared to progress, looking forward compared to looking backward can be found.

Our party and our country will profit most from a program of action * * * decisive, bold action to solve the problems and get the job done. I am less concerned about who leads this fight or the exact course it will take than I am about getting on with the task.

I am far less concerned about who will lead us in 1960 than I am whether he will have the tools with which to lead. We must give him the program, the record, the accomplishments. With this, he will win, whoever he is.

Your part in this is to help us with ideas, ideals, and advice. It is to correct us when we are wrong, boost us when we are right. It is to tell the story of what we are doing, how we are doing it and why.

We are, I believe, on the threshold of greatest success, success in which everyone in this room can benefit morally and materially.

Let us promise each other, now, we will work together to get the job done.

American Youths Break Down the Barriers of Misunderstanding

EXTENSION OF REMARKS
OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, July 13, 1959

Mr. RANDOLPH. Mr. President, last week I introduced a bill for the establishment of a Department of Peace.

At that time, in a colloquy with the distinguished senior Senator from Minnesota [Mr. HUMPHREY], I referred to the contributions to international understanding that are made by the student exchange programs.

I characterized these young people as roving ambassadors. Though without skill in the formal arts of diplomacy, they speak the language of the heart and thus break down the barriers of distrust and suspicion which so often divide peoples and nations.

Recently, in the Washington (D.C.) Post and Times Herald and in my hometown newspaper, the Elkins Inter-Mountain, there were reported two incidents of students who are conducting their own voluntary cultural exchange programs. The stories were well written and carry an appeal and a challenge. These young people express in their actions the youthful enthusiasm and idealism which transcends national boundaries and move the world closer to a true international community.

I commend these articles to the attention of my colleagues and ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald, July 3, 1959]

STUDENT RUNS HIS OWN CULTURAL EXCHANGE PLAN

(By Jean White)

Harry Morgan, a college senior who sells $1 shares in friendship to underwrite his own private exchange program, is ready to take four visiting foreign students on a goodwill tour across the United States.

This is the fourth year his "Ambassador for Friendship" program has been on the road, and the Morgan entourage is traveling in style this time.

"I needed a car," the 25-year-old Rutgers University student explained simply. "So I wrote a one-page letter to George Romney (president of American Motors Inc.) and told him about our exchange.

"A few days later he called and asked: 'What color?'"

So Harry and his four ambassadors from overseas now have a red and white, air-conditioned, power-steered, power-braked Nash Rambler for their 13,000-mile trek.

Traveling along with Harry are an economics major from Pakistan, a political science major from Italy, a civil engineer-lawyer from Argentina, and an artist from the Philippines.

They're traveling on $1,500 and American hospitality.

"If we see a prosperous looking farm, we stop and tell the farmer how lovely his barn is and get invited to supper," says Harry.

On their 3 days here, the Morgan ambassadors are guests of the Statler Hotel. Hilton hotels in five other cities also will be hosts to them.

Harry raised the $1,500 this year by asking service and women's groups to buy a share in international understanding. In 1957 and 1958, he raised $3,000 each year. This time school work curtailed his fundraising so he decided to take four foreign students already studying here but without money to travel.

The idea of a private exchange program came to Harry in 1953 after a stint with a Friends work group in Holland on flood relief. He's worked at his project ever since.

[From the Elkins Inter-Mountain, July 6, 1959]

YOUTHS HAVE FAITH IN FELLOW MAN—VOUCH FOR NATION'S HOSPITALITY

(By Eldora Menjum)

Two Arizona teenagers arrived in Elkins over the holiday weekend singing the praises of their fellow men.

"We've traveled 4,000 miles on the hospitality of the American people," said 16-year-old Dave Burns, who with his companion, Bob Smelick, 17, spent the night in Elkins at the YMCA.

The Central High School students of Phoenix, Ariz., had set out from home 3 weeks ago to attend the National Student Council convention in Pittsburgh. Their school couldn't afford to pay their expenses as delegates, so the two youths decided to hitchhike their way to the convention city.

Not only did they reach Pittsburgh without difficulty, but they have toured all the major cities along the east coast.

Carrying their bedroll with them, the two lads have slept on porches and in basements and have been invited to many a stranger's dining table in their 3-week-long expedition.

"We've spent less than $60 each," said one of the youths, as he explained that they visited YMCA's in many towns to find overnight lodging.

Neither of the young men had ever traveled east of the Mississippi. So their first yearn was to visit New York City where they spent 4 days. They also visited Atlantic City, N.J., and Washington, D.C.

"We baled 10 tons of hay for our lodging and a real feast in Lancaster County, Pa.," said Burns.

In the Nation's Capital, our Congressman took us out to lunch, and we saw the sights. We passed the office door of Vice President RICHARD NIXON, and decided to go in and pay him a visit. But one of the receptionists reminded us he was in Russia.

"We didn't do much actual thumbing," reminded Burns. He said they answered advertisements in the motor travel section of newspapers and shared rides or helped drive person traveling to various sections.

Homeward bound and just outside of Washington, D.C., a Pentagon employee picked them up and gave them a lift for 20 miles. He let them out along the deserted roadway about dusk with a storm threatening from a distance. He was turning off the highway in another direction. The motorist

continued on his way for some 10 miles, but became worried about the two youths left alone alongside the road and returned to pick them up and take them home with him for the night.

Near Petersburg, the lads were hitch-hiking when a minister and his family picked them up. The pastor drove them some four miles and then invited them to come home to join in a family dinner.

Burns, son of a Lutheran minister and State oratorical contest winner, said he and Smelick became acquainted with Miss June Myles of Elkins, at the National Student Council convention. Miss Myles, president of the student council at Elkins High School, representing this city at the meeting.

While in Elkins, the two youths visited at the George Myles residence.

Smelick, president of Central High student council and president of Salt River Valley Presidents and Vice Presidents Association, must be back in Phoenix, by July 10. For on that date, he leaves by plane for an all-expense paid trip to Boy's Nation, the site of the convention—back in Washington.

The Arizona youths caught a ride to Elkins from Petersburg with James Reese, of Fairmont, an auditor who was spending some time in Elkins before continuing to Parkersburg. He gave the boys a lift on to Parkersburg as he departed this city.

Representative Fulton on U.S. Defense Policy

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, July 13, 1959

Mr. JAVITS. Mr. President, it is sometimes overlooked that while the Soviet Union is a distant neighbor, Moscow being 4,700 miles from New York, it is also a fact that the U.S.S.R. is only a few miles distant across the Bering Strait from our 49th State, Alaska, and within relatively short range of our advance bases throughout the world. Representative JAMES G. FULTON, the senior minority member of the House Committee on Science and Astronautics, and a senior member of the House Committee on Foreign Affairs, has written an important commentary on this question published in the Sunday, June 28, Washington Post and Times Herald.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald, June 28, 1959]

WHERE SHOULD THE UNITED STATES CONCENTRATE ITS DEFENSE BUILDUP?—REPRESENTATIVE FULTON SAYS FORWARD BASES PUT A PREMIUM ON IRBM MISSILE

(By Representative JAMES G. FULTON)

Big nation power plays today are as fast as a big league baseball game. A crack of the bat or a line drive down center field, and the strategic positions of the teams change and the stands are electrified.

The two big league powers, United States of America and U.S.S.R., are and have been winning and losing ball games for the last 12 years. But it is still a tight series and no one has a really decisive advantage.

Anybody who tries to give the results of this world series during the tight 12th game is permitting his bravery to get beyond his reason.

Neither the U.S.S.R. nor United States of America has such overwhelming strength that it can eliminate the other. Each has sufficient current strength in various fields so that neither could destroy the other without being nearly destroyed itself, which is clearly unprofitable.

So, does the argument of who is ahead in the ICBM race really profit us? In the missile and rocket field, each nation surpasses the other in different ways but neither presently has an effective strategic superiority.

We have no information that the Soviets have operational ICBM weapon capability, nor do we know that there has been a successful target reentry by a Soviet ICBM in which the CEP (circle of probable error) has been accurate enough to indicate that it is at this date even a partially successful military weaponry system. I challenge anybody to prove otherwise.

Statements giving the U.S.S.R. this capability are pure guesswork. Of course, the Soviets have their IRBM land range, and their southwest-to-northeast ICBM land range, largely over Siberia. But successful missile flights of the length that the United States has completed over the Atlantic missile range from Cape Canaveral to Ascension Island, would fall in the Pacific Ocean on Russia's ICBM range. Their range is too short for land fall and there is no evidence of successful Russian ICBM sea reentry shots such as this country has publicly announced.

There is no doubt of American superiority in the guidance and control fields, and in tracking and telemetry. We and our allies have a worldwide network of ground stations aiding us in these fields. The U.S.S.R. has none outside of her territory and satellites.

Do not underestimate our advances in the production and use of IRBM's for the defense of the United States and the free world from European bases, as well as from over 250 free world bases scattered everywhere. We can get to a target with more missiles, more accurate CEP, in half the time and at half the expense of the ICBM long-range missiles.

Russia must depend on an ICBM range of 4,000 to 8,000 miles launched from her own territory. The United States has been smart in moving her defenses to forward bases outside her borders with ranges for ICBM missiles of only 400 to 1,500 miles to target areas on the average.

Why should the United States take Senator SYMINGTON'S advice and adopt Russia's strategy of ICBM's? Now—we should fill out our U.S. defense production immediately to support our forward bases which give us defense in depth, and we must now continue emphasis on research and development in the ICBM field rather than production.

We should not now make the decision to match Russia's 1961–62 strength as predicted by Senator SYMINGTON to be 3,000 ICBM's—they are probably the "Big Bertha" cannons of World War I transferred to world war III.

The ICBM capability of all nations has been tremendously handicapped already by the high-space nuclear shots by the United States in September 1958, in the South Atlantic which can knock out most of our present electronic missiles guidance systems.

Address by Hon. Dennis Chavez of New Mexico, Before Non-Partisan Statehood Association of Puerto Rico

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Monday, July 13, 1959

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered before the Non-Partisan Statehood Association of Puerto Rico, at San Juan, P.R., on July 3, 1959.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS DELIVERED BY THE HONORABLE DENNIS CHAVEZ, U.S. SENATOR, DEMOCRAT, OF NEW MEXICO, BEFORE THE NON-PARTISAN STATEHOOD ASSOCIATION OF PUERTO RICO, SAN JUAN, P.R., JULY 3, 1959

My friends of Puerto Rico, I am most happy to be with you and to discuss with you briefly what I believe are matters of importance to every person on the island.

It is not my purpose or intent to interfere in any way, shape, or form, in the political business of Puerto Rico, or to tell you how you should run your political business. I am most happy to feel that under your present status, and under the Governorship of the Honorable Luis Muñoz-Marín, you have made great advancement, both politically and economically.

But there are other things, in my opinion, in which you are interested—whether you want to continue under the present political status or want to become part of, and not only an associate to, the United States of America.

I repeat—what you do, I still maintain, is your business.

I, for one, believe it is in the interest of your future welfare, your economic progress, and the history of your past under the American flag, to be part of, and not associated with, the United States.

What are the requirements for statehood?

Hawaii and Alaska aside, the case for Puerto Rican statehood can stand on its own merits.

The traditionally accepted requirements for statehood are defined in a 1953 report (Senate Rept. No. 1029) of the Senate Interior and Insular Affairs Committee as follows:

"1. The inhabitants of the proposed new State are imbued with and are sympathetic toward the principles of democracy as exemplified in the American form of government.

"2. The proposed new State has sufficient population and resources to support State government and carry its share of the cost of Federal Government.

"3. A majority of the electorate wish statehood."

Does Puerto Rico qualify? I firmly believe that it does.

No one who knows the beautiful island and its industrious people can doubt the Puerto Ricans' devotion to democracy. Puerto Ricans distinguished themselves with great valor on the battlefields of World War II and the Korean war. They have demonstrated a keen awareness of the Communist menace to freedom. Their determined ef-

forts and sacrifices to provide widespread education, adequate housing, proper standards of health, and opportunities for their youth—all by means of democratic processes—are akin to our own deepest aspirations and methods for achieving them.

Does Puerto Rico meet the population requirements? Look at the statistics. Its 2.3 million is over 10 times the population of Alaska and almost 4 times that of Hawaii. Actually, 24 States of the Union (not including Alaska and Hawaii) have less people than does Puerto Rico. In fact, the island contains more than Nevada, Wyoming, Vermont, New Hampshire, and Delaware put together. Moreover, while Alaska has only 1 city with a population of over 25,000, and Hawaii but 2, Puerto Rico has 6.

A further requirement for eligibility is that the proposed new State can support State government and carry its share of the cost of Federal Government. Puerto Rico's economic self-development is impressive. Puerto Ricans have demonstrated a remarkable industriousness and self-sufficiency. In 1957, the last year for which figures are available, the island exported merchandise valued at $457 million and imported a total of $732 million worth of goods. Of that total, a whopping $640 million worth was purchased in the United States, while Puerto Ricans shipped us over $430 million worth of products.

Unfortunately, comparative statistics for Hawaii and Alaska are not available. But statistics showing the trade of all three with other nations of the world are published, revealing again that Puerto Rico leads. In 1957, Puerto Rico's imports from other countries totaled around $93 million, compared with Alaska's $3.8 million, and Hawaii's $27 million. On the other side of the ledger, Puerto Rico's exports to other countries amounted to more than $27 million, compared with Alaska's $8.5 million and Hawaii's $20 million.

What of the third requirement, that a majority of the electorate wish statehood? It must be remembered that Public Law 600 which was submitted to the Puerto Rican people on June 4, 1951, for their acceptance or rejection authorized them to "organize a government pursuant to a constitution of their own adoption." Delegates to the constitutional convention had no opportunity to vote on statehood inasmuch as the convention concerned itself exclusively with setting up a commonwealth form of government. Public Law 600 did not imply such a restricted frame of reference. In any case, Public Law 600 does not set an irrevocable status for the island. There is still the opportunity to put the question of statehood before the electorate.

I, for one, urge that a plebiscite be held as soon as possible. And I hope that our Puerto Rican citizens vote for statehood.

What are the advantages of statehood?

Admission of Puerto Rico to the Union has a number of striking merits. The Communists throughout Latin America have seized upon Puerto Rico as an issue to stir up old resentments against the United States. Everywhere Vice President NIXON went in South America, and Dr. Milton Eisenhower in Central America, they were assailed with Communist-inspired accusations of United States imperialism in Puerto Rico.

Of course we know that Puerto Ricans voted to stay affiliated with the United States—and they can vote to secede any time they want to. Puerto Rico is our best propaganda weapon to counter the Communist big lie.

Admission of Puerto Rico as a State would abruptly pull from the Communists one of their major propaganda weapons in their campaign to drive a wedge between the United States and its Latin American neighbors.

Another point to be considered is the strategic geographic location of the island. It stands at the gateway between the Caribbean and the Atlantic and athwart the approaches to the Panama Canal. Extreme nationalist sentiment which wants independence is today far in the minority. Yet in Puerto Rico's still indeterminate political status, the Communists could have readymade allies among a handful of resentful people who would seek any ally in their struggle to achieve independence. Statehood would end forever this insidious threat.

For Puerto Ricans, themselves, statehood would bring incalculable benefits. Those who have made their homes in the United States would certainly feel an added sense of belonging to the community.

Full-fledged citizenship, on a par with citizens of other States of the Union, would imply the responsibilities as well as the privileges which Puerto Ricans already enjoy. These responsibilities—electing representatives and Senators to Congress, and paying taxes for the support of their Federal Government—far from being burdensome, would put the Puerto Ricans on an equal psychological footing with citizens of every other State.

There is one remaining argument for Commonwealth status.

In the final analysis, the only possible argument left—both on the mainland and in Puerto Rico—against statehood, is the one of economic advantages under the Commonwealth. We hear fervent arguments to the effect that the tax concessions which Puerto Rico can offer new investors are a decisive factor in attracting new industries to the island. I believe, on the contrary, that the sense of political insecurity growing out of the neither fish-nor-fowl status of the island is a major barrier to investment of capital in the island.

Many mainland investors today look upon the island with a degree of suspicion. They have read the sensational stories about the attempt to assassinate President Truman and of the shootings from the gallery in the House of Representatives.

We know that those were the deplorable actions of a handful of fanatics. But potential investors, wondering about the unsettled political status of the island, probably recall the incidents, and think twice. Once Puerto Rico took its place alongside its sister States in the Union, once the Puerto Rican people had registered their final, irrevocable intention to cast their lot permanently with the United States, all doubts would necessarily disappear.

Another prong in the economic argument used by Commonwealth supporters is that with statehood, Puerto Rico would have to pay Federal income taxes and excise taxes, spelling economic ruin for the island. It can be argued just as cogently that such advantages are offset by the loss of Federal appropriations, which accrue to the States.

I hold that the economic, cultural, psychological, and strategic advantages weigh heavily in favor of Puerto Rican statehood. Whatever the outcome, I think that Puerto Rico should have a plebiscite on the question of statehood to find out the real wishes of the Puerto Rican people. Whatever your views, I urge you to vote. For your vote is the essence of the democracy, which in the final analysis, is the fundamental political right we all share.

The admission of Alaska and Hawaii into the Union casts a new light on Puerto Rico's status. Creation of our 49th and 50th States buried once and for all the old arguments used to block Puerto Rico's admission. The old arguments are dead.

Opponents on the mainland to Puerto Rican statehood used to argue that Territories outside the continental limits of the United States should not be integrated into the Union. The fact that Puerto Rico is closer to Washington, D.C., in travel and communication time than Boston and New York were when the United States was founded, left die-hard opponents unmoved. Now, however, the questions of continental contiguity and distance are no longer even open to debate. Neither Alaska nor Hawaii are contiguous. Alaska's capital lies about 3,000 miles from Washington; Honolulu about 4,800 miles; while San Juan is but 1,550 miles away.

Then there was the contention that the historical, linguistic, cultural, and racial differences between Puerto Rico and the mainland would make statehood inadvisable. Pointing to our own Spanish heritage in the Southwest and in Florida made only a little dent in that argument. The admission of Hawaii to full-fledged membership in the Union pulls the rug out from under that point of view. Everyone knows that over three-fourths of Hawaii's population are non-Caucasians, with orientals predominating.

We have outlined and briefly discussed requirements.

Let us for the moment discuss the military participation of Puerto Rico in the forces of the United States since 1898. In the First World War, in the Second World War, in Korea, thousands of your citizens who were serving the United States in an American military uniform (and not the uniform of the Commonwealth of Puerto Rico) did not come back to their dear ones or to be buried in this beautiful island.

The Veterans' Administration advises that as of December 1958, Puerto Rico had 114,000 veterans who served the United States of America, in American uniforms and following the flag of the United States in war—willing to make the supreme sacrifice, if need be, for the flag they followed.

Puerto Rico contributed many fine men, the soldier, the corporal, the sergeant, up to and including generals, such as Gen. Raul Esteves, General Codero, and Gen. Pedro del Valle of the U.S. Marines, who commanded the 3d Division at Okinawa. He didn't lead troops of the associated Commonwealth of Puerto Rico, but American—U.S. Marines.

Going a little further on the number of veterans that you now have—if you were a State, in my opinion, you would have not only a 200-operating-bed hospital at San Patricio, you would have hospitals sufficient to take care of the 114,000 veterans.

But who will fight for them?

At the moment in Washington, as far as Puerto Rico is concerned, under your present status—and I do not doubt the sincerity of purpose, the desire and inclination of your Resident Delegate to help the veteran, he can't vote to give that veteran 1 cent, or provide 50 cents for the construction of a hospital. It is not his fault. It is the island's status.

Think it over. Think carefully.

There should be a plebiscite, submitted under congressional direction, to the people of the island to determine just exactly what they want the island to be.

I thank you good folks for your patience and indulgence. Hasta luego.

Government Bond Interest

EXTENSION OF REMARKS

OF

HON. WALLACE F. BENNETT

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, July 13, 1959

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Government Bond Interest,"

published in the New York Times of July 1, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times, July 1, 1959]

GOVERNMENT BOND INTEREST

Representative WILBUR MILLS and other senior Democrats on the House Ways and Means Committee have reportedly come to the sensible and responsible conclusion that the administration's request to abolish interest rate ceilings on Government bonds should be granted. But they are also reported to be under heavy pressure from the rank and file of the party to refuse this assent, under a threat of defeat of the legislation in the House.

It is difficult to imagine that in a final showdown a majority of the Members of Congress, acting out of ignorance or ancient prejudice or pure partisan politics, should act to hamstring the Treasury. This is a matter of great seriousness. While the value of the dollar would not evaporate if the Treasury were forced to sell only short-term securities for a few more months, such a condition could not continue for long without frustration of the whole mechanism of financial restraints on which the dollar is founded. Allan Sproul, the great central banker who used to head the New York Federal Reserve Bank, has recently called the past year's flood of short-term issues "frightening," and he is right.

Obviously the Treasury must do a better job of education to persuade doubtful Members of the elemntal facts involved, including the fact that this legislation will not be a cause of higher over-all interest rates for private borrowers. But in the end the key role will fall to Mr. MILLS, Speaker RAYBURN, Senator JOHNSON, and the other leaders of the party. Passage of this legislation is a difficult thing to ask of the Democratic leadership, but the very essence of leadership is assumption of responsibility on the tough ones.

Realism Needed—Evacuation Absurd

EXTENSION OF REMARKS

OF

HON. STEPHEN M. YOUNG

OF OHIO

IN THE SENATE OF THE UNITED STATES

Monday, July 13, 1959

Mr. YOUNG of Ohio. Mr. President, a recent column entitled "Porter on Civil Defense," which was published in the Cleveland Plain Dealer, one of the Nation's leading newspapers, on July 9, 1959, is worthy of thoughtful consideration. Philip W. Porter, its author, was a soldier in World War II and is a noted news commentator.

I believe the column presents convincingly the waste of the taxpayers' money on the utterly useless program, the absurd setup, and the inept management by high-salaried bureaucrats of the Office of Civil and Defense Mobilization. I commend this article to my colleagues in the Senate and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Cleveland Plain Dealer, July 9, 1959]

PORTER ON CIVIL DEFENSE—SENATOR YOUNG RINGS BELL WITH ATTACK ON WASTE OF MILLIONS ON ABSURD SETUP

(By Philip W. Porter)

Senator STEVE YOUNG, of Ohio, is making hay with his campaign to put some commonsense into civil defense. This week he has the lead article in the Saturday Evening Post, and the Post is extremely shrewd in guessing what subjects people are really interested in.

For a guy who was the great unknown nationally a year ago, and low man on the totem pole in Ohio Democratic campaign meeting, Steve has proved several times in recent months that he is no slouch at getting the headlines. He picked out a real ripe one when he chose civil defense as a target.

Our National Government is full of waste and absurdity, and compared to some (such as buying up farm surpluses and borrowing money to build warehouses to store them) civil defense is peanuts. It only wastes millions, whereas the farm program wastes billions. But it's such obvious nonsense that it's a wonder someone hadn't tackled it before. It's only a small nest of bureaucrats, but almost completely useless. They don't know where they're going, and never have.

REALISM NEEDED

Something useful might be done in civil defense. If the masterminds would come down to earth. Up to now, the big pitch has been evacuation in case of enemy attack. They've placarded escape highways, tested sirens and occasionally tried dry runs, notably around Washington, in which key Government offices would be moved out into the country. But, as YOUNG points out in the current article, that's old stuff now, based on the idea that we'd have some warning of a missile attack. Today's intercontinental rockets would give about 15 minutes warning, if that.

Even if adequate warning were given, it's impossible to imagine the populace of a city of several hundred thousand moving out by automobile. We can't even get traffic to move in snowstorms, rush hours, and on holidays. The only way they could move would be on foot. But we auto-minded characters would never stoop to that.

Today, YOUNG says, the need is to devise a realistis plan for people to hide and thus escape radiation fallout. Evacuation is as outmoded as a Civil War cannonball, but something might be done to sell the idea of small shelters, he believes. One could be located on your own lot for about $100.

EVACUATION ABSURD

I've long believed the notion of evacuation is absurd. I don't see much point, either in the Federal Government subsidizing State and local civil defense officials. It's true that the civil defense men have performed tireless, valuable, unpaid service in times of storm or flood disaster and they often assist police in directing traffic, but local communities could organize such auxiliary volunteer police forces, if they wished, without the pretense that they would become useful in civil defense.

We know perfectly well that if a big bomb should land on us, the nearest military commander would proclaim martial law, anyway. If the Federal Government simply must scatter money to States and cities, it could best be spent in offering first-aid courses through the Red Cross.

After writing a recent piece on this subject, I got a throughtful letter from a man who was once in the middle of this nonsense, and knows what he's talking about, Harry Temple, of Sandusky. Listen to what he wrote:

"I was director of civil defense in Sandusky during 1950 and 1951. I took a course in civil defense ot the Staff College in Washington. I read all the pamphlets put out by the National and State offices and in none of them did I find a well defined and thought-out workable plan. I finally came to the conclusion that I was wasting my time, so I quit the job. * * * I never did find any evidence that many of our people read this stuff. They seemed to be allergic to reading, or else found it too much work and some, I suspect, did not know how to read.

SUGGESTS TV AID

"When you wrote of the sensible thing like taking instruction. I wonder if it would be possible to have simple lessons on TV at stated hours when the family could attend?"

Sure, it would. But then the jobholders in Washington would have to give up writing and mailing those pamphlets which no one reads, and making signs for highways which no one is ever going to use, and buying sirens which no one pays any attention to.

I don't believe STEVE YOUNG is going to sell the idea of backyard shelters, either. The only sensible thing to do is abolish the entire present setup, have a high-level unpaid commission study the problem, let the military make plans for coping with an emergency, and get the Red Cross to go on TV with first aid instruction. But that would be too simple and sensible.

Rhode Island Couple Aided After Fire

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, July 13, 1959

Mr. LANGER. Mr. President, I ask unanimous consent that an article entitled "Hospitable North Dakota Town—Rhode Island Couple Aided After Fire," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RHODE ISLAND COUPLE AIDED AFTER FIRE

The most hospitable place in the world to a young Providence couple is a little North Dakota town of 700 population named Hebron.

It was there last Sunday that William G. Leonard and his wife, Merle, saw their new Volkswagen, loaded with personal belongings, destroyed by fire. Mrs. Leonard narrowly escaped serious injury.

The couple was driving from Providence to Fairbanks, Alaska, which they intended to make their permanent home. Mr. Leonard is the son of Providence County Sheriff John P. Leonard and Mrs. Leonard of 173 Vermont Avenue.

The younger Mr. and Mrs. Leonard stopped at a service station in Hebron for emergency repairs to the car's fuel system. The car was raised on a hydraulic lift. Mrs. Leonard stayed inside the car to operate a gasoline tank valve peculiar to Volkswagens.

A pool of gasoline formed on the garage floor. A man dropped a match and there was an instant fire. Mrs. Leonard, at a shout from her husband, jumped to the floor and was uninjured. The mechanic suffered second degree burns and was hospitalized for 2 days. Damage to the garage was estimated at $8,700.

That was when Hebron's hospitality began. A family whose own son is in the Marines took them in. They were passed from home to home for meals, with each hostess preparing something really special.

A department store gave Mrs. Leonard clothes. More than 50 residents of the town contributed to a fund sponsored by Hebron's weekly newspaper, the Hebron Herald.

The young couple stayed in Hebron 2½ days while they got organized. Then they took the train to Providence.

In a way, their trip to Fairbanks would have been a return home. They resided in the Alaskan city for a year while Mr. Leonard was an airman at Ladd Air Force Base. Mrs. Leonard taught the first grade at the base school and was planning to take a summer course at the University of Alaska.

Since the fire in North Dakota, Mr. and Mrs. Leonard have changed their plans. They will stay in Providence and Mrs. Leonard will continue her studies at Rhode Island College of Education.

The couple especially treasure a letter which accompanied the fund the people of Hebron raised. It said, "We are deeply sorry that your trip to your new home in Fairbanks was so tragically interrupted in the fire that destroyed your car and possessions.

"While money alone cannot compensate for your loss, we hope this expression of our concern will in some way help you to adjust your plans and get you back on the road toward a happy and successful life.

"We hope this gift will help you remember Hebron, N. Dak., as a friendly community, with people who are interested in strangers passing through, rather than just a community where ill fortune befell you."

Some Losing Sight of Idea Behind Joint Chiefs Setup

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, July 13, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the Norfolk-Portsmouth (Va.) Ledger-Dispatch and Star for June 19, 1959.

This article was prepared by the well-known military observer, James Elliott, and contains a thoughtful and penetrating analysis of the value inherent in free discussion among the Joint Chiefs of Staff.

I believe that Mr. Elliott's able presentation warrants the careful attention not only of the Members of Congress but of the general public as well.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Norfolk-Portsmouth (Va.) Ledger-Dispatch and Star, June 19, 1959]

MILITARY REPORT—SOME LOSING SIGHT OF IDEA BEHIND JOINT CHIEFS SETUP

(By James Elliott)

NORFOLK.—A lot of responsible persons, it seems, have lost their perspective over the importance of the functions of the Joint Chief of Staff.

The ink is hardly dry on the 1958 reorganization bill and already it has become a popular pastime for many to make whipping boys out of the Joint Chiefs in what appears to be deliberate attempts to magnify struggles between them over the adoption of individual weapons systems.

Inherent in this thinking, of course, is the undercurrent for a single Chief of Staff. Proponents of that totalitarian concept say it is necessary for swift decisions with no waste of time.

If recent history is any criterion however, this complaint is hardly valid. At Suez, quick, decisive action on the part of the Joint Chiefs and the American forces—while the British and French were dawdling about trying to determine what they should do—won attention the world over. The Joint Chiefs wasted no time at Jordan. They wasted no time at Lebanon—Marines were going ashore in something like 7 hours after the order was issued and TAC's units were in Adama, Turkey, in about 20 hours. Neither was there indecision at Formosa. As in a football game, the wisdom of the coach (Joint Chiefs of Staff) is lost in the clamor over the players (forces in the field).

Complaints against the Joint Chiefs of Staff emphasize bickering and haggling in ominous tones as though it were something to be avoided when actually the differences are no more than expressions of sound, individual judgments in an attempt to draw out the collective wisdom of all the Chiefs of Staff.

This generation of ideas based on each man's pattern of thoughts, on his own concepts, on his own skills, based on different information and different experiences is, by design, aimed at allowing the Joint Chiefs of Staff to offer counsel to the President, Secretary of Defense and the Congress.

This system is the very basis for America's democratic way of life. The framers of the Constitution shaped it into a system of checks and balances to prevent a totalitarian system. And the Joint Chiefs of Staff is no more than a means of checks and balances.

Already some Congressmen are complaining that the level budget and the influence of the President and Secretary of Defense over the Joint Chiefs of Staff has restricted them in providing Congress with the frank appraisals it needs to shape the Nation's military posture. Under the present system, however, they are able to obtain a difference of opinion—however restricted it might be. And with a single chief of staff, Congress would get only the information the military Solomon at the top wanted to give. The single chief of staff would also have in his hands more than half the budget. Entrenched in such a position, he could conceivably become powerful enough not only to write his own legislation, but also to originate his own money bills and to get them passed by Congress substantially as written.

Criticism of the Joint Chiefs system is, in effect, an effort to penalize free thought, differences of opinion and collective wisdom. The single chief concept is as farfetched as doing away with both political parties in Congress so there would be no debate. Such a road leads to autocracy, not democracy.

The real fault with today's system is the lack of action of the part of the Secretary of Defense plus the restrictions placed upon the Joints Chiefs of Staff by the level budget.

The level budget forces the Joint Chiefs to compete for a limited number of dollars. As a result, they have been forced to accept programs they do not privately consider adequate. And in the absence of any pat and positive solution to meeting the world's problems they obviously will have differences because nobody can say for sure what the answer is.

Retired Military Officers Entitled to Jobs

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, July 13, 1959

Mr. BEALL. Mr. President, there has been some criticism of former military officers taking jobs with industrial concerns who are contractors or potential contractors with agencies of the U.S. Government. From what I have been able to learn, there is little or no danger in this situation. Gen. Maxwell Taylor has stated he has never known of any case where a former military officer has influenced or tried to influence his former coworkers in the Pentagon. Admiral Rickover and others have testified along the same line.

Men who have been in the military for many years have acquired certain skills which are of value to industrial concerns, and these concerns are justified in trying to utilize these skills. As for the officers themselves, after leaving service, they are justified in locating positions where their skills are of value.

I certainly know of no case where a former officer was given a job as a reward, or payoff, for some favor he rendered while in service.

Now, Mr. President, let me go a step further. I have been asked if the lobbying of former military personnel in the Halls of Congress is a problem. My answer is that it certainly is not. I have not observed or been made aware of any such lobbying which could be frowned upon. I have heard no complaints in this regard from any other Senator.

The word "lobbying" has been given an evil connotation which is undeserved. As for myself, I have never found the activities of lobbyists as obnoxious. I am always glad to listen to the arguments of interested parties on both sides of a question. I therefore appreciate the benefit derived from the arguments of lobbyists. I think a Member of Congress should listen to the strongest possible arguments on both sides of a question, and then make up his mind.

In connection with the criticism of former military officers, there appeared in the Baltimore Sun of Saturday, July 11, 1959, an excellent editorial, which I think all should read.

I ask unanimous consent to have this editorial, titled "No Need to Despair," printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NO NEED TO DESPAIR

Having graduated at West Point or Annapolis in 1920, having served with credit during the normal career time, a man retires with the modest emoluments allowed by a routinely grateful people. He is then employed by another man who has business with the Defense Department. In the course of his service our general or admiral has picked up quite a feel for the technicalities

of defense. His new employer hires him with that information frankly in mind. Just as frankly, his new employer remembers that he was at school with A, who now is buying hardware for the Army, or with B, who is a hardware buyer for the Navy.

When our retired admiral or general makes his way to Washington he is quite likely to drop in on his former classmate. There will be easy and reminiscent talk about respective wives and no doubt the reciprocal conning of desk or wallet photographs. Genial lies about the beauty of daughters and the prowess of sons will be exchanged. And then, a little by a little, the talk will get around to defense needs, and more explicitly, to defense contracts. And first thing you know, the old friend with power to buy may have bought something from the old friend who has a line of goods to sell.

A situation fraught with great possibility of abuse and exploitation? Unquestionably. One in which the public interest might very easily be lost sight of in the glow of old memories and present congenialities? Again unquestionably. If the selling admiral is a low fellow and his buying or contracting friend is just as low or lower, then all sorts of sinister possibilities open up.

But how often do they happen in real life? Not very often, says Thomas S. Gates, Jr., the Deputy Secretary of Defense. Not very often, says Admiral Rickover, never one to sugar the frailties of men. Would a new law help any? Maybe a statute commanding the two old friends to be honest and mindful of the public interest? Maybe a law requiring the two old friends not to get together at all? Maybe a law denying employment in service-connected industry to veterans of any service? A little legislation might, indeed, nibble here and there at the edges of the problem At its center we will just have to rely now as always on the personal integrity of all involved. Only the unworldly will think this a reason to despair.

Tribute to Will J. Driver

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, July 13, 1959

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from an address by the Honorable A. F. Barham, delivered to the Osceola Kiwanis Club, Osceola Ark., on June 25, 1959, in honor of the late Honorable Will J. Driver, a former Member of the House of Representatives, and one of Arkansas' distinguished statesmen.

I may announce at this time that on August 11 a memorial ceremony will be held at the dedication of a statue to Judge Driver in the city of Osceola. All Members of Congress, including the Members of the Senate, have been invited to attend. It will be my honor and pleasure to be present on that day, and to deliver the address in connection with the dedication of the statue to Judge Driver. I hope many Members of Congress can attend.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

A SWAMPY WILDERNESS BECOMES AN AGRICULTURAL EMPIRE

For centuries prior to the early 1900's, the greater part of the land in Mississippi County, as well as in many other counties lying to the south of it, in what is sometimes called the St. Francis Valley or the St. Francis Basin, often referred to as eastern Arkansas, comprised a great wilderness. This vast area of fertile land had been subject to annual overflow from the Mississippi River almost since the beginning of time. Deposits of silt from these floods continually enriched it. It was covered with valuable timber. As this timber was removed, the land was of little value to its owners, because in its overflowed condition it could not be placed in cultivation. Even ordinary rains kept it too wet. There was no drain to carry this rainfall away. Much of the water that did not evaporate had to be absorbed by the earth. Water, whether deposited by floods or rains, could seldom find its way into such streams as the St. Francis, Little River, or even the Mississippi before its levees were built, because strange as it may seem, in each case, the river bank, except for a few occasional breaks, was higher than the land on either side of it. The levee, built across these bayous or drains apparently running into the Mississippi River did not obstruct draining of the lands behind the levee because these bayous carried water away from and not into the river at flood times.

This overflowed condition produced swarms of Buffalo gnats and mosquitoes bringing malaria, much suffering, and often death to the inhabitants. One old settler has been heard to remark that all of the early graveyards were founded on chills and fever. Every home able to afford it, had at least one bottle of Grove's or Mendenhall's chill tonic, while doctors and druggists carried prodigious stocks of calomel and quinine, thought to be the only salvation for victims of malaria. A far better remedy would have been to knock a hole in the rain barrel and police and empty all other water containers—always breeding places for mosquitoes.

Mr. R. E. Lee Wilson, Sr., founder of Lee Wilson & Co., at Wilson, Ark., being the owner of thousands of acres, was in the foreground of the battle for drainage. He began his efforts as early as 1901. Several different drainage districts were organized, and to raise money for the work assessments of benefits were levied against each tract of land. These benefits were pledged to guarantee the payment of bonds issued and sold by the district to raise money for the work.

But the mighty Mississippi River proved by the high waters of 1912 and 1913 and the consequent levee breaks at Wilson in each of these years that no amount of drainage canals or ditches could protect the area from overflow if the levee failed to withstand the high waters in the Mississippi. Something must be done to curb her and prevent a repetition of these floods. The levee was wholly inadequate. Its base must be widened and the levee itself must be built much higher and banks must be revetted to prevent wave wash. This was the verdict of U.S. engineers as well as engineers and members of the board of directors of St. Francis Levee District, the agency that had acted for the taxpayers in building the levee in the first place.

After these great floods of 1912–13, land, still cheap, became cheaper and farmers often experienced great difficulty in procuring money with which to make crops.

Then, Judge Will J. Driver came along. He had served his district as circuit judge for 8 years and retired to the practice of law. His people elected him to Congress where he served from 1921 to 1939. As a landowner, he was very conversant with the prime necessity for protection against floods. Perhaps the fact that he and his father had helped so much to organize the St. Francis Levee District and obtain practically all of the right-of-way through Mississippi County and his father had served as its second president, had caused him to give great study to the flood problem which confronted his people. At any rate he gave his time to the further study of ways and means to remove the menace of these frequent high waters, levee breaks and floods incident to them in the almost annual rampages of Old Man River. He became a member of the Rivers and Harbors and Flood Control Committees in Congress and devoted much of his time to the subject in hand.

In cooperation with levee board engineers, he began seeking a sure remedy to stop these disastrous levee breaks. A law written and formulated by him enabled the building of greatly enlarged levees, much higher and stronger than ever before, the revetment of banks to prevent wave wash which helped to undermine the levee and bring about breaks in it, straightening the big river in many places, deepening its channel and removing obstructions to its flow so as to hasten the discharge of these large volumes of water into its outlet, the Gulf of Mexico.

This work was done at the expense of the United States and under the supervision of levee board and Army engineers. Mr. Driver had convinced Congress against rather formidable opposition at first that the matter of the prevention of floods along the Mississippi River was primarily the responsibility of our National Government and not of the taxpayers of the affected areas.

Today, due to the successful planning of Mr. Driver, his many associates throughout the St. Francis Basin and United States engineers, the Mississippi River is no longer a dread and a menace to our people. Its former devastating floods are no more.

Thanks to redredging of channels, Old Man River is now a useful servant and an integral part of America's great transportation system. With its boats and barge lines it moves a vast amount of freight between north and south, much of it going overseas.

This great work was the result of the efforts of the man we propose to honor and whose memory we desire to perpetuate with a monument.

The citizens and business interests of eastern Arkansas are all indebted to our former Congressman, Hon. Will J. Driver, who thus spent the best years of his life in their honorable and efficient service. It would be too great a task to set down here all of the many fine services rendered by him to his people.

The St. Francis River, our greatest outlet for drainage has in recent years proven very troublesome because it has been filling with silt and other elements which obstruct its flow. At best its current moved very slowly because of sand bars, bends, willows, and other things which tended to slow it down.

Today, the St. Francis, from its mouth to near Marianna has been widened, deepened, and straightened. This work is being done at the expense of the Government under Mr. Driver's flood-control law. When it is completed, it is believed that our drainage will be ample for all purposes.

Since he and his father, the late John B. Driver, who was its second president, had so much to do with organizing and putting the St. Francis Levee District into operation, we do not feel that these remarks would be complete without the following excerpt from the History of the St. Francis Levee District, compiled and published in 1945 by men who knew of the great services rendered by Judge Driver:

"It can truly be stated that no citizen of the levee district has contributed more to the work and success of the levee district

or has been more devoted to the welfare and progress of the people of the district than Judge Driver."

To those who would know more of Judge Driver and his fine records, and are interested in the history of the development of the St. Francis Basin, we earnestly suggest that they procure a copy of the History of the St. Francis Levee District and read it carefully.

WHO WAS THE FATHER OF DRAINAGE AND FLOOD CONTROL IN MISSISSIPPI COUNTY?

From time to time claimants of this honor have appeared, but when confronted with the cold facts of history, these pretenders, have usually subsided and abandoned their claims.

Great as his services were, and as indispensable as they were to the levees and drainage, we do not claim for Mr. Driver that he was the father of either drainage or levees. We are quite sure, however, without the plan worked out by him and the levee board engineers to control the flood waters of the Mississippi River, drainage ditches would have been of little lasting value—hardly worth their cost. We would not want history distorted by any such claim.

The absurdity of these spurious claims is easily seen when it is known that long before the unfortunate and disastrous war between the States, many of the landowners along the Mississippi and, for that matter, most likely along the other streams which flow through the lowlands of eastern Arkansas, had begun to build levees to protect their lands from overflow. It seems reasonable to presume that one so anxious to protect his land from floodwaters as to build a levee, would also provide ditches to drain off the surface water caused by excessive rainfall.

This practice produced only a patchwork system of levees and drainage ditches, for not all landowners were financially able or had the gumption or energy to build them, even just for their own protection. This system left many gaps, through which the water from these rivers flowed into the lowlands, even then referred to as the St. Francis basin.

From 1861 to 1865 while the war was in progress, probably no new levees were built by landowners and such as they had could not be kept in repair and suffered great damage from the floods of those years. When the war ended, sporadic efforts were made by the more progressive landowners to restore their levees, and of course, ditches.

Practically every worthwhile citizen understood that a much greater effort was imperative. That these lands could not be developed without much higher and stronger levees, channel dredging, and bank revetment. They also knew that local interests could not pay for these great improvements.

Congressman Will J. Driver was ready, able, and willing to undertake the job of providing these improvements. It was his superb leadership as a member of the Flood Control Committee in Congress, that brought about the happy situation we now enjoy.

Where there once was only a swamp, there is now a vast agricultural domain. Our farms are equipped with every kind of modern machinery needed for the maximum production of very kind of crop and palatial farm homes are to be found everywhere.

WILL J. DRIVER AS A CITIZEN

From the very beginning of his career, Mr. Driver was in the forefront of every movement for the betterment of Osceola and Mississippi County. About 1907 he acquired the tract of land lying between what are now St. John and Elm Streets in Osceola and laid it out in town lots, building concrete sidewalks on both sides of most, if not all of the streets. This venture he called the Osceola townsite addition. He sold the principal part of the lots in this addition to white people but that part lying south of Ford Avenue named for his friend, the late E. M. Ford, and the part lying north of Semmes Avenue, named for his old friend, the late Capt. S. S. Semmes, then one of the leading lawyers in Osceola, to colored people. The part between Ford and Semmes Avenues, he reserved for white people. Quinn and Hale Avenues were named for his lifelong friend, the late Mr. J. W. (Pappy) Quinn, and for his friends of the Hale family, all very prominent in the business and social life of that time. He made many gifts of property and money to the public. Prime examples of his generosity to his hometown are his gifts of the lots upon which the courthouse, the public library, and the U.S. post office in Osceola now stand. The deeds conveying these lots recite a consideration of $1, and even that sum was probably never paid.

THE LIGHT PLANT

He, with the late D. Fred Taylor, Sr., formulated and put into execution the plan which resulted in the ownership by the city of Osceola of the waterworks and electric light plants, thus giving to our city for the first time, wholesome water from a deep well and an ample supply of electricity for electric lights and power. These plants have been carefully maintained and enlarged to fit the needs of modern living conditions. Under the able management of Mayor Ben F. Butler, and aldermen, D. N. Morris, Garner Robbins, Ed Teaford, R. E. Prewitt, Ralph Wilson, and Ray Morgan, they have provided profits with which to pay for many fine improvements in Osceola, just a few of which are a fine swimming pool, many well paved streets and very necessary extensions of the sewerage system. These and the recently installed water purifying system have contributed in a large measure to the health and convenience of our citizens. No city of comparable size in Arkansas has a finer public utility service or more paved streets than has Osceola.

HELPS BRING RAILROAD TO OSCEOLA

In 1901, Mr. Driver, in cooperation with his good friend, the late Mr. E. M. Ford, incorporated the Deckerville, Osceola & Northern Railroad Co. This company purchased a logging road that had been projected for several miles in a northeasterly direction from Deckerville, Ark., by the Pond-Decker Lumber Co. It connected at Deckerville with what is now known as the "Frisco Railroad." Pond-Decker Lumber Co., in which Mr. Ford was a stockholder, owned a large sawmill at Deckerville. This logging road had been built by the company to bring timber to its mill. The Ford-Driver combination extended their railroad into Osceola in the year 1901, thus giving Osceola a railroad connection with the outside world. Later, the Deckerville, Osceola & Northern Railroad was extended to Luxora. Still later it was sold to the "Frisco" and that part of it between Luxora and Evadale is now a part of its main line between Memphis and St. Louis.

HELPS PROVIDE OSCEOLA WITH A TELEPHONE SYSTEM

About the beginning of this century Osceola was without telephones. Lack of means of quick communication was very irksome to the citizens of this growing little city.

Judge Driver, with the able cooperation of the late Mr. R. C. Rose, the late Dr. Thomas G. Brewer and others, under the name of Tri-State Telephone Co. provided Osceola with its first telephone system. It was a very efficient one and probably the first in Mississippi County. For the first time, Osceola had long-distance connections with the outside world.

The telephone system proved to be a very profitable investment. It was finally sold to the Southwestern Bell Telephone Co.

Mr. Driver rendered his people a lifetime of fine and intelligent service.

His career was one of kindness, generosity, and efficiency. One of the finest indexes to the character of the man is to be found in his great contributions to the needy. No one in distress, whether white or colored, ever appealed to him in vain for help. However ragged and dirty he might be and regardless of his station in life, no one who appealed to him was ever refused help. Whether it was for money, sound advice, or both, he always responded generously.

WILL J. DRIVER MEMORIAL COMMITTEE,
A. F. BARHAM, *Chairman.*

Henry J. Kaiser, Jr., Supports Federal Aid to Schools

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, July 13, 1959

Mr. NEUBERGER. Mr. President, improvement of the Nation's educational system cannot be accomplished without increasing expenditures. It has become more and more apparent that Federal revenues must be tapped for this purpose, because the burden of State and local taxes for operation of schools has about reached the ceiling in most parts of the United States.

At a recent meeting of the National Education Association, one of America's outstanding industrialists, Henry J. Kaiser, Jr., spoke out in favor of Federal aid to education. I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Milwaukie (Oreg.) Review, written by State Senator Monroe Sweetland, in which he comments on the views of Mr. Kaiser. The editorial was published July 1, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Milwaukie (Oreg.) Review, July 1, 1959]

LISTEN TO HENRY KAISER, JR.

Not every industrial leader is more concerned about his income taxes than the security of the Nation. Latest to make clear where he stands is Henry J. Kaiser, Jr., in an address this week at the National Education Convention at St. Louis. Moreover, he made it clear that he, as one of the Nation's most powerful industrials spokesmen, favors effective and quick Federal aid to local education.

"We cannot have the kind of educational system we need without money," Kaiser said. "We need classrooms. We need more teachers. We need the means of making the teaching profession an attractive one. And a greater proportion of this money may well have to come from Federal sources."

Kaiser said that, speaking as a businessman and a layman, he thought it shocking that teachers were asked to get along on an average salary of $4,500 a year. Teachers, he said, should be among the highest paid people in our society, if we want quality education.

"One of the great tasks remaining to us in the 20th century," he added, "may lie not in the direction of super weapons, but in the

discovery of new political meanings, and new moral and human goals.

"We have whole new cities to build. New tasks, new professions for our workers yet to be created. Instead of quailing before this challenge we should be exulting in the opportunity to throw our national energies into action, for the sheer joy of achievement."

In Oregon and in all States which export much of the wealth produced within their boundaries, the necessity of Federal tax rebates for schools is urgent. Only Uncle Sam's long arm can equalize opportunity by bringing back here a fair tax share of the wealth of our forests and utilities, our land and our industries, held by the coupon clippers in New York and Chicago, in Los Angeles and Miami. This should be a major objective of Oregon farm and home owners whose real property taxes for education are already burdensome.

Ineffectiveness of Loyalty Oaths

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, July 13, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Oaths and Disclaimers," written by Graham DuShane, editor, and published in Science magazine for July 10, 1959.

The article, I think, presents an excellent summary of the arguments for the enactment of S. 819 and clearly states the position of the academic community on the issue. I draw particular attention to the statement made in the editorial that the present provision of the law is both ineffective and imposes unnecessary financial and administrative burdens on the colleges and the Government.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OATHS AND DISCLAIMERS

On June 24 the Senate Labor and Public Welfare Committee reported the Kennedy-Clark bill, S. 819, a bill that would eliminate from the National Defense Act of 1958 the section that requires a teacher or a student who applies for a loan or a grant under the provisions of the bill to sign an oath of loyalty and an affidavit that "he does not believe in and is not a member of and does not support any organization that believes in or teaches the overthrow of the U.S. Government by force or violence * * *."

What will happen to the bill now is anybody's guess. The action of the committee in reporting it put it on the Senate Calendar, but it will not come up for a vote unless the Senate majority leader, LYNDON JOHNSON, decides to put it on the agenda.

In the hearings on the bill (a copy of the testimony may be obtained from your Senator) the great majority of those who testified—the Secretary of the Department of Health, Education, and Welfare, and representatives of the American Council on Education, the Association of American Colleges, and the American Association of University Professors, among others—strongly favored elimination of the disclaimer affidavit. Opinion about the loyalty oath was divided—some thought it perfectly proper, some thought it proper but ineffective and cumbersome to administer, and some thought it improper in that it singled out students and teachers as a special class whose loyalty was impugned. Those who felt this most strongly wondered why other recipients of Government aid—farmers, veterans, bankers, airline operators, and so on—were not also required to take a loyalty oath.

The middle position was represented by those who were willing, in some cases reluctantly, to let the loyalty oath stand, but who were strongly in favor of eliminating the affidavit or disclaimer oath. Thus, both the American Association of University Professors and the Association of American Colleges, as well as many individuals, agreed that the disclaimer was undesirable. It was objected to, as was the loyalty oath by some, for discriminating against teachers and students, for being superfluous if the loyalty oath were retained, for being a test oath of opinion reminiscent of the religious and political test oaths of bygone ages, and for being vague (what organizations one is supposed not to believe in is nowhere specified) and possibly unconstitutional.

The arguments advanced against the disclaimer oath on the basis of principle are somewhat subtler. They center around the importance of trust in the educational process and in democracy. Fairly representative of this stand is the comment of the American Association of Colleges to the effect that the disclaimer affidavit created "apprehension and timorousness on college and university campuses" and that the "real security of the country lies in the maintenance of freedom of spirit as well as in fact, and that democracy depends upon trust in the individual."

This is a good and moderate statement, but it does not go far enough. Neither the oath nor the disclaimer is going to give pause to anyone who is disloyal to the country. Thus, both are ineffective and impose unnecessary financial and administrative burdens on the colleges and the Government. We agree with Secretary Flemming and others that the oaths are unnecessary, that our present security laws provide adequate safeguards, and that anyone who violates them "should be prosecuted immediately under the laws designed directly and specifically for such offenses."—G. DuS.

America's Farmers Deserve Economic Justice

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 1, 1959

Mr. JOHNSON of Wisconsin. Mr. Speaker, on June 13 I had the pleasure of accompanying my good friend, Senator HUBERT HUMPHREY, of Minnesota, to my home district of Wisconsin. He was there to talk to members of the Pierce-Pepin Electric Co-op, who were holding their annual meeting at Ellsworth, Wis.

Senator HUMPHREY has a long and strong interest in the rural electrification program, an interest which is part and parcel of his broad interest in the fate of the family-type farmer. During his 10 years in the Senate he has led the fight for economic justice for America's farmers. Time and time again he has introduced and fought for legislation aimed at helping our rural folks help themselves achieve their rightful place as first-class citizens in our economy.

Since I came to Congress in 1953 I have had the privilege of working with Senator HUMPHREY on bills dealing with various parts of the complex farm problem. During this session we are cooperating on the self-financing and self-regulating Humphrey-Johnson dairy marketing program, which would guarantee dairymen 90 percent of parity at less than half the cost of the present dairy support program, and the Johnson-Humphrey milk sanitation bill, which would allow the free flow of high-quality milk in interstate trade. I have also introduced Senator HUMPHREY's food for peace bill in the House because I heartily agree with the Senator's belief that it is far better to enlist our food abundance in waging peace than to be faced with the prospect of enlisting our sons for war.

Senator HUMPHREY has compiled a "farmer's bill of rights" containing 12 basic standards from which farmers should never retreat. He included this bill of rights in his speech to the rural electric co-op folks in my district—a speech which, under unanimous consent, I would like to have printed in the RECORD.

The speech follows:

THE FARM CHALLENGE

(By Senator HUBERT H. HUMPHREY, of Minnesota)

There is no gathering of any kind which gives me more pleasure than a meeting of the members of a cooperative, folks joined in a common endeavor to make life better for everybody. So I am glad to be here and happy for the opportunity to greet you, to wish you good fortune in the continued health and strength of the Pierce-Pepin Electric Cooperative, and to discuss ideas with you on present farm problems and prospects ahead.

And it is also a source of real pleasure to be here today with my good friend, cooperator and fellow legislator, your outstanding Congressman—LESTER JOHNSON.

LESTER JOHNSON actually started the Wisconsin Democratic revival back in 1953 when he won this congressional seat in a special election. Things have been looking up for the Democrats ever since, not only in Wisconsin but all over the country.

But LESTER'S victory meant more than a new era for Democrats. It also meant a great deal to all farmers, Democrats and Republicans alike. He has become a real champion of agriculture in the House of Representatives, has been a great help—and privilege—for me to have such an able partner on legislation of importance to Wisconsin and Minnesota, dairy farmers as the Humphrey-Johnson dairy bill and the Johnson-Humphrey Milk Sanitation Act establishing national standard under the Public Health Service.

He has arranged for hearings in poultry and egg problems in the House next week, and I am working in the same direction in the Senate.

You are fortunate in Wisconsin in having other good friends of agriculture, such as my good friend Senator BILL PROXMIRE, and your capable Gov. Gaylord Nelson. BILL PROXMIRE can always be counted upon to stand solidly with friends of agriculture. He is an effective member of our Senate committee.

While I am mentioning Wisconsin names, I cannot overlook another young man who has made a great and continuing contribu-

tion in your behalf. He is Bob Lewis, one time editor of the Wisconsin REA News, the boy from the Wisconsin family farm who has never forgotten his first royalties. His father, George Lewis, pioneered the REA cooperative movement in Wisconsin, and Bob has carried on in the same tradition of service. He was formerly administrative assistant to Senator PROXMIRE. I am so pleased that Governor Nelson has Bob as his right-hand farm adviser, his agricultural coordinator. Bob Lewis is a man who knows what he is fighting for.

In all fairness, I might add that agriculture welcomes and recognizes friends from either major political party. We who put the welfare of farm people above partisanship appreciate the consistent support of Republicans such as Senator MILT YOUNG, of North Dakota, and your own Senator ALEXANDER WILEY, who have refused to go along with this GOP administration's wreck-the-farmer policies.

After 10 years of fighting battles for farmers in Washington, I know something about who you can count upon and who you cannot. The sure test of faithful performance is a consistent record of support for agriculture throughout the years.

What really counts, is having people in public office who really care, and who really understand your problems and want to do something about them.

That certainly goes for the REA, as well as general farm legislation.

I believe in all kinds of cooperatives, but I have a special place in my heart for the rural electric cooperatives. You have not only brought light and power to the rural areas of America, you have also strengthened the entire farm cooperative movement by teaching more farmers the value of working together to help themselves.

Our rural electric co-ops have developed strong and courageous leadership because of the very necessity to resist continuing attacks upon your great program. If there is a single destructive trick that foes of your organizations have not used or tried to use in the last 6 or 7 years, I cannot name it. I know, because I have been in the thick of your battles, shoulder to shoulder with men like Clyde Ellis of the National Rural Electric Cooperative Association.

Perhaps it appears that we have just lost a round in our most recent REA fight—the attempt to override the President's veto on the Humphrey-Price bill. But let me tell you something; it was a mighty hollow victory for foes of REA, when two-thirds of the Senate voted in your behalf, and we only missed by four votes having a similar two-thirds vote in the House.

I am proud of that fight, and my own part in it, with your backing. When we found out 2 years ago that the Secretary of Agriculture was attempting to take over the loan-making authority of the REA Administrator, I insisted that Secretary Benson come before our Senate Committee on Government Operations to explain what he was up to.

I acted in good faith, because Secretary Benson had promised in 1953 not to change the operational pattern of REA if he were given authority over its functions under the President's reorganizational plan.

You may recall that Ezra "took a walk," and refused to appear, even though my official authority as chairman of the Subcommittee on Government Reorganization called for acting as a watchdog over his administration of the authority given him.

Secretary Benson virtually hid out until Congress adjourned. So when Congress returned, my first act was introduction of legislation restricting his authority and returning it to the REA Administrator where it belonged.

This time Secretary Benson could not escape coming before our committee—and he was unable to convince a majority of the committee he had acted in good faith. The result was the enactment of the Humphrey-Price bill by both Houses of Congress.

Yet, it was vetoed, despite the expressed intent of Congress as to how the program should operate. And the Republican administration, from the White House down, exerted every pressure in the world to sustain that veto.

We lost by just four votes. And, I don't think I have to remind you, four Republican votes in Wisconsin for REA could have turned the tide in your favor.

More was involved than just this simple REA organization act. If we could have broken the back of "government by veto," it would have opened the door to great strides forward in giving farmers other help they have been asking for—a better farm program, seeing that farmers have a chance to earn a decent farm income while at the same time cutting down the tremendous losses of the Commodity Credit Corporation.

Yes; if four Republican Congressmen from Wisconsin had voted differently, our immediate legislative future for agriculture would have looked a great deal brighter.

Yet even in supposed defeat we have served notice on REA-wreckers that a vast majority of this Congress is not about to let this great program be crippled. And we have put the brakes to efforts of this administration to hike your interest rates on REA loans. That alone was worth the effort.

Now I want to talk to you today about more than just the great REA program.

You are farm people. The purpose of your REA cooperative is to better enable you to do a good job as farmers. Farming is your business. Yet it is even more—it is your way of life.

I am sure that uppermost in your minds is the future of American agriculture—and the extent to which your Government is going to help you, or neglect you, in your struggle for economic justice—in a time of serious economic distress.

As a member of the Senate Committee on Agriculture and Forestry, as a long-time friend of American agriculture, your problems are of grave concern to me.

They should be of serious concern to all citizens, urban or rural, for we all have a stake in what happens to agriculture.

The Democratic Party has received a powerful mandate from the farm people of America to right the tragic wrongs that have been done to American agriculture under the Republican administration in Washington.

Remember, it is the Republican program that is such a mess today, as much as they would like to duck responsibility.

It is the Republican program and it has been Republican bungling that has made such a costly mess of it without producing any effective results for farm people.

It is high time for some changes to be made.

But it is only fair to warn you that the Congress is working under extremely serious and inescapable limitations. We cannot do everything you wish we would do. We cannot do everything we want to do.

First, we are working under the limits imposed by the President's veto power. I think it is only fair and accurate to expect that the President will veto any bill we might pass which will do anything substantial to raise farm prices.

This means that Congress is limited in what it can do for farmers to what can be passed by a two-thirds vote over a Presidential veto.

Secondly, Congress is limited in what it can do for farmers by the veto power which is held by the Secretary of Agricultrue.

You have seen how good farm programs can be ruined by unsympathetic administration. The power of the Secretary of Agriculture to negate the intent and spirit of Congress is great.

The Secretary's power to veto by administrative action limits the good that Congress can do for farmers to those things that are so simple, so direct, that the results can come through to the farm in spite of all the foot-dragging and hostility that it will encounter as it passes through the Department of Agriculture's hands.

Despite these severe handicaps, at least some of us in the Democratic Congress are determined to develop a workable program that will help the farmers of America.

You can mark it down as absolutely certain that the Democratic Congress will not let the administration pull down the temple of agricultural programs completely in its final hours, as it has seemed determined to do.

The Democratic Congress will never, never, never give Ezra Taft Benson the zero-parity floor he has asked for. We will not give him the marketplace, no-parity gimmick he has asked for either.

The Democratic Congress will not allow the administration to get away with putting a penalty tax on the refunds that your cooperatives pay to their patrons.

The Democratic Congress will not let the administration jack up REA interest rates, nor throw the REA co-ops to the wolves of Wall Street.

You can count on that. You can bank on it. You can bet your economic lives on it—and that is exactly what the stakes are in agricultural policy today. For while the administration has a powerful veto weapon to use against Congress when it tries to help the farmer, we have a veto power of our own when it comes to acting on the administration's plans to harm the farmers. And we will use it. We will not give up a single inch.

This tragic era for agriculture—the dark era of Ezra—has had a good and constructive result along with all the misery and waste. So it seems to me, at any rate.

It has made us grow up and come of age in our thinking about farm policy.

We now realize that the real argument in farm policy should not be over methods and details. The real argument is over basic objectives.

Are you for a program to help the family farm? Or are you against the family farm? That, my friends, is the real issue, the real dividing line, in farm policy debate today.

Almost any farmer in America can think up the general outline of a farm plan that will work—if there is a will to make it work.

Methods are important. Details are important. Some will work better than others. Some well-intentioned ideas might not work at all. We need highly skilled technical experts and conscientious administration to carry out our farm programs. But our trouble is not for lack of ideas and conscientious, skilled people to put them into effect. The Department of Agriculture is overflowing with fine, dedicated career public servants—who could make a farm program work and work well, if they were given a chance.

Regrettably, the public attitude toward agriculture has been so deliberately distorted that we now need to mobilize better understanding on the part of all American people as the first step toward the new and better farm program some of us are seeking.

America's farm policies need to be reexamined and clarified in terms of objectives sought in the Nation's interest—not just in terms of political slogans or cliches designed to turn city resident against farm resident, and even farmer against farmer.

Before we can enact any effective new farm legislation, we need to make clear what our purposes and objectives are.

That's what some of us are trying to do in Congress now, while we are working on new and better legislation.

All the legislative history behind the development of farm programs in America confirms that our objective and purpose has been to assure the American people of a continued abundance of food and fiber, to offer America's farmers an opportunity to achieve economic equality with other segments of our economy, and to preserve and protect America's traditional pattern of family owned, family operated farms as the type of agriculture best adapted to our democratic way of life.

In more recent years, there has been added a new objective in the ineerest of the entire Nation—the purpose of using our abundance as a useful and effective humanitarian arm of better international relations.

Repeatedly, the Congress of the United States has restated its intent to uphold these objectives, in one way or another.

But these objectives are being challenged—we have heard our blessings of abundance criticized as a curse.

We have heard that even 90 percent of equality—let alone full equality—is more than farmers are entitled to in our economy.

We have heard disturbing yet increasing talk of encouraging a complete change in our historic pattern of farming, to put more emphasis on bigness and efficiency, less on human values and problems of rural living. We have heard less concern about perpetuating our family farming pattern, and more and more about giving way to the pressure of mass operations.

Serious questions of public policy are involved, if we are to cross that line.

It is not a change of direction toward which we should be allowed to drift or be pushed, without fully knowing the consequences.

The most damaging product of the age of Ezra is the dangerous erosion of America's will to do justice for her farm people.

For the first time in the history of our Nation, a cancer of doubt has arisen in the public consciousness as to the merit of our family farming system—the most efficient agricultural production system in the world.

The swift rise of vertical integration provides the mechanism whereby big concentrated business and financial interests can extend their domination over agriculture. This will leave the farm family on the farm. But it will take away its economic independence. The farmer will be told what to grow and where to sell, and the absentee-corporation farm director will control what the farmer gets for his efforts. This is but corporate collectivism—with private agricultural commissions.

This ominous forecast for American agriculture holds a powerful, fascinating allure for all too many people in our country today. Its allure has been heightened immeasurably by the discouraging, demoralizing shambles that the Republican administration has made of our farm programs. There is a growing sentiment in our country for just giving up on the farm problem.

This sentiment is strong among those who do not understand the tremendous values and strengths in our family farming system, nor the unusual problems which farm families must face. There are millions and millions of citizens in our population who are far removed from the soil. Their number is increasing year by year. Domination of agriculture by centralized corporate power appeals to many of them as an easy way out of the farm problem.

And it appeals even more strongly to those who simply do not care about what happens to farm people.

But I am one of the people who care, and so is LESTER JOHNSON, and so is Senator PROXMIRE. And I believe that there are many more elected Representatives like us in the Congress of the United States.

Rather than stumble and drift along blindly because of a vacuum of sound farm policy leadership from the present administration, farm people and city people alike need to do some soul searching, and some honest appraisal of what we really want—and the alternatives we face. Perhaps I can be helpful in that direction today, by outlining to you my own guidelines for trying to develop a new and better farm program.

We need an agricultural stabilization program far less costly to the American taxpayers than the present inexcusable mess—yet one that is far more effective in its protection of family farmers and their contribution to the American economy.

We can, and must, have both.

We need an agricultural stabilization program that provides more equality of opportunity for agriculture to keep pace with the rest of our expanding economy in terms of income, yet one that does not make the farmer dependent on the Government for that income.

We need a program that recognizes the need for and encourages farmers to help themselves through cooperative action for bargaining power in the market place and for whatever production adjustments that may be necessary to make the best use of our human, soil, and water resources.

We need a program that recognizes and is tailored to the vast technological changes, yet does so without sacrificing the human and social values of our traditional American pattern of family owner-operated farms.

We need a program that recognizes the farmer's stewardship responsibility for conserving productivity of our land for the sake of future generations, yet recognizes too that the entire Nation shares that same responsibility—and must share in the cost of seeing that it is properly done.

We need a program that really does something about surpluses—making use of what we have, and adjusting production to keep from building up more beyond the level of possible need.

Above all, we need a national food policy closely meshed with our farm policy, so that we can better gear our productive resources to the needs of humanity at home and abroad—instead of producing for Government storage bins.

If the choice facing us rests between abundance and scarcity, consumers and farmers alike have a vital stake in abundance—wisely used. Farm abundance has done more to check inflation and the increase in the cost of living than any other single factor in our economy.

Until we as a Nation face up to our social responsibility of deciding what we are going to do about the areas of hardship and suffering in our own midst—and to what extent we are willing to share out potential abundance with hungry peoples of the world as a force for freedom—until these questions are resolved, it appears morally wrong to insist that American agriculture drastically curb its output below levels for which human need exists.

Society must recognize that in the long run, it pays the price one way or another.

Is it not cheaper—and far better—to enlist our food abundance in waging peace, than to be faced with enlisting our sons and mobilizing our economy for war?

It is not cheaper—and far better—to invest some of our abundance in raising the living standards of low-income groups in our country, rather than turning to a scarcity philosophy that can only force up food costs to all segments of our society.

American agriculture is offered no alternative other than following the pattern of monopoly industry, in cutting back its production to the point where it can receive more income for less output, it will be consumers of the Nation who will pay the bill.

Farmers would like to produce in abundance, if that abundance is wisely used, and they can receive a fair return for their investment, their managerial skill, and their labor.

Yet there is no reason why farmers alone should subsidize other segemtns of our society already receiving a greater proportionate share of our national income, nor any reason why farmers alone should bear the costs of producing to meet the needs of underdeveloped areas of the world, in the interests of America's foreign policy.

If consumers want the price protection of always having a little more than enough to eat, if the Nation wants the valuable asset of abundance in a world of need, then the public must recognize that there is a public interest stake in Government providing a climate of conditions in which farmers can survive economically.

You cannot do it by writing off farm people as second-class citizens, who are not to share in the general prosperity and progress of the Nation.

You cannot do it by throwing farmers on the mercy of the free market for what they sell, when the costs of what they buy are bolstered and supported by all kinds of built-in protectors.

Food is basic to national life.

Price protection, farm credit, conservation assistance—all such farm programs are but means to an end—not the end itself.

There is no simple answer to achieving these objectives, no one panacea for the entire farm problem. Neither can any one bill meet all the problems we face.

But reasonable men should be able to agree on combining an entire kit of economic and program tools in order that each commodity may be handled in the manner best suited to its unique needs.

We need more adequate credit designed to family farm requirements. We need better conservation programs. We need more research directed into utilization of our abundance. We need a food stamp program to increase consumption among our aged, our handicapped, our dependent children, and our unemployed. We need greatly expanded uses of our food internationally under a food-for-peace program.

Yet with all of this, we need the Government's cooperation with farmers toward more adequate income protection and production adjustment. We can do it through combined use of income equalization payments to producers, through marketing orders and agreements, through orderly marketing loans and direct purchases, through marketing quotas, through payments in kind in some instances, through greater rural development aid and through Government sanction of farmers banding together to help themselves when they develop and accept programs to do so by majority vote of producers.

Far from regimentation, such a program offers the real freedom farmers need—freedom from poverty, freedom from economic domination, and freedom of choice as to the alternatives they prefer in seeking to avoid the hardship of the wildly fluctuating free markets over which they now have no control.

These are not pie-in-the-sky proposals. They are sound and practical and should be achieved, if American agriculture mobilizes its forces and carries its true story to the rest of the American people.

And with such a program, I am sure, we can at long last secure for all agriculture assurances which I have termed my "farmer's bill of rights," as standards from which farmers should never retreat.

They include:

1. The right to full equality of economic opportunity.
2. The right for improved standards of rural living.
3. The right of reasonable protection against natural hazards.
4. The right to extend agricultural free enterprise through cooperative action.
5. The right to public cooperation and assistance in conserving and saving the soil.
6. The right to preserve the social and human values of family farming.
7. The right to decent land tenure which encourages the desirable goal of farm ownership.
8. The right to a democratic voice in his own farm program.
9. The right to benefits of an expanding world trade.
10. The right to a long-term program of food reserves to protect consumers against costly scarcity.
11. The right to assurance that land reclamation development will result in establishment of new family farms, not factories in the field.
12. The right to the entire Nation's support for use of food and fiber as a force for freedom throughout the world.

These, I believe, are the basic rights of American agriculture.

They are not new rights. They are not rights of special privilege, gained through misuse or abuse of tremendous power over the lifelines of the Nation's food supply.

Rather, they are rights of historic precedent, earned by the great and continuing contribution of agriculture to American life—the fulfillment of the Nation's needs in peace or war, in good times or bad, at personal profit or loss.

They need to be restated now only as a guiding beacon of light, cast upon the darkness of present confusion over America's farm policy.

They must be just as zealously guarded against forces which seek to destroy them, as we guard other historic rights, privileges, and responsibilities of freedom in our democracy.

Citizens' Union Urges Mayor To Reorganize Title I Program

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 15, 1959

Mr. LINDSAY. Mr. Speaker, in view of the recent disclosures in New York City indicating faulty procedures in the administration of the title I program, I think my colleagues in the House will be interested in the following comment recently made by the Citizens' Union:

CITIZENS' UNION URGES MAYOR TO REORGANIZE TITLE I PROGRAM

The Citizens' Union today released a letter it has written Mayor Wagner urging a complete reorganization of the title I slum-clearance program. The letter, signed by Citizens' Union Chairman Milton M. Bergerman, follows:

"DEAR MAYOR WAGNER: I am writing on behalf of the Citizens' Union to urge you to proceed promptly with a thoroughgoing reorganization of the city's title I slum-clearance program.

"Some weeks ago the Citizens' Union addressed a series of questions to the mayor's committee on slum clearance. We received answers, and we then asked the committee to open some of its files to us. We and others subsequently examined some of the records. As a result a good deal of light has been thrown on the manner in which the title I program has been conducted up to now, and some major weaknesses have been disclosed.

"The chairman of the slum-clearance committee has now declared that title I in New York City is a 'dead duck.' Like the report of Mark Twain's death, this report is highly exaggerated. The exposure of certain weakness of administration should simply lead to a sounder and better organization of future title I operations.

"Whatever has been accomplished in the first 10 years of operation of the slum-clearance program, it is unquestionable that a vast job of rebuilding the city's deteriorated areas remains to be done. Now is the time to put the program on a sound, constructive basis.

"Two major weaknesses have been revealed in the present procedure:

"1. Title I has been administered by a scratch committee in a haphazard fashion. There has been no sound advance planning and organization.

"2. Title I has been a bonanza for some miscellaneous groups of persons who have found it a safe and easy way to make a lot of money without giving anything in return. Of course, there are exceptions. There have been a very few responsible persons and groups who have performed creditably both as initial sponsors and as salvagers of projects that were initially given to the wrong people.

"We now urge you to ask the city administrator to make an immediate study and to prepare a plan for handling present and future title I operations. As tentative suggestions, we offer the following:

"1. Comprehensive planning for redevelopment of deteriorated areas should be a function of the city planning commission. The commission should draw up a comprehensive plan which will not only designate appropriate areas for redevelopment, but will also indicate the proper type of development for each area, whether luxury apartments, middle-income housing, subsidized housing, or business or industrial use.

"2. An extensive operation such as the title I program should not be in the hands of a scratch committee. A formal operating organization should be set up. This organization should have full authority to administer the work of obtaining reliable sponsors and supervising their activities, including the clearance of the sites, the relocation of tenants, and reconstruction of the area.

"We believe that a new setup along these lines will have the effect of interesting many more responsible developers than at present and will put new life into the title I program."

Forthcoming Labor Legislation

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, July 13, 1959

Mr. McINTIRE. Mr. Speaker, while the Congress is working on reform labor legislation, various segments of our citizenry and press are pondering the issue and formulating opinions on this highly controversial matter.

From the editorial section of the Houlton Pioneer Times, a popular northern Maine weekly, comes this poignant and persuasive observation:

[From the Houlton (Maine) Pioneer Times, July 2, 1959]

MORE ABOUT FORTHCOMING LABOR LEGISLATION

Two weeks ago we discussed one of the phases of pending labor legislation that is to be acted on by the House of Representatives, that commends itself to the thoughtful attention of every citizen of this country.

This was along the theme that the Kennedy-Ervin bill, soon to be considered, is, in its present form, ineffective, without teeth and too mild to correct the most flagrant abuses of which some labor organizations are guilty.

The first major issue was the bill of rights for union members which Senator JOHN L. MCCLELLAN, Democrat, of Arkansas, declares must be an integral part of this changed law if that law is to do the job it should. We agree with Senator MCCLELLAN on that point. we believe most of our readers will if they give the issue serious thought.

Second major issue is the question of the right of union leaders to put picket lines around a place of business and use secondary boycotts to force employees to join a union.

This is the most flagrant kind of duress which abridges the rights of both workers and employers. On this question Senator MCCLELLAN believes that employees should be free to determine whether or not they want a union. He contends that, if a majority of them do not want a union, they should not be forced into one.

Branding organizational picketing and secondary boycotts as instruments of economic coercion used to thwart the will of employees and used as an instrument to perpetuate racketeering in labor-management relations, the chairman of the famed McClellan rackets committee, which turned the spotlight on these and other offensive practices of labor organizations, firmly believes union leaders should be deprived of these rights.

You might ask what possible interest there could be in this section of the country on labor matters when there are so few that we have to contend with hereabouts and those that do exist are of a somewhat different character than those who so vigorously sponsor the Kennedy-Ervin bill.

Our view is that because the abuses of blackmail picketing and secondary boycotts are so completely un-American and because they can have such a far-reaching and destructive effect on enterprises far from the scene of a labor dispute and be such a real menace to small business, they should be completely abolished.

If this is true, and we believe every red-blooded American will agree that it is, then it is the duty of every citizen, whether he would be directly affected by such reform or not, to request his Congressman to vote to put teeth into the Kennedy-Ervin bill when it comes up in the House and to have no part of the present milk-and-water version.

It seems to us this is a time for the House of Representatives to do what the Senate apparently did not have the courage to do.

Congressman CLIFFORD G. MCINTIRE is your Congressman. His address is House Office Building, Washington, D.C.

This We Believe

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 13, 1959

Mr. HERLONG. Mr. Speaker, under leave to extend my remarks, I include

the following article by Dr. Louis M. Orr, of Orlando, Fla., president of the American Medical Association, entitled "This We Believe."

THIS WE BELIEVE

(Inaugural address by Louis M. Orr, M.D., of Orlando, Fla., president of the American Medical Association, at presidential inauguration ceremony, American Medical Association, 108th annual meeting, Convention Hall, Atlantic City, June 9, 1959)

President Eisenhower, Dr. Larson, fellow physicians, and friends, in taking office as president of the American Medical Association I do so with gratitude and humility. I am aware of the responsibilities of my new position. And I am determined to carry out my duties with all the dedication at my command.

Tonight, I consider it my duty to speak out on certain fundamental ideas which are vital to medicine, to America, and to mankind.

Medical progress through the years has been inspired by a particular type of man:

Those who learn from the past, but face boldly up to the future: who work at the day's task, but work and dream, also, for tomorrow's progress.

These are the men who blaze the trail for humanity.

But they must breathe the air of freedom; and they flourish best in those times and places where all men respect knowledge, value personal initiative, and applaud quality.

They have flourished in America—in this young nation which, from its beginnings, has cherished the ideals of individual freedom and self-reliance. They have flourished, as the green bay tree, whether in medicine, industry or the other professions. For it is the spirit of democracy to encourage action, cooperation, and the striving for excellence.

Today, however, we can perceive distrubing trends in our country; and they concern all thoughtful men. In confronting these trends, we would be wise to pause for a moment and study the past, because from the past we can learn important lessons for the present.

Modern medicine, for example, traces its traditions back to Hippocrates, the Greek physicion and teacher. He taught his students the facts about the art and science of medicine as they then existed. But Hippocrates gave them much more than facts; he also gave them a sense of values and ethics. He taught the physician's obligation to the patient; respect for the individual; compassion; the doctor's duty to impart his knowledge to others.

Greek children were taught the meaning and value of freedom. The Greeks knew that their country was free only because they as individuals were free, and they accepted full responsibility for maintaining and protecting that freedom. They were willing to pay the price because they valued freedom above everything else. They achieved greatness not because their country was large, or rich, or blessed with abundant natural resources, for they had none of those advantages. Greece left an indelible stamp on history for one reason only: it gave birth to a spirit which for 2,500 years has sparked hope in the minds and hearts of men—the same spirit that underlies the promise of America.

When Greece and Rome eventually fell, they were conquered not by outside aggressors by a decline in their moral and spiritual strength. Describing what happened, Miss Edith Hamilton, the famous classical scholar, has put it this way:

"In the end, more than they wanted freedom, they wanted security, a comfortable life, and they lost all—security and comfort and freedom. Is not that a challenge to us? Is it not true that into our education have come a slackness and softness? Is hard effort prominent? The world of thought can be entered in no other way. Are we not growing slack and soft in our political life? When the Athenians finally wanted not to give to the state, but the state to give to them, when the freedom they wished most for was freedom from responsibility, then Athens ceased to be free and was never free again."

Miss Hamilton's words have a pertinent, almost ominous ring, for us Americans today.

Are we teaching, living and developing all of the potentialities of our democracy?

Are we standing up for the individual over the group or the State?

Are we concerned with the moral and ethical basis of our society, or do we worry more about money, and the things that money can buy?

Are we exploring all possible ways and means of solving our problems through self-reliance, initiative and cooperation, or do we more and more give up without question and accept intervention and eventual government control?

Let us appraise the road we are to travel.

One road leads to rigid and unworkable compulsion; to deadening uniformity and to the loss—yes, the inevitable loss of that individualism and vitality which has made American medicine a pace setter in the world.

This, we must not lose.

This road we must not take.

The other is the road of the free spirit; of dedicated men and women voluntarily working together; of sustained and heartening progress in the never-ending war against the killers and cripplers of mankind.

This is the road we have followed. This is the road we must follow.

For in this way—and in this way only—can we continue to make medicine a faithful servant to mankind.

As citizens, we believe in individual freedom, individual rights, individual responsibilities.

We believe that the basic element of progress is not compulsion but voluntary cooperation; not force but reason; not blind obedience but independent intelligence; not timidity but faith—faith in man, faith in ourselves, faith in God.

We believe that freedom, to survive and grow, can never be placed upon a shelf and forgotton, but must be fought for again and again, day after day, by men and women willing to stand up and to be counted. We reject any philosophy alien to these beliefs.

We know that we must continue to furnish the best possible health care to every American—and this emphatically includes the older citizen.

We know that we must continue to improve and broaden voluntary health programs in preference to compulsory programs that lead to waste.

We know that we must continue to defend the unfettered, inquiring mind for medical progress depends upon the relentless quest for truth by minds that are free.

This is not merely an opinion; it is a significant lesson of history, true yesterday, true today, true always.

For the practice of medicine is more—much more—than merely facts and experience. It is new knowledge, new ideas; a blending of the best of the old with the best of the new. It is the "invincible belief" of Louis Pasteur that "science will triumph over ignorance, that the future will belong to those who have done the most for suffering humanity."

As doctors of medicine it has been our responsibility to watch men, women and children in their darkest hours and to seek to heal and help them.

Anyone who has done this knows that there is inside every man an unquenchable spirit linked to life and love, mercy and hope and the eternal values that come from the Creator.

Upon this knowledge is built our firm belief—the belief that the fundamental obligation of our profession is to maintain medicine's role as the faithful servant of mankind.

Now, and for always—this we believe.

Federal Milk Marketing Order Unfair to District of Columbia Consumers and Midwest Producers

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 1, 1959

Mr. JOHNSON of Wisconsin. Mr. Speaker, Al Steadman, agricultural writer for the St. Paul Pioneer Press, St. Paul, Minn., has an excellent editorial on the cause and effect of the recently adopted Federal milk marketing order for the Washington, D.C., area.

I am in full agreement with the views expressed in Mr. Steadman's article. The new Federal order works a hardship against milk producers in the Midwest, milk consumers in the District of Columbia area, and taxpayers all over the country. This is another example of barriers erected against the free flow of milk between the States. My national milk sanitation bill is aimed at breaking down trade barriers and allowing consumers in all parts of our country to get the Midwest's wholesome, yet economical, milk.

Under leave to extend my remarks, I include Al Steadman's editorial. It follows:

CAUSE AND EFFECT

On June 1 a new Federal milk order went into effect for the Washington, D.C., area, greatly cutting down the flow of milk from outside regions to home consumers and defense agencies in the Nation's Capital.

On July 1, exactly a month later, prices on home-delivered milk in Washington were boosted to 48 cents a half gallon. This is 13 cents a half gallon or 6½ cents a quart higher than the price now being paid for home-delivered milk in the Twin Cities. That difference is about twice as much as the cost of transporting whole milk from the Twin Cities to Washington. Some of that increased cost to consumers is attributed to a recent wage increase of 8 cents an hour for milk company employes.

The rest of the increased milk cost is the District of Columbia consumers' burden in carrying the new Federal milk order with its restrictions against outside competition. Washington consumers don't have any vote, so they have even less standing than consumers generally have in Federal milk order proceedings of the Department of Agriculture.

But among the Washington consumers in this instance happen to be many tax-supported institutions including all of the national defense agencies that buy milk for soldiers, sailors, or airmen.

So Midwest dairymen are in a position to sympathize with the helplessness of those agencies and of Washington home consumers. Our dairymen would like to sell them milk cheaper but the Government won't allow it.

This region would like to have a whack at the defense milk business. But, like Washington consumers, Midwest dairymen have equal standing with the insiders only when it comes to paying Federal taxes. When it comes to selling milk, cream, or concentrated milk to those national defense agencies that our boys help to staff and man, the U.S. Government now says "nothing doing."

Living Portrait of a Potential U.S. President

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AYRES
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, July 13, 1959

Mr. AYRES. Mr. Speaker, there has been considerable comment regarding Earl Mazo's new book on Vice President RICHARD M. NIXON. The following review by Mr. Willard Edwards should be of interest to all:

LIVING PORTRAIT OF A POTENTIAL U.S. PRESIDENT

(Reviewed by Willard Edwards)

The difficulties of unbiased biography are magnified when the subject is not only very much alive but a comparatively young politician and office holder, in midcareer, both hated and admired, the target of fears and hopes as a potential President of the United States.

Earl Mazo, an experienced Washington correspondent, has surmounted these obstacles by a magnificent reporting job—the kind of dogged digging for detail and tireless pursuit of the truth that breathes life into a portrait.

Here is the first complete, factual, unvarnished examination of the deeds, thoughts, philosophy, and ambitions of a highly complex figure whose political success story, in a short 13 years, is one of the marvels of this era.

The bare facts of Vice President RICHARD M. NIXON's public career make exciting reading. When these are combined with a disclosure of many hitherto hidden chapters, frank revelations by NIXON himself of his reactions to dramatic episodes, and a perceptive analysis of his qualities, the narrative becomes absorbing history.

Armed with a wire recorder, Mazo interviewed 307 friends and enemies of NIXON, scattered from Washington, D.C., to California. As one of those thus cross-examined at length, this reviewer can testify to the author's skill as an exhaustive questioner. He searched forgotten records and labored thru the mountains of printed material based upon the young Californian's headlong rush to the political heights.

In 2 dozen private interviews with NIXON himself between December 1957 and January 1959, Mazo searched diligently for this "controversial" character's views on subjects from Taft to television. These "off the record" conversations, embodied in a final chapter, are remarkable in their direct approach to matters often ruled taboo by politicians.

When he was first assigned by his newspaper to cover NIXON's activities, Mazo had a preconceived aversion—based on published accounts—to the Vice President's personality and methods. When he took a furlough to gather material for this biography, traces of this hostility remained. After 15 months he had 200,000 words of manuscript. In an effort to attain "balance," he confesses, he culled 100,000 words, all, in his phrase, "pro-NIXON."

What remains is an equitable accounting, hiding neither the creditable nor the questionable. Mazo finds NIXON a paradoxial combination of qualities that bring to mind Abraham Lincoln, Theodore Roosevelt, Harry S. Truman, and Joseph R. McCarthy. Nixon's foes will not like the conclusion, produced by the logic of events recorded here, that the qualities of the first two men have become predominant as the Vice President has matured.

The book is bursting with fresh material. There is much new detail about one of the most theatrical incidents of a presidential campaign—the "Nixon fund" episode of 1952—which was converted by the then 39 year old running mate to General Eisenhower from disaster into triumph. His resistance to pressures from high quarters, urging that he quit the ticket, is told for the first time.

From the days of the Alger Hiss case, when NIXON first attained national prominence, to the exciting events of his South American tour last year, when he faced murderous assault in Caracas, this account shows the Vice President steadily advancing in self-assurance, wisdom, coolness under fire, and a fatalistic belief that he is being borne along, powerless to resist, on the stream of history.

His ambition is not as fierce as many think, Mazo says. Three times he has faced the possibility that the President's illness might make him the Nation's Chief Executive. He was numb with shock on the first occasion; he faced the prospect calmly on the third. Politically bold, a conservative with a practical yardstick, he would be the "hardest driving and most controversial" President in 50 years, and no one, "whether in dismay or admiration," notes his biographer, can expect that he would be a weak Executive.

GTA Daily Radio Roundup

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Monday, July 13, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the GTA Daily Radio Roundup, of Tuesday, July 7, 1957.

There being no objection, the Roundup was ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP

Big corporations with their armies of tax lawyers, efficiency experts, and technical advisers know how to make sure that every last bolt and squirt of oil on a production machine pays for itself time and time again. But there isn't one farmer in a million who is rich enough to hire one expert, even though the cost is tax deductible.

Still, nowhere has the big drive for efficiency been so bally-hooed as on the farms. From the U.S. Department of Agriculture, the machinery makers, the big farm magazines the word to farmers has been: "Boost efficiency. Buy more machinery. Use less labor. Beat the cost-price squeeze."

So what has happened? Farmers are loaded with machinery, much of it bought on credit. Now the question is, is it paying off? Does more machinery mean more efficiency? That's a hard question to answer. We haven't seen much reliable research on the economics of how much more profit a farmer earns through buying more machinery. So we are indebted to a report on this subject by an independent reporting agency that publishes a newsletter called "Agribusiness Outlook." What it has to say may come as a surprise to most farmers. Here's what Agribusiness Outlook says:

"There's strong evidence that farmers have been oversold on the economic benefits of more and better farm machinery and too-rapid expansion. For agriculture, as a whole, increased mechanization simply isn't doing what it is supposed to do—cut production costs and increase income."

What's the evidence? Well, listen to these statistics and figures. Agribusiness Outlook reports that the farmer's "unit production costs haven't been cut by mechanization. Out of each dollar of sales income, the farmer now has about 82 cents cash costs to pay, compared with 65 cents in the base period of 1947 to 1949. Output per man-hour on the farm has increased 32 percent since 1948 but output per unit of farm machinery and motor vehicles declined 40 percent."

Agribusiness adds all this up to show that farmers have held their gross income about level at $30 billion a year, but only by increasing production 18 percent in the last ten years. But it cost them 28 percent more to get that 18 percent production increase. Agribusiness concludes that "the farmer will continue on the technological treadmill as long as the economic benefits are absorbed by higher prices for supplies, equipment, and service, or until they can pass along their own rising costs through greater bargaining power."

We've just skimmed the surface on the facts and figures in this Agribusiness Outlook report. If you would like more information why not drop in at your local co-op elevator. The manager will have a copy of the report that you can look over. Or, drop a postcard to Farmers Union GTA in St. Paul and we'll send one direct to you.

We think you'll agree, after examining the facts, that lower farm prices and all-out production are not the answer to the farm problem. And the 23d of this month is the time for the Nation's wheat farmers to make to make their decision. A "Yes" vote in the wheat referendum will hold the line on both production and prices.

The following is an excerpt from a news story in the July 7, 1959, issue of the St. Paul Pioneer Press:

"LIKES GTA-TYPE BROADCAST—IKE EYES WEEKLY SHOW

("By Robert E. Lee, Pioneer Press Washington Bureau)

"WASHINGTON. The political effectiveness of the generally antiadministration broadcasts of the (Farmers Union) grain Terminal Association has captured the respect of President Eisenhower.

"The Pioneer Press Washington Bureau is informed by sources close to Eisenhower that he wishes the Republican party could put on something like the GTA broadcasts emanating * * * from St. Paul. The President doesn't dream of doing it on a daily basis; he'd settle for one a week starting next February and running up to election day in November. Eisenhower is said to be aware that the constant hammering of the association and GTA General Manager M. W. Thatcher against his programs and for theirs is getting a message across. He doesn't like the message but he seems to be sold on the technique.

Proposed Solution of the Farm Problem

EXTENSION OF REMARKS
OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, July 13, 1959

Mr. CARLSON. Mr. President, our farm problem is one that requires solution in the interests of both the farmers and the taxpayers of this Nation.

Many proposals are being advanced for a solution of the problem, and I have just received a most interesting suggestion from Mr. Paul Walther, of the Weber Flour Mills Co., of Salina, Kans., which is worthy of the study of every Senator.

I ask unanimous consent that the proposal be made a part of these remarks and printed in the Appendix of the RECORD.

There being no objection, the proposal was ordered to be printed in the RECORD, as follows:

PROPOSED SOLUTION OF THE FARM PROBLEM

To the impartial economic observer there can be no doubt that the present methods provide no solution for the farm problem, because all the schemes tried so far defy any and every sound economic principle.

Under the loan and price-support program the farmer was given a guaranteed outlet at a guaranteed high price which could have only one result, namely, to increase the production some more.

Production control by acreage reduction and production quotas for every single farmer in the country is also no solution. Besides being socialistic and defying our free enterprise system, it had no practical results because only the poorest land was taken out of wheat production and with the help of improved farming methods even bigger crops were raised on the reduced acreage.

Now it is proposed to reduce the wheat acreage some more, not to permit the farmer to use the retired wheat acreage for other crops, in return for which the loan price is again to be raised and on top of it the farmer is to be paid a dole for doing nothing and letting part of his land lay idle.

Higher prices will curtail domestic consumption some more, exports will require tremendously increased subsidies, and still the production will be far greater than what can be consumed and can be given away.

While in the past it was a farm problem, meaning that one economic group had some difficulties, by now it has grown into a national economic disaster. By draining these untold and ever-increasing billions of dollars from the Treasury, without accomplishing anything, it has become the principal cause that the budget cannot be balanced. This inevitably will step up the tempo of inflation and the end result will be terrible economic chaos.

Twenty-five years of continuous dismal failure should be time enough to convince even the most enthusiastic supporters of these so-called New Deal fallacies that they will not and cannot do the trick. It is high time that the fact is realized that all these programs have one basic weakness, namely, the surplus commodities are not put to economic use.

I, therefore, would like to suggest once more an economic approach which would provide a permanent solution for the entire complex farm problem without any Government help or interference with the natural developments of agriculture.

I propose that the Commodity Credit Corporation be changed into a mixed corporation under private management.

The present methods of establishing parity prices should be abolished. When farming became highly mechanized and diversified, it became an industry and should be treated as such.

Only by putting interest on the original investment, maintenance and depreciation, and manpower labor cost per acre on one side of the ledger, and the present average yield per acre on the other side can a fair average price per bushel of wheat be determined which would allow the farmer to cover his expenses and assure him a fair profit in relation to the time and effort spent in raising this particular crop. The present methods are utterly ridiculous because they do not take into account the reduced labor cost and the tremendously increased yield per acre. It is also economic nonsense to set some arbitrary prices 9 to 12 months in advance, regardless of future developments. It further should be clear that the same price cannot be declared adequate if farmers have a bumper crop or if they have a near failure.

A Board of Economic Advisers, appointed by the President and approved by Congress, should cooperate with the management of the Corporation to establish for a period of 3 to 6 months minimum and maximum prices for the three major grain crops—wheat, corn, and milo. If prices go below the established minimum, the Corporation starts buying until normal prices are restored. If prices go above the established maximum, the Corporation starts selling to prevent inflationary price rises.

The Corporation will carry at all times a reasonable emergency reserve of the three grains. All surpluses remaining after domestic consumption and legitimate efforts are taken care of are to be converted into fuel alcohol.

When buying the grain, careful selection would be necessary. Only the best qualities, suited for prolonged storage, should be added to the reserve, and low grades, subject to early deterioration, should be immediately converted into alcohol.

In times when our domestic prices are above world prices, it would be one of the obligations of the corporation to make part of the stocks available for export. Special care should be taken to place mills in a competitive position to maintain and if possible to extend foreign markets for American wheat-flour and corn products. The losses to be taken on these export sales would be prorated over the remainder of the stocks, increasing slightly the cost price of the grain which it is to be converted into alcohol. This will be a temporary necessity only because it can be expected that our domestic prices and world prices eventually will meet again.

By establishing a guaranteed market and fair and reasonable prices for these three grain crops all other Government loan or support activities as well as all controls and regulations for all other farm activities can be abandoned. One or the other of these three grains can be grown anywhere in the country and farmers will not be so foolish to produce tobacco, cotton, soybeans, peanuts, or any other crop in excess of normal needs if they can have better returns per acre from and a guaranteed outlet for these standard grain crops.

It also would be instrumental in adjusting the meat and dairy production to the actual demand. No dairy farmer will produce milk, cheese, or butter surpluses when he can at all times sell his surplus corn at a fair profit to the Corporation.

But above all, every farmer can do what is best under his particular conditions and nobody will be coerced by Government regulations which cannot be elastic enough to fit the varied conditions in the different parts of the country and at the same time be strict enough to be effective.

In setting up the Commodity Credit Corporation as a mixed corporation the Government should retain 51 percent of the stock for the one and only purpose to make sure that the Corporation is run strictly for the economic interest and benefit of the country as a whole and to prevent that any individuals or any special group could derive any unjustified profits or advantages from the activities of the Corporation.

The remaining 49 percent of the shares should be offered to the farm organizations representing the producers of the grain.

The elevator interests and grain trade who will be called upon to handle and store the grain.

The milling industry who will have to granulate the grain for the distilleries.

The distilleries who produce the alcohol.

The oil industry who will have to absorb the end product.

As can be expected all kinds of objections will be voiced by the oil industry and it therefore would only be fitting to consider shortly the effects of such a measure on the oil interests.

It goes without saying that the cost price of this fuel alcohol will be considerably higher than the cost price of fuels derived from crude oil. Conceivably this fuel alcohol could be used to advantage in the production of synthetic rubber or as jet-fuel but for simplicity's sake let us consider that it would be used entirely to be blended with gasoline. Since the fuel alcohol has a much higher octane quality, the crude oil could be refined at a higher yield, reducing the cost of the gasoline and the alcohol then would restore the octane to the required rating. Since the alcohol would be distributed to refineries in proportion to their capacity they would be all in the same boat and if any change in the price for gasoline would be necessary it would be the same for everybody.

In comparison to the enormous quantities of gasoline used, it would take only a small admixture of this higher priced fuel alcohol to absorb it and it can be expected that the price of the gasoline would not be raised more than about one-half cent per gallon. However, in the beginning stages, when the high priced surpluses carried now by the Government will primarily be used, it is conceivable that the price increase for gasoline could amount to about 1 cent per gallon. If this would be considered undesirable, all that would be necessary would be to reduce the gasoline tax by the same amount per gallon. Nobody would be hurt and still the Treasury would be approximately $6 billion better off because they would not have to pay anymore all these billions for ineffective farm supports.

Another objection from the oil interests no doubt would be that this fuel alcohol would take the place of considerable quantities of natural oil products. With full production on the farms and restored prosperity in the rural sections of the country, the consumption of gasoline will increase tremendously and offset at least part of this additional supply.

An added advantage would be that it would help to stretch our potential reserve of natural oil and postpone the day when oil will have to be extracted from shale or coal under very unfavorable economic conditions and at extremely high costs.

It is of utmost importance to keep always in mind that this conversion of grain into fuel alcohol is intended to be only an emergency measure to dispose off the horrible surpluses now in Government hands and the overproduction in the immediate fu-

ture. The use of grain for fuel alcohol will gradually taper off as feed and food consumption slowly but surely will catch up with the increase in production.

A thorough examination of my suggestions by economic experts will show that the results would go far beyond solving the farm problems. Instead of spending these enormous amounts for farm supports the general farm income will be restored to full parity with other sections of our economy, resulting in greatly increased tax returns from the rural sections. Not only would we have again a balanced budget but the national debt could be reduced, reversing the present inflationary trend and restoring sound economic conditions in our great country.

Sincerely yours,

PAUL WALTHER.

The North Still Has Much To Do To End Bigotry and Discrimination Within Its Own Boundaries

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, July 13, 1959

Mr. NEUBERGER. Mr. President, earlier in this session I have spoken in the Senate of the fact that we of the northern States still have much to accomplish in the vital realm of race relations. Bigotry, discrimination, and unfairness have by no means been eliminated above the Mason-Dixon Line. It is, of course, politically safer for a northerner to assail Little Rock than to criticize Levittown. Yet we should constantly be aware of the mote in our own eye, when we discuss the unfortunate circumstances which prevail in certain of the southern States. Let us not look so hard at the distant horizon that we overlook what is going on right at our own shoelaces.

For example, of the 39 States outside the South, only 19 have established FEPC practices to eliminate discrimination in employment. Only 9 States outside the South have enacted laws to forbid discrimination in publicly-assisted housing projects. In 30 other States outside the South, no official action has been taken to end any kind of discrimination in housing.

Now a further humiliation has occurred. The West Side Tennis Club, in Forest Hills, N.Y., the site of many international tennis championships, has denied membership to one of the most illustrious Americans in the land, Dr. Ralph Bunche, a former winner of the Nobel Peace Prize.

Dr. Bunche and his son were excluded from membership in the West Side Tennis Club because they are Negroes. There was no other reason other than that for the action taken. Yet Dr. Bunche has won international renown as a diplomat and as Under Secretary of the United Nations. In view of the fact that some 65 percent of the people of this earth have skins which are not white in color, we can only imagine the adverse impact which such an episode must have on the prestige and influence overseas of our Nation. One such incident can erase all the beneficial propaganda carried on for years and years by the Voice of America. Was it not Emerson who said, "What you do speaks so loudly that I cannot hear what you say."

Furthermore, there has recently been reported in the press the fact that an eminent Chinese scientist who had faithfully served this country in various scientific capacities was denied admission to two beaches in Maryland because and his family were non-Caucasians. What must have been the reaction to that report in the teeming nations of Asia and Africa?

Mr. President, a great American newspaper, the New York Times, has published a militant and challenging editorial in its edition of July 10. The title of the editorial is "Privacy at Forest Hills." It discusses the impact of the episodes which I have been discussing, when we seek to attain or hold the friendship of the countless millions in the underprivileged nations of the earth where most of the people are black, yellow, or brown in color. We do a great deal of lecturing to other countries about democracy; yet we can only speculate on what those people say when they learn that one of the greatest diplomats America has ever produced cannot, with his young son, join a tennis club where America has set the stage for its international and national tennis matches.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, with my remarks, the editorial from the New York Times of July 10, entitled "Privacy at Forest Hills."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times, July 10, 1959]

PRIVACY AT FOREST HILLS

The West Side Tennis Club in Forest Hills, Queens, is two things: First, it is a private club which, in this land of the free, is entitled to choose its members according to taste; it might require all members to have red hair or to have an intelligence quotient of 150 or more or, possibly, of 100 or less; second, it is a club with some national and international significance as long as it remains the stage on which international and national tennis matches are played.

In its private capacity the club may choose, as it has done, to deny membership to the son of Ralph Bunche or, in general, to deny membership to any Negro or any person of the Jewish religion. In its public capacity, as an institution with some diplomatic functions, the club has no right to make these discriminations. We do not exaggerate when we say that the refusal of the West Side Tennis Club to accept Ralph J. Bunche, Jr., or any other qualified young man of whatever race or religion, hurts the cause of the United States the world over.

We seek to hold or gain the friendship of Asia's and Africa's millions. Incidents such as that at Forest Hills will undo much that has been accomplished by the sweat and devotion of our true ambassadors, who have striven in obscurity and under hardships to exemplify an ideal that Sir Henry Newbolt gave to the International Tennis Club of Great Britain: "The brotherhood that binds the brave of all the earth." For such men, and for many of us who stay at home, Ralph Bunche, winner of a Nobel Prize, superbly courageous, highly intelligent, cultured and compassionate, belongs among the elect of our generation. No group could exclude Ralph Bunche without signifying its own spiritual poverty.

The same copy of this newspaper which brought the news from Forest Hills also told of an eminent Chinese scientist who, after serving this country well in his specialty, was refused admission to two Maryland beaches because he and his family were not "Caucasians." On the same day President Eisenhower found it necessary in his press conference to reject "the theory that prejudice, religious prejudice should rule our choice of candidates and officials in this Nation."

We cannot do anything about the West Side Tennis Club's membership requirements. We may suggest that if it continues to make such requirements it should no longer be considered representative of American public opinion in tennis or in any other area. We might also suggest that those who control Maryland's beaches, or any other beaches, reread some of the amendments to the Constitution and possibly one or two decisions of the United States Supreme Court.

There are a number of extravagances we cannot afford in our present struggle to keep Western civilization alive and thriving. One of these extravagances is that stupid and cowardly thing, racial and religious prejudice.

The Laying of the Cornerstone for the Extension of the East Front of the U.S. Capitol, July 4, 1959

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 13, 1959

Mr. SCHWENGEL. Mr. Speaker, on July 4 this year, a significant event occurred in the laying of the cornerstone for the east front of the Capitol. This ceremony marked another milestone in the history of this edifice which holds a special place in the hearts of freemen everywhere.

Since I have been in Congress I have been intensely interested in this building and its history. It has been very difficult to piece the complete story together, however, because adequate records have not been kept of proceedings like this.

So that future generations might not have the same difficulty I place in the RECORD a full account of the program as it actually took place, including the address of President Eisenhower, the remarks of the distinguished Speaker, and the Masonic ceremony which was a part of the proceedings.

It is also fitting that some facts and interesting information about our Speaker who was the prime mover of this important project, Mr. SAM RAYBURN, and the Architect of the Capitol, George Stewart, should be included as a part of this historic record:

PROGRAM OF CEREMONIES AT THE LAYING OF THE CORNERSTONE OF THE EXTENSION OF THE EAST CENTRAL FRONT OF THE U.S. CAPITOL BY PRESIDENT DWIGHT D. EISENHOWER, WASHINGTON, D.C., JULY 4, 1959, 12 O'CLOCK NOON

Commission for the Extension of the U.S. Capitol: Hon. Sam Rayburn, Speaker of the House of Representatives, Chairman; Hon. Richard M. Nixon, President of the Senate, member; Hon. Everett McKinley Dirksen, minority leader of the Senate, member; Hon. Charles A. Halleck, minority leader of the House of Representatives, member; Hon. J. George Stewart, Architect of the Capitol, member.

OPENING OF CEREMONIES

The Honorable J. George Stewart, Architect of the Capitol, opened the ceremonies with the following statement:

"Mr. President, Mr. Chairman, distinguished and honored guests, the ceremonies of the laying of the cornerstone of the extension of the east central front of the U.S. Capitol will now commence. I now slightly digress from the printed program and call upon the Reverend Frederick Brown Harris, Chaplain, U.S. Senate, for the invocation."

INVOCATION BY DR. HARRIS

Prayer, Cornerstone Laying, Capitol Extension, by Frederick Brown Harris, D.D., Chaplain of the U.S. Senate, Saturday, July 4, 1959

"God of our fathers and of their succeeding race: We come seeking Thy grace and favor as with grateful and contrite hearts we bow reverently at this shrine of each patriot's devotion whose white dome in these days of destiny is lifted into the view of all the earth, as it is revered from sea to shining sea in this free land of hope and glory.

"In this high hour we would be conscious of the unsullied form of one who, in the agony of Valley Forge, lifted up his heart to Thee and who, after victory had come, laid the cornerstone of this edifice of state which loomed prophetically in his heart, but which was a promised land he was never to enter.

"Amid all the babel of today's angry voices we would listen to the calm and reassuring voice of the Father of our Republic, who being dead, yet speaketh, as turning from all pedestals of selfish ambition he warns us, in this year of our Lord, that without a genuine religion decay of moral standards and values follows as the night the day.

"Where there are signs of crumbling deterioration in the fabric of our freedom may there be fashioned out of the very ground of democracy stronger and fairer columns of spiritual verities, of religious faith, of moral integrity, and of high principles that scorn expediency.

"As the stately cathedral of our cherished liberties is thus constantly rebuilt and restored as the centuries pass, may it always be that the glory of the latter house may be greater than the glory of the first, as at the altar of national devotion a nation of freemen lifts the never-ending prayer, 'America, America, God mend thine every flaw.' And so—

"On this stone now laid with prayer,
Let our faith rise strong and fair;
Ever, Lord, Thy name be known
Where we lay this cornerstone.

"By wise master builders squared,
Here be living stones prepared
For the temple near Thy throne,
Under God, its cornerstone.

"We lift our petitions in the name that is above every name. Amen."

PRESENTATION OF THE CHAIRMAN

The Architect of the Capitol then presented the Chairman of the Commission, with the following remarks:

"It is my great honor and high privilege to present the Chairman of the Commission for the Extension of the U.S. Capitol, the Speaker of the House of Representatives, the Honorable SAM RAYBURN."

INTRODUCTION OF THE PRESIDENT OF THE UNITED STATES

The Chairman of the Commission made the following remarks in introducing the President:

"Mr. President, members of the Commission and friends, we meet here today in historic surroundings, on the grounds of the Capitol of the United States.

"On September 18, 1793, President George Washington laid the cornerstone of the Capitol of the United States on these grounds.

"And it was here on November 17, 1800, that the second session of the Sixth Congress of the United States met for the first time in the infant city of Washington.

"In 1851 President Millard Fillmore laid the second cornerstone on these grounds.

"Today, on July 4, 1959, we meet to lay a cornerstone for the rebuilt east front of this Capitol.

"This is a building of which all citizens of the United States—whether they have seen it or not—are proud.

"The Capitol of the United States houses the legislative branch of the Government which must act before there are any laws to execute or any laws to interpret.

"We trust that this whole building will stand throughout the ages, and it will unless irresponsible and mad men determine to destroy everything. We express the hope here today that this will never happen.

"So on this another historic day of the laying of the third cornerstone on this hill, we have another President of the United States to lay this stone in the person of the present President of the United States, the Honorable Dwight D. Eisenhower."

ADDRESS BY THE PRESIDENT OF THE UNITED STATES, HON. DWIGHT D. EISENHOWER

"Mr. Speaker, Mr. Stewart, distinguished guests, ladies and gentlemen, we are here today for the ceremonial laying of a cornerstone—a ceremony that has twice before marked the history of this building, the Capitol of the United States of America.

"By this symbolic gesture we do more than to recognize and provide for new needs resulting from national growth. We rededicate ourselves to the principle of representative government. We reaffirm our devotion to the values upon which this Republic rests.

"These values, unequivocally stated in the Declaration of Independence, in our Bill of Rights, and in other parts of that remarkable document, the American Constitution—are both the hallmarks and the hand tools of freedom. In a free society they must be prized and they must be used, lest freedom wither.

"In the collision of ideas between freedom and despotism, freedom is neither won nor held in a climate of spiritual stalemate. Its preservation is a many-sided and never-ending task.

"Complacency today speeds the erosion of liberty tomorrow. Inertia will destroy it; dynamic dedication assures its lasting vitality.

"On this Fourth of July, 183 years since our Nation embarked on its course of independence, we are reminded that our Declaration of Independence did more than galvanize the idea of freedom for our own people.

"'The generation that produced our Declaration of Independence,' said Lincoln, 'meant to set up a standard maximum for free society which should be constantly looked to, constantly proximated, and thereby constantly spreading and deepening its influence and augmenting the happiness and value of life to all people of all colors everywhere.'

"Each of these three cornerstone ceremonies has marked stages of America's evolution.

"In 1793, when President Washington laid the cornerstone of the original Capitol Building, a young but vigorous Nation was struggling into political existence.

"Fifty-eight years later, when President Fillmore laid the cornerstone of the House and Senate wings, the Nation was no longer in its infancy.

"On that day a proud Daniel Webster extolled the progress of the United States since 1793—from 15 States to 31; from 209 post offices to 21,000; from 35 colleges to 694—and why it had become necessary to enlarge the Capitol Building.

"Again this ceremony represents growth. America has come a long way since the laying of the 1851 cornerstone.

"Yet it is somehow unnecessary to commemorate this occasion by reminding ourselves of the bare statistics of cultural and material growth—for example, that our Nation's colleges and universities have grown from 694 to 1,957.

"Rather, we come here today to remind ourselves of our responsibilities, to the world and to ourselves.

"We come here to rekindle our faith that this building, the central home of America's representative Government, will house wisdom, understanding, and compassion for all people.

"Finally, we gather on this Fourth of July, as our forefathers did at Independence Hall, more than ninescore years ago, to emulate them as they pledge their common adherence to basic principles, and their common obligation to uphold these principles regardless of differences of opinion, even of policy.

"So long as we never waver in our devotion to the values on which these men began the building of the Nation, no differences of partisan policy or partisan feeling can cause America to falter on her upward course.

"As we now lay this new cornerstone in the U.S. Capitol, we are grateful for the courageous beginnings of a new Nation, represented by the first stone; for the pioneering effort and the bountiful growth represented by the second; and for the confidence that if we make ourselves worthy, this third stone will forever symbolize America's unending purpose to lead along the path toward peace, with justice for all peoples."

LAYING OF THE CORNERSTONE

At this point, Mr. Stewart stated, "We will now proceed with the laying of the cornerstone."

The President of the United States, accompanied by Speaker Rayburn, Senator Dirksen, and Mr. Stewart, descended to the site of the cornerstone and proceeded to lay the cornerstone, spreading mortar with the trowel used by the first President of the United States, Hon. George Washington, in laying the first cornerstone of the Capitol in 1793, and also using the gavel used by the first President of the United States on that occasion and by President Millard Fillmore on July 4, 1851, at the laying of the cornerstone of the Senate and House wings of the Capitol. The trowel and the gavel were presented to the President by the Grand Master of Masons, Reuben A. Bogley, Jr., and were returned to him by the President after their use.

At this point in the proceedings the President departed from the Capitol.

MASONIC CEREMONIES

Following the convening of the Grand Lodge of Masons of the District of Columbia

by Most Worshipful Brother Reuben A. Bogley, Jr., Grand Master, at the Masonic Temple, on Saturday, July 4, 1959, at 10:30 a.m., the grand lodge proceeded to the site of the cornerstone commemorating the construction of the east front of the U.S. Capitol at Washington, D.C., to perform their ritual in laying the cornerstone in accordance with the principles and practices of the craft of Freemasonry. This ceremony was performed at the request of the Commission for the Extension of the U.S. Capitol.

The cornerstone, lowered during the ceremonies attended by the President, was raised and the Masonic ceremonies attending the cornerstone laying were commenced.

The Grand Master of Masons accompanied by the officers of the Grand Lodge surrounded the cornerstone for the purpose of carrying out the Masonic service. In calling attention to the fact that the Grand Lodge was assembled for the purpose of laying the cornerstone of the U.S. Capitol and that the members, as Masons, being taught that we should implore the aid of our Supreme Grand Master in all laudable undertakings, requested all to join the reverend and worshipful grand chaplain as he invoked the blessing of Almighty God. The prayer of the grand chaplain, Rev. Edward Gardiner Latch, D.D., follows:

"O, Eternal God, who art the source of life, the supporter of freemen and the Saviour of the world—we pause in silence before thee and before this undertaking, invoking Thy blessing upon us and praying that in that spirit we may do our work.

"We are mindful of the experiences which bind us together and for our faith in democracy which makes us one people. Petty are the vices which divide us and great are the virtues which unite us. So, we pray, remove from our mind all narrowness, all prejudice, all fear, and may the power of a passion for the princely principles of goodness, truth, and beauty rule all our minds and all our hearts to the end that we may now and ever be the land of the free and the home of the brave.

"May this cornerstone be the symbol of our spiritual foundation, making and keeping us, as a people, the champion of justice, the safeguard of freedom, and the guarantee of democracy in our world. We pray in the name of Him by whose truth men shall be free—Jesus Christ our Lord. Amen."

The grand master then proceeded with the prescribed rites and ceremonies of the Masonic fraternity, the whole of which follows:

"GRAND MASTER. Right Worshipful Grand Treasurer, you will deposit in the case the several articles as they are called by the Right Worshipful Grand Secretary."

The following Masonic deposits were made:

Masonic Code, District of Columbia, 1951 edition.

Proceedings of the grand lodge, 1958.

Masonic calendar, 1959.

Replica of Bible upon which Brother George Washington took the oath of office as the first President of the United States on April 30, 1789.

History of Fredericksburg Lodge No. 4.

Replica of the trowel employed by Brother George Washington at the laying of the original cornerstone of the U.S. Capitol on September 18, 1793.

Chronological facts concerning the George Washington gavel used by Brother George Washington on September 18, 1793.

History of Potomac Lodge No. 5.

The following deposit was made by the Chairman of the Commission, Hon. SAM RAYBURN: Sealed envelope containing a copy of his remarks.

The following deposits were made by the Architect of the Capitol, Hon. J. George Stewart:

Articles deposited in the cornerstone of the extension of the east central front of the U.S. Capitol, July 4, 1959

House document No. 385, 58th Congress, 3d session: Extension and completion of the Capitol Building, report of the Joint Commission, March 3, 1905.

Hearings before the subcommittee of the Committee on Appropriations, House of Representatives, 84th Congress, 1st session: Legislative appropriations for 1956, request for authorization of the project and for $5 million to start project.

Hearings before a subcommittee of the Committee on Appropriations, U.S. Senate, 84th Congress, 1st session on H.R. 7117, "Making appropriations for the legislative branch for the fiscal year ending June 30, 1956, and for other purposes": Legislative branch appropriations, 1956, request for authorization of the project and for $5 million to start project.

Hearing before a subcommittee of the Committee on Public Works, U.S. Senate, 85th Congress, 2d session, on S. 2883, "A bill to amend the Legislative Appropriation Act, 1956, to eliminate the requirement that the extension, reconstruction, and replacement of the central portion of the U.S. Capitol be in substantial accord with scheme B of the architectural plan of March 3, 1905," February 17, 1958: Extension of the U.S. Capitol Building.

Legislation Appropriation Act, 1956, Public Law 242, 84th Congress, 1st session, approved August 5, 1955, H.R. 7117, "An act making appropriations for the legislative branch for the fiscal year ending June 30, 1956, and for other purposes": Authorizing extension of the Capitol project. Creating Commission to direct the project. Providing initial appropriation of $5 million.

Urgent Deficiency Appropriation Act, 1956, Public Law 406, 84th Congress, 2d session, approved February 14, 1956, H.R. 9063, "An act making appropriations for the fiscal year ending June 30, 1956, and for other purposes": Amending original law, Public 242, 84th Congress, 1st session. Granting indefinite contract authority.

Mimeographed statement setting forth text of Public Law 242, 84th Congress, 1st session, as amended by Public Law 406, 84th Congress, 2d session.

Legislative Branch Appropriation Act, 1957, Public Law 624, 84th Congress, 2d session, approved June 27, 1956, H.R. 11473 "An act making appropriations for the legislative branch for the fiscal year ending June 30, 1957, and for other purposes": Providing additional appropriation of $12 million.

Second Supplemental Appropriation Act, 1959, Public Law 86-30, 86th Congress, approved May 20, 1959, H.R. 5916, "An act making supplemental appropriations for the fiscal year ending June 30, 1959, and for other purposes": Providing additional appropriation of $4 million.

Minutes of meetings, Commission for Extension of the U.S. Capitol: First meeting, March 26, 1956; second meeting, August 30, 1957; third meeting, February 21, 1958.

Directives of the Commission for the Extension of the U.S. Capitol to the Architect of the Capitol authorizing letting of contracts and performance of work under the project: August 5, 1955; July 24, 1956; October 28, 1957; February 24, 1958; March 25, 1959.

Press releases issued by the Architect of the Capitol at the direction of the Commission for Extension of the U.S. Capitol: April 20, 1956; February 21, 1958; June 23, 1959.

Reports:

Report of the Architect of the Capitol on the preliminary plans and estimates of cost for the extension of the U.S. Capitol, August 1957.

Copy of foregoing report as carried in the CONGRESSIONAL RECORD, proceedings and debates of the 85th Congress, 1st session, Washington, Friday, August 30, 1957, pages 15151 to 15158.

Report of the Architect of the Capitol dated February 13, 1958, to the Senate Committee on Public Works on the project.

Report of the Architect of the Capitol, March 24, 1958, to the Chairman of the Commission for Extension of the U.S. Capitol, transmitting a report of the Associate Architects for the extension of the Capitol project, supplementing report of the Architect of the Capitol, dated February 13, 1958, to the Senate Committee on Public Works.

Report of the Architect of the Capitol on the status of the project as of May 8, 1959.

Other items:

Coin, bearing the name and bust of Millard Fillmore, found during excavations in the removal of the portico and steps.

Telephone directory, U.S. Senate, February 1959.

Telephone directory, U.S. House of Representatives, 86th Congress.

Copy of the official program of the cornerstone laying, July 4, 1959.

Speech of President Eisenhowever, autographed Dwight David Eisenhower, July 4, 1959, delivered at the ceremonies of the laying of the cornerstone July 4, 1959, taken from the lectern upon completion of the speech and deposited in the cornerstone. This speech was placed in an envelope.

Sealed envelopes from Members of Congress and others.

Weather map, July 4, 1959.

Newspaper accounts of the ceremonies.

Photographs:

East front of the Capitol prior to start of the project.

Groundbreaking, February 24, 1959.

East front of the Capitol with portico removed.

Signatures of the Architect of the Capitol, Assistant Architect, Second Assistant Architect, and other members of the office staff; names of east front project field employees; and a list of contractors working on the project and their employees.

The trowel was presented to the grand master, who explained: "The trowel will be used in spreading the cement which shall unite this building into one common mass. May the trowel symbolize to us the spreading of the cement of friendship and affection which should unite the brotherhood of man into a sacred band, among whom no contention should ever exist save that noble contention, or rather emulation, of who can best work and best agree."

Cement was first spread by the grand master and thereafter by Speaker Rayburn, Senator Dirksen, and Mr. Stewart, and the stone was lowered into place by three distinct motions to its proper position at the cornerstone of the foundation.

The Architect of the Capitol presented the working tools of the profession to the grand master, the square, the level, and the plumb, saying:

"Most Worshipful, the necessary preparations having been made for laying the foundation-stone of this edifice, I present you the square, level, and plumb, those useful implements of the craft by which you will be able to ascertain that the material which is to constitute the chief cornerstone of the future edifice, and which you are about to lay in its appropriate position, is well formed, true, and trusty."

The grand master handed the square to the deputy grand master, the level to the senior grand warden, and the plumb to the junior grand warden:

"GRAND MASTER. Right Worshipful Deputy Grand Master, what is the proper implement of your office?

"DEPUTY GRAND MASTER. The square, Most Worshipful.

"GRAND MASTER. What are its moral and Masonic uses?

"DEPUTY GRAND MASTER. To square our actions by the square of virtue, and prove our work.

"GRAND MASTER. Apply the implement of your office to that portion of the foundation-stone that needs to be proved, and make report.

"DEPUTY GRAND MASTER. Most Worshipful, I find the stone to be square. The craftsmen have performed their duty.

"GRAND MASTER. Right Worshipful Senior Grand Warden, what is the proper implement of your office?

"SENIOR GRAND WARDEN. The level, Most Worshipful.

"GRAND MASTER. What is its Masonic use?

"SENIOR GRAND WARDEN. Morally it reminds us of equality, and its use is to prove horizontals.

"GRAND MASTER. Apply the implement of your office to the foundation stone and make report.

"SENIOR GRAND WARDEN. Most Worshipful, I find the stone to be level. The craftsmen have performed their duty.

"GRAND MASTER. Right Worshipful Junior Grand Warden, what is the proper implement of your office?

"JUNIOR GRAND WARDEN. The plumb, Most Worshipful.

"GRAND MASTER. What is it Masonic use?

"JUNIOR GRAND WARDEN. Morally it teaches rectitude of conduct, and its use is to try perpendiculars.

"GRAND MASTER. Apply the implement of your office to the several edges of the foundation stone, and make report.

"JUNIOR GRAND WARDEN. Most Worshipful, I find the stone to be plum. The craftsmen have performed their duty.

"GRAND MASTER. This cornerstone has been tested by the proper implements of operative masonry, and I find that the craftsmen have skillfully and faithfully performed their duty. I therefore declare the stone to be well formed, true and trusty, and correctly laid according to the rules of our ancient craft. May the all-bounteous Author of Nature assist in the erection and completion of this building, protecting the workmen from every accident, and may He long preserve this structure from decay."

At this point the symbolic use of corn, wine, and oil becomes a vital part of the ceremony, and is best described by the following wording of the Masonic ritual:

The deputy grand master presents to the grand master the vessel of corn, saying:

"DEPUTY GRAND MASTER. Most Worshipful Grand Master, it has been the immemorial custom to scatter corn as an emblem of nourishment. I therefore present you this vessel of corn."

The grand master scatters the corn upon the stone, saying:

"GRAND MASTER. In the name of the Great Jehovah, to whom be all honor and glory, I now scatter this corn, and invoke a continuation of the prosperity and manifold blessings which He has unceasingly bestowed upon our country and its people."

The senior grand warden presents the vessel of wine, saying:

"SENIOR GRAND WARDEN. Most Worshipful Grand master, wine, the emblem of refreshment, having been used mystically by our ancient brethren, I present you with this vessel of wine."

The grand master pours it upon the stone, saying:

"GRAND MASTER. In the name of the Holy Saints John, I pour out this wine to virtue. May the Giver of every good and perfect gift bless and prosper all our undertakings and inspire the present generation with wisdom and virtue to transmit to the latest posterity, unimpaired, so priceless a heritage.

The junior grand warden presents the vessel of oil, saying:

"JUNIOR GRAND WARDEN. Most Worshipful Grand Master, I present you, to be used according to ancient custom, this vessel of oil.

The grand master pours it upon the stone and extending his hands, says:

"GRAND MASTER. I pour out this oil, an emblem of joy. May health, prosperity, and peace, symbolized by corn, wine, and oil, plenteously abound throughout the length and breadth of our land. May the Great Ruler of the Universe bless and consecrate the edifice which shall rise on this foundation stone.

"Amen. So mote it be."

The grand master then strikes the stone three times with his gavel, and the brethren give the public grand honors three times.

These ceremonies having been completed the working tools were returned to the Architect, the grand master admonishing him in the following words:

"Worthy Brother having thus, as Grand Master of Masons, laid the foundation-stone of this structure, I now deliver these implements of your profession into your hands entrusting you with the superintendence and direction of the work, having full confidence in your skill and capacity to conduct the same."

The closing feature of the Masonic ritual is the charge addressed to all the people by the grand master. This charge follows:

"Ladies, gentlemen, and brethren, be it known unto you that we be lawful Masons, true and faithful to the laws of our country, and engaged by solemn obligations to aid in the erection of public buildings by placing in position the chief corner-stone whenever called upon to do so by those having charge of the same. These ceremonies which you have witnessed have come down to us from time immemorial, and are in themselves invaluable to us as purely symbolic of that spiritual building which each one of us is engaged in erecting during our natural life; and as in this temporal building about to be erected we have proved the chief corner-stone to be well formed, true, and trusty, let each one of us be sure that in the spiritual building our chief corner-stone be likewise well formed, true, and trusty."

Benediction

Upon conclusion of the Masonic ceremonies, Mr. Stewart asked Rev. Bernard Braskamp, the Chaplain of the House of Representatives, to offer the benediction.

Dr. Braskamp then pronounced the following benediction:

"Now may the Lord bless you and keep you; the Lord make His face to shine upon you and be gracious unto you; the Lord lift up the light of His countenance upon you and give you peace, through the merits and mediation of the Prince of Peace we ascribe unto God, the Supreme Builder and Ruler of the universe, all majesty, dominion, and power. Amen."

At the conclusion of the ceremonies the grand lodge returned to the Masonic Temple and was closed in due and ancient form by the grand master.

The officers of the grand lodge, F. A. & A. M., of the District of Columbia, are as follows, and were assisted in the ceremonies by three visiting grand masters:

Reuben A. Bogley, Jr., grand master; J. August Johnson, Jr., deputy grand master; Ralph W. Wolfe, senior grand warden; Convass B. Dean, junior grand warden; Raymond N. Babcock, grand secretary; Dean Hill Stanley, grand treasurer; George W. Feidt, grand lecturer; Edgar E. Bageant, grand lecturer emeritus; Edward G. Latch, grand chaplain; John H. Eiseman, senior grand deacon; Charles B. Gilley, junior grand deacon; Harry B. Savage, senior grand steward; Lex L. Dodds, junior grand steward; Richard H. Hart, grand marshal; Alfred J. Steffen, grand sword bearer; Charles T. Macdonald, grand pursuivant; Karl T. Weimar, Jr., grand tiler.

Assisting: S. Dexter Forbes, grand master of Virginia; A. Wayne Reed, grand master of Maryland; Charles W. Lewis, grand master of Delaware.

The masters, officers, and large numbers of members of the 48 constituent lodges under the jurisdiction of the grand lodge were present at the opening of the grand lodge and at the ceremonies on Capitol Hill, and rendered brotherly assistance and encouragement to the grand master.

Assisting in the Masonic ritual were the master and other officers of Fredericksburg Lodge No. 4, A.F. & A.M., of Fredericksburg, Va.; the master and brethren of St. Johns Lodge No. 1, A.Y.M. and F. & A.M., of New York City; the master and members of Potomac Lodge No. 5, F.A.A.M., of Washington, D.C.; and the master and members of Alexandria-Washington Lodge No. 22, A.F. & A.M., of Alexandria, Va. These brethren brought with them the masonic treasures now entrusted to their keeping and described in the accompanying history.

"Bibles, travel, square, level, and gavel

"The Great Light of Freemasonry, the Holy Bible, used in these ceremonies comes to the Grand Lodge of Masons of the District of Columbia through the courtesy of St. John's Lodge No. 1, A.Y.M. and F. & A.M., of New York City, and it was upon this Bible that George Washington took the oath of office as the first President of the United States on April 30, 1789, in New York City, and also succeeding Presidents, upon request, the last being President Dwight D. Eisenhower on January 20, 1953.

"The other Holy Bible used by the grand chaplain is the property of Fredericksburg Lodge No. 4, A.F. & A.M., of Fredericksburg, Va., comes through their courtesy, and is the Bible upon which President George Washington assumed his masonic obligations.

"The trowel, the square, and the level are used through the gracious cooperation of Alexandria-Washington Lodge No. 22, A.F. & A.M., of Alexandria, Va. These implements were employed by Most Worshipful Brother George Washington, designated Grand Master of Masons, on the occasion of the laying of the original cornerstone of the U.S. Capitol on September 18, 1793, and by succeeding Presidents in similar ceremonies at other U.S. Government structures, and by officiating dignitaries to lay cornerstones of churches, schools, cathedrals, masonic and other temples. The plumb is the proud possession of the Grand Lodge of the District of Columbia, and has been used by dignitaries of public and semipublic office, and by grand masters of Masons for many years.

"The gavel is the property of Potomac Lodge No. 5, F.A.A.M., of Washington, D.C., and is used today through the courtesy of that lodge. The gavel was first used by President George Washington at the original cornerstone laying of this building on September 18, 1793, and on numerous similar occasions by other Government officials, including President Millard Fillmore on July 4, 1851."

Others appointed by the grand master to assist the Grand Lodge of the District of Columbia are as follows:

Bearer of the great lights: Brothers Francis W. Springer, master (St. John's Lodge No. 1, New York City) and Edward H. Cann, grand junior warden (Fredericksburg Lodge No. 4).

Bearer of the lesser lights: Brothers J. August Johnson, deputy grand master; Ralph M. Wolfe, grand senior warden; Conbass B. Dean, grand junior warden.

Trowel: Brother Odie R. Howell, Jr., master (Alexandria-Washington Lodge No. 22).

Gavel: Brother James R. Hughes, master (Potomac Lodge No. 5).

Square: Brother Reuben A. Bogley, Sr., past grand master.

Level: Brother Renah F. Camalier, past grand master.

Plumb: Brother William E. Schooley, past grand master.

Corn: Brother Horace S. Allen, past grand master, Delaware.

Wine: Brother A. Wayne Reed, grand master of Maryland.

Oil: Brother S. Dexter Forbes, grand master of Virginia.

Masonic committee: Renah F. Camalier, past grand master, chairman; Reuben A. Bogley, Jr., grand master; Reuben A. Bogley, Sr., past grand master; William E. Schooley, past grand master; Edwin S. Bettelheim, Jr., past grand master; R. Baker Harris, past grand master; Raymond N. Babcock, grand secretary; Samuel T. Beacham, past master; Crawford C. Heerlein, past master; James C. Smith.

SPEAKER SAM RAYBURN'S ROLE

I think it is fitting and proper to call to the attention of the House, and through the CONGRESSIONAL RECORD, to the attention of future historians, the leading role played by Speaker SAM RAYBURN in this enormous undertaking.

"Mr. SAM'S" love of the historic, the traditional, the familiar is legendary. He is a man with great reverence for the past, and his feeling for this Capitol Building and its traditions might be likened to the pride which an archbishop has for his ancient cathedral.

But the Speaker also is a great believer in commonsense. When he became convinced by the testimony of expert engineers and architects that an extension of the east front was the wise, sensible thing to do, he gave the project his undivided backing.

For a time a great storm broke out with angry protests from some newspapers, private citizens, and the leadership of the American Institute of Architects. One newspaper declared, "The Capitol does not belong to SAM RAYBURN."

On the floor of this House, the Speaker replied, "Propaganda does not drive me around, because I do not know anybody around here who can take criticism better than I can. I am not afraid of it. When I am right, as I think I am on this proposition, nobody is going to drive me off it."

For the past 4 years Speaker RAYBURN has devoted countless hours to this east front project, watching each detail of its progress. People around the Capitol know him as the most active of all the "sidewalk superintendents" who are watching this mammoth undertaking with great fascination and a realization of its historic importance.

On August 5, 1955, the President signed the bill setting up the Commission for Extension of the U.S. Capitol which put this project into motion. When the Commission had its organization meeting on March 26, 1956, Speaker RAYBURN was unanimously elected its chairman, a position he has held ever since. He was nominated by the Honorable JOSEPH W. MARTIN, of Massachusetts, who was minority leader of the House of Representatives.

In the summer of 1956 the first contracts were let for the east front project, and the Commission made it clear that it was determined to have it completed in time for the inauguration of the next President of the United States in January, 1961.

In the spring of 1958 a great storm of protest arose over the carrying out of the project. Bills were introduced in both the House of Representatives and the Senate to halt the project.

I had introduced such a bill in the House of Representatives, but after making an exhaustive personal study of the matter and after personally inspecting the building and learning firsthand of the absolute necessity for the project, I announced to the House of Representatives on March 31, 1958, that I was withdrawing my bill, giving my reasons for it.

Speaker RAYBURN took the floor to discuss the project.

"Architects of great worth who have looked at it say that it (the east front) is a hazard to human life. They say it may fall down. Suppose that the best judgment of men everywhere is that this is a hazard and that it should come down. What difference is there between extending it out 32½ feet and doing this necessary work for the convenience of Members, and reestablishing it where it is?" he asked.

The Senate voted down, 47 to 32, an effort to halt the project.

On May 28, 1958, Speaker RAYBURN appeared before the National Press Club for the first time in many years, and he chose the east front extension as the subject of his address.

He pointed out that the most important purpose of the project is the preservation of the building itself, but that additional advantages of the plan are the correction of the architectural defect caused by the overhanging dome of the Capitol, and also the creation of desperately needed additional space in the Capitol for work purposes.

The Speaker reminded his listeners that "our Capitol was not a building constructed in its entirety at one date, to remain frozen and unchanged in any detail for all time to come. It has been added to, altered, and improved as commonsense and changing needs dictated."

RAYBURN declared that "any time I am convinced that the Congress needs more room to discharge its work for the American public, I will ask each and every time for additional space."

He recalled the statement of a colleague that "the Capitol is a workshop, not a museum."

On August 26, 1958, the first scaffolding arrived to be used in the dismantling of the old east front, which began immediately thereafter.

The ground breaking for the new east front took place on February 24, 1959, when Speaker RAYBURN used a silver spade to break the ground.

In his speech on that occasion he declared that "I am one of those who has a great regard and respect for tradition. I like the old things if they are historic. I want them to be used as long as it is possible to use them. We did not remove this east front because we needed more room. It was removed principally because it was in a dangerous condition.

I might say that in this building is housed the legislative branch of the Government, that part of the Government that is closest to the people because it comes directly from the people. The legislative branch of the Government is the most important branch of the Government because there would be no laws to execute if the legislation were not passed by the Congress. There would be no laws to interpret if the Congress did not pass laws to be interpreted," the Speaker continued.

"The east front of the Capitol, when this work is over, will be built of beautiful, light gray, almost white, Georgia marble. And it is my hope that we will be able to sandblast the Senate and the House wings, because many people do not know that they are of light Massachusetts marble. When this old hill has sitting upon it this magnificent, almost white structure, it will be the pride and joy of everyone."

J. GEORGE STEWART, ARCHITECT OF THE CAPITOL

On October 1, 1954, J. George Stewart was appointed by the President of the United States as Architect of the Capitol. Upon assuming office he became the eighth man to hold the position since it was established, in 1793—following William Thornton, Benjamin Latrobe, Charles Bulfinch, Thomas U. Walter, Edward Clark, Elliott Woods, and David Lynn. He is the second man from the State of Delaware to hold this office, William Thornton having become a citizen of the United States in Delaware on January 7, 1788.

Mr. Stewart serves as a member of the Commission for Extension of the U.S. Capitol, the Capitol Police Board, and the District of Columbia Zoning Commission.

He is charged with the structural and mechanical care of the following buildings: The Capitol, Senate Office Buildings, House Office Buildings, Capitol Powerplant, Legislative Garage, Robert A. Taft Memorial, Library of Congress Buildings, U.S. Supreme Court Building, and the U.S. Court of Claims Buildings.

Mr. Stewart is also charged with the operation of the House Restaurants and the U.S. Botanic Garden (as Acting Director).

He is responsible for the acquisition of real property and for the planning and construction of buildings and other improvements committed to his care by the Congress. At present the major construction projects are: Construction and equipment of the nearly completed additional Senate Office Building; remodeling of the Old Senate Office Building; construction and equipment of an additional House Office Building and remodeling of the present House Office Buildings; development of additional areas as part of the Capitol Grounds; construction of security vaults and underground transportation systems; extension and completion of the Capitol Building; and changes and improvements to the Capitol Powerplant.

The Architect of the Capitol is in charge of the works of art in the Capitol, totaling about 340; administers the laws governing Statuary Hall; arranges for the reception of new statues from the States, with the attendant ceremonies of acceptance.

In cooperation with the proper authorities, he makes arrangements for ceremonies and ceremonials held in the Capitol and on the grounds and for the reception of visiting dignitaries.

Every 4 years, the inaugural stands are built under his direction and he cooperates with other officials in carrying forward the inaugural ceremonies at the Capitol.

Mr. Stewart was born in Wilmington, Del. He was educated in the public schools of that city and studied at the University of Delaware in the engineering school from 1907 to 1910. He left the university in 1910, without taking his degree, to join his father's construction firm—Stewart and Donohue. In September of last year, the University of Delaware admitted him to the degree of bachelor of science in engineering, class of 1911. The citation for conferring this degree stated that: "In his position as Architect of the Capitol * * * he has deeply impressed those with whom he has worked * * * as a man of sincerity, vision and courage.

"John George Stewart, it is now 47 years since you normally would have received your degree. You have richly earned it by your accomplishments."

In his association with his father's firm, he served in all departments of his general construction business—as water boy, timekeeper, apprentice mason, gang foreman, superintendent, partner, and, finally, as president of the company.

From January 1935 to January 1937, Mr. Stewart served as Representative in Congress from the State of Delaware.

From January 1947 to February 1951, he was with the District of Columbia Committee of the U.S. Senate. He served as clerk of the committee for 2 years. Be-

ginning in 1949, he served as minority clerk and professional staff assistant.

In 1952 and 1953 he was engineer consultant to the Lands Division, Department of Justice. He was also engineer consultant for the Corps of Engineers (Washington District).

Mr. Stewart is licensed in the State of Delaware as a professional engineer.

In May of 1957, he was elected an honorary member of the American Institute of Architects as "one who has rendered distinguished service to the advancement of architecture and the allied arts and sciences."

Other activities:

Member of Delaware State Emergency Relief Commission, 1931 and 1932. Appointed by Hon. C. Douglass Buck, Governor of Delaware.

Member of original Delaware State Athletic Commission, 1932 to 1934. Appointed by Hon. C. Douglass Buck, Governor of Delaware.

Foreman of New Castle County, Del., Grand Jury, 1939.

For 5 years, chairman of building and grounds committee, Wilmington General Hospital.

That Impossible Inflation

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 24, 1959

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I desire to insert the following editorial which appeared in the New York Times on June 24, 1959:

THAT IMPOSSIBLE INFLATION

In the month April 15–May 15 the consumer price index of the Bureau of Labor Statistics broke out of the narrow range of 123.6–123.9 to which it had been confined since May of last year.

Now there is no basis in this fact for the conclusion that we are off on a new inflation spree. But the situation focuses attention on the statement made by Senator PAUL DOUGLAS 2 weeks ago in criticizing the President's proposal to raise the ceiling on interest rates on the Government's long-term debt. "A great deal of the present difficulty," declared Mr. DOUGLAS, stems from the "'scare' talk about 'monetary' inflation, which does not now exist, and a refusal to do anything about the 'administered' price inflation, which does exist. The administration has been shouting 'inflation, inflation,' so long and so hard that a great many people in this country have been unnecessarily frightened concerning the value of the dollar and the stability of the Government."

We venture to suggest that if the country has been frightened about inflation it has not been because the President has called attention to the actions of Senator DOUGLAS and his spending-minded colleagues in Congress. We would like to suggest that if the country has been frightened it is because of the actions themselves—the continuous attacks on the monetary authorities for refusing to pursue the policy of unlimited easy money, the deficit of $13 billion for the fiscal year soon coming to an end, the insistence by this group on trying to keep active the long discredited theory that inflation can come into being only in the presence of the full employment of the country's labor force and productive facilities and the naive attempt to justify a program of perpetual pump priming by invoking the equally discredited quantity theory of money.

Both the Senator from Illinois and the joint congressional committee of which he is chairman completely missed the boat in their report on the President's Economic Report made public in March. They are not likely to recover their lost prestige by their present extraordinary position that (1) inflation is a practical impossibility, and that (2) if we do have inflation the responsibility will not be that of the spenders in Congress who, in a period of full-fledged recovery, have dedicated themselves to a policy of continuous cheap money and Government spending, but that of the President, who was inconsiderate enough to call public attention to the inflationary nature of the program.

Two Soviet Visits

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, July 13, 1959

Mr. JAVITS. Mr. President, the good will shown the Bolshoi Ballet by the American people and our appreciation of their art, I am sure, have indicated to the Russian people our will to increase understanding, in the same way that the enthusiastic reception accorded in Moscow to American pianist Van Cliburn communicated itself to us. Our receiving a diplomatic visitor is not inconsistent with our determination to defend freedom in our relations with the Soviet, nor is the American gracious reception to the Bolshoi dance group inconsistent with our inborn rejection of the Communist philosophy and that for which it stands.

Life magazine has published an article regarding Sol Hurok, the American who arranged for the Bolshoi Ballet to come to this country. It should be noted that the Bolshoi came here on a commercial basis, and not under official U.S. sponsorship and that it worked well and tastefully. Mr. Hurok has served well U.S.-U.S.S.R. cultural interchange.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IMPRESARIO WHO BOOKED THE BOLSHOI HUROK'S BALLET COUP CAPS 50-YEAR CAREER

(by Joseph Roddy)

As Russia's incomparable Bolshoi Ballet makes its four-city tour of the United States, it is accompanied by a stocky, pashalike man wearing a black crush hat and carrying a gold-topped cane. Just as he did for 21 nights at New York's Metropolitan Opera House, he will probably attend every performance, and each evening, from a strategically located box seat, will applaud lustily and beam approvingly at the audience, every member of which he considers his personal guest.

Sol Hurok is fully entitled to both his enthusiasm and his proprietary attitude, for the Bolshoi's American appearance is entirely his creation, the final result of more than 30 years of labor and the crowning achievement of his career as the great impresario.

The august pronouncement "S. Hurok presents" has appeared at the top of posters and playbills for so long that many concertgoers think the name must be some form of typographical invention. Hurok is, however, very real: he lives well and breathes deeply and he almost always gets very worked up about what S. Hurok presents. He awaited the Bolshoi's opening with unabashed eagerness. "For this," he said, "people have been waiting 50 years. When the curtain goes up there could be nothing but horses on the stage and they'll still think it's grand." The Bolshoi opening (Life, April 27) had no horses, but it had almost everything else an impresario could ask for, including some of the most ecstatic reviews the ballet world has ever seen.

THE LIMELIGHT PLUNGER

Hurok is in every sense a true impresario: A show-business producer of flamboyant mien, vast ambition, and an exhilarating conviction. The conviction is that any stage or concert attraction the impresario chooses to present is made all the more attractive by the fact that he has chosen it. Unlike ordinary producers who collect money from others to put on shows that have profit-making possibilities, the impresario is a limelight plunger who pours his own money into productions of his own choice. All the risks and all the rewards are his alone.

P. T. Barnum, a roistering connoisseur of circus freaks in the 1950's, was the first American of positive impresario stature. Sergei Diaghilev, an enormous Russian who hobnobbed with Stravinsky, Piscasso, and Nijinsky, and who produced ballets and operas throughout Europe in the early 1900's, was the Continent's best specimen of the breed. Both Billy Rose and Mike Todd showed early promise, but Rose is now inactive and Todd died before he could reach full impresario status. Today Hurok stands virtually alone on his lofty pinnacle.

"In a business I would be a millionaire 10 times over," Hurok says, "but this is not a business, it is a disease." The short, rotund Russian, who is now 71, has brought some of Barnum's broad-gaged manner to his trade. Impresarios are expected to live and talk big, and Hurok plays the role with gusto. Almost every day he lunches at New York's expensive Pavillon restaurant where, between forkfuls of boeuf à la mode, he utters melancholy pronouncements on the state of the world. Mankind is in such bad shape, in fact, that it is in desperate need of more Hurok attractions, especially the ballet, which Hurok calls "bolly," and dramatic presentations like England's Old Vic repertory company, which he calls "Uld Wick."

Through his heavy horn-rimmed glasses, Hurok views the artistic world as a patchwork of music, drama, or dance attractions waiting to be found worthy of the "S. Hurok presents" label. To sign up those that are worthy, Hurok has been ranging the world for the last 50 years looking for the singers, instrumentalists, dancers, or actors who can meet his standards and yield him about 15 percent of their gross at the boxoffice.

Hurok's 35-man New York staff, aided by scouts in Europe, turns up the prospects, but Hurok alone makes the choices. To do that, he temporarily divests himself of his impresario manner and plays the role of the average customer looking for his money's worth. Arriving unannounced at a prospect's concert or recital, Hurok pays his way into the theater and, while being shown to his seat, plots out his path to the nearest exit in case he should find himself bored. When the performance begins Hurok waits to see what effect the artist will have on him. As he expresses it, "I have to feel them my-

self." If the right kind of feeling comes over him, Hurok then looks about the hall to see if the same thing is happening to the rest of the customers. If there is complete conformity between what Hurok feels and the audience shows, he will sit through the entire performance and drop back stage afterward, resuming his impresario manner and proposing a contract. If there is not, he heads unobtrusively but swiftly for the exit.

Over the years the system has worked amazingly well, although Hurok has had his share of magnificent flops. In 1926 he confidently signed up the Habimah Players from the Moscow Art Theater, and when the troupe opened at the Mansfield Theater in New York just 39 paying customers were in their seats. Hurok was on hand to count them because he had not been able to bear it any longer in Chicago, where an S. Hurok touring opera company was singing Boris Godunov and losing thousands of dollars for him every week. Says Hurok today, "When people don't want to come, nothing will stop them."

Hurok got his start in 1908 signing up free performances for political rallies in Brooklyn. A 20-year-old immigrant from Russia, he had skipped out of his father's hardware business in the Ukrainian town of Pogar 2 years previously and got right back into the hardware line in lower New York. On Sundays he would hawk silverware to afford the concert tickets he needed to size up the artists who might help his political candidates. Presently Hurok decided that if he could get performers to play for him free at a ward hall, he could probably get them to play for him for money at Carnegie Hall.

Violinist Efrem Zimbalist, a fellow Russian immigrant, was Sol's first bigtime attraction. That was in 1912 and at the time the impresario could devote only lunch hours and nights to booking concerts because he was busy the rest of the time selling nuts and bolts in the hardware store. But by 1916 he was able to switch full time to being an impresario and he soon signed up such notables as the great Austrian contralto Ernestine Schumann-Heink, the eminent Russian basso Feodor Challapin and the famous Russian ballarina Anna Pavlova. Over the years Hurok Attractions (agents merely have clients, but impresarios have attractions) have given more than 100,000 performances. Pianist Artur Rubinstein, violinist Isaac Stern, guitarist Andres Segovia, singers Marian Anderson, Jan Peerce, and Roberta Peters, monologist Emlyn Williams—all have borne the label. Hurok regards all his performers as the world's finest artists and himself as a part of their acts.

EXPLAINING ISADORA TO BOSTON

Like any impresario worth his gold-topped cane, Hurok has had to learn to live with crisis. One day back in 1922 he heard with horror that one of his stars, the celebrated dancer Isadora Duncan, had denounced her audience in Boston for what she called its false puritanism and had showed the intensity of her beliefs by baring her bosom. The late Mayor James Michael Curley retaliated by ordering Isadora to leave town, and Hurok had to race to Boston to try to explain Isadora to the city. He has since helped shovel out snowbound ballerinas, returned Chicago hotel towels stolen by a basso, built stages on a day's notice in Mississippi, and even done his best to reconcile a pair of enraged Russian choreographers who were about to wage a pistol duel in Central Park.

But there have been rewards as well as crises. Hurok loves to hobnob with his eminent attractions, and among his proudest possessions are pictures of him at parties waltzing with British ballerinas Margot Fonteyn and Moira Shearer and doing the conga with Katherine Dunham. He only wishes he had brought a photographer along with him the time he foxtrotted with Anna Pavlova at the Palisades Amusement Park.

The relationship between Hurok and many of his artists is less personal now than it was years ago, for these days he tends to conduct most of his transactions with their governments. Most ballet troupes and repertory theaters outside the United States are state-supported ventures, and Hurok's manipulations to get them here under his private auspices have already produced the first American appearances of the Royal Ballet (once the Sadler's Wells) and the Old Vic from London, the Comédie Française from Paris, the Inbal Dancers from Tel Aviv and the Kabuki players from Tokyo. The Hurok eye for a new act has not lost its sharpness during these high-level transactions. In London some years ago he watched the changing of the guard at Buckingham Palace and took an old showman's fancy to the paradings of the Guards regiments. In a flash he decided that such pageantry had enough box-office potential to pack Madison Square Garden five times straight at a $6 top. He was right: for the past 4 years Americans have delightedly watched the Scots Guards and other bagpiping groups by courtesy of Hurok. "Hurok is the sort of fellow," one of his friends says, "who thinks about the 42d Airborne Division a lot differently from the way you or I do."

Although he has had great success in dealing with the artists and governments of many countries, Hurok for years has had a special compulsion to acquaint American audiences with the best things from his Russian homeland, and that drive is what finally resulted in the Bolshoi Ballet's coming to the United States this spring. Back in 1929 Hurok had the Bolshoi signed up, but at the last minute the deal fell through. It has taken him 30 years to make good on it.

"Believe me," said the impresario recently, "if I would know in advance the trouble I am having to get the Bolshoi, I could put up a 100-story building instead." In 1954 when Hurok, for the hundredth time, asked the Russian Government for the Bolshoi Ballet, he was told he could have it—but first he must bring over the Moiseyev Dancers, a much less famous troupe. The Moiseyev tour last year was a brilliant financial success. But Moscow still stalled: Hurok could have the Bolshoi, yes, but now he must sign up the Beryozka Folk Dancers, a relatively obscure band of 53 women and 5 accompanists. He did so, and again the reception was excellent.

Finally last November Hurok thought he had the Bolshoi sewed up. Travel arrangement were made and theaters booked. Everything seemed set. Then it was all off: the troupe wanted to prepare a new work for its American tour and would postpone its visit to the fall. In January the word was yes again, in February it was no again. Hurok in despair dropped the option he had on the Metropolitan Opera House for April.

It was only late in February that the final okay came. Presumably it was prompted by the enthusiastic reception that Soviet Deputy Premier Anastas Mikoyan saw the Beryozka Dancers receive in Chicago during his U.S. tour. Hurok hastily renewed his option on the Metropolitan and triumphantly unveiled the Russians there last month. Even so he knows his troubles are not over. When the Bolshoi was in London in 1956, anti-Communist literature tossed into the troupe's buses upset the cast, and one day a dancer found bits of broken glass in a dish of ice cream, leading the troupe to suspect sabotage. "I know what will happen," says Hurok. "Someone gets a bad ice cream here and Khrushchev calls up Hurok."

Although the old impresario has now landed his most sought-after catch, he has no intention of retiring. To him the world's best hope for peace is the kind of cultural exchange that he so splendidly provides. The Moiseyev dancers were delighted by what they saw in the United States and Hurok hopes the Bolshoi will be too. In July he will bring over still another group of Russian dancers and singers. After that, who knows? Some Hurok observers suspect that the impresario has his eyes on even bigger things. "Do you suppose it's the summit conference?" one of them asked. "Think of the billing. S. Hurok presents—The heads of state."

Address by Dr. O. Meredith Wilson to 1959 Graduation Class of University of Oregon

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, July 13, 1959

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a moving and thoughtful charge to the 1959 graduating class of the University of Oregon, given by Dr. O. Meredith Wilson, president of the University of Oregon. It is a challenge, as well.

Dr. Wilson's address is particularly significant in this centennial year of the State of Oregon, because he has emphasized the historic implications of the westward movement which brought frontiersmen to search for the Northwest Passage, for the elusive Columbia River and for a route across the continent. As Oregon once pioneered in settlement of the wilderness, our State now leads the way in many important educational advancements—as demonstrated by the address which I herewith present by the able president of the University of Oregon.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY DR. O. MEREDITH WILSON TO 1959 GRADUATION CLASS OF UNIVERSITY OF OREGON

We are met together in the centennial year of our State, the occasion being to acknowledge the years of serious and productive intellectual inquiry by our graduating classes. In addition to those who are honored here today, we have earlier this week in Portland, in appropriate and separate ceremonies, conferred University of Oregon degrees upon 226 men and women, among them 62 nurses, 68 doctors of dentistry, 66 doctors of medicine. The cumulative figure for degrees awarded in these four ceremonies, of which this event is climax, will be 1,722.

You new alumni are a cosmopolitan company. Among you are represented citizens of 39 States and 26 foreign countries. You are joining a distinguished cavalcade of more than 34,000 who already hold degrees from the University of Oregon, and an additional 100,000 who, for less than the years required to earn a degree, have attended this university and take pride in the name of Oregon.

In a few moments you candidates will march by to receive your degrees. It, there-

fore, becomes my obligation to charge you with responsibilities appropriate to your expected new honors and status. Since these new responsibilities should logically follow from the education you have received, it would be well to begin with what you are.

The late Sidney Fey, a distinguished author of diplomatic history, on retirement was honored at a banquet. After being regaled by admiring colleagues and students, he responded by reading a paper which had been prepared by one of his students years before, which he had never dared submit to a scholarly journal, but which he thought merited attention. It had been written by Robert Benchley, who perhaps had not read much diplomatic history, in response to a request for an essay on the disputes over fishing rights off the Banks of New Foundland. It began, "Dear Professor Fey, much has been written about the Newfoundland fishing rights from the point of view of the United States. Even more has been written from the point of view of the British. Rather than review this material which, I am sure, is familiar to you, this paper will be written from the point of view of the fish."

Speaking from your point of view is not easy, as I was reminded recently when I remonstrated with my eldest daughter about late hours. Her reflex response, I'm sure intending no disrespect, was, "Daddy, I wish you were alive today." Yes, difficult as it is for me to speak for you, I am emboldened to do so because 4 years of working with you have made me fond of you; and because through the Emerald and Old Oregon you have spoken your minds with admirable candor. Brant Ducey, writing in Old Oregon, represents you as not too interested in space travel—as wanting to see the rest of this world before leaving it; as especially concerned about nuclear warfare, which you describe as "the delicate balance of terror"; as saying the major unsolved problems are international; as having been spawned in depression, raised in war, and possessed of a dubious future; as victims of pressure for conformity with no forceful people and no explorer attitude; as lacking confidence in your own generation.

Your discontents are wholesome. They are a necessary precedent to planned improvement. But confident self-respect must be joined with discontent. And resignation must be replaced by determined action. It, therefore, may be useful to put some of your concern into proper perspective. The delicate balance of terror is the product of amoral forces that were spawned before you were conceived. These forces are a part of your environment but not a part of your responsibility. The failures that led to international disease were ours. The moral confusion which surrounds you is what threatens to beat your generation. That confusion is our creation. To be a beatnik requires only that you resign yourself to live in the hopeless state we have prepared for you. To be a man requires much more of you.

One of you has said, "We have no forceful people and no explorer attitude." In keeping with Oregon's centennial it is fitting that I remind you that we owe everything to the will to explore.

The New World was forced onto the consciousness of Europe by the courage and persistence of Columbus and the faulty calculations of geographers. In any respects the discovery of America was more shocking than would have been a flight to the moon. The moon every European had seen. Though space flight was impossible, the idea was available in fable and Mother Goose rhymes. But until 1492 America was not even an idea. Then suddenly she rose out of the cold mists west of the Azores and east of Cathay as an unknown factor to breed rumors of witchcraft and to inspire tales of the New Atlantis or Utopia where man would yet learn to understand man, and perhaps to love him.

Once discovered and recognized for what she was, this New World loomed as the great American nuisance, and much that was learned about her was revealed by men who were seeking ways through or around her. Europe did not want America, but a shortened route through her to the markets of the East.

First the search for the Northwest Passage, and then hope for a great river of the West, which men called the Mighty Oregon, brought this area into international controversy. But, even among the very early seekers along the Oregon shores, a lust for knowledge and a scientific point of view were to be found.

Capt. James Cook (1778), sailing in time of war, was so generally recognized as a man of science that the enemies of England instructed their fleets to respect his mission as he groped along the shores of the Northwest or sailed the wide Pacific. And, Jean Galaup, Count Lapérouse (1786), commissioned by France, confided to his log that his voyages would be devoted to the "Noble science of discovery." Lewis and Clark, whose mission was military, were, nevertheless, enjoined to bring back all possible scientific data, and Lewis was put to school in Philadelphia in preparation for his scientific obligations. We entered history as an object of science.

The noble science of discovery has not lost its nobility nor its significance. The fact that some of you have seemed to find your generation wanting in the explorer attitude is clearest evidence that you value it. In the midst of your doubts I read with pleasure that you have developed a capacity to think more critically and more independently. One of you said, "If someone says it's raining my first reaction isn't to agree—I get up and look outside for myself—even though I'm living in Oregon"; and from another: "Everything was clear and neat in high school, but here it doesn't always equate and if nothing else you learn to accept that fact."

Watching you through 4 years, seeing you accept responsibility, listening to your growing concern for the significant aspects of campus life, the faculty has learned to admire you, and has developed a confidence in you that you may lack in yourselves. Any generation that recognizes the importance of exploration, sees the world as an untidy set of unsolved problems, and is thoughtful and independent enough to go see for itself, "even though living in Oregon," is a generation of hope, not of despair.

You are right; the explorer's attitude is of first importance. Not what you know but what you demand to know is the measure of your education. Not the conditions of life as you find them, but what you insist that they become will be the measure of your manhood. Your interest in knowing more would be legitimate if supported by nothing more than mankind's restless, divine curiosity. But it now has more imperative voices speaking its cause. It is, in fact, legislatively enjoined upon us by the National Defense Education Act, the statement of purpose of which is as follows:

"Congress hereby finds and declares that the security of the Nation requires the fullest development of the mental resources and technical skills of its young men and women. The present emergency demands that additional and more adequate educational opportunities be made available. The defense of this Nation depends upon the mastery of modern techniques developed from complex scientific principles. It depends as well upon the discovery of new principles, new techniques, and new knowledge."

This is but legislative recognition of Alfred North Whitehead's striking dictum, that "the race that does not value trained intelligence is doomed."

But the trained intelligence now needed is not simply the encyclopedic mind that can regurgitate any known principle. What is more required is the innovator, the mind that has original power, the mind that can move with freedom and order from the known to the unknown. As Congress declared: "[We] depend * * * upon the discovery and development of new principles * * * and new knowledge."

I, therefore, charge you to employ confidently the sharpened critical faculties that you carry away from Oregon in courageous, even audacious exploration of the jungle of moral, political, and diplomatic confusion that surrounds us, and pray hopefully that you will find for us all a new route to that land of peace whose shores we all restlessly seek, where every man may sit under his own vine or fig tree and learn war no more.

O. MEREDITH WILSON,
President, University of Oregon.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of July 11, 1959:

WASHINGTON REPORT
(By Congressman BRUCE ALGER, 5th District of Texas)

A FABLE (?)

Once upon a time two men went into the building business together. Partner A agreed to draw up a budget for the firm and sign the checks to pay the monthly bills. Only Partner B, however, was empowered to authorize expenditures. Though the business got off to a good start, Partner B began to purchase items beyond the budgeted necessities, each item seeming desirable, if not necessary, for the welfare of the business. When Partner A complained about exceeding the agreed budget and said there wasn't enough money to pay the bills, B retorted: "Well, you're running the paying end of this business, and," (wagging a finger) "don't run up a deficit. Besides," said B, "I have reduced spending on some of the items we did have budgeted, namely, office furniture and decoration. I'm saving money." "Yes," Partner A rejoined, "but you are running around charging other items we didn't budget; and on top of that you authorized a subcontractor to withdraw construction funds from our bank account as he needs it."

Not convincing his partner, but facing the stark reality of more due bills than money at the end of the month, "A" had but two alternatives, short of bankruptcy. Either he must raise more income or borrow money from the bank to cover the bills. He arranged a 90-day loan. Meanwhile, old "B" continued to make unbudgeted purchases, charging them to the firm's account, and the subcontractor was drawing money directly from the bank account as he needed it.

The 90-day loan was extended and increased. Then, unable to extend the loan again, a loan from another bank was arranged to repay the first. As time passed,

and the spending and refinancing continued, Partner A knew that a sad day of reckoning was coming.

A tried to counsel his partner: "The way we're spending more than we're taking in and borrowing more to cover our debts, our credit is getting shaky and I am having difficulty refinancing. Even now I am forced to pay higher interest rates. We've got to tailor our spending to our income, and now, before our creditors lose confidence in us." To this wise advice, his partner replied: "Now, wait a minute. Each of these things I am buying is something our company ought to have—a colorful neon sign, the automatic opening door, the brocade draperies, carpeting—these things add class and are necessary for the welfare of our business, for our success and growth."

As though A didn't have troubles enough, B often added insult to injury by loudly criticizing the company's growing indebtedness, and the fact that A was having to pay higher interest rates for the borrowed money. Sometimes he even slyly inferred that his partner was just paying these higher rates as sort of a favor to his banking friends. As fiscally responsible partner A pondered this stalemate, his problem loomed larger. How could he reason with this fellow who was consistent only in his appalling misunderstanding of even the most rudimentary facts of economic life? How could he avoid alarming the creditors? And how could he explain the situation to the other investors whose money was involved? Finally, how could he set them on the course to solvency?

Fable? Now let's look at Government: Partner A, the administration, prepares our budget and must sign the checks to pay our bills; but only partner B, the Congress, may authorize expenditures, and is expected to provide the income (through taxes) to pay the bills. As spending by Congress exceeds income ($13 billion last year), the administration must meet its bills by borrowing more money, and refinancing older debts as they come due. Since there is more demand for available loan money—for the use of other people's savings (and that $13 billion worth of Government demand is quite an item in itself), the price for the use of money automatically goes up. And that's all interest really is—the price paid for the use of money. The more people who want to use what money is available, the higher will be the price charged for it.

The root problem again is spending. Without continual deficits and the inflation they cause, the Government's borrowing problem would not be as acute, nor would interest rates go up. Ironically enough, however, some of the very Congressmen who vote for the big spending want also to decrease the Government's income (taxes) and will loudly blame the administration for any rise in our indebtedness or in interest rates.

It's no wonder that the technical nature of this subject often confuses the voter and that political orations larded with such terms as "tight money," "monetizing the debt," etc., only serve to worsen the confusion. As soon as enough voters understand that interest rates are not "set" by anybody; that interest is simply the price for the use of the commodity, money, and is regulated by supply and demand just as every other price must be; that when the Government must borrow heavily in the short term loan market, it thus competes for the use of money with newlyweds who need furniture and families who need automobiles. Then the administration's problem will be greatly simplified. Then the voter can point his finger at the real culprit, the "big spender" in Congress, reckless in his eagerness to "provide something-for-everybody" (sometimes he calls this promoting growth or expansion) and who refuses to recognize that continued spending beyond income brings inevitably nearer the day of reckoning, and hurts most of all the so-called little man and those average families who foot most of the tax load and are most cruelly hurt by inflated prices.

Shape of Things Ahead on Berlin

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 26, 1959

Mr. COHELAN. Mr. Speaker, under permission to extend remarks I wish to include in the RECORD an article by Chalmers M. Roberts, from the July 12 edition of the Washington Post, entitled "Shape of Things Ahead on Berlin." In this article it is suggested that an interim agreement on Berlin may be in the offing, one which might find Russia cancelling its ultimatum for Western withdrawal from the city, but which might also involve Western acceptance of Soviet demands for recognition of its East German satellite. The question immediately arises whether such an agreement is any kind of a victory at all. The article follows:

SHAPE OF THINGS AHEAD ON BERLIN

(By Chalmers M. Roberts)

It may be far from clear just how the Berlin affair will end. But as the ministers gather again in Geneva the picture of what may, perhaps will, happen is somewhat clearer than when they recessed 3 weeks ago.

Despite the bluster and tough talk from Nikita Khrushchev it begins to look as though there will be an interim agreement on Berlin which will open the road to the summit. But what kind of agreement? And at what cost to the West?

The Soviet tactic, as has been demonstrated for decades, is to demand the outrageous and if possible settle for part of it. This is the tactic being used in the Berlin negotiations. It is effective now chiefly for two reasons: the geographic facts about West Berlin, isolated in the Communist sea of East Germany, are against the West; growing Soviet nuclear power has emboldened Khrushchev and made the West more willing to compromise just as he hoped.

Khrushchev first demanded that the West get out of West Berlin. Then he demanded that at least it agree on a time when it should end the "occupation" there, suggesting a year and then extending the limit to 18 months. This the West called an ultimatum. But the West in trying to get a Soviet commitment on continuation of its West Berlin rights offered some concessions.

The West offered to limit its garrison to no more than the current 11,000 figure; to curtail the propaganda-subversive activities if the Russians would do the same for East Berlin; to forswear nuclear weapons in Berlin, not in itself meaningful but perhaps meaningful as a first step in the Soviet demand for such a ban everywhere.

Having squeezed the orange and gotten some useful drops of juice, the Russians indicated they would relent on the ultimatum. That was done in the elliptical statement by Gromyko on June 28 denying that Western rights in Berlin would end after the 18-month period of all-German talks. But he did not say how long they would continue.

At best the West probably can get agreement that at the end of the talks—and Gromyko indicated the period could be stretched beyond 18 months to perhaps 2 years—Western rights will still exist but without any commitment on how long. Certainly there will be no Soviet commitment to continue the rights until Germany is unified, as the West proposes.

This kind of agreement, hinted at by Gromyko, now would come as a great relief to the West. But the full price for even this has not all been paid. Secretary Herter indicated on Thursday a willingness to accept parity for East Germany with West Germany on the proposed all-German group. This is yet another step in Western acceptance of the major Soviet demand for recognition of the East German satellite, and thereby of the Soviet control of Eastern Europe. It comes on top of the acceptance of East Germans at the Geneva talks which Gromyko trumpeted as "an important achievement" amounting to de facto recognition.

The all-German group, too, will be an issue of contention. The Soviets and their puppets in Pankow want to use it to bolster further the East German regime. The West does not want that but it will be very hard to escape.

Thus it may turn out that the second round at Geneva will produce a Berlin agreement. The Western allies doubtless would, in such a case, claim a great victory in forcing the Russians to let the West live on in Berlin. But the price of such a victory will be considerable: an erosion of the Western position in Europe.

Soviet pressure on the West will not, of course, stop there. Just what Khrushchev has in mind for the summit is a mystery in the West but it certainly won't be any Christmas present. It will represent some new pressure. The Russians are not indulging in the competitive coexistence game just to stay even; they expect to win.

Herter has tried hard to get on top of the situation he inherited. Probably he has done about as well as anyone could expect, given an administration so determined to hold the status quo abroad and so convinced that the overriding issue is the budget and inflation at home.

OBA Corp. Should Be Complimented for Promoting U.S. Savings Stamps

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 13, 1959

Mr. KEARNS. Mr. Speaker, H.R. 8107, a bill introduced by Congressman MULTER to amend title 18 of the United States Code to prohibit the use of U.S. Savings Stamps for trade promotion, is in direct opposition to our great American ideals of free enterprise. This bill is directly aimed at OBA Corp., an organization founded by a group of public-spirited businessmen, to aid the sale of U.S. savings stamps and bonds by encouraging public collection of the stamps.

These businessmen wish to sell their products, yes, but if they can, at the same time, interest millions of American housewives and their families in pur-

chasing U.S. savings stamps, should this be called a crime?

The Government should be very grateful that there are some leaders of American business who are concerned enough about the economic future of our country to direct hundreds of thousands of dollars toward a reawakening of the savings stamp program. This program is especially valuable to our children, where we wish to encourage thrift and sound economic thought. The OBA Corp. plan to distribute free savings stamps and savings books—none of which cost the Government anything at all—through the use of coupons on various consumer products is entirely consistent with the highest standards of business-Government cooperation as evidenced by the entire savings bond program, and I heartily endorse the program. I wish to compliment the businessmen who have begun this program and I urge others to join with them in this most worthwhile effort.

Domestic Agriculture Problems

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 13, 1959

Mr. BERRY. Mr. Speaker, I have on several occasions recently attempted in my humble way to point out to the Members of this House that there is no farm problem, that the problem is one of international trade.

I have tried to point out that the job of the Secretary of Agriculture is not one of keeping domestic agriculture production in line with domestic consumption, but rather a job of reducing domestic agriculture production to make room for foreign agricultural imports.

In this connection, one of the most interesting things that has come to my desk recently is a radio address given June 20, 1939, by the Honorable E. H. Everson, then secretary of agriculture for the State of South Dakota. I quote portions thereof because the problem he pointed out at that time is exactly the same problem confronting agriculture and the Department of Agriculture today. In fact, the problem today is the result of 22 years of reciprocal trade. Mr. Everson said in part:

In fact, the determination of our trade policies is left entirely up to the Secretary of State, Cordell Hull, and his international associates, with the assistance of the Tariff Commission. No provision whatsoever is made whereby hearings may be held giving an opportunity for our people to present their case before the so-called reciprocal trade treaties are made. Then it is left to the Department of Agriculture to reduce and restrict agricultural production in the United States so as to make room for these agricultural imports. Through the Surplus Commodities Corporation he buys up farm products and holds them over the market and may release them at any time so that legitimate investors are reluctant to invest in these commodities for fear that the Surplus Commodities Corporation may throw their stocks upon the market at any time and thus destroy our prices.

In another part of his speech, Mr. Everson said:

I sometimes wonder just how long you farmers, yes, and you businessmen, too, who are absolutely dependent upon our farm market, will permit yourselves to be deceived by these internationalists and their secret trade agreements. They are not just selling us down the river. No; they are selling us out across the ocean, and they will continue to do so until you raise your voices in protest so that it will be heard so loudly in the Congress of the United States that the Congress and Senate of the United States will know that it is its constitutional duty to regulate commerce with foreign countries, to the end that our basic industry in the United States may be permitted to survive and feed and clothe our 130 million population.

In another point, he said:

Why should we continue to loan money to those foreign nations to purchase our goods and lose both the goods and the money? Why should we continue to import more than $2 worth of farm products for every $1 worth of farm products we export * * * while we are asked to reduce and restrict our own farm production in order to provide an American market here in the United States for these farm products from foreign countries and while we continue to issue billions of dollars of Government bonds, to be paid by our innocent and defenseless posterity, in order to sustain our unemployed who are thus denied their opportunity to produce these things which they need to sustain themselves?

When we call attention * * * to these inconsistencies they tell us these imports are only a drop in the bucket; that they do not amount to anything * * * yet during just 1 week and on just one farm product—meat alone—the imports of these meat products at the port of New York for the week of May 11–17, 1939, was 2,502,224 pounds. Just convert those meat products into carloads of livestock and you would have approximately 250 carloads of livestock at one port in 1 week, mind you, and yet they tell you this doesn't amount to anything, that it is only a drop in the bucket. * * *

This means that 240 cars that could and should be transporting these livestock are idle along the sidetracks while increased freight rates are asked for on an ever-diminishing volume of transportation. It means that increasing millions more men are taken out of productive private employment in the railroads, shops, and processing plants, while farmers are required to curtail their production, thus increasing the cost of production and reducing the income per unit of production all along the line. It is substituting the unnatural, artificial law of scarcity and diminishing returns for the natural law of abundance and of supply and demand. It is substituting internationalism for Americanism. It is subsidizing foreign commerce and foreign producers at the expense of domestic producers and domestic commerce, and, therefore, is at the expense of the vast majority of our American people.

Although the Everson address was made 20 years ago, it is as applicable today as it was then and much more damaging than it was then because we have had 20 years of imports stacked year upon year to add to our domestic agriculture problems.

The Long-Range Threat of Inflation

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, July 13, 1959

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article presented to the Monetary Conference of the American Bankers Association on May 5–8, 1959, in London by Dr. Alfred Schaefer, chief general manager, Union Bank of Switzerland, entitled "The Long-Range Threat of Inflation."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE LONG-RANGE THREAT OF INFLATION

(By Dr. Alfred Schaefer, chief general manager, Union Bank of Switzerland)

I. NATURE OF MODERN INFLATION

The inflationary consequences of the French Revolution and of the First World War were destructive but short, and could be cured by appropriate drastic measures. The creeping inflation of our days is more dangerous, because the economic power of the state and the volume of circulating money have increased enormously. Modern inflation is not only an ethical and social problem—it seems to be embedded in the free economy, like a managerial disease. Like a sick organ in the human body, there is in the economy an organ which shows this cancer: the weakening money. No solution can be based only on technical measures. The reconciliation of stable money and full employment is an unsolved problem, and full employment with perpetually rising wages is certainly the most risky experiment of our so-called free economy.

II. POSSIBLE REMEDIES

1. Reaction of the public, the consumer

The public is unorganized, inadequately informed, generally apathetic, confused by the disputes of economists and advisors (Prof. Slichter). It could elect to public office men recognizing the value of stable money, ready to fight for it—but this is a pious hope. Everybody agrees on the social, individual and international perils of too rapid an inflation. But too many believe that inflation is here to stay as part of modern life, that a 2 percent annual loss in the purchasing power of money is not so bad, forgetting that this means 50 percent in one generation and that sooner or later business will have to pay a correspondingly higher rate of interest. It is true that until now long-term bond financing has gone on, that through custom and inertia "wolf" has been cried so often that when the real "wolf" appears few take any notice. This dangerous acceptance of slow inflation helps to create or intensifies the very consequences it fears. Sooner or later the little man will realize these consequences, and then we could have accelerated currency troubles. The signs are increasing—even in the United States of America—and we are all under warning: Soaring prices for shares, stock options as the only incentive to management, buying "growth" instead of "yield," interest for South African goldmine stocks, high interest rates for bonds, preference for index-based bonds, flight into seemingly more stable money. Investors, pension funds, trust funds are all investing 30 percent and more of their capital in stocks and other prop-

erty—often regardless of the price. Soon there could be too little real saving or more negative saving through installment credits and higher taxation.

No buying strike of the unorganized public against high prices for consumer goods seems possible, not even against the probably politically necessary, but economically scandalous world-wide agricultural price supports through subsidies and stockpiling.

2. Reaction of management, enterprise

There is too much lipservice paid to the goal of monetary stability. Management partly accepts slow inflation and adjusts its plans accordingly. A slow increase in prices, i.e. a fall-off in the value of money, seems the best attainable result in the long run for many producers. Increased costs are corrected by increasing prices or avoided by labor-saving machinery, but too quickly increasing capital expenditures create more inflation.

Like the public, management is not much frightened any more about a slump—the welfare governments will help. During the last recession nobody dared to let the slump ride itself out, to accept a really corrective shakeout of the weaklings or a strike of the labor unions—everybody asked for subsidies, relief, Government orders, cheap money, tax reductions, credit injections.

We are therefore already halfway between a pure market economy and a centrally planned economy, in an economy which depends on the decisions of the State, of large-scale firms, groups and other economic units.

We are all sinners against the very roots of our capitalistic society. We psychologically expect and accept the annual round of wage increases as our fate, we would consider ourselves as shylocks if we did not grant a little increase in salary or in fringe benefits to everybody every new year. Kindness is a human quality, softness is an economic mistake.

3. Labor, wages

Wages are the most important, the crucial problem of the capitalistic world of free enterprise. Wages are linked to retail prices, industrial prices to wages, farm prices to industrial prices, retail prices to farm prices—a rigid circulus vitiosus of prices and earnings making true the saying of Fréd. Bastiat a 100 years ago: "La grande fiction à travers laquelle tout le monde s'efforce de vivre aux dépens de tout le monde" ("The great ficton through which everybody tries to live at the expense of everybody else.") The responsibility for inflation is passed from one interested group to another, from employers to labor, and vice versa.

The compensation of workers in money has increased to the last 10 years at least twice as much as productivity. Wages resisted even recessions. It should be borne in mind that, generally speaking, wage increases cannot reasonably be based on increases in the productivity of particular industries. Rather, they must be limited, at the most, to the average rise in productivity of the economy as a whole. In estimating the latter, it is well to remember that both agriculture and the service industries, particularly the latter, in the last 10 years have had average productivity growth rates of some one-half to 1 percent only.

Even in an especially progressive industry wages paid should not be geared to changes in productivity of that industry. Such practices would almost force other industries, whose productivity has risen less, to grant similar wage boosts lest they lose workers lured away by the higher incomes earned in the rapidly advancing industry. Escalator clauses in contracts—introduced on a large scale by the biggest industrial company in the world—set the pace for seemingly sacrosanct increases following every possible increase in the index of living costs, regardless of productivity. Nobody, therefore, is much interested in fighting inflation, because he will soon catch up with higher prices. High and prolonged unemployment compensation relieves the pressure on the individual to find another job or on the unions to reduce their excessive demands. The labor unions are in danger of pricing their members out of the market, especially in the United States of America (hourly wage rate of steelworkers $3, versus $1 to $1.25 in Switzerland, 80 to 90 cents in Germany). Results: Rationalization speeded up too quickly, more people out of work, more productivity, boom begets recession.

Too much political power is in the hands of union leaders, but partly becouse management did not dare to resist the excessive wage demands which set in motion the whole inflationary spiral: From fear of losing out to the competition of other firms, nobody dared to face a real showdown, to accept a prolonged strike.

4. Measures of the State and the central banks

In the long run no help from outside can reestablish a sound monetary balance. Higher taxes mean compulsory saving and are no remedy, because they will be spent by governments and finally passed on to the consumer in the form of higher prices—but the consumer will not accept a lower standard of living.

Since the war Government expenses have everywhere increased through programs for housing, social security, highways, armament, atomic science, etc. Pressure groups push the expansion of their own plans. Everywhere there is a superstate with a superbudget, supertaxation, superwelfare—we cannot increase it without approaching dangerously near the Russian system.

Tax reforms are needed. The fiscal elephantiasis has partly destroyed the efficiency of the interest rate as an essential weapon for securing an equilibrium between money and goods. The interest rate as a factor in cost is less important than the tax burden. It is an absurdity that the tax angle is very often more important than any other consideration. The consequence is a progressive enfeeblement of the efficiency of central bank discount policy. Every increase of the rate hurts Government because it has too great an amount of Treasury bills in the market which cannot be consolidated easily—one more important possible factor for inflation.

The policies of the central banks are necessarily, but perhaps too much, influenced by political pressure groups. A serious restriction of money and credit and an increase of rates are immediately criticized—one has only to remember the accusations during the last few years, when the tightening of the money supply was in reality a very appropriate but feeble measure against an exaggerated credit expansion. And in order to make the policy effective, money must be made not only dear, but also short.

III. CONCLUSIONS

It is bad form to use the word "deflation." Economists call it disinflation. Since the thirties, the fear of unemployment haunts everybody. But full employment gave the labor unions their exaggerated bargaining power, brought the wage inflation as a new and real seat of danger. The wartime dams against inflation broke and only courageous measures of the State, the central banks, and self-discipline of economic groups and labor unions could help. The direct cause of inflation, the continuous increase in the supply of money and credit, the swelling of the stream of money at a rate faster than that of the stream of goods and services must be stopped. Individual savings and insurance, which produce the bulk of much needed investment capital, must be based on the confidence that the value of money will remain more constant than it has been in the last 15 years. Otherwise inflation will strike at the roots of the economy of the free world, and our grandchildren perhaps could go hat in hand to Moscow.

What is the best and immediately necessary measure? Switzerland has not relied on the printing press, has no great surplus in the balance of payments, no budget deficit, no big price-dictating cartels. It may be of interest to raise the question why of all nations Switzerland, whose large foreign trade strongly exposes her economy to price developments abroad, in her cost-of-living index got away with a relatively modest rise to 106 (1953=100), while this index now stands at 108 in the United States of America, 110 in Germany, 121 in England, and 128 in France. It is practically beyond doubt that this favorable development must primarily be ascribed to moderation on the part of labor unions, many of whose leaders—and sometimes even rank-and-file members—often possess a remarkable understanding for the needs of the economy as a whole. What small inflation Switzerland has had, has been the consequence of higher priced import goods and of a worldwide softening of the will to resist, of a tendency to work less and earn more.

We must make up our mind: Sound money and full employment and ever-increasing wages cannot go together. We can count on and must encourage a conservative and courageous policy of the central banks, free of all political pressures. We must accept eventually a period of higher interest rates—dictated by the market—and we must insist on a balanced Government budget. But most of all should we frankly and categorically resist any further automatic wage increases, and abolish any short-term escalator clauses. Higher productivity then will be able to keep prices down and money sound, provided that management will finally feel the moral responsibility to pass technical progress on the consumer in the form of lower prices.

The United States has an international responsibility also in this regard. The dollar has become the measuring stick for others. Between $14 to $16 billion of short-term money are kept by Europe in the United States. Unfortunately, there are some signs that creeping inflation—which continued even during the recession—could go on a little bit faster in the United States than in Europe. It can anyway be assumed that most of the European industrial nations will not inflate faster than the United States. The American balance of payments is passive, the dollar shortage does not exist any more, some gold has returned to Europe—more could flow out if it knew where it could safely go. American investors buy European stocks, partly because the buying power of the dollar is higher in Europe than in the United States.

U.S. competition abroad is crimped by high prices and wages. Import restrictions cannot be any longer a remedy in a climate of freer international give and take. Increased wages for steelworkers would put a major milestone on the road to further inflation. A general acceptance of the idea that a creeping inflation of 2 to 3 percent is inevitable (a la Professor Slichter) would accentuate serious potential risks and endanger the dollar as the yardstick for the world's currencies. Any important wage increase should be refused in the near future—even at the price of a major strike.

The vanishing respect for private property is intimately related to our laxity about the integrity of money. A free society can only stand on firm and durable foundations.

Effect of the New Budget on Water Resource Development

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, July 13, 1959

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very informative address by Elmer B. Staats, Deputy Director of the Bureau of the Budget, delivered before the 46th annual convention of the National Rivers and Harbors Congress, here in Washington, on May 14 of this year.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EFFECT OF THE NEW BUDGET ON WATER RESOURCE DEVELOPMENT

Informal remarks by Elmer B. Staats, Deputy Director, Bureau of the Budget at the 46th national convention of the National Rivers and Harbors Congress

I am glad to speak very briefly here this morning about the Government's 1960 budget as it affects water resources development.

I will not take up your time with a lengthy dissertation on what's in the budget for water resources. You are familiar enough with the facts, I'm sure.

But there are a few key points about the budget that I do want to mention, because what we do in water resources, and how fast we do it, frequently must be decided in the context of the larger perspective of the Government's commitments and resources.

As all of you know, the demands on Govment for expenditures of all kinds are almost infinite. We fact the very basic question of what should be the Government's fiscal policy in times like these. We've got to deal with that question head on.

I think our choices can be defined very simply. One course is to go on spending without regard to estimated revenues in the hope that in the long run our income will overtake our expenditures, and everything will come out even. The other course is to decide that prudent management requires us to confine expenditures to the income that is in sight. That is the policy of the balanced budget, and it is the choice that the President made in his 1960 budget message.

In some quarters, the policy of a balanced budget has been criticized severely as a blind obsession which runs roughshod over the country's needs. It is a little strange that so few of these critics have shown much disposition to urge the new taxes that would supply Government with the revenues to tackle these national needs on a pay-as-we-go basis.

Taxes today are already high, and they are high for one principal reason. National security costs money—a lot of money. Sixty cents out of every dollar we spend in the Federal Government goes to mount our defense in a world full of threats and dangers. Nobody can say for sure how long this will go on, but it will probably go on for quite a long time.

If we aren't willing to pay more taxes, then the only present course by which to increase expenditures is by deficit spending and borrowing. We've done this 24 times in the past 30 years, and today the result is a public debt of $285 billion and an annual carrying charge of over $8 billion. Think of it: $8 billion out of our budget of $77 billion simply goes out in interest payments. More deficits and more borrowing simply would only add to that problem. We have to stop some place and get control of our fiscal affairs, or the toboggan ride will wind up in a ditch.

Now, just because the balanced budget for 1960 ruled out increases in a number of worthwhile fields, it doesn't mean that they are gone for all time. The Federal Government seems destined to develop and improve its services as the needs of the Nation change and grow. The key to the rate of Federal spending is, first, the flow of revenues, and secondly, the choices that must be made among competing demands for priority.

Now, let's take a look at the Federal Government's role in water resources.

Why did the budget exclude "new starts" in 1960? The plain fact is that expenditures in 1960 on flood control, navigation, irrigation, and similar activities of the Corps and the Bureau of Reclamation will come to $1.1 billion—an all-time high. What is more, in the years after 1960, it will take $5 billion to complete going projects, and when we get to 1961 and 1962, annual expenditures will go up still more.

Construction outlays of the Corps of Engineers and the Bureau of Reclamation, which make up the major part of total water resources construction are estimated to reach $789 million in the current year and to rise to $869 million in 1960. Only once in previous years has this combined total exceeded $800 million—in 1950 it reached $812 million after the long wartime deferments. Expenditures of these two agencies in 1961 are expected to rise above the 1960 record total and to hold at the higher level in 1962, even without new starts. Maintenance, operation, and other costs require $200 million, or more, annually. Thus, even beyond 1962, large expenditures will be called for on going work. That is why it seemed prudent, as the President said in his 1960 budget message, "to take a breathing spell in the initiation of new projects"—not only in the water resources programs, but in the case of veterans hospitals and public buildings as well.

Yet, there are those who may feel that the 1960 budget discriminated against the water resources programs. Perhaps some of you feel that way. In view of the strategic importance of water resources in the Nation's economic development, this attitude is understandable.

But, if you were a scientist, you might feel that other things should be put aside for a time while we concentrate on being the first to get to the moon.

If you were an educator, you might feel that more schools and better-paid teachers were paramount.

If you were a military man, you might give top priority to military demands.

And, if you were a budget officer you would have to fit all these legitimate competing demands into a balanced governmental effort which the taxpayers are able and willing to support.

This we have tried to do and we sincerely believe is the only sensible approach for this year.

And right here, let me make it clear that we must plan for the orderly development and use of our water and land resources. But let me emphasize the word "orderly." It means careful planning, coordinated effort, sensible cost sharing geared to where benefits fall, and realism in the proportions of the whole budget which are allocated to resources developments.

In spite of the record construction program underway by the Corps of Engineers and the Bureau of Reclamation, as well as the more recent watershed protection and flood prevention programs of the Department of Agriculture, the 1960 budget will make it possible to continue investigations and advance planning of projects and to assemble basic data for future years. It recommends funds for two special river basin commissions to continue their studies for development of the water resources of the Southeast area and the State of Texas. Further, it provides funds for design work and site selection for demonstration plants to develop economic processes for converting saline and brackish water to fresh water in quantities sufficient for municipal, industrial and agricultural use.

Some of you may feel that the budget for 1960 could have included some new starts because the initial impact on budget expenditures would have been very slight. That is true enough for 1960, but the problem comes in the rapid pickup of expenditures in the second and third years of construction, and we already face increasing water resources expenditures in 1961 and 1962.

Very frankly, we face this upward push in going expenditures right across-the-board in 1961. If the Congress goes along on a balanced budget for 1960, without adding to what the President has asked for, we will still have to reckon in 1961 with a built-in growth in expenditures of between $2 and $3 billion. Aviation, outer space, education, and water resources are just some of the areas where expenditures are bound to be higher. Tax receipts may be higher, too, but present indications are that expenditures and receipts will be closely balanced in 1961, leaving at best only a limited margin for program increases or, alternatively, tax adjustments.

And so, while the budget for 1960 does not propose new starts for water resources projects, the fact remains that planned expenditures in this field will establish a new high record. In the general framework of a balanced budget, and in the light of a generally restrictive approach to program expansions, the water resources program is in a strong position.

I should like to touch briefly on another matter of unique interest to this group, namely the issue of an equitable division of the costs of flood control projects as between Federal and non-Federal interests.

As you know, we've had a number of special commissions studying the problem of water resources development. Some of you may feel that the subject has been studied to death. But one consistent idea has come through in practically every one of these studies. They agree that we need a fair and consistent basis for cost-sharing in flood control work, no matter which Federal agency does the work. The lack of uniformity in cost-sharing standards makes it possible to play off one Federal agency against another in order to reduce the local contribution.

I think we should be able to agree that this kind of confusion doesn't reflect any credit on Government. Every Federal agency ought to speak the same language when they are dealing with the same problems. It doesn't make much sense to look at a wide range of actual local shares, all the way from 2 percent to over 60 percent.

We have just transmitted to Congress a draft bill to set standards of cost-sharing which would apply to the flood control aspects of programs of the Corps of Engineers, the Bureau of Reclamation, and the Soil Conservation Service. Briefly, the bill provides that non-Federal interests would bear at least 30 percent of the first cost of projects allocated to the production of flood control or flood prevention benefits. The value of lands, easements, rights-of-way, etc., would be counted as part of the non-Federal share, and the balance would be payable over the period of construction or, in certain cases,

over 50 years, with interest. In the case of reservoirs which benefit large areas, the non-Federal interests would bear at least 30 percent of the costs of only those benefits that are significant and accrue to identifiable groups.

I hope you will take a careful look at this proposition. A lot of hard work and effort have gone into it, and it represents a basis for a real improvement in the way we do business. The increase in the average level of non-Federal participation is quite modest, but it strengthens the most effective test of project soundness—the willingness of local groups to put their own money in a joint undertaking with the Federal Government. I will just add this thought, that greater cost-sharing means that we will get more out of whatever Federal funds are available for flood protection.

I will conclude by saying that the Federal Government realizes fully the importance of water resources development to the Nation. At the same time, our Nation faces many needs, as a growing society must expect. The budget provides a point for reconciling and balancing all these needs within the means at its disposal. As imperfect a device as it may be, it nevertheless affords us an opportunity to couple vision with responsibility—two very vital qualities of a free and fortunate people.

"Space Highway"—Circumferential Route 128, Boston, Mass.

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, July 13, 1959

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from this week's Time magazine. It refers to the "Space Highway," the circumferential route 128 which encircles Boston, Mass.

The article points out, as we in Massachusetts so well know, that the great natural resources of our economy in the Bay State are our brain power and genius. The article points out that Boston has been and is the intellectual center of the Nation and is the leader in our Nation's scientific and technological revolution.

Massachusetts and its "space highway" along route 128 will continue to attract pioneering leaders in the electronics industry.

Mr. President, I think I can confidently predict that the industrial boom which we have experienced on route 128 is but a mere prelude to the great economic development which lies ahead for Massachusetts and New England. Massachusetts, the home of new ideas, is indeed grateful to Time for this recognition of its leadership.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ELECTRONICS—THE IDEA ROAD

On road maps, the new superhighway that curls through the pleasant woodlands surrounding Boston is known routinely as route 128. But to U.S. industry, it is known more romantically as the Space Highway. Amid the landscaped woods of the industrial parks along commuter-clogged 128 are tucked scores of low, angular buildings bearing science-fiction names: Trans-Sonics, Tracerlab, Microwave, Dynametrics. These plants add up to the biggest and fastest growing science-based complex[1] in the United States, and provide the Nation's most impressive proof of the vast new industrial potential of the electronics and space age. Beyond that, they are a dramatic demonstration of the fact that behind current new industrial development lies one key factor: new ideas.

For Wall Street, highway 128, the road of ideas, has become a road of enchanting mystery, glamor—and the source of quick profits. Many a Wall Street analyst periodically tours the highway, on the hunt for hot new companies. Few investors can understand what many of the companies make. But their eager bidding to get in on the ground floor has sent the prices of some stocks soaring a hundredfold—and more—in the last few years.

Along the highway, giant manufacturers such as Raytheon, RCA, Avco, and Sylvania are hard at work on missile and space systems. Smaller firms make components and instruments—some of them so tiny that a week's production fits into the rear of a station wagon. Many of them are so sophisticated that even company brass are hard put to explain how they operate. From 128's small companies come devices that can read print optically, or probe space to guide a missile.

OUT OF THE LOFTS

Highway 128 was built to be just a Boston bypass. But in the 8 years since it opened, the roadway has lured 17 industrial parks and $137 million worth of new buildings. Into them have moved 227 companies employing 28,000 people.

Most of the companies started in small lofts, warehouses, or garages in the commercials districts of Boston or Cambridge, looked very much like the radio repair shops and jobbers that surrounded them. To finance samples of new products, the founders dug into personal savings or tapped friends. Cash came from such risk-minded organizations as American Research & Development Corp., which sponsored many science companies (High Voltage, Tracerlab), and from individual investor groups such as those of Laurance Rockefeller, who now is sponsoring one of the 128's newest, Geophysics Corp. of America. As the prototype models succeeded, the young companies outgrew their quarters and moved out to the highway.

The 128 boom burst upon an economically depressed area that has scant natural resources for industry, a limited power supply, and an uninviting tax structure. But it has two overwhelming advantages: a climate for ideas that has been carefully fostered during its 250 years as a U.S. intellectual headquarters, and the opportunity for pleasant living. The Atlantic Ocean is a few miles away. The mountains are only a short drive. Nearby are many science-strong schools: Harvard, Massachusetts Institute of Technology, Tufts, Northeastern, and Boston University. Says M.I.T.'s Engineering Dean Gordon Brown: "To have a place where research-based companies can grow up, you must have a special climate where people are interested in ideas, where they meet to discuss them. These companies are started by people with an intellectual, venturesome spirit."

[1] Another: the San Francisco peninsula around Stanford University at Palo Alto.

OFF THE BLACKBOARD

Most 128 companies stress their academic bent. Their competitive advantage is sheer brainpower—a blackboard, chalk, and talent snatched from all across the United States. They attract many corporation scientists who want to do advance research at local universities—and then they jealously guard these recruits. Said one 128 president: "We don't let our chief scientist out of town without a duenna." At the same time, route 128 companies draw as part-time consultants the full-time professors and graduate students who want to put their ideas into action in industry (and to reap its rewards).

One of the first companies to utilize the area's resident brainpower is now big, well known and a darling of Wall Street: Polaroid. Edwin Herbert Land, 50, the founder-president who left Harvard to work on his first polarized light project in 1926 and later invented the Polaroid Land camera, actively cultivates an academic atmosphere in the plants. Every year he hires a few Smith or Wellesley girls for laboratory work, considers them a prime source of fresh ideas. Several have made notable contributions to Polaroid's quick photography. "Everyone," says Land, "whether he is a worker on the assembly line or a scientist in the lab, has some real urge and need for creative participation in industrial activity."

WEANING PROCESS

Another firm that leans heavily on the universities is Raytheon, the major missile-maker (Sparrow, Hawk), which was co-founded by M.I.T. scientist Vannevar Bush and is now bossed by Harvard-bred banker Charles Francis Adams (Time, June 23, 1958). Raytheon keeps 30 to 40 university consultants on tap for problems, pays them $75 to $100 a day. Some 128 consultants get up to $10,000 a year ("More than they earn by teaching," says one Raytheon executive).

Faculty boards have become reconciled to the fact that consulting jobs keep many valuable men and women at the university, while they otherwise might be tempted into industry. M.I.T., which stars in both pure and applied research (Dr. Bush developed the first electronic computers there in the 1930's), goes even farther: it feels a responsibility to pioneer techniques for industry. "We get a thing dry behind the ears and wean it," says M.I.T.'s Dean Brown. "Weaning means kicking it off the campus."

Among the companies weaned by M.I.T. and the other schools:

Ewen Knight Corp. grew out of the Harvard doctoral thesis of Harold Ewen. Working with Harvard's Nobel Prize-winning Physicist Edward Purcell (in 1952, for nuclear magnetic measurement), Ewen developed and built equipment to locate and trace hydrogen clouds several hundred thousand light-years distant from earth. This resulted in no less than a remapping of the solar system. With a fellow scientist's $1,000 and his own theories, Ewen started his company in 1952, turned out radiometers (receiving systems for radio telescopes), radio sextants, microwave components. Last year Ewen Knight chalked up $2 million in sales, expects $3,500,000 this year.

High Voltage Engineering Corp. sprang from wartime research by MIT Physicist Robert Van de Graaff, MIT Engineer John Trump, and British Engineer Denis M. Robinson. They started manufacturing Buck Rogers gear in a dreary Cambridge garage, moved to Route 128 in 1956. High Voltage now builds giant (three stories high) particle accelerators that can sterilize materials by firing a stream of electrons through them. The accelerators are also used for high-energy physics studies and for breaking down chromosomes to study their properties, may soon be used commercially to irradiate food

so that it will keep for years without refrigeration. High Voltage is also working with B. F. Goodrich Co. on ion-propulsion engines for spaceships. Its expected sales this year: $7 million.

Itek Corp. started when its president, a wartime aerial-reconnaissance expert named Richard Leghorn (MIT, 1939), borrowed $142,000 from Laurance Rockefeller to buy two science-heavy organizations after the defense-spending cutback hit research in 1957. With these two—Physical Research Laboratories of Boston University and cash-shy Vectron, Inc. (electronics)—Itek began with a well-shaped organization (more than 100 scientists) that would have taken years to build. Though most of its work is classified, and identified only as graphic retrieval, its stock soared from about $1.60 to $60 in a year, counting splits. Among other things, Itek (for "information technology") makes information-processing systems, works in photochemistry, electromechanics. Current sales: $30 million a year.

Farrington Manufacturing Co., a 56-year-old maker of display cases, is one of the older companies that changed course to catch the electronics boom, moved to 128. In 1929 Farrington devised the department stores' Charga-Plate, which gave it entry to two of the 1950s' hottest business areas—credit cards and automatic accounting systems. Four years ago Farrington moved into one of the highway's largest plants (354,000 sq. ft.), there prints credit cards (for Hilton, 35 oil companies, all the airlines), manufactures printed circuits. It also produces a remarkable machine: an electronic scanner that reads, then transmits the information it has read onto cards or tapes that can be used by IBM machines and other automated systems. Expected sales this year: $12 million.

Microwave Associates, Inc. is one of that majority of Route 128 companies that ring up the bulk of sales from products conceived just yesterday. Of Microwave's 400 electronic devices, 80 percent are less than 2 years old. To get some of them, energetic President Dana Atchley Jr., 41, played a favorite 128 game: capture the scientist. Last year Atchley heard that Bell Laboratories had developed a type of semiconductor called the varactor, which amplifies microwave frequency signals and does it with exceptionally low background noise. Atchley wooed one of the key developers of the varactor, Dr. Arthur Uhlir, with stock options and Route 128 living, built a scientific team around him, boosted sales to $6,500,000 a year. The varactor has accomplished some of the most advanced feats in space-age communications, and scientists are working toward using it as an oscillator that could speed up computers 1,000 times.

LURE OF THE OPTION

It is common for scientists to leave giant companies or great universities to join one of 128's spunky newcomers. The stock option holds a particular attraction, as does the chance to participate in some bold, new project at a decision-making level. "Smaller companies can offer participation which the big ones give only to top executives," says Microwave's Atchley.

Generous options and explosive growth have provided many a scientist with a chance to become independently wealthy for the first time in his life, have made millionaires out of some Route 128 scientists. Itek's president Leghorn, together with three other Itek executives, acquired 81,040 shares of the company for $136,880 during the past 2 years; now these shares are worth more than $3,200,000. Shares of other companies on 128 have also scooted up. Compared with their 1957 lows, Raytheon moved from 16⅜ to 57⅜ last week, Polaroid from 30 to 150½. High Voltage Engineering from 17 to 60. In 1959 alone, Microwave has zipped from 5 to 22, Farrington Manufacturing from about 12 to 74.

REMARKABLE OFFSPRING

These orbiting prices also smooth the road to merger. With the price of each share so high, a 128 firm can acquire another company by swapping only a comparatively small number of shares. Thus it can expand without great dilution of its stock. Merger partners are not scarce because many companies want a toehold on 128. "When you are in Boston," says one 128 executive, "your stock sells for around 10 times earnings. As soon as you move to the highway, these bankers cruising up and down discover you, and you're selling at 40 times earnings. That's almost enough to make you move right there."

Corporate marriages are not always happy, but they often produce remarkable offspring. One of the highway's first companies was Bomac Laboratories, Inc., which grew out of an engineering group at Sylvania and produced microwave tubes and devices (1958 sales: $10 million). When Bomac merged with Varian Associates this year, six key employees were piqued because they got less than 1 percent of the swapped stock; in April they stalked off with four others to form Metco (Microwave Electronic Tube Co.) and compete with their former employer. Within 9 days they had a plant in Salem, Mass., financing, firm contracts, and a production schedule calling for June deliveries of microwave tubes. "Within a year," predicts Founder Richard Broderick, former Bomac treasurer, "we'll have 100 employees. And in 3 years, we'll be back on the highway."

BUYING THE FUTURE

How long can 128's whiz kids keep up their phenomenal growth? The companies are heavily dependent on Government contracts, which can be cut back or canceled overnight. Their products often can be copied by competitors. Their financing can fall through if the stratospheric stock market ever tumbles or credit tightens. Their space-age industries can run into rugged shakeouts—just as most other industries have in the past. This means that only those with the wisest managers, the sharpest scientists, and the biggest bankrolls will come through. Even for those, the prices of the stocks are so high that investors are, in effect, paying on the basis of what a company will earn years hence.

Despite these potholes in the road, the bold adventurers on 128 say that the period of biggest growth is ahead. So many research-based companies were being formed around Boston last week that plans were afoot to build another highway, swinging out beyond 128, to accommodate them. The believers in space highway hold that when the climate produces ideas, growth is sure to follow.

Stop Flops Drop Crop Props

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 13, 1959

Mr. HOSMER. Mr. Speaker, the above title conveys my message.

Man Shall Not Live by Bread Alone

EXTENSION OF REMARKS

OF

HON. WALLACE F. BENNETT

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, July 13, 1959

Mr. BENNETT. Mr. President, on June 7, my former senior colleague, and for 12 years a very successful Member of this body, delivered the baccalaureate address at the University of Utah. On June 25 I asked unanimous consent to have former Senator Watkins' address, entitled "Man Shall Not Live by Bread Alone," printed in the Appendix of the RECORD.

The address apparently exceeds the limit of the amount of material which may be printed in the Appendix of the RECORD without an estimate. I have discussed this subject with the Public Printer, and have ascertained that the address will occupy some two and a half pages in the RECORD, at a cost of $202.50.

Notwithstanding the cost, I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

MAN SHALL NOT LIVE BY BREAD ALONE

(By Arthur V. Watkins)

I have a very special reason for gratitude that you have honored me by your invitation to speak on this occasion. My beloved mother, who has passed on to her eternal reward, attended this institution in pioneer days. She always had a warm spot in her heart for this university, a feeling I have shared with her, as I have watched this institution grow and flourish in greatness and the power for good.

The theme I have chosen for discussion is so vast in its possibilities that the time allotted will permit a discussion of only a few of the highlights. However, I sincerely hope that I will be able to use this limited time to get across to you a message that will provoke some serious thinking and, I trust, some constructive action to follow.

My text is taken from St. Matthew:

"Then was Jesus led up of the spirit into the wilderness to be tempted of the devil. And when he had fasted 40 days and 40 nights, he was afterward an hungered. And when the tempter came to him, he said 'If thou be the Son of God, command that these stones be made bread.' But he answered and said, 'It is written, Man shall not live by bread alone, but by every word that proceedeth out of the mouth of God'." (Matthew 4: 1–4)

GREATEST HALF CENTURY IN HISTORY

Recently a friend told me with marked enthusiasm that he felt he had lived in one of the greatest half centuries of the world's history. "The great progress in the arts and sciences and in all material developments, during my lifetime," said he, "has been miraculous."

That this has been one of the most fabulous periods of the world's history is generally conceded. Man not only has taken giant strides in his conquest of the world we live in, but new worlds to conquer also are coming into view quicker than we ever dreamed could happen.

We are boring into the bowels of the earth and sending scientists down into the depths of the oceans in our quest for knowledge of our physical environment. At the same time we are probing the smallest forms of matter, and seeking to curb hurricanes and to modify the weather.

There is hardly a spot on this globe that man hasn't been on or over, and jet transports have shrunken the once vast globe on which we live. But that is not enough. Now we are seeking to free ourselves from the force which has held us captive to this earth and we are seriously training men to survive in orbit around our own planet and eventually to explore others.

In the almost unbelievable accomplishments in the material world of today we have living proof of what the Scriptures and our own modern philosophers have declared to be possible: "What man can imagine, he can do."

UNLIMITED OPPORTUNITIES FOR YOUTH

To you—the youth of today—it scarcely need be said that many of these advances into the unknown are essentially by you and for you. We see the evidence of it everywhere. Not long ago I visited Adm. Hyman Rickover of atomic submarine fame in his laboratories and Navy quarters in Washington. When I had been introduced to members of his staff, I remarked to the admiral that they seemed to be very young men. "They are," he replied. "Most of them are 30 years and under. This is a field for youth. Very few others know much about it."

Yes, this is a world of opportunity—of almost incredible possibilities for progress. Would it not be wonderful if we could stay on this note of optimism? But as we speculate on the marvels of this age, we cannot ignore the overtones. We know that we cannot close our eyes to the fact that there is another side to the shiny mirror—one that should be so obvious that even the blind should see it.

It is one of the most ironical paradoxes of history that the age which has produced our greatest progress in the material world has also produced at the same time an environment and forces which threaten the complete destruction not only of all we have created, but of our possibilities of growth for the future. These destructive forces also threaten our very existence upon this planet.

THE COLD WAR BATTLE FOR SURVIVAL

Now we are engaged in a cold war, but, eventually, unless the Communists change their historic long-range objectives and present policies, we must either surrender to them or fight an all-out war.

In this connection it is important to note that many knowledgeable leaders in this country, in and out of Government, are firmly convinced that in our lifetime this world will become either all free or all Communist. They assert the Communist dictators are men in a hurry—that they were badly shaken by the events in Hungary—that they feel they must win before their captive populations become strong enough to overthrow their masters or weaken them so that they will be defeated by forces from without.

There are others who claim to know, who present a contrary view: That Communist nations will agree to coexist with other nations if we are but patient with them; that we are a strong Nation and can become stronger if we will just appropriate more and more billions of dollars for defense. The conclusion appears to be that if we spend enough billions, no one will dare attack us.

Small wonder then, that our people are badly confused and divided. Out of the fog of confusion of claims and counterclaims, it is now becoming clearer by the hour that the issue for civilization, for all of us—friend and foe alike—is one of survival—nothing less.

And it is becoming equally clear that peace—not peace at any price—but peace with honor and justice for all the inhabitants of the earth is an absolute must if the peoples of the world and civilization as we know it are to endure.

Strange, when you think of it, is another paradox of our times: The mad armament race of today is rapidly becoming an intolerable burden on the backs of the peoples of this earth. Yet, no one of any consequence—no responsible leader in that race, for East or West—can be found who will admit that he wants war or that he favors war as a solution to our present international controversies. On the contrary, everyone—including our enemies—claims that he is for peace.

Wars of the past, except World Wars I and II, have been essentially limited conflicts, not involving practically all nations armed with ultimate weapons, as probably would be the case in the event of a third world struggle. The grave questions are: Have the peoples of today come to the point where they must admit their complete inability to live together in harmony because no peace based upon freedom, justice, and equity can be agreed upon? Must it be conceded that ultimately fate must ring down the curtain on this planet in a quick series of searing, burning atomic, and hydrogen blasts that will leave a barren world in smoking ruins? And that following those blasts the very earth on which our race has trod will be so poisoned that it will be unfit for human habitation for generations to come? Is that to be our fate because we are frustrated in all our attempts to secure a just peace?

THERE IS A WAY TO PEACE

In spite of the pessimism and forebodings that have accompanied all of our international conferences with the Communist nations since the end of World War II—and of the conferences that are in process now—there are millions of people—I claim to be one of them—who sincerely believe that there is a way to peace, a way that has never yet been fairly tried by the inhabitants of this earth. This way to peace, they affirm, was embodied in Jesus' reply to the devil, the tempter, when the tempted Redeemer said these words: "It is written man shall not live by bread alone, but by every word that proceedeth out of the mouth of God."

This growing group of peace advocates further firmly believe that even in the event that an aggressive enemy, or uncontrollable circumstances, force us into a defensive war, that our ability to defend ourselves against all enemies will be multiplied manyfold if we do not rely exclusively on our economic strength and our armed might, but choose instead to rely, as well, on spiritual strength that comes from God to peoples who also sincerely do their best to live by the words of God as revealed in his commandments to mankind.

In addition to Jesus' own witness—set forth in my text—let me call as supporting witnesses a few outstanding men who have been our leaders in times of extreme stress and who know from firsthand experience what modern war means and what herculean efforts will be required to secure a just peace that will endure.

First let me call our World War I President Woodrow Wilson, one of our great Presidents. In a justly celebrated essay entitled "The Road Away From Revolution," President Wilson declared:

"The sum of the whole matter is this, that our civilization cannot survive materially unless it be redeemed spiritually. It can be saved only by becoming permeated with the spirit of Christ and being made free and happy by the practices which spring out of that spirit. Only thus can discontent be driven out and all the shadows lifted from the road ahead.

"Here is the final challenge to our churches, to our political organizations, and to our capitalists, to everyone who fears God or loves his country."

CHRISTIAN LEADERSHIP URGENTLY NEEDED

Ponder on this injunction, my friends, because it is a warning even more appropriate for the atomic age than it was when it was written. And please observe that President Wilson stated that our civilization "can be saved only by becoming permeated with the spirit of Christ and being made free and happy by the practices which spring out of that spirit." Note especially that mere lip service is not sufficient; the warning makes it clear and emphatic that the practices which the Christian spirit prompts are all important.

The next witness is Gen. Douglas MacArthur, field troop commander in three wars, and one of the great military strategists of all time. He certainly should be qualified as a special witness on war and peace.

A quarter of a century later than President Wilson's statement General MacArthur uttered this warning from the battleship *Missouri*, following the Japanese surrender in 1945:

"Men since the beginning of time have sought peace. Military alliances, balances of power, leagues of nations, all in turn failed, leaving the only path to be by way of the crucible of war. If we will not devise some greater and more equitable system Armageddon will be at our door. The problem basically is theological and involves a spiritual recredescence and improvement in human character that will synchronize with our almost matchless advances in science, art, literature, and all material and cultural developments of the past 2,000 years. It must be of the spirit if we are to save the flesh."

Here, again, I ask you to note that the general placed emphasis upon the reform and improvement of human character.

The third witness is none other than one of the greatest field commanders of World War II, and now President of the United States—Dwight D. Eisenhower. He has been charged with the weighty responsibility of leading us in these perilous days of the cold war and the greatest arms race in world's history. Since he is our leader and since what he does and says by reason of that official leadership is of paramount importance to us all, should we not give serious considerations to his views on this subject?

If he were here physically as a witness, I would address to him this question: "What do you consider to be the principal issue of this contest between the free world and the Communist dictators who have set out to impose their ideology upon the world?"

As recorded in the Christmas issue of Life magazine, 1955, this probably would be his answer today:

"At issue is the true nature of man. Either man is the creature whom the Psalmist described as "little lower than the angels" or man is a soulless, animated machine."

This expression leaves little doubt that the President had in mind the familiar fundamental Judeo-Christian doctrine that man is a child of God and that this earth and all that is in it was created or organized for the benefit of man and that governments are for the aid and protection of man and not his master.

CONTRAST BETMEEN COMMUNISM AND CHRISTIANITY

Coupled with the Communist doctrinaire slogan, "Religion is the opiate of the people," a news item out of Russia in late 1958 fur-

nishes some rather dramatic support to the President's statement of the issue between communism and free nations of the West.

It is a statement of special interest to university students everywhere in the world, who at this time of year are receiving conventional academic honors. Note the contrast in Russia as described in a well-authenticated news report in "Dateline" which reads as follows:

"The official Soviet news agency, Tass, reports that a University of Atheism has been opened in Ashkhabad, capital of Soviet Turkmenistan. * * * The university is offering a * * * course in godlessness to further the spread of 'scientific-atheistic knowledge. * * * And according to the Manchester Guardian Weekly, the civic registrar in East Germany is issuing certificates to those cancelling their church affiliation. The possession of such certificates is compulsory for party officials, officers in the armed forces, students in teacher training colleges, and is now being demanded from teachers in schools and universities."

Now let us consider a further statement made by the President in the Life magazine article already referred to:

"Application of Christianity to everyday affairs is the only practical hope of the world. The result will be fresh vigor in the international effort to build a firm and just peace within the brotherhood of men under the fatherhood of God. Our forefathers proved that only a people strong in godliness is a people strong enough to overcome tyranny and make themselves and others free. Today it is ours to prove that our own faith, perpetually renewed, is equal to the challenge of today's tyrants. At issue is the true nature of man."

SPIRITUAL STRENGTH VERSUS ARMED MIGHT

The comparative worth of armed might with that of spiritual strength was discussed by President Eisenhower before a world religious gathering in Washington in 1954. Said the President:

"Because, my friends, though today we must remain strong, we must remain strong in all the economic and the scientific affairs of the world, we must remain strong militarily for the protection of our firesides and our rights to prevent domination by those who would seek to enthrall us, yet bullets and guns, and planes, and ships, all the weapons of war can produce no real or lasting peace.

"Only a great moral crusade, to determine that men shall rise above this conception of materialism—rise above it and live as people who attempt to express in some faint and feeble way their conceptions of what the Almighty would have us do, that is the force that will win through to victory, and the world will have prosperity and peace—prosperity beyond all imaginings of the past. And science will be developed and devoted to the happiness, the welfare of man, and not to his destruction, and all of us can live together peacefully and happily."

In deference to you shining young products of our academic system, I shall summon as my last witness one from the ranks of the learned men and women who courageously face the challenge of preparing you young people to grapple with today's tremendous problems.

This final witness is Dr. Laurence M. Gould, a distinguished scientist, educator, college president, and author. Dr. Gould has looked beyond the missiles and destructive weapons of the atomic age and found a greater threat to civilization in the heart, in the moral fiber of man himself. Said Dr. Gould:

"I do not believe the greatest threat to our future is from bombs or guided missiles. I don't think our civilization will die that way. I think it will die when we no longer care—when the spiritual forces that make us wish to be right and noble die in the hearts of men. Arnold Toynbee has pointed out that 19 of 21 notable civilizations have died from within and not by conquest from without. There were no bands playing and no flags waving when these civilizations decayed; it happened slowly in the quiet and the dark when no one was aware. * * *

"If America is to grow great, we must stop gagging at the word 'spiritual.' Our task is to rediscover and reassert our faith in the spiritual, nonutilitarian values on which American life has really rested from its beginning."

In other words, Dr. Gould puts in second place the threat of an all-out, world-searing nuclear war. A greater threat, he asserts, is that our civilization will die from within if we allow our moral, spiritual fibers to be destroyed by a false reliance on material, utilitarian values of the type that led to the physical decline and fall of 19 of the 21 great world civilizations.

SUCCUMBING TO INTERNAL WEAKNESS

I shall not call the roll of those civilizations which have succumbed to internal weaknesses. One example shall suffice. What has happened to the glories of ancient Rome? Is not the great Roman civilization just as dead, just as much a rubble heap as if it had been laid waste by a string of nuclear bombs? And what reduced the power, pomp, and glory of the great Roman Empire to a few ruins probed by archeologists or ogled by 20th century tourists: Well, it was not the invading barbarians from the North; they merely took over a dying civilization suffering from a fatal corruption and spiritual rot. And this is the kind of a national fate that Dr. Gould impliedly predicts for our civilization if we don't wake up and repent.

All this may be regarded as strong language for a graduation function, but I feel a heavy personal responsibility to speak out and warn you frankly how I feel about this matter. I do feel strongly about it and I agree most emphatically with Dr. Gould that we are in grave national danger from within as well as without. And I am sure there are millions of patriotic, forward-looking Americans who also fully agree with Dr. Gould.

There are three reasons why I don't mind discussing such a subject frankly with a graduating class. In the first place, young people today are far more tough-minded intellectually than we were in my day. Most of you have lived through a period marked by the greatest world war in history; a brutal blood-letting of American youth in Korea, and a decade of the most intensive and nerve-wracking cold war this world has ever seen. You are conditioned to wars and rumors of wars and destruction; hence, you can look at things realistically and take them in stride—I pay you that compliment.

Secondly, that in spite of the many things that drag us down and make us vulnerable to internal decay, America is one of the greatest Nations of history and has a record of altruism toward other nations without parallel. Millions of Americans who love freedom above life itself believe in their country's destiny as the leader of the free nations of the world and are willing to make almost any sacrifice to help her fulfill that destiny.

Thirdly, Dr. Gould's estimate was not a pessimistic one. He frankly recognized the awful danger facing us, but he coupled his forecast with a simple positive remedy that all of us can contribute to, if we have the will. Let us recall his words: "If America is to grow great, we must stop gagging at the word 'spiritual.' Our task is to rediscover and reassert our faith in the spiritual, nonutilitarian values on which American life has really rested from the beginning."

LIVING THE COMMANDMENTS OF GOD

Well, how can one return to the spiritual, nonutilitarian values to which Dr. Gould referred? Simply, by sincerely living the Commandments of God and accepting a higher plane for the guidance of our own conduct—fundamental principles which guided the founders of this country and the framers of our basic charters of democratic government and sustained our people in the dark days of our history.

President Wilson was very positive that our civilization can survive materially only by becoming "permeated with the spirit of Christ and being made free and happy by the practices which spring out of that spirit."

What are these essential principles and practices? Well, time does not permit an inventory, but I am sure most of you learned them in your home, regardless of what your religious faith may be. The precepts of the Golden Rule, for example, are taught in virtually all great religions, and certainly no one would contend that general application of this practice would not vastly improve governmental and social relations here in this country, or in any other nation or nations.

And in spite of our vast gains in science and space technology, no one has ever repealed the Ten Commandments as a code for living. If we could all seriously strive as individuals and as a nation to observe these time-tested principles, transmitted to mankind by the spiritual leaders of the old Hebrew civilization, wouldn't the world be a greatly improved place to live in?

In fact, if we could only hearken to the two great spiritual commandments to man as outlined by Jesus Christ, the social and moral climate here in the United States and elsewhere would improve tremendously.

LOVE THY GOD AND THY NEIGHBOR

Said the Master: "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind.

"This is the first and greatest commandment. And the second is like unto it, thou shalt love thy neighbor as thyself."

Just think of what a general application of this spiritual principle could do. Why it could end war itself.

Spiritual leaders for centuries have been valiantly trying to persuade their fellowmen to place such values above the material side of life, and in many cases it has been a losing fight. However, never before in history have we had the twin disasters of nuclear destruction and decay from within, staring our civilization bleakly in the face. Perhaps this awful prospect will generate a belated reformation and amplify the efforts of our spiritual and our national leaders to command the attention of a civilization hellbent for self-destruction unless it repents.

THE DIGNITY OF MAN

There is only one point, one major conclusion to this discussion. It is, simply stated, that you and I—young and old—all of us of the free world, should engage wholeheartedly in a great sustained crusade for moral reform and peace based upon the spiritual foundation of a belief in God and the dignity of man as a son of God, and practices—personal and governmental—that are consonant with such beliefs.

And this crusade should not in any way supplant the activities of our churches—but should be an aid, on a wide scale, to them in this global emergency—in the valiant efforts they are now making for righteousness and a lasting peace.

This is no impractical, visionary suggestion. Based on the fundamental principles I have just reviewed, it is the most practical, positive, urgently pressing thing we can do, and it is of special significance to young peo-

ple who are destined to man the ramparts of liberty and to take over the ships of state under the threat of the world-poisoning mushroom of the nuclear bomb. No graduating classes in my recollection ever went out into a world fraught with greater danger and faced with heavier social and moral problems, than those of 1959. Conversely, no group of young people ever faced a brighter future of technological and material progress if that overwhelming problem of peace and survival can be successfully resolved on a basis of freedom and justice for all mankind.

THE CHALLENGE TO YOUTH

This proposed moral, spiritual drive for strength that will secure and maintain a just peace has never been tried seriously on any large scale as a solution to this tremendous international problem. It, therefore, stands as a stimulating challenge to young, eager minds, trained and ready to carry their share of the burden of trying to solve the present ills and problems of mankind.

In a successful meeting of this challenge you would also help turn the tide against those forces from within which are a deadly threat to our civilization.

INTERNATIONAL SPIRITUAL CRUSADE

I cannot overemphasize the importance of President Eisenhower's repeated statements on this subject. Like President Wilson, he not only is a national leader, but also a widely respected world leader as well. Perhaps no one else in our times is more admirably suited to assume the leadership in such an international crusade—a crusade which he suggested. And I hope and pray that his present good health continues so that he can persevere in his efforts for world peace for many years after he leaves the office of President.

A recent issue of Life magazine reproduced excerpts from some of his private letters, and I was pleased to note that a letter dated November 28, 1958, showed that he was still considering the ways and means of launching such a spiritual crusade to strengthen our own country and the free world, if he can find the right occasion and forum.

"We have too much thought of bombs and machines and gadgets as the arsenal of our national and cultural strength," the President wrote. "Yet in the realm of their respect for spiritual values, all nations which are either philosophically or politically related to our own have a combined potential strength that is indestructible. The great problem is to get people—our own people and our friends—to understand these things and to think of them objectively and with a sense of inspiration and uplift."

It has been said there is nothing so volatile as an idea. And this is one of the most potentially powerful ideas we can explore and adopt.

So I earnestly beseech all of us here at this gathering to think seriously of this problem and to take steps individually and collectively to bring about some results in positive action toward a worldwide spiritual crusade that will bring and maintain peace based on freedom and good will toward all men.

The President, I am sure, and all other leaders of the free world engaged in the quest of a just peace, will appreciate your personal interest and counsel. And we can find, I am equally sure, considerable support among the oppressed peoples in the Communist countries.

THE FUTURE IS YOURS

If the movement flourishes and spreads, you young people will be the captains and the lieutenants in the ranks, just as you will be the core of our defense forces if peace efforts fail and the world succumbs to the terrible folly of war. This problem, of course, concerns us all, but you have the greatest stake in it, even if you are not responsible for getting us into this unhappy predicament. It is your future, your opportunity to build and to improve. Fortunately for all of us, youth is not dismayed by a challenge, and you have the energy, the trained minds, and the youthful enthusiasm and the will to contend with and to solve problems that your predecessors have wrestled with unsuccessfully.

May God bless you and inspire all of us to prodigious efforts, crowned by the rich fruits of success, as we respond to the challenge of building a better and more peaceful tomorrow.

Soviet Naval Power

EXTENSION OF REMARKS

OF

HON. RICHARD B. RUSSELL

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Monday, July 13, 1959

Mr. RUSSELL. Mr. President, at a time when so much of our national security concern is necessarily focused on the missile and space race, we must be careful not to overlook the very serious and ominous naval buildup of the Soviet Union.

Adm. James S. Russell, Vice Chief of Naval Operations, discussed the Russian naval buildup and its significance to the free world allies in an address to the National Convention of Rivers and Harbors Congress in Washington last May.

In his remarks, Admiral Russell pointed out that in the relatively brief period since World War II, Russia has emerged with the world's second largest naval force. That fact in itself is alarming enough. But even more alarming has been their concentration on submarine development. Admiral Russell said the U.S.S.R. is now believed to have about 450 submarines—far more than this country has in service. In 1956 alone, Admiral Russell said, the Russians built more submarines than the U.S. fleet now has in active service.

Mr. President, Admiral Russell's speech is most informative and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE SIGNIFICANCE OF SOVIET SEAPOWER

Address by Adm. James S. Russell, USN, Vice Chief of Naval Operations, before the delegates to the 46th National Convention of the National Rivers and Harbors Congress, Mayflower Hotel, Washington, D.C., Friday, May 15, 1959

The Soviet Navy is the least understood of the Soviet armed forces. This lack of appreciation of Soviet seapower and its implications is probably due to two things. First is the great secrecy with which the Soviets have cloaked their naval development in the postwar period. Except for occasional dark hints that the navy, too, is equipped with all modern weapons, Soviet propaganda has aided this secrecy by focusing attention in the field of missilery and aviation. The second reason concerns our traditional view of Russia as a land power rather than a naval power. The pattern of World War II gave us little appreciation for Russian seapower or its possible future trends.

At the end of World War II, Russia's intransigence and the unfolding of her inflexible adherence to the Communist doctrine caused a startled, divided, and rapidly disarming West to face about and unite in protection against this Frankenstein which had been a World War II ally.

The United States has joined with no less than 42 other nations in cooperaitve defense treaties. NATO, SEATO, ANZUS, and the RIO Pact of the Western Hemisphere are mutual defense organizations in which we have membership.

Place in your mind's eye a map of the world and note that these 42 free nations, who together make an impressive strength, lie overseas or draw power from the sea. These free nations can be described, quite properly, as the World Sea Confederation—a single body politic of the sea. At the center, the United States and Canada form the surging heart. Overseas to the east lie the sturdy limbs of our NATO allies, to the west ANZUS and SEATO, and south the RIO Pact members of South and Central America. Each nation by itself may be small in comparison to the Russian Bear in Eurasia, but, united in freedom, their combination is unmatched.

Joining together these farflung components of free world strength and giving life and being to the body politic are the arteries of the sea.

Now to Soviet leaders, truth stands out: if only they can cut these arteries, mortal damage may be done to the West. If the West loses the sea, it loses all.

In contrast to our Navy, the Russian Navy is heavily slanted toward submarines, and there is, of course, good reason for this. Russia has been impressed with the near successes in two World Wars of submarines as an implement useful to a continental power for cutting the seaborne life lines of belligerents who otherwise ruled the seas

Post World War II, Russia has engaged in a most impressive and significant naval building program. This program has provided her, today, the second largest navy in the world with approximately 28 cruisers, 150 destroyers, over 3,000 naval aircraft, and, significantly, about 450 submarines. This fleet reflects Russia's trend away from a continental outlook, and also her particular interest in the submersible weapons system.

No power in world history has ever had in peacetime as large a submarine force. Two-thirds of Russia's 450 submarines are new long-range ocean patrol types developed in the years after World War II with the aid of German submarine designers. Between 1950 and 1956 submarine construction increased each year, reaching a phenomenal peak in 1956 of about 100 submarines. This means that Soviet shipyards were turning out a completed submarine every 3rd or 4th day throughout the year—an impressive rate indicative of what the machinery of dictatorship can accomplish with its total control of government, industry, materials, facilities, and people whose standard of living can be depressed at will. Thus in the single year of 1956, Russian shipyards turned out about as many submarines as we have in service in the entire U.S. Fleet.

Suddenly this massive rate of production was cut off. In 1957 there was practically no submarine building. In 1958, however, production of a new long-range type was initiated, but at a much slower pace than before.

Quantitatively, we say expect the Soviet submarine fleet to remain at about its pres-

ent level; qualitatively, however, the threat to the free world will continue to grow as the older and smaller submarines are phased out of service and the number of new long-range types increases. These long-range submarines pose a threat not only to our vital traffic across the seas, but to our industrial centers as well, for the Soviets have the capability for arming these submarines with missiles and it must be assumed that some are already so equipped.

Although the U.S. Navy has a long lead in nuclear power, sooner or later nuclear power will appear in Soviet submarines and give them, too, that great tactical advantage which accrues when the ability to remain submerged indefinitely combines with high submerged speed. We must assume also that the Soviets are working on their own version of our Polaris submarine-launched ballistic missile. All of this gives an added dimension to seapower and poses a vastly increased danger from Russia's numerous underseas fleet.

Russia's Navy is modern. Eighty percent of all her combatant ships have been built since 1945, a degree of modernness in sharp contrast to the 20 percent of ours built during the same period.

Russia's Navy is beginning to show itself. Shortly after Stalin died, the Soviets relaxed the cloak of secrecy on their naval program to the extent of sending some of their ships abroad on goodwill visits. The loss of security by such visits has been minimized through sending the same classes of ship—a new cruiser and destroyer—on all subsequent visits. Visits have for the most part been to Scandinavian and Western European countries, but on one occasion—in the fall of 1957—to Latakia, Syria, as a demonstration of Soviet interest in the area.

The Soviets have a double purpose in making these visits. First, by showing first-class, impressive warships abroad they demonstrate their military strength which in turn facilitates diplomatic pressure and intimidation. Second, the crews of these Soviet ships are very carefully indoctrinated as to their behavior toward the local populace. Their purpose, of course, is to convince the inhabitants that there is nothing to fear from Russia, and that alliances such as NATO are plainly unnecessary.

A recent development is the announced Soviet decision to equip a number of submarines to do research in oceanography and on fishery problems. The first of these submarines is in service, and others will probably follow. Although their purpose may be primarily what the Soviets claim, their value for the collection of military intelligence is great.

Still another cold war activity of the Soviet Navy which aids political penetration, is the selling of Soviet warships to neutral nations. Egypt is the best example. Some Soviet destroyers, several submarines, and some smaller craft have already been turned over to Egypt. The Egyptians will have some trouble assimilating these warships and will depend heavily on Soviet technical assistance and training for some time to come. This, coupled with other Soviet military aid to Egypt, gives the Soviets a considerable influence in the military establishment of the United Arab Republic. The Soviets have offered naval vessels to other neutral countries, particularly in southeast Asia.

In Russia's past perfidy, her unwavering adherence to the concept of a worldwide dictatorship of Moscow controlled communism, and in Khrushchev's own words, "We will bury you," there is abundant evidence that Soviet Russia is in a ferment of expansionism. Her navy is designed to further her purpose at a time when to fulfill her ambitions she must turn more and more to the sea. Her navy exists as a direct threat to the free world's defensive alliances which depend upon the sea for their strength.

To meet this challenge at sea we must look to the strength of our Navy and to the efficiency and number of the ships which make up our merchant marine.

What does the future hold? Of one thing we can be sure, the pressure will continue. Those formerly free nations now within the Communist circle will be severely and savagely disciplined, as was Hungary and now Tibet, to insure that they make no deviation from the Communist doctrine. Outside the circle the Taiwans, the Lebanons, and the Berlins will occur at regular intervals. These crises are planned situations each in turn designed to test the free world alliances and the strength of democratic principles.

The vast Russian nation, the masses of whose people are being educated for the first time in history, will some day learn that Marx and Lenin, Stalin and Khrushchev, do not provide the answer to man's existence, but that the true revolution lies in the West where government serves rather than enslaves its people, where man is truly free and enjoys the highest standard of living in history. Meanwhile, we in the West must remain true to our innermost faith in the basic freedom of nations and individuals, and above all, we must not shrink from the burden of preserving the freedom of the seas without which the world cannot prosper.

Agribusiness Outlook

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, July 13, 1959

Mr. LANGER. Mr. President, I ask unanimous consent that the issue of June 15, 1959, of the Agribusiness Outlook be printed in the Appendix of the RECORD.

There being no objection, the edition was ordered to be printed in the RECORD, as follows:

AGRIBUSINESS OUTLOOK

Agribusiness industries—and not farmers—are the main beneficiaries of the agricultural mechanical revolution. This is due to the severe economic squeeze, whereby farmers absorb higher industrial and service costs but are not in a position to pass along their own increasing costs through higher farm prices.

A highly accredited independent analysis of the farm economic situation reveals that today, as contrasted to 10 years ago, farmers are absorbing in one way or another about $10 billion a year in higher costs of both the processor-handler and farm supply and service industries. (Based on Government statistics.)

Processors and handlers pass back about $4 billion a year increased costs in form of lower prices for farm commodities. Farm supply and service industries pass along another $4 to $5 billion increased costs in higher prices and increased sales—including higher wages and increased taxes both to business and employer.

Farmers, the figures show, could not finance rising costs from current income, so doubled their debt from $10 to $20 billion to to it.

There's strong evidence that farmers have been oversold on the economic benefits of more and better farm machinery and too-rapid expansion. For agriculture as a whole, increased mechanization simply isn't doing what it's supposed to do: Cut production costs and increase income.

Research, education, and farm programs have driven farmers into 5 million separate approaches to technological efficiency, rather than creating a common approach to economic efficiency or guiding them toward group market strength.

Here's what's happened in the 10-year 1947–57 period:

Farm production went up 18 percent but gross cash income held relatively steady at about $30 billion. At the same time, farm costs went up 28 percent. In other words, 18 percent more production gets him the same amount of cash income—but costs him 28 percent more.

Unit production costs have not been cut by mechanization. Out of each dollar of sales income, the farmer now has about 82 cents cash expenditure. This compares with 65 cents in base period 1947–49—and with 92 cents in the depression thirties.

Output per man-hour on the farm has increased 32 percent since 1948 but output per unit of farm machinery and motor vehicles has declined 40 percent.

Net inventory of farm machinery and motor vehicles has increased from $6.9 billion to $18 billion while livestock and crop inventories now are valued at slightly less than the $22 billion of 10 years ago.

Farm labor cost has declined only $220 million a year for 2 million less hired men, while depreciation on equipment (10 percent rate) went from $700 million to $1.7 billion a year; overall capital depreciation went from $1.6 to $4 billion.

Evidence shows it would take gross cash income of $40 billion-plus a year to keep farm income up with rising costs, compared with current average $30 billion.

Meanwhile, the farmer will continue on the technological treadmill—improved technology won't pay for itself—as long as the economic benefits are absorbed in increased costs of suppliers of equipment and materials, and production, marketing and transportation services. Or, until farmers can pass along their own rising costs through greater "bargaining power."

Increased consumption can't solve the agricultural surplus problem. That's the opinion of Lyle Bender, South Dakota extension economist, in a recent study of three consumption-boosting approaches to the problem.

Here's Bender's viewpoint on the three major consumption approaches:

Income approach: An example of this is the food stamp plan of the early 1940's, which also has backers in the present Congress. Bender points out that only about 18 percent of the population has family incomes less than $500 per person annually.

If every family under $500 per capita had their food raised to the same amount consumed by families in the $500–$700 income group, total food purchases in the United States would be boosted by 2.4 percent. This is far short of an 8 percent boost in consumption experts say would be required to help solve the surplus problem.

Price approach: Advocates believe people would eat more food if it were cheaper. This is the approach used by the present administration, Bender points out.

If all retail food prices were reduced 10 percent, Bender estimates total food consumption would increase only 2.1 percent, compared with the eight annual farm surplus.

"However," he emphasizes, "this 10 percent drop in retail price would probably mean a 20 to 25 percent decline in prices at the farm level."

Nutritional approach: This couldn't do the job either, he believes, since "we in the United States are pretty well fed." In 1955, fewer than 10 percent of the families had diets classified as poor, compared with 33 percent in the mid-1930's.

Nutritional deficiencies are not large, Bender says. "Some have argued that overeating is more of a nutritional problem than inadequate nutrition."

Surplus stocks underrated? This was suggested by Dr. Earl F. Crouse, president of the Farm Business Council, Urbana, at the National Plant Food Institute convention the other day. Crouse indicated that United States $9 billion investment in surplus commodities is worth more than generally conceded.

Declaring that subsidies have helped develop agriculture from "a horsepowered economy into an agribusiness economy," Crouse said the United States is faced with "the major public policy decision of how to properly finance food reserves for 180 million Americans."

"As big as our Government stocks appear to the casual observers," he said, "I do not think they are large by realistic standards of adequacy."

Red Chinese Failures

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, July 13, 1959

Mr. SCOTT. Mr. President, we keep getting additional evidence of the failures of the experiments being undertaken by the Red Chinese. The most recent is a report of the findings of Dr. Sripati Chandrasekhar, Director of the Indian Institute for Population Studies at Madras, who visited mainland China in 1958.

I ask unanimous consent to have printed in the Appendix of the RECORD a release by the Joint—American and Nationalist Chinese—Commission on Rural Reconstruction.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

SAYS REDS QUIETLY DROP BALLYHOOED EXPERIMENTS

Many experiments widely publicized by the Communist regime in mainland China have been dropped quietly when they proved unworkable, said Dr. Sripati Chandrasekhar, Director of the Indian Institute for Population Studies at Madras, now visiting in Taiwan.

He cited deep plowing, irrigating with hot water to speed germination, and close spacing of crops. Birth control education also has been abandoned, he said, and the official line now seems to encourage population increase.

Dr. Chandrasekhar will make a public address at National Taiwan University, Tuesday morning. He is in Taiwan for a week to study progress in economic development and education as a guest of the Joint Commission on Rural Reconstruction.

Dr. Chandrasekhar pointed out that population increase on the mainland may be controlled, however, through systems that keep husbands and wives separated because they are employed at separate jobs, or even in separate cities. He discounted the reports, which he said were widely repeated in the United States, that husbands and wives were forced to live apart in communes as a birth-control measure.

The Indian population expert was in mainland China for 8 weeks late in 1958. He said he found in many areas that children and old people have been moved out of family homes and other married couples have been brought in to occupy the rooms they vacated. In nursery homes run by the state the children seem well fed, he commented, and invariably sang Communist songs when a visitor appeared. "They are being raised as robots," Dr. Chandrasekhar said.

Old people are encouraged to do light work in the old people's homes. Dr. Chandrasekhar disbelieves reports that family houses have been pulled down when people were forced into communes. But the family system has been destroyed by Communist practices, he said.

While deep plowing has been abandoned, deep burials are being practiced to avoid using valuable land as cemeteries, he reported. Graves are dug 15 feet deep, and orchard trees are planted on them so that the land remains in production.

In Hangchow, he said, a large cemetery has been made into a park.

He told of visiting the commune of the 16 guarantees north of Chengchow. The guarantees include everything from free marriages to free burials. Dr. Chandrasekhar termed this commune a sort of zoological garden.

People in the cities fare better than those in the country, in his opinion. "The poverty of the old days is gone, but the big show of improvement is in the cities," he said. "The villages are not changed much, except that they are swept clean." He told of an active Communist campaign against spitting in public.

The Red claim of a population of 600 million is probably fairly accurate, Dr. Chandrasekhar said, since it was based on registration of voters, and everyone was required to vote. He was told that 20 million people have been moved from the southeast to the northwest of China. But the Reds have given up trying to depopulate the city of Shanghai. According to Communist statistics the birth rate is now 37 per 1,000 and the death rate 17 per 1,000. Population increased 24 million last year, it is believed.

The best schools and colleges are limited to trusted and loyal Communists, he found. In charge of universities and similar institutions are Communist Party leaders who may have no qualifications for the post they hold.

Many women now hold jobs, draw wages, get divorces and pursue professional careers, Dr. Chandrasekhar said, and thought that they were in favor of the marriage regulations now in practice.

But most person relationships have changed, he said, and few people have friends any more. "There is only Big Brother."

H.R. 7645—Public Buildings Act of 1959

SPEECH
OF
HON. HAROLD T. JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

Mr. JOHNSON of California. Mr. Speaker, I am happy to support H.R. 7645, the Public Buildings Act of 1959. I believe it is necessary and worthwhile legislation. It is a bill which when enacted into law will go a long way toward getting underway throughout the Nation a very necessary program of Federal building construction.

The history of the building construction program in this country from 1902 up to date discloses that there has been only one basic law placed on the books for overall Government building construction. That is the Public Buildings Act of 1926. H.R. 7645 is the first basic and fundamental change to be presented to the Congress since the enactment of the 1926 act. It contains the best features of the 1926 act and adds as well those features which through the years have proved to be workable ones in the development of a sound public building program. It places the authority for public building construction squarely where it belongs, in the hands of the Administrator of General Services. It gives to the Congress the necessary control for a coordinated public building program. It is a bill which was unanimously reported by the House Committee on Public Works, of which I am a member. It has been carefully worked out over a long period of time.

In my opinion, this is one piece of legislation that should be enacted into law during this session of the Congress. As I have stated before, here is a bill that contains the best features of the previous public building laws, adds new features that will further enhance the program and will, when enacted, finally bring about the implementation of a much needed building program. I am happy to support this bill.

Private War on Communism

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, July 13, 1959

Mr. REECE of Tennessee. Mr. Speaker, since there has been considerable interest manifested in the article "Private War on Communism" published in the June issue of the New Age, the magazine of the Supreme Council 33°, Ancient and Accepted Scottish Rite of Freemasonry, southern jurisdiction, United States of America, which had picked it up from the American Mercury magazine, I am placing it in the CONGRESSIONAL RECORD so that it might be more widely available:

PRIVATE WAR ON COMMUNISM
(Hon. B. CARROLL REECE, 32°)

In the late 1920's an ordinary debate in the Czechoslovakian Parliament degenerated into a near riot. The Communist leaders jeered at their opponents, refused to listen to any proposal other than their own, and indulged in wholesale violence as a means of intimidation.

An anti-Communist, meeting Klement Gottwald, Communist leader, outside the hall, asked: "Just what do you Communists really want, anyway? Why are you always so embittered and unreasonable? Why are you against everything and why do you refuse to compromise on even the least im-

portant matters?" Then, before the belligerent Gottwald could reply, the anti-Communist threw the $64 question at him. "What," he demanded, "would you do if you were in the majority instead of being in the minority?"

Gottwald had the answer for that one. "When we take power," he snarled, "we shall hang you, you scoundrel."

The anti-Communist was stunned. "Surely you don't mean that?"

"I mean precisely that," Gottwald threatened. "We intend to hang all you bourgeoisie and bloodsuckers."

The rest of the story is history. Twenty years later the Communists seized power in Czechoslovakia, rounded up their enemies, and rushed them off to concentration camps. Thousands of them—labor leaders, army officers, businessmen, and intellectuals—have not been heard of to this day. Presumably they were murdered on the ground that they were bourgeoisie and bloodsuckers. That is communism in action.

"But," thousands of well-meaning Americans will tell you, "that could never happen in America. The American Communist is a different brand. He could never resort to such methods."

What do the Communists themselves have to say on this subject? Perhaps William Z. Foster is as definite an example as we can cite. In his book "Toward Soviet America," he answers this question with such frankness that event the dullest-witted do-gooder cannot fail to comprehend its full significance:

"The American revolution, when the workers have finally seized power, will develop even more swiftly in all of its phases than has the Russian revolution. This is because in the United States objective conditions are more ripe for revolution than they were in old Russia."

But Foster did not stop at that. He added:

"All capitalist parties—Republican, Democrat, Progressive, Socialist, etc.—will be liquidated—the Communist Party functioning alone as the party of the toiling masses."

Does that have a familiar ring? Does it bear a close resemblance to Clement Gottwald's threat to the anti-Communists in Czechoslovakia? This is the Communists' plan. It is the blueprint to be followed when the day comes for them to take over America. "When we take power," you can almost hear the Communists snarl, "we intend to hang you bourgeoisie and bloodsuckers."

What can you—the ordinary man or woman in the street—do about this threat? First, you must realize that merely being "against communism" is not enough. You must do better than that if you are to become a vital force in saving America from the fate of Czechoslovakia. What shall you do? Here are a few suggestions which should be helpful:

1. UNDERSTAND THE SUBJECT

The American Bar Association in its "Brief on Communism" says:

"There is widespread ignorance and confusion throughout the United States concerning the nature of communism and the objects and purposes of those people in this country and elsewhere who embrace and follow Communist teachings."

In order that you may be certain of your facts, you must read authoritative publications regarding communism, i.e., the American Legion magazine, National Republic, Reader's Digest and the Saturday Evening Post and a few other periodicals which publish objective articles on this important subject.

You should listen to statesmen fired with patriotic zeal, read the publications of the House Committee on Un-American Activities, Internal Security, and other congressional organizations which are engaging in this all-out struggle against communism, the battle of the century.

In your reading you will learn that Communists and their vast corps of secret allies are tireless missionaries. They never waste their effort trying to convince or convert each other, but are continually working to seduce and subvert outsiders.

This gives you a valuable cue: Become an equally fervent and tireless missionary for Americanism. Never let a day pass but what you attempt to persuade those who seem less dedicated than you to the American way of life. You will do this by sharing with others the information you have obtained—the tragedies of communism, the glories of Americanism.

2. BE AN EFFECTIVE CITIZEN

Just what does this entail? These things: Take an active and intelligent interest in your local civic, State, and national affairs. Follow your State's legislative and congressional activities. Remember, you are a free citizen of a Republic—not a helpless subject of an all-powerful state. Act the part.

3. BE AN OPINIONMAKER

You will find the Communists and their secret allies have infiltrated every strata of our society—PTA, powerful national organizations, and even some churches. The comrades may have their representatives in your lodge, community, and even in your small local clubs. These people try to direct the activities of every group. They offer suggestions, persist in their opinions, and absolutely refuse to compromise. There is but one way to deal with them. Refuse to agree with them in any detail whatsoever. See to it that you, and others who are thoroughly American, make the opinions, rules, and regulations of your lodge, church, and community.

4. EXPOSE COMMUNISTS

The thing which Communists fear most is exposure. This is because it isolates them from the rest of the population. And isolation, the Communists know full well, means death to their most effective weapon—the fifth column.

"How," you ask, "can the ordinary man in the street do this?"

The process is simple. It consists of two steps: First, recognition that one is a Communist; second, leading others to that realization. It is relatively easy for one to learn the ingredients of communism. He then is in a position to decide that a given individual is, or is not, composed of those elements.

But step two is more difficult. Here is the way the astute citizen proceeds in this aspect of fighting communism:

"Never say," counsels a noted authority on this subject, "that one is a Communist. Instead, cite evidence which will lead others to the inevitable conclusion." He illustrates thus:

"If I point to a two-legged befeathered waterfowl the size and shape of a duck and call attention to its webbed feet, to the fact that it quacks like a duck, that it swims like a duck and eats like a duck and associates with ducks, the average, fair-minded American will conclude that the waterfowl is a duck."

That is an effective way of operating. It enables the other fellow to come to his own conclusion. Your job is to supply the evidence. There is no better way of exposing Communists.

5. ATTEND AND SUPPORT YOUR CHURCH

It is generally known that Communists are frantically and militantly atheistic. "We Communists," Earl Browder has said, "do not distinguish between good and bad religions because we think they are all bad."

"Is there," you ask in complete sincerity, "really a danger that some churches are helping communism?"

J. Edgar Hoover, 33°, Director, Federal Bureau of Investigation, has this to say on the subject:

"I confess to a real apprehension so long as Communists are able to secure ministers of the Gospel to promote their evil work and espouse a cause that is alien to the religion of Christ and Judaism."

In other words, even among the clergy, you will find individuals who, knowingly or not, are working for communism. Your job, then, as a disciple of Americanism, is to identify these subversives no matter who or where they may be and to expose them.

How?

By applying the very same principles to your church-going acquaintances that you apply to your office colleagues, lodge brothers, neighbors. The fact that one is a church member—or an official in the church—certainly is no guarantee that he is an American. In fact, some of the most dangerous Communists in this country are respected members of various churches. To say that they are wolves in sheep's clothing is a gross understatement.

6. EXAMINE YOUR SCHOOLS

"Give us the child for 8 years," Lenin announced years ago, "and it will be a Bolshevik forever." To that end the Communists have planned for your child in the name of education.

"They mean to take him from the nursery, put him in uniform with the hammer and sickle flag in one hand, a gun in the other, and send him out to conquer the world," reports the House Committee on Un-American Activities.

"If they have their way, he will be guided from the kindergarten straight through college so that he will have anything except a mind of his own.

"He will be trained but not educated. He will be taught to solve problems that are handed to him and to consider it a crime to think for himself. He will be the child-man of communism."

The alarming thing is that this is happening in some elementary and secondary schools, in our colleges and universities Some of the most effective Communists in this country have been teachers.

What can you do about this?

Plenty. Simply apply the same yardstick to the schools and teachers that you used with others. Things equal to the same thing are equal to each other.

Learn what the schools are saying regarding history, economics, social welfare. What do the teachers say about international communism? Do they see it as a real threat or as a fad that amounts to but little? What do these same teachers have to say about Americanism? Is it an outdated philosophy of government or something to be prized above all else?

If you find that a teacher is selling America short, expose him. It is a part of an American teacher's duty, especially today, to instill in the pupil's mind a deep American way of life. Any teacher who fails to do that bears the closest scrutiny tag.

7. PREACH AMERICANISM

It is true that you are but one person. You may feel that you are not too important. And consequently, you may think that there is little you can do, personally, to fight communism. However, you must remember that no matter who or what you are, you are free to take an individual stand on this subject. You can make sure that, every day, through your words and actions, you preach Americanism. And there are more than 160 million people in the United States today. In view of these facts, can there be any doubt but what you and you are a tremendous force?

To adopt this attitude does not mean that you will indulge in a continual flag-waving act. But it does mean that, in your contacts with colleagues in the office, lodge, church, union, and community, you will unwaveringly advocate the principles of free speech and religious freedom, of free enterprise and free elections, equality, justice, trial by jury, and majority rule.

These are the ingredients of Americanism. These are the elements which communism would destroy and Americanism must preserve. Your role in this drama can hardly be overestimated. You, really, are the very keystone of Americanism.

Here, then, is a statement of what you, the individual, can do in this world-shaking struggle between international communism and Americanism. Here are the principles, the steps which you must take if you wish to become an effective soldier in the greatest conflict the world has known. Here, in short, is the blueprint for your private war on communism. See that you use it well.

Nightmares Over Sewage

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mr. JOHNSON of Colorado. Mr. Speaker, the Rocky Mountain News in the eighth of its series of articles on sewage in Metropolitan Denver, published June 28, describes the complexity and magnitude of the problem.

Reporter Bill Miller refers to bad dreams where the problem is not yet critical, to nightmares where things are already beyond control. Local officials quite apparently are not keeping up with the rapid population growth, as several dozen separate sewer districts go their own way in attacking the problem.

I believe, Mr. Speaker, this article, like others in the News series, deserves publication in the RECORD, so I ask that it be printed there as a representative picture of what many metropolitan areas are up against.

The present Federal law discourages cooperation between areas. The Blatnik bill, H.R. 3610, already approved by the House, is needed to encourage cooperation in metropolitan areas.

The article follows:

[From the Rocky Mountain News, June 28, 1959]

SEWAGE PROBLEMS EXPANDING

(By Bill Miller)

Sewage problems in the Denver Metropolitan area are not confined to Denver and the Clear Creek area.

In their 1957 study, Black & Veatch, Kansas City consulting engineers, surveyed existing sanitary authorities and facilities in a vast area stretching from Golden to Buckley Field and from Castle Rock to Brighton.

This design area, covering all or parts of five counties, comprises 364,000 acres.

The population explosion in this area has been cited as the main cause of sewage and stream pollution problems.

This remains true even though only an estimated 91,000 acres, or 25 percent, are developed for urban use.

Denver and Clear Creek problems were discussed in previous articles.

SERVED BY DENVER

A substantial portion of the area west of and tributary to Denver already is served by Denver. Sanderson, Weir, and Lakewood gulches drain this area which includes 11 sanitation districts, several communities and subdivisions, and Federal agencies.

These, with a 1956 estimated population of 40,500, include: Mountain View, Pearson Woodside, Olinger Gardens, part of Wheat Ridge, Edgewater, East Jefferson County Sewer Association, Jewish Consumptive Relief Society, Mountain Sanitation District, Lakewood Sanitation District, East Lakewood Sanitation District, South Lakewood Sanitation District, Federal Center, West Lakewood Sanitation District, Highland Park Sanitation District, Green Mountain Park Sanitation District, Green Mountain Heights Sanitation District, some 140 miscellaneous connections generally southwest not affiliated with any district, Alameda Sanitation District, South Sheridan Sanitation District, and 320 connections, unaffiliated with any district, along Sheridan Boulevard.

Southeast of Denver, three sanitation districts, Holly Hills, Hi-Lin and Scenic View, with a combined population of 1,400 are served by Denver.

Eight percent of the total area, according to Black & Veatch, is utilized by various State and Federal Government agencies while the balance is either used for agricultural purposes or a land unsuited for development.

The adhesive which binds this entire area together is the Platte River. All drainage, streams, creeks, and minor watercourses wind up in this river.

WATERSHEDS

"Since the customary collection of sewage is by gravity, the various systems of sewage collection and treatment in any area generally are separated by watersheds," Black & Veatch said.

"The wastes from the various treatment works are discharged to the main stream, or its tributaries, within each watershed and consequently the effects of such discharge also are separated and defined by these watersheds."

The Black & Veatch study, prepared for the Inter-County Regional Planning Commission, designated these eight watersheds in the metropolitan area: City and county of Denver; South Platte River (north of Denver, including Brighton); Clear Creek; area west of and tributary to Denver; Bear Creek, South Platte River; Cherry Creek, and Sand Creek.

As has been pointed out, Denver's north and east side plants are inadequate. Both need secondary treatment units to bring effluent treatment up to State department of public health standards.

In addition, the Berkeley sewer main of Denver serves 600 connections in Adams County.

Up until 1954, when Englewood built its own plant, Denver also served 26,000 residents there.

In the Bear Creek watershed, there are several existing sewage treatment facilities.

First, a trunk sewer connected to the Denver system extends along Bear Creek almost to Sheridan Boulevard. It has capacity to serve approximately 46,000 persons in the Bear Creek Valley, in addition to the Denver and College View areas it drains.

NEEDS MORE UNITS

The Federal Correctional Institution has its own treatment plant but, according to Black & Veatch, it needs secondary treatment units.

The Colorado Industiral School for Girls and Fort Logan have their own treatment facilities and they are adequate.

Loretto Heights College, the town of Sheridan and Morrison all have septic tank disposal systems.

The State health department has recommended addition of secondary treatment units to existing facilities at Loretto Heights.

Morrison, where the population has been fairly stable, has no problem unless its population should increase rapidly.

Sheridan, which last October approved a $250,000 sanitation bond issue, is involved in litigation about whether to connect with Denver or Englewood sewage treatment facilities. The bond issue money is to be used to install sewage lines.

South of Denver, along the South Platte River, the key communities are Englewood and Littleton.

Englewood provides complete treatment of sewage for its residents as well as for Brookridge Heights Water and Sanitation District, an area along Santa Fe Drive, Cherry Hills Heights Sanitation District and the South Englewood Sanitation District.

OVERLOAD POSSIBLE

While treatment now is adequate the population boom expected in this area within a few years could overload the plant.

Littleton's plant, according to the 1957 Black & Veatch report, is overloaded.

The two communities recently held several meetings in an attempt to consolidate sewage treatment. But the attempt fell by the wayside and each community is now going its separate way.

The Martin plant has its own complete treatment facilities which according to the State Health Department, are doing an adequate job.

Cherry Hills Village, Greenwood Village and Bow Mar residents have individual septic tanks. So long as the population remains fairly small in these individual areas—and it probably will because of restrictive zoning—the needs of the people are being met.

Castle Rock, however, has a community septic tank from which effluent flows into a series of four lagoons. Sludge from the septic tank is drawn into two drying beds and the residue is used for crop fertilizer. Sanitation experts have advised city officials to construct a raw sewage lagoon system at an estimated cost of $200,000 plus.

The Cherry Creek watershed includes more than 30,000 acres of land but only one incorporated community, the tiny town of Glendale. The two water and sanitation districts, Holly Hills and Hi-Lin, utilize the Denver sewer system.

GLENDALE SITUATION

Glendale, with 150 residents and 80 registered voters, plans to construct a sewage plant along Cherry Creek.

The Tri-County and State Health departments have discouraged the construction. Denver opposes it violently.

In the Sand Creek drainage basin east of the Platte, there are 26,000 acres of land. Included in the basin are Aurora, Fitzsimons Hospital, Altura Sanitation District, part of Rocky Mountain Arsenal and part of Buckley Field.

Buckley has a complete plant which, with minor additions, would be capable of treating sewage wastes from a population of approximately 36,000. But Buckley is scheduled to be abandoned by the Navy. Its future status is unknown.[1]

Fitzsimons has a complete treatment plant that is adequate for a population of 5,000. Effluent is discharged to Toll Gate Creek, a tributary of Sand Creek.

The Altura Sanitation District, which serves a population of 2,500 living near the east boundary of Stapleton Field, has an adequate but heavily loaded lagoon system.

AURORA PLANT OK

Lagoon systems, according to health authorities, adequately serve small population areas so long as land costs are not too high.

---

[1] It has since been transferred to the Air National Guard.

In this system, shallow lakes are built and sewage is drained into the lakes. Algae, which live on sewage, dispose of wastes.

Aurora has a complete treatment plant, built in 1952, that is nearing its population capacity. In 1957 Black & Veatch estimated the plant could treat sewage for a population of 33,000. The city's population now is estimated at 40,000.

In the past, the city has considered additional plants but Black & Veatch warned such coonstruction may lead to further complications and problems like those in other metropolitan areas.

In the drainage area north of Denver there are the three incorporated communities of Brighton, Thornton, and Commerce Town, the Rocky Mountain Arsenal and the South Adams County Sanitation District.

Brighton sewage does not have much effect on the Metropolitan Denver area. Brighton's disposal plant is adequate and its effluent is carried northward by the South Platte, away from heavily populated areas.

Commerce Town, a highly industrialized area north of Denver, is served by the South Adams County Sanitation District which has a complete treatment plant near the confluence of Clear Creek and the Platte.

Thornton is served by a complete treatment plant, built in 1953 and owned by the Northwest Utility Co. The plant had a population capacity of 5,500, was enlarged, but again is reaching the overloaded stage.

Rocky Mountain Arsenal and its sewage disposal facilities are the center of a scheduled Government investigation. Representative BYRON L. JOHNSON has charged that Army Chemical Corps operations at the arsenal have contaminated underground water in a 5-mile strip of Adams County and have threatened Brighton's water supply.

ARSENAL REPORT

Black & Veatch gave the arsenal's sewage treatment facilities a favorable report since the complete treatment available was adequate for a population of 6,000 and it was serving only an estimated 375 persons.

Thus, around the Denver Metropolitan area, the treatment of sewage ranges from extremely bad to fairly good.

Where the problem is not critical, increasing population portends bad dreams for harassed city officials.

Where the problem already is critical, increasing population causes nightmares.

Statement of Louis Ratzesberger, Jr., for the Illinois State Chamber of Commerce, Before the House Committee on Agriculture, July 2, 1959

EXTENSION OF REMARKS

OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 13, 1959

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of a personal friend of mine, Louis Ratzesberger, Jr., before the House Committee on Agriculture on July 2.

Mr. Ratzesberger is president of the Illinois Canning Co. and immediate past president of the Illinois State Chamber of Commerce.

He is thoroughly familiar with agricultural problems, and I think his statement before the committee merits special attention on the part of every Member of Congress:

My name is Louis Ratzesberger, Jr. I am president of the Illinois Canning Co., Hoopeston. I am immediate past president of the Illinois State Chamber of Commerce and a member of its board of directors and agriculture-business relations committee.

This statement is presented on behalf of the Illinois State Chamber of Commerce, a statewide business organization with more than 16,000 members in over 400 communities in all parts of the State.

The Illinois State Chamber's 93-man agriculture-business relations committee has for 16 years worked with farm people throughout the State to bring about a better understanding of problems of mutual concern to agriculture and business. In the course of these efforts, the importance of a sound agriculture to the economy of our State and Nation has become readily apparent. The recommendations discussed in this statement were formulated as an outgrowth of this close association with the farm leadership in Illinois on a State and local level. The program outlined here offers no easy way out of our present dilemma—it presents an opportunity for lasting strength under our private enterprise system.

You may wonder why a business organization should show so much interest in Federal farm policy. Actually, the answer is simple. We believe the farm situation is one of the most pressing domestic problems facing our Nation today. It affects all our residents, rural and urban alike. Additionally, its international implications are becoming increasingly more serious almost daily. With Illinois business so dependent on a strong farm economy, we anxiously view present surpluses, skyrocketing costs of farm programs and increasing bureaucracy in agriculture as serious threats to the future stability of farm income.

We do not feel capable or feel the necessity of placing the blame for our present problems in agriculture. Current difficulties have developed over a 40-year period and have been affected by prosperity, depression and recession, three wars, a wide variety of growing conditions, tremendous advances in farming techniques and technology, international competition, political considerations, and other factors.

While it is not possible to place the blame for the present situation on any one source, the responsibility for finding a way out of this quandary lies clearly in the hands of Congress. A large share of the burden of leadership needed to bring an end to these wasteful, ineffective, and largely unneeded farm programs must necessarily rest on the shoulders of members of this committee. We urge you to report out to the floor of the House a bill which will squarely attack these problems. Our statement today is designed to give you our views on a course of action we sincerely believe is the most desirable one to follow in drafting this measure.

NEED FOR ACTION

The following facts about the situation illustrate the need for prompt action:

The latest totals of Government-held farm surplus commodities amount to $8.9 billion—just below the all-time high figure registered earlier this year.

We are currently saddled with a surplus of wheat in Government hands large enough to meet all needs for over 16 months and which is costing more than $700,000 a day to store. An estimated 100 million bushels of wheat will be added to present hordes again this year.

The corn situation is little better. We have nearly $2.5 billion worth of Government surplus corn stored around the Nation. All indications point to further additions to surplus stocks of this commodity later this year.

The outlay for all price support activity and U.S. Department of Agriculture services is expected to total $7.3 billion for the fiscal year just ended. Admittedly, some of this expenditure is for the traditional regulatory, research, educational, inspection and similar functions performed for the benefit of all our citizens by the Department of Agriculture. Most of it, however, was spent for price stabilization efforts. Although some of this outlay will be recovered, the percentage lost is great and it represents a heavy investment of Government funds.

The number of persons employed by the USDA amounted to over 88,500 during December 1958. A large proportion of these employees was engaged in farm price support and soil conservation programs. More people are employed by the Department of Agriculture than any other Federal Government agency except the Post Office and Defense Departments. In Illinois alone we have over 1,000 full-time and 6,000 part-time employees working under the auspices of the State and local ASC offices to supervise soil conservation and price stabilization programs.

On the international trade scene we currently subsidize every pound of cotton or bushel of wheat exported from the United States. Experience with cotton exports shows that Government cannot tinker with the price mechanism without seriously disrupting normal marketing processes. Too-high support prices for cotton retarded sales in foreign markets and stimulated production of substitutes at home and abroad.

INDICTMENTS OF PRESENT PROGRAMS

With these comments in mind, we make the following indictments of present programs:

While defended on the basis that they aid the little farmer, price support programs actually provide very little assistance to him because they are based on output. The small farmer who produces little obviously benefits in equally small measure from this price support effort.

Price supports are based on archaic, unrealistic concepts. By use of the parity formula, we have attempted by Government edict to keep a dynamic agriculture harnessed to an economic relationship which existed half a century ago.

Price supports have failed to take cognizance of the fact that price does have a function. It is no secret in Illinois, for instance, that high price supports have encouraged farmers to farm their land more intensively and concentrate their production on crops already in surplus supply. Lower support prices for corn and wheat in recent years would not have encouraged the widespread increase in acreage planted to these crops outside their traditional growing areas. Price supports held at high levels by Government must bear a large share of the responsibility for chasing acreage around the country.

Price supports are far too costly. When USDA expenditures this year amount to an average of $1,500 for every farm in the Nation, represent 9 cents out of every Federal tax dollar, and are equivalent to 56 percent of net farm income, it would seem abundantly clear that we are going too far. Yes; we know that some of the price support money will be recovered and not all the Government farm expenditures are for price stabilization purposes. Acknowledging this, we insist that the cost is still far too high.

Legislation now on the books directly conflicts with other legislation designed to stabilize farm prices and renders them partially ineffective. For example, agricul-

tural conservation program payments to farmers for lime and phosphate add to output of commodities already in surplus supply. In Illinois, over 80 percent of A.C.P. payments have been used for this purpose. Thus we find government subsidizing production while at the same time trying to restrict production with acreage and marketing controls and the soil bank. This practice makes as much sense as pushing the gas pedal of your car to the floorboard at the same time you are applying the brakes.

Farmers face the very real prospect of having an abrupt end written to all farm price stabilization legislation if public indignation suddenly becomes aroused at the waste entailed in present programs. The lesson provided by the potato farmers' experience a decade ago should give us a clear indication of what we can expect if the present farm program is not radically altered. The handwriting is on the wall for all to see. I predict that unless the course of Federal farm price stabilization efforts is not radically changed, the growing disgust and anger of the general public over this waste of tax funds will be translated into Congressional action far more painful than the medicine the Illinois State Chamber is prescribing today.

Farmers, once a bulwark of our free enterprise system, are on the verge of being the most regulated of all businessmen because of a program set up to help them. The longer present programs are continued, the greater the restrictions which must be imposed on their right to run their farms in order to keep the entire house of cards from tumbling down. We see restrictions in one area of production resulting in expansion of others with considerable disturbance of long-established, efficient growing patterns as an undesirable consequence.

Planting restrictions are repugnant to our democratic way of life and will never be imposed to the degree needed to be effective because of the political implications of doing so. Besides, control of acreage planted to a few crops is not enough—rigid control of every acre of farmland in the country would be necessary to insure that American farmers are adequately shackled. The amount of fertilizer, new crop varieties and hybrids, fungicides, insecticides, and pesticides, irrigation, and even the brains applied to specific farm operations would also have to be carefully rationed to make the restrictions effective. I question whether this Congress or any other Congress will wish to go this far.

Although not connected with price support programs as such, subsidies of REA loans are, nevertheless, illustrative of unneeded and unrealistic Government efforts to aid agriculture. These loans are made at approximately half the interest the Federal Government pays to secure the money originally. This is done in spite of the fact that (1) 96 percent of the Nation's farms now have electricity; (2) half of REA power goes to nonfarmers; (3) 75 percent of all new REA customers are municipalities, industries, and suburban residents; and (4) cooperatives are not in shaky financial condition and private sources have money available for loans to them.

A POSITIVE PRACTICAL PROGRAM

In order for the position of the Illinois State Camber of Commerce to be made crystal clear, I emphasize this point: We do not recommend "pulling the rug out from under agriculture." We do recommend, however, immediately taking the steps necessary to (1) redirect the intent and means employed in the Federal farm program toward reestablishing a free market economy for agriculture over a period of time; (2) provide the means to ease the impact of this shift on farmers; and (3) stop Government programs contributing further to the already serious problems of agriculture.

I can point to the following two examples to indicate the practicality of the recommendations we make to you today:

The first deals with the dairy industry. Some dairy farmers and others supposedly interested in their well-being complained long and bitterly about the lowering of Government support prices on dairy products in recent years. The drop has been relatively slight, but it has had a profound effect on the industry and on the burden imposed on the taxpayer. In contrast to what we have faced in the recent past, we now find that there are fewer cows producing more milk more efficiently, demand and supply are much more nearly in balance, Government stocks of dairy products have been reduced to relatively insignificant amounts, and cost of price supports for these commodities is practically nil. Although several Illinois farmers who had a few cows have decided to get out of dairying, I have heard of none going bankrupt, nor do I expect to. Most of those who stayed in the dairying business have enlarged their herds, culled out low-producing cows and have become more efficient, businesslike operators. I can see nothing but good resulting from these developments.

The second example relates to the experience of the livestock industry. The livestock industry has been the recipient of only intermittent price support aid. During 1954 through 1956, the industry wisely resisted an all-out Government price support program. Yet, over the years, cattle and hog producers have fared quite well. Certainly they have seen cyclical fluctuations and received some low prices as well as extremely good prices. Most livestock producers I know feel they are far better off than they would have been if price supports and animal raising restrictions had been applied to their business. If they want to be able to cash in on the good years, they know they must risk the occasional bad ones.

John Strohm, well-known agricultural writer from Illinois, recently surveyed the agricultural economists of the Nation's land grant colleges to learn what they thought about the farm surplus situation and what they thought should be done to correct it. The answers he received from 40 of these economists reveal clearly "the fallacy of trying to cure economic ills with political prescriptions." Mr. Strohm reports that four out of five of these economists believe:

"Any laws further hamstringing the free market will hurt the farmer, the consumer, and the Nation.

"Legislation has not and cannot solve the farm problem, although the 'right kind might help.' But few economists believe we've had the right kind in the past, and most are pessimistic about getting it in the future.

"Schemes in foreign countries to guarantee all farmers a fair income have been costly failures.

"The law of supply and demand is not out of date—there is no substitute for the free market."

We believe these views are worthy of your consideration.

RECOMMENDATIONS

The following recommendations made by the Illinois State Chamber of Commerce are designed to be fair to farmers, consumers and taxpayers and effectively cope with the present farm dilemma in a realistic manner. We urge Congress to take the following steps:

1. Reduce support prices to levels which will move the current output of farm commodities into use through normal channels of trade.

2. Establish definite termination dates for complete withdrawal of price supports.

3. During the transition away from price supports, base the level of support on dollars-and-cents levels calculated to permit commodities to move into consumption without reference to parity formulas.

4. Immediately discontinue nonrecourse loans as a means of supporting farm commodity prices and, to the extent that support is provided during the transition period, utilize purchase agreements and recourse, interest-bearing loans as the support mechanisms.

5. To make possible the transition to a free-market economy, isolate the existing Government surplus stocks from the market while providing for their orderly disposal over a period of time by means which will not unduly disrupt markets (barter, gifts).

6. Concurrent with reduction of support prices, free the farmer from marketing and acreage controls.

7. Tighten up administration of the conservation reserve program of the Soil Bank and expand it as a means of facilitating resource adjustment in agriculture.

8. Continue public and private efforts to expand markets for farm products at home and abroad on a sound, economic basis.

9. Continue emergency programs for disposal of surplus commodities in foreign countries until surpluses are reduced, but reexamine them with a view to improving their effectiveness and reducing their cost.

10. Reduce restrictions on sales of farm commodities to Iron Curtain countries.

11. Coordinate the interrelated functions of Federal agencies responsible for management of Government-owned land, price support activities, soil conservation work and land reclamation and development projects.

12. Discontinue Federal financing of power and irrigation projects.

13. Sharply curtail spending for the agricultural conservation program and limit it to conservation measures which reduce physical destruction of soil, including such measures as reforestation of watershed areas.

14. Expand and encourage public and private agricultural research and educational programs to reduce production and marketing costs, to develop new uses and new markets and to assist in other ways in the long-range improvement of agriculture.

15. Encourage and help farmers with limited opportunities to move into more rewarding pursuits so as to better their level of living.

16. Set interest rates on Rural Electrification Administration loans at levels reflecting current capital costs.

17. Provide for patron ownership of the REA cooperatives.

CONCLUSION

We sincerely urge you to give thoughtful consideration to this program. We firmly believe it will (1) stop the surplus buildup, (2) lower the cost of the program to the taxpayer, (3) give farmers greater freedom to farm efficiently, (4) stop Government programs which actually contribute to the farm problem, (5) help arrest inflation, (6) enable farmers to adjust to the changed conditions with a minimum of hardship, (7) establish a sound base for agricultural growth and prosperity through initiative, resourcefulness and self-reliance, and (8) halt the trend toward socialization of the Nation's farms and regulation of the Nation's farmers.

On behalf of the Illinois State Chamber of Commerce and myself, I wish to express our sincere appreciation to you for this opportunity to appear before you and present the views of this organization on the very important matter of Federal farm legislation.

Thank you.

LOUIS RATZESBERGER, JR.,
Member, Agriculture-Business Relations Committee, Illinois State Chamber of Commerce.

Unregulated Imports of Tuna

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 13, 1959

Mr. UTT. Mr. Speaker, since 1950 the tuna fishing industry of California has been increasingly damaged by unregulated imports of tuna, principally from Japan. In the course of these 9 years, all of the fleets fishing for tuna out of San Diego and San Pedro have been shrinking in size, and their financial capabilities of staying in business have also been diminishing. During this same period, the market for canned tuna in the United States and the tuna processing industry of southern California have about doubled in size. Thus we have had the curious predicament of half an industry being killed off by imports while the other half has thrived and grown.

The causes for this condition are complex. I, as well as other Members from California, have set these causes forth before this House repeatedly in the past years, and have repeatedly presented them to the appropriate committees of the House, the Tariff Commission, and the appropriate agencies of the Executive, with little effect. It is not necessary to do this again.

The situation of the fishing half of the tuna industry has become so desperate and hopeless this summer under new floods of Japanese tuna, that everyone knowledgeable in respect of the industry has become newly and deeply alarmed. This includes all of the tuna canners, who see their raw material sources shriveling, the labor unions, the associations of fishing vessels, the U.S. Navy, which sees these valuable auxiliary fleets disappearing, and the Department of the Interior, upon whom the Congress put the responsibility in the Fish and Wildlife Act of 1956 of stimulating the development of a strong, prosperous, and thriving fishery and fish processing industry.

The serious nature of the present situation, coming on top of 9 years of increasingly hard hammer blows on the fleets, has reached the White House, too, and caused concern also to the President. As a consequence of this, Mr. Wilson and I conferred with President Eisenhower on the situation July 8, and recommended to him, with success, the general program set out below.

At the same time that Mr. Wilson and I were conferring with the President, a Government-sponsored meeting was going forward in another section of town, where the Department of State, Department of Defense, Department of the Interior, and the Department of Commerce had called together the leaders of every segment of the tuna processing and tuna producing industry, for the purpose of looking into what, at last, should be done to preserve this industry from utter destruction.

At this other meeting, Mr. Harold F. Cary, general manager, American Tunaboat Association, San Diego, acting as the mutually nominated spokesman of small canners, big canners, fishermen's unions, cannery workers unions, and the associations of bait boats, purse seiners, and albacore vessels—all segments of the entire industry—submitted the statement and recommendations of the entire industry. I would like to emphasize, Mr. Speaker, that this is the united position of the entire California tuna industry.

This statement and these recommendations appear to me to be so lucid, comprehensive, and moderate in their tone, that I have asked permission to have them set out in full in the RECORD.

I am most pleased to be able to report to you, Mr. Speaker, that the President has told us that this appears to him to be a practical and sensible approach to these complex problems and that the appropriate agencies of the Executive have already begun preparations of the necessary steps antecedent to asking the Government of Japan for a full range conference on the subject of tuna as recommended in the attached statement from the industry.

Perhaps we are at long last beginning a resolution of problems of this industry which we in California, and the U.S. Navy, value so highly. Perhaps the Executive will at last be able to carry out the mandate which the Congress so bluntly gave it in 1956—the policy of stimulating the development of a strong, prosperous, and thriving fishery and fish processing industry:

STATEMENT

The Congress in section 2 of the Fish and Wildlife Act of 1956 declared a policy with respect to the domestic commercial fisheries to be "stimulating the development of a strong, prosperous, and thriving fishery and fish processing industry."

As of this summer 1959, the domestic tuna fishing industry is in critical condition. The relatively healthy condition of the segments of the tuna canning industry, whether or not dependent on domestically produced fish, is thus placed in serious jeopardy. The natural dependency of domestic producer upon the processor and the processor upon the producer means that one-half cannot go down without bringing the other closely behind.

With these things in mind, and having pursued many alternative courses, and also thinking of the policy directive of the U.S. Congress referred to above we, who represent small canners, large canners, unions of fishermen, cannery workers, and owners of purse seine vessels, bait boat vessels, and albacore vessels in southern California where at least 80 percent of domestically canned tuna is produced have developed the attached plan of action which we recommend to the U.S. Government for its present undertaking with respect to the domestic tuna industry.

REASONS, JUSTIFICATIONS, AND OBJECTIVES OF A CONFERENCE ON TUNA BETWEEN THE GOVERNMENTS OF THE UNITED STATES AND JAPAN

In this document we set forth our reasons, our justifications, and our ideas of the appropriate terms of reference, for a conference on tuna between the United States and Japanese Governments.

REASONS

Our business and its future is inextricably bound up with and virtually controlled by the business and future of the Japanese tuna industries. In the neighborhood of 90 percent of the tuna imported into the United States in its several forms is caught by Japanese fishermen. Half, or a little more, of the canned tuna eaten in the United States will have been processed from tuna caught by Japanese fishermen. Domestic ex-vessel prices of tuna appear to be closely related to, if not governed by, the price Japanese tuna fishermen get for their product in Japan. The wholesale price of tuna canned in the United States is intimately related to the price charged by importers of Japanese canned tuna.

Both Nations fish on resources of the high seas which are the common property of all mankind under international law, and in which neither of us have any private property right or control. Our fishermen are increasingly beginning to operate in the same geographic areas of the world's high seas, and we anticipate that this tendency may increase. Fishermen of both Nations require the same knowledge of sea, weather and fish movements for the same reason, cutting their cost per ton of production. Some domestic canners are now completely, or almost entirely, dependent upon Japanese raw material for their processing activities. Others are becoming so. As a matter of fact the whole U.S. market for canned tuna is almost half dependent upon Japanese produced raw material tuna, and there is some question whether any canner of tuna in the United States could long survive in the market the cutting off of his access to Japanese raw material.

All Japanese tuna imports to this country are handled by two Japanese cartels located in Tokyo, whose activities are regulated by the Japanese Government. No such cartels exist or could be permitted to exist in the United States. In this manner decisions can be, and are, made in Tokyo by these entities which violently affect our economic welfare and operations and frequently even damage Japanese operations in this market. Such decisions taken from such a long distance, by foreign persons, on the basis of inadequate information about this market, on the basis of considerations foreign to U.S. interest, cannot avoid, and customarily result in upsetting the orderly development and operation of the U.S. tuna market, the U.S. canned tuna industry, and the U.S. tuna fishing industry.

For these reasons it is imperative to the orderly development of the U.S. canned tuna market, U.S. tuna canning industry, and the U.S. tuna fishing industry that there be a more full exchange of market, fishing and scientific information between the two countries, a more integrated planning for the future so that a more intelligently and better informed relationship between the two countries can be developed. A formal conference on the whole subject of tuna between the two Governments with each delegation provided with advisers competent in each major segment of the two industries is not only the logical, but practically the sole, remaining means of accomplishing this end.

JUSTIFICATIONS

The question arises as to what reason can be brought forward to justify such a conference in respect of tuna without establishing a precedent for other industries similarly affected by Japanese imports. While adequate precedent has already been established for such procedure, we put forward these justifications which make our case unique.

1. The sea: Both Japanese and United States fishermen work in the same oceans

and our productivity is governed by the same interrelated meteorlogical, oceanographic and biological factors and movements.

2. The property: Contrary to all, or almost all, other industries the producers of tuna both work upon resources that lie in the public domain and over which there is no property right or control.

3. Trade Agreements Act: Most, if not all, other industries similarly affected, have access to escape clause or other escape mechanisms provided in the Trade Agreements Act or related U.S. foreign trade law as affecting the full range of their commodities. We do not.

Approximately 25 percent of the total raw material source of all canned tuna used in the United States, over half of the total imports of tuna in all forms, and by far the most rapidly increasing source of tuna in the U.S. market, consists of fresh or frozen tuna other than albacore (yellowfin, bluefin, bigeye ond skipjack tuna). This commodity bears no tariff, is under no quota, and is not the subject of a trade agreement. Accordingly it does not come within the purview of the various escape procedures and protections provided by U.S. law.

Accordingly an escape clause proceeding in respect to some lesser volume commodity such as loins and discs, tuna canned in brine, etc., has no practical meaning. Furthere such tariffs were not established on the basis of study of the economics of tuna trade. Present duty rates are, thus, unrealistic and even maximization thereof under present law would be wholly ineffectual.

For these reasons and many other compelling reasons, we believe the case for a United States-Japanese conference on tuna rests on a uniquely justified base, in addition to the precedents already established.

OBJECTIVES

We are setting forth here what we consider to be a reasonably full range of topics which should be discussed with the Japanese. This contains long-range, intermediate, and short-range topics extending from oceanography and the natural history of tuna to such controls over specific items of tuna in commerce between the two countries as may be considered necessary.

This full range of topics should be fully explored with the Japanese and as many of the questions arising from them settled by intergovernmental agreement as is possible, with the door left open for meetings in the future to review decisions taken and to reexamine problcm areas left untouched or not possible of agreement at this first meeting.

Irrespective of the range of subjects that the administration feels should be recommended to the Japanese Government for discussion at this time, we believe that such a conference would be eminently worthwhile. It would increase the understanding of the two governments of these complex problems, it would increase the understanding by both industries of the problems faced by the other and it would promote good will between the two governments and between the two industries. There would be practical, long-range accomplishments result from joint action on such subjects which would benefit all four entities mutually. Accordingly we recommend this series of agenda items for this tuna conference:

I. Conservation

A principal obligation on the part of an industry using a public resource is to see that the sustainable productivity of that resource is not impaired by the industry's use of it. This obligation applies particularly to the tuna fisheries, substantially all of whose production comes from resources lying in the high seas and therefore in the public domain of the world.

Presently available scientific information does not indicate that either the Japanese or ourselves are either overfishing any stock of tuna or that such overfishing is imminent in either or both fisheries. On the other hand, the production of tuna from the seas of the world by these two entities was a little less than 400,000 tons in 1952, and may approach 700,000 tons in 1959 (with the Japanese securing all of the increase). A 50- to 60-percent increase in an already major fishery in 7 years' time is considerable. There is reason to think that it will continue to increase substantially in the next 7 years. Seven years' time is not a long period in which to elucidate biological problems whose geographic occurrence may cover half the surface of the earth.

We suggest that discussions under this topic might wish to take these paths as well as others:

1. Relations, if any, between subsurface yellowfin stocks fished by the Japanese in the Pacific and surface stocks of that species fished by the United States in the Eastern Pacific.

2. Biological and fishing intensity explanations, if any, of the sharp drop in catch per unit of effort by the Japanese long-line fishery for yellowfin tuna in both the Pacific and Indian Oceans.

3. Relations, if any, of both fisheries to the wide variations in albacore productivity in the north Pacific as a whole, and in each fishery.

4. Biological relations, if any, of the skipjack stocks of the eastern, central, and western pacific and the effects, if any, of the fishery upon them.

5. Areas of scientific studies on these and related questions not now being studied adequately by either Japanese, United States, or international research agencies in the Atlantic, Pacific, and Indian Oceans.

6. Methods of such studies that might lend themselves to conformity or broader adoption among these three sorts of research agencies.

II. Efficiency of harvesting

Another necessity of competitive business growth is to bring the product to the consumers in edible form as economically as possible consistent with the principle of providing an adequate, reasonable, and necessary profit. One of the chief costs in a can of tuna, a pound of sashimi, a kan of katsuobushi, or a piece of tuna sausage or ham is the cost of locating a school of biting or nettable tuna and getting it aboard ship quickly.

Experiences of the scientists and fishermen on both sides of the ocean is leading inexorably to the conclusion that the next major step in improving fishermen's efficiency and lowering his cost per ton of production on both sides of the ocean and in its middle, may properly be the elucidation of the relationship between air mass movement, water mass movement and ocean climate, tuna aggregation in commercial quantities, and tuna behavior—and then feeding this information back to the fishermen in a form both timely and useful.

Since we are both looking for the same understanding of the same ocean for the same purpose we believe that it would contribute to the efficiency and speed of progress in this field of study for us to compare notes as to what we know, what is not being investigated that requires to be elucidated, and how this may best be done.

III. Quality of product

A third necessary responsibility that a producing industry has to its consumers is to provide them with a product of highest attainable quality.

This is a matter of substantial difficulty and much discussion between the frozen tuna exporters of Japan and U.S. canners. It is a problem of varying importance between U.S. boatowners and their canner customers. It can be assumed that it is the same between Japanese boatowners and their several types of consumers. This quality problem extends right through the freezing, holding, cooking, and canning parts of the tuna production chain.

Furthermore, a very considerable amount of basic research has been done, and is being done, on tuna quality problems both in Japan and the United States. Since we are working on the same species of raw material and the same end product (as it reaches the American consumer at any rate), and the producing and processing stages between these two points are reasonably the same in both countries, this is a third subject which a meeting could examine profitably.

We suggest some subtopics that could be usefully dealt with: (1) Greening in tuna; (2) biological effects of freezing tuna; (3) use of antibiotics in handling tuna; (4) natural differences in tuna quality related to species, population density, food, season, etc.; (5) effects of present processing methods on pigment changes in tuna.

IV. Efficiency in marketing

A fourth necessary responsibility of an industry producing a staple food is to assure its steady and efficient flow to the consumer, in order that the costs of marketing and distribution do not form an undue part of its cost to the consumer.

The flow of tuna between the two countries in recent years has been marked by fluctuations as to volume and price so much as to substantially affect the total overall cost level of the end product.

For instance, the terrible market upset in the United States in 1951 arose definitely from accidental flooding of the market by the Japanese in the last half of 1950.

For a time in 1954 the price of tuna was abnormally high in both countries, from reasons which appeared to be primarily associated with marketing rather than to fluctuating volumes of raw material or demand functions.

Again in 1957, it seems likely that both the Japanese and American boatowners sold their catches at below their costs of production, and that this very broad situation in the total market grew directly out of errors of marketing judgment made by the Japanese frozen tuna cartel in marketing about 15,000 tons of summer albacore from the 1956 season.

Presently both industries seem to believe that the present market crisis is linked primarily to the introduction of new Japanese Atlantic production in this market beginning last September.

One might wish to examine in the course of discussing this subject:

1. The total production of tuna by both nations (a) by species, (b) by month and year, (c) by types of gear, and (d) by geographic area and sea.

2. The end use of the product (a) by species, (b) by both month and year, (c) by type of end product, and (d) by country of end use.

3. The structure of business enterprises in each country including (a) unions of fishermen and cannery workers; (b) associations of vessel owners; (c) associations of canners, sausage makers, frozen tuna producers; (d) associations of exporters; and (e) the relationships existing among such entities within a country and as between countries.

4. The role of government in each country in (a) providing or assuring capital requirements; (b) research at various levels of production and marketing; (c) controls overproduction and flow of tuna to market; and (d) subsidies.

5. Problems existing that prevent the orderly flow of tuna to market such as (a)

changes in availability of fish to fishermen that contribute to shortages or gluts; (b) shortages of working capital that contribute to dumping at low prices with resultant buying at high prices to replenish depleted inventory; and (c) lack of, or slowness in transmission of, supply and market data that would enable entrepreneurs to better anticipate and interpret supply-demand functions.

V. Market research and development

A cursory examination of the statistics shows plainly that the consumption of tuna in its several principal end product forms (sashimi, katsuobushi, namaribushi, fish sausage and hams, and canned) is growing on a worldwide basis at a rate that may properly be characterized as booming.

One might hypothesize that in this area of the conference may lie the solution of the problems between the two countries, and within each, arising from the tuna trade. The answer to the problems of all elements in both industries may well lie in a further expansion of the total tuna market of the world to the point where demand will exceed supply at present raw material price levels. Although it may be premature to look for such a general solution of these tuna problems to be imminent, the prospects are sufficiently exciting that they should be looked at exhaustively by all parties concerned.

Under this agenda item we believe discussions could be conducted beneficially along these lines, among others:

(a) Projections of demand in each of the several end product markets based at least on population growth anticipated in those market areas.

(b) Types of marketing research and development now being undertaken by both governments in tuna markets and the possible effect of this, or modifications of it, upon future demand.

(c) Flow of marketing data and information between agencies of the two governments as found in such things, for instance, as the Market News Service, MRCA research, Simmons study, etc., in this country and their counterparts, if any, in Japan.

(d) Effect of end product price on the growth of several end product markets.

(e) Use of advertising and other marketing devices and instruments (such as special deals, tuna weeks, joint promotions, provision of material to radio, television, and food editors) in the several end product markets.

(f) Consideration of whether or not the industries doing all that is practicable to promote consumption of tuna and are joint efforts needful or desirable.

(g) Consideration of whether or not the two governments are doing all that can reasonably be expected of them in promoting the consumption of tuna.

(h) Consideration of whether or not a more current and timely exchange of marketing trends, changes, and opportunities information by either or both governments to all branches of both industries could be of practical significance and use in promoting the overall consumption of tuna.

(i) Consideration of why consumers in the several markets buy tuna in its several forms in preference to substitutable protein food, and how these stimuli could be augmented.

(j) The desirability of a continuing, timely, advisory service on the part of government concerning the total production of tuna and its flow to market.

VI. JAPANESE PRICE AND VOLUME CONTROLS

At the present time the situation of the domestic tuna fleets can only be characterized as critical. The five preceding agenda items may in the long term provide remedies in some degree to some of these critically urgent conditions, but by that time there would be little or no domestic tuna fishing industry left.

In Japan exists a perfect mechanism to provide quick and temporary relief to the domestic industry while these complex problems can be competently investigated and dealt with on a more permanent basis. These are the two cartels (1) Japanese Frozen Fish Export Association, and (2) Japanese Canned Fish Export Association. Through these two cartels must pass all tuna destined for the United States. They are empowered by law to control each commodity both as to price and as to volume. Their decisions when ratified by the Japanese Government become binding upon all citizens of Japan. They can move quickly and effectively as they showed again on July 2, 1959, when the frozen tuna export check prices were raised about 10 percent.

We suggest that under this topic discussions between Japanese and the U.S. Governments should lead in these directions:

1. Proper price and/or volume levels of frozen and canned tuna exports to the United States in order to accomplish temporary objectives in this market.

2. The problem of the unearned dividend last year under which the Japanese have got a 250,000 case increase in their canned tuna market here this year as a result not of an increase in consumption in the United States last year but as a result of increased canned tuna going into inventory in the United States.

3. Proper relationships on a longer term basis than indicated in item 1 between price and/or volume level in (a) frozen yellowfin and bigeye from home islands; (b) frozen yellowfin from Atlantic; (c) ship frozen, mothership, and round albacore; (d) loins and discs; (e) tuna canned in brine for household consumption in the United States; (f) tuna canned in brine for institutional consumption; (g) tuna canned in oil; (h) tuna in all forms shipped through or processed in third countries; (i) white meat canned tuna versus light meat canned tuna and relation of these to price and volume structure of frozen tuna and loins exports to this country.

4. Relationship of factors in three above to (a) sausage market in Japan, (b) sashimi market in Japan, (c) Katsuobushi market in Japan, (d) canned tuna market elsewhere in the world than the United States, and (e) frozen tuna market elsewhere in the world than the United States.

5. When and how such price and volume regulations can be established.

6. What mechanism is required to watch their effect, to change or to terminate them, and to prevent their inhibiting competition among elements of the domestic industry in the United States.

One Hundred and Twenty-fifth Anniversary of the Bangor Daily News

EXTENSION OF REMARKS

OF

HON. CLIFFORD G. McINTIRE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, July 13, 1959

Mr. McINTIRE. Mr. Speaker, the Bangor Daily News is now 125 years of age, and during the course of these many years it has performed a splendid service in keeping informed the citizens of northern Maine.

On the occasion of this anniversary, I want to express my congratulations and extend a hearty "happy birthday" greeting to this truly fine news medium, a real credit to the State of Maine:

IT'S OUR BIRTHDAY

Today is our birthday. It marks our 125th anniversary in the newspaper business. With pardonable pride we look back on the past 125 years and take this opportunity to express our appreciation and thanks to all those men and women who have contributed immeasurably to our success. Without their loyalties and skill none of this would have been possible.

In commemorating the occasion, we are publishing this morning a 64-page tabloid that will be included as part of your regular newspaper. We hope you like it. It tells, in part, the story of this newspaper and of the great area it serves.

We are proud to have played a part in the development of this section of Maine and we look ahead with confidence that over the next century even greater things are destined for eastern and northern Maine.

Free Enterprise—Let's Just Try It

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 9, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following text of a column which recently appeared in the Detroit Free Press, written by Inez Robb. This article is being brought to the attention of this body at the request of a constituent of mine:

FREE ENTERPRISE—LET'S JUST TRY IT

(By Inez Robb)

In my lifetime I have heard so much favorable discussion of free enterprise I would dearly love to see the United States give it an experimental try.

It is not a return to laissez-faire economics I crave, but a halt to leaping socialism.

And to prove that Fearless Fosdick is a quaking coward compared with me, I would, if I had the power, end any and all Government subsidies at once.

That would send the whole Nation, both the "haves" and the "have nots" into a tailspin.

The "haves," who wouldn't have it (a subsidy) any more, would be screaming like banshees until their voices gave out. And the "have nots," who have been giving the "haves" a free ride for years, would be numb with joy.

I would unsubsidy everyone—farmers, oilmen and even illegitimate mothers—and give the law of the marketplace—good old supply and demand, a chance to operate.

Surely, we couldn't be any worse off under free enterprise than under subsidy socialism, with which the Nation ran up a national deficit of $13 billion in the fiscal year of 1958–59.

Under the subsidy system, we are certainly going for broke. And Congress has just voted another increase in the national debt ceiling.

That ceiling is now so far up above the cloudline that I can't see it with a telescopic lens.

It'll have to be raised to $300 billion to enable us to pay interest on the debt. This

is known as a viscious circle in cold cash.

I would cut everyone loose from his subsidy to sink or swim, survive or perish in true Horatio Alger fashion.

Maybe that would help dry up the river of surplus wheat and end the racket in storage facilities for the Nation's surplus commodities.

Maybe if subsidies ceased so would the American miracle of decreasing farm population and increasing farm surpluses.

I would chop off airline and shipping subsidies before the railroads cut themselves in on this melon. And the oil and mineral depletion tax would be out the window.

Only veterans with service-connected disabilities, plus the widows and orphans of men who have died in the military service would be generously cared for by the Government.

There would be no blanket subsidies in the way of free-for-all hospitalization and pensions.

As for subsidization of illegitimate motherhood—that would be out, too. These mothers-for-profit would go off the relief rolls, pronto.

I would propose sterilization of such a woman, after two illegitimate children, and also the men responsible.

Unless this country is willing to give free enterprise a chance by abolishing subsidies and making everyone stand on his own two feet, we unsubsidized taxpayers will be supporting politically powerful minorities the rest of our lives.

Remarks of James V. Day, Director, National Public Relations Commission, the American Legion, Before the Department of Maine Convention, Bangor, Maine, June 27, 1959

EXTENSION OF REMARKS
OF

HON. CLIFFORD G. McINTIRE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, July 13, 1959

Mr. McINTIRE. Mr. Speaker, I have been privileged to have a personal relationship with Jim Day, and to know him is to recognize that he is one of Maine's outstanding citizens.

Presently Jim is performing a stellar service for the American Legion, acting as director of its national public relations commission.

Late last month Mr. Day delivered an address at an American Legion convention in Maine, and because his remarks touch on matters vital to America, I commend them to the attention of my colleagues in the Congress.

The address follows:

REMARKS OF JAMES V. DAY, DIRECTOR, NATIONAL PUBLIC RELATIONS COMMISSION, THE AMERICAN LEGION, BEFORE THE DEPARTMENT OF MAINE CONVENTION, BANGOR, MAINE, JUNE 27, 1959

I am deeply privileged to appear before you today and bring official greetings from the national headquarters of the American Legion.

As most of you know, 8 years ago I had the honor of serving as your department commander. That year was a great revelation to me as to just what the American Legion is and what its principles are. Since, I have held other posts in the Legion, and 3 years ago I was selected national director of public relations of our organization.

As national director of public relations, I continue to be impressed and inspired by the forces of good represented in this country by the American Legion. The Legion is without a doubt one of the most powerful organizations of service in this country, not only for veterans but for all the people.

Some of you here attended the first American Legion convention in Maine as World War I veterans. Some of you, as veterans of World War II and Korea, are attending your first convention. But, whether this is your first or your 41st convention—I don't have to tell you that the American Legion is on the march forward.

Our membership record of the past year proves it. Every single day since our national convention in Chicago last September, our 1959 membership has been greater than the corresponding day of 1958. It is now more than 16,000 ahead of last year at this time, and despite the natural rate of attrition, I think it is going to be on the increase for years to come. In Maine, my last report showed you were within 590 of your 1959 goal.

Just what does this upward trend mean to you and me? What difference does it make?

Let me tell you some of the things I read into an increased enrollment. First, it means that there is a growing strength and vitality in the American Legion. We may have celebrated our 40th birthday this year, but the Legion is the youngest 40-year-old you're ever going to meet. There is no hardening of the arteries here.

It means that the prestige of the American Legion is growing—that more and more people are approving of what the American Legion stands for. It means that the enthusiasm, which is self-evident here, will be carried back to your individual posts.

Most important—it means that the American Legion has been performing its mission—that it has been doing the job for which it was created—that the pledge of "service to the community, State, and Nation," is being carried out.

It means that the American Legion has had the manpower, the initiative, and the know-how to be a positive force for Americanism. I don't need to tell you that there are those who find comfort in any sign of weakness in the American Legion. This past year has not been a very good one for them.

In one short speech there is not time to list all the ways in which American Legion posts throughout the country are helping to build better communities.

This summer more than 18,000 high school juniors will be learning the real meaning of citizenship at 49 American Legion Boys States. These youngsters are already leaders in their own schools. Their participation in these workshops in civic and State governments gives them a big boost toward the right kind of community leadership.

I doubt that there are any future Alger Hisses at an American Legion Boys State. As evidence of the public appreciation for Boys State as a training school for future civic leaders, I cite the growing number of youngsters who attend under the sponsorship of other community organizations. We are indebted to those groups for the confidence and support.

American Legion posts are sponsoring 4,333 Boys Scout units. Some 182,000 boys are too busy with the fun and serious business of Scouting to worry the police. The so-called beat generation will get few recruits from youngsters who have been taught to live by the Boy Scout law. The American Legion's role in scouting is also on the ascendancy. During this past year, Legion posts added nearly 100 Scouts units.

Today nearly a million youngsters are playing baseball under the auspices of the American Legion. On the opening day of the baseball season this year, 15 of the 16 starting pitchers in the Major Leagues were graduates of American Legion Junior baseball. A possible professional career in baseball, however, is a very minor part of this program. Its major values are the teaching of sportsmanship, team play, and physical fitness.

During the past 12 months, Legion posts, together with the Auxiliary, the 40 and 8, and the 8 and 40, spent in the neighborhood of $7 million on child welfare and related youth activities. This money was invested in the future of America. The stock market can go up or down. But the money and effort which are devoted to teaching citizenship and building stronger families will always show a return. Now, The American Legion has its own Child Welfare Foundation. It is pioneering in new and promising projects aimed at the prevention of some of the physical and social ills of children.

In the field of civil defense, American Legion light duty rescue squads are being organized in community after community. Legion-sponsored blood donor groups are among the most effective in the country. The American Legion amateur radio network became operational last fall and stands ready to fill a vital communication need in any emergency.

We are convinced that veterans, all veterans, prefer jobs to pensions. This year we have started an active program to stimulate the employment of the older worker. It will not be an easy matter to change almost universal employment practices, but we have made a start. We believe there is a great waste of manpower when business and industry fill all vacancies with men under 45 and force retirement at 65.

These are but a few of our nationwide activities. All of them begin in a post, yours and mine. The individual programs are varied and countless. But they all begin in the same place.

None of us serve the American Legion with the hope of personal credit. We work for and in its because we believe in it, because it is our way of meeting an obligation to our Nation and our fellow veterans.

That is the reason we are so enthusiastic about the new spirit of progress and accomplishment which we sense in this convention and throughout our organization. We recognize that there are still great obstacles and serious challenges. But we want to get on with the job.

This spirit of dedication holds great promise not just for the American Legion but for all veterans—and for the Nation itself.

On the pension legislation now in Congress, we have been sniped at from both sides. The antiveteran group charged us with conspiring to bankrupt the Nation. At the other extreme, we were belabored for failing to advocate pensions for all. However, we did defeat the original bill which had the backing of the administration. The new bill, while it does not do everything the American Legion hoped for, is a tremendous improvement over the original bill. It finally puts World War II and Korean war widows on equality with World War I widows, a proposition the American Legion has been urging since World War II.

The new bill has the support of the Legion because its good features far outweigh the undesirable ones, and that is why we were sniped at. It does not worry us in the Legion. We have too much to do to be bothered about who is getting the criticism or the credit.

The American Legion is and will be highly critical of our national failure to take and maintain an offensive in the struggle between communism and freedom.

There are those people who speak of the "preservation of the Nation," of the need for "national defense," of the "maintenance of our way of life," when actually we need something more. These are negative or, at best, passive ideas. We need not only to preserve—but also to build. We need to advance as well as defend. Few battles are won by the guard detail. Battles are won by the force which takes the offensive, which sends its patrols out into the unknown enemy territory with an objective, and fights to win the objective.

We'll never beat communism mearly by being against it. We will defeat communism only through a vital and dynamic faith in Americanism.

Our duty in this, the nuclear age, is to wage the fight for freedom with all the courage and vigor we can muster. The international conspiracy of atheistic communism threatens us with total extinction through the deadly destruction wrought by the devastating weapons of this era.

The FBI tells us that Soviet espionage activities in this country expose the fallacy of so-called peaceful coexistence. In recent years, pseudo appeals for peace by Communists have been more than matched by intensified Communist espionage efforts in the United States. Using blackmail, bribery, and similar techniques, Communist agents, many with diplomatic immunity, are stepping up their efforts to obtain our military, scientific, and industrial know-how for use against us.

One tried and proven weapon the Communists have used in the past has been the ruthless smear. Congressional committees, patriotic organizations, including the American Legion, the FBI, and all those who attack subversion and defend American concepts are primary targets. The American Legion is proud to have earned from Communists and their fellow travelers the title of archenemy.

The best yardstick of the effectiveness of the fight against communism is the fury of the smear attacks against the fighter, launched and conducted by the Reds. The smear of the American Legion by the Communists is not a new thing. It has been a continuing part of Communist effort since the American Legion exposed it 40 years ago.

There was a time when American ideals of freedom and opportunity fired man's imagination throughout the globe. The United States was the light and hope of all mankind. It should become such a symbol again. It can, provided we have a plan of victory consistent with our American principles, provided we are willing to work and to sacrifice for our ideals—provided we take the offensive in the war for the minds of men.

I believe all real Americans will agree when I say that we want to live in a land which is strong enough and morally courageous enough so that, instead of receiving insolent Communist ultimatums, we will be issuing American ultimatums to Red tyrants.

We want to live in a nation which will not tolerate the spawning of communism on its own doorstep, Cuba, or in any other part of the free world that remains.

Action on these principles is the fundamental task of the American Legion. We must become a focal center for rallying the moral strength of democracy. No other organization can do this for us. Moral leadership in this time of crisis can be claimed only by an organization which is completely free of ulterior motive, an organization which is courageously representative of all that is good in our way of life. This is the American Legion.

Address by Dr. Louis M. Orr, President, American Medical Association

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 13, 1959

Mr. HERLONG. Mr. Speaker, under leave to extend my remarks, I include the following address by Dr. Louis M. Orr, of Orlando, Fla., president of the American Medical Association:

ADDRESS TO THE HOUSE OF DELEGATES BY LOUIS M. ORR, M.D., OF ORLANDO, FLA., PRESIDENT-ELECT, AMERICAN MEDICAL ASSOCIATION, OPENING SESSION, HOUSE OF DELEGATES, AMERICAN MEDICAL ASSOCIATION, 108TH ANNUAL MEETING, ATLANTIC CITY, JUNE 8, 1959

Mr. Speaker, members and guests of the house of delegates, I would like to express my warm, personal approval of the applause which you have given to Dr. Gunnar Gundersen. For the past 2 years, in his extensive travels throughout this country, and in Europe, Asia, and Australia, he has been an effective spokesman for American medicine. Dr. Gundersen has carried out his presidential duties not only with energy, but also with dignity and sincerity. I commend him for a job well done, and I hope that in the year ahead I can achieve the same high level of performance.

In my brief remarks this morning, I shall look at a few issues and challenges which I believe should have close attention from this house of delegates and the entire medical profession—not just for the next 12 months, but for years to come.

The policy actions taken at this meeting will be vitally important to American medicine. In addition, we must give constant attention to many other problems—old ones, new ones, and hardy perennials. Taking the long-range view, let me point out for particular problem areas which demand full recognition and advance planning to meet the needs of the future.

COSTS OF MEDICAL CARE

One of these is the cost of medical care. Numerous Federal agencies and State governments are conducting studies of hospital costs, health insurance programs, and other economic aspects of medical care. Everyone is writing or speaking on this subject—politicians, economists, magazine writers, newspaper columnists, and curbstone experts, who sometimes air their views through the press.

The American public—and rightfully so—has an intense interest in the costs of medical care. Those costs involve the people's lives, health and pocketbooks. But the mass of written and spoken words frequently produces confusion and misinterpretation of facts in the field of medical economics. Quick and easy information—sometimes misinformation—is coming from persons who may be adept at statistics, but who lack a thorough knowledge of all the medical and human elements that go into health care.

Therefore, I strongly urge that the American Medical Association take the lead in providing authoritative information gathered by qualified personnel with a real understanding of all the economic, medical and human factors involved in this complex subject.

As I see it, such a program should involve much more than the collection of dry statistics—it should include continuing, simplified interpretation, made understandable to the public. It should include studies of all possible ways to stabilize or reduce the costs of medical care, hospitalization, and health insurance. It should encourage the development and increased use of rest homes, nursing homes, rehabilitation centers, chronic illness facilities, home care programs, homemaker services, and other special facilities for patients who do not need complete hospital care.

Finally, in the field of hospital costs—and this perhaps is the major problem in the overall picture—the American Medical Association should draw atttention to all new ideas on the organization, design and construction of hospitals. One of these is the concept known as "progressive patient care"—which means the systematic classification of patients according to their medical needs.

Under such a program the hospital can concentrate expensive equipment and highly skilled personnel in an intensive care unit for patients who need close attention. Then, as a patient improves, he can be moved to an intermediate care unit and finally to a convalescent or self-help unit. This will represent the concept of automation in patient care. This concept improves patient care and produces economy both in construction and operating costs. In the field of atomedics we are going to see bricks and mortar, metal and plaster being replaced by plastics. Adhesives will be substituted for nails and bolts. We will also see the increasing usage of computing devices, all of which will assist in reducing costs. Moreover, because of the variation in room rates for the different units, the hotel aspects of hospitalization can be reduced.

In short, all fresh, imaginative approaches should be explored by the American Medical Association in a vigorous, continuing study of medical and hospital costs.

NEED FOR DEDICATED YOUNG PEOPLE

The second area which I have in mind is the recruitment of qualified, dedicated young people to enter the study of medicine.

For the past 30 years or more the production of new physicians by our medical schools has kept pace with the Nation's growth in population. However, we no longer can relax in the complacency of past or present accomplishments. We are entering a period when increasingly rapid population growth—plus the mounting number and complexity of medical services—will require a still greater increase in the annual number of medical school graduates.

Last December in Minneapolis this house of delegates approved a clear, positive statement urging the sound expansion of existing medical schools and the creation of new medical schools by universities which can provide the proper academic and clinical setting. This program of expansion would be based upon careful, continuing study of the changing needs in all categories of medical activity.

We accept the need for a greater quantity of medical service in the future. At the same time we are encouraging the medical schools to experiment in new programs to even further improve the quality and content of their curriculum.

There is one more very important consideration—the mental, moral and ethical caliber of tomorrow's doctors.

It will not be enough to have a larger number of well-trained physicians in the years ahead. They must also be dedicated men and women with a profound, sincere realization of their obligations to their patients and to all of humanity.

With these ideas in mind, I strongly urge the medical profession to consider the de-

velopment of a planned, organized program to recruit the best qualified young people into the study of medicine. Such a program, to be effective, must be carried out on all levels—national, State, local, and individual.

The American Medical Association already is engaged in a variety of efforts along these lines. It participates each year in the National Science Fair. It is producing a new career guidance film on medicine. It provides informational materials for interested young people. The American Medical Association, however, cannot do the job alone. It must be carried down to every local community.

Basically, this is a grassroots responsibility which should be assumed by every individual physician. He should take the time to talk medicine with promising young people of high school and college age. In particular, he should concentrate on those who have not only scientific aptitudes, but also the capacity for dedicated service.

MEDICAL RESEARCH

The third area to which I would call your attention is that of research. It has been estimated that by 1970 this country will be spending around $1 billion a year on medical research—with about one half of that total coming from private philanthropy and industry. We in the medical profession must exert influence and leadership in seeing that research funds are spent wisely, not just in the economic sense but also from the standpoint of scientific principles and the public interest.

Medical research in the years ahead will require more and more money and facilities. It will require increasingly intensive efforts to recruit and train medical scientists with an aptitude for research. It also will require constant vigilance to maintain a sound balance between practical, applied research and basic, long-range research. The American Medical Association should encourage, in all areas, the creation of "lifetime grants" in basic research. It is only in this way that we will be able to attract the dedicated minds to pursue basic research with complete freedom from worry and distractions, financial and otherwise.

Those of us in active practice are, quite naturally, interested in the practical results of medical research—the new drugs, treatments and techniques which we can apply in our everyday work. However, we must never forget that the vaccines, antibiotics, and hormones in use today are only the end results of basic discoveries made years ago in such fields as pathology, bacteriology, and biochemistry.

Everyone, in and out of medicine, hopes and prays that a cure will be found for cancer. However, if and when we achieve an ultimate, complete conquest of cancer, it probably will come through new, basic knowledge of body cells—how and why they behave as they do. This kind of research will then provide specific clues for the development of new methods of treatment and prevention.

The basic research of today produces the lifesaving drugs, preventive vaccines and dramatic surgical techniques of tomorrow. As Dr. Hans Selye has pointed out, the Nation's culture, health, and strength depend primarily upon its creative basic scientists—those whose main endeavor is to search for the kind of truth that can be verified by experience.

And so—whether we are promoting private research programs, or expressing our opinions on legislation involving medical research funds—let us fight always for proper recognition of those dedicated men whose basic research may have a profound effect on the future of mankind.

RESPONSIBILITIES IN AGING

The fourth and final subject I have in mind is aging and health care of the aged. As you know, this involves a complexity of problems with both immediate and long-range aspects. The American Medical Association on the national level, is working hard on an expanding program to bring about a sound, realistic approach to all phases of these problems.

But here again, the American Medical Association cannot do the job alone. I strongly appeal to every State medical society, every county medical society, every physician, to accept a share of the responsibility in carrying out the national program. I charge every member of this house of delegates to review the work in his State, and to help stimulate even greater activity.

This responsibility must be met through medical leadership. If it is not, the politicians will take over the field. Every individual doctor must recognize the problems that exist in the field of aging. The key to sound solutions lies in community planning to develop services and facilities attuned to the needs of older people. This will require close cooperation among physicians, hospitals, and all other interested groups.

Encouraging progress has been made during the past 6 months by medical societies, prepayment plans, and insurance companies to meet the health insurance needs of senior citizens. However, we probably have less than a year in which to demonstrate—dramatically and convincingly—that private health insurance can do this particular job. I appeal for an accelerated, snowballing program which will demonstrate medicine's leadership and wisdom in meeting the problems of an aging population.

This annual meeting here in Atlantic City promises to be an extremely interesting one. If I may call a spade a spade, we can expect some very spirited discussion during the next 3 days.

You will be acting upon the report of the Commission on Medical Care Plans, which was presented 6 months ago at the Minneapolis meeting and which, since then, I hope has been under study by the entire profession.

You will be receiving a report from the judicial council on our relations with osteopathy.

You will be considering some important recommendations from the Committee on Preparation for General Practice.

You will be wrestling with some proposals regarding social security coverage of self-employed physicians.

These and many other issues coming before you at this meeting contain the seeds of controversy. They involve subjects on which physician shave a wide range of opinions.

MEDICAL STATESMANSHIP

I urge every interested physician to express himself fully at the reference committee open hearings tomorrow. I urge every delegate to make full use of his privileges on the floor of this house. At the same time, I hope that all discussion will be based upon a maximum of reason and logic. Above all, I hope that medical statesmanship will prevail—keeping in mind not only the interests and standards of medicine but also the medical and economic welfare of the people whom we serve.

Thank you.

House Armed Services Subcommittee Investigation Into Activities of Retired Military Personnel

EXTENSION OF REMARKS
OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 9, 1959

Mr. STRATTON. Mr. Speaker, last week the Subcommittee on Investigations of the House Committee on Armed Services began its investigation into the activities of retired military, naval, and civilian personnel in connection with the awarding of defense contracts. Because this action grew out of action that first took place on the floor of the House in connection with the 1960 defense appropriation bill, and a suggested amendment to that bill which I opposed on the floor, I believe that some Members may be interested in the text of testimony which I was privileged to submit to the subcommittee on July 10. Under leave to extend my remarks the testimony follows:

TESTIMONY OF CONGRESSMAN SAMUEL S. STRATTON, DEMOCRAT, NEW YORK, BEFORE THE SUBCOMMITTEE FOR SPECIAL INVESTIGATIONS OF THE HOUSE COMMITTEE ON ARMED SERVICES REGARDING THE EMPLOYMENT OF RETIRED MILITARY AND FEDERAL CIVILIAN PERSONNEL IN DEFENSE CONTRACTING, JULY 10, 1959

Mr. Chairman and members of the committee, I appreciate the opportunity to appear before this subcommittee today in connection with the broad question of the employment of retired governmental personnel, both military and civilian, in the field of defense contracting. I have no particular special interest in this field except that I happen to be a Reserve officer in the Navy and I do represent a district which includes two major defense manufacturing concerns, the General Electric Co. and the Alco Products Co., both of Schenectady. Since Schenectady is an area which has been most heavily hit by unemployment our people are naturally concerned about any action that might further impair the likelihood of a fair share of the employment connected with the defense industry from coming into our area.

This subject arose in the first instance, if my recollection is correct, in connection with the employment of retired military personnel, and it came to a head on the floor of the House on June 3 in an amendment offered by my friend and colleague from New York State, Congressman SANTANGELO, to the Defense Department appropriation bill for fiscal 1960 providing that no defense funds could be expended for the payment of any contract with any firm which employed retired military or naval officers of general or flag rank who had been retired for less than 5 years. Although the amendment came to the floor in the course of debate and was entirely unexpected, I believe the RECORD will show that I was the only Member of the House to rise and speak out against it specifically on the merits. The amendment failed by a single vote on a division of the House, but only after the chairman of the Defense Appropriations

Subcommittee, Mr. MAHON, had indicated that he felt the subject raised by Congressman SANTANGELO should be fully explored by this committee rather than be tacked on hastily to a major appropriation bill. Since the committee is now in the process of undertaking the inquiry to which the gentleman from Texas referred, my only purpose here is to restate most emphatically the opinions that I expressed on the House floor at the time the original suggestion was made, and to offer to this subcommittee, most respectfully, my own suggestions as to the proper course that this investigation should take.

In my judgment the amendment originally offered by Mr. SANTANGELO was unwise and unsound. It could only have had the result of damaging many entirely innocent retired officers, and it would have had a most disastrous effect on the conduct of our whole defense program. Certainly this committee would not, I am sure, desire to do anything either to impair the defense program or to cause injustice to be done to loyal officers of our armed services who have completed their service and retired pursuant to law.

The original amendment appears to have been offered on the assumption that retired officers who have gone to work in defense plants are, if not always at least in most cases, utilizing their knowledge of defense matters and their acquaintances among defense personnel to the detriment of the Government, the taxpayers, and the defense program as a whole. The suggestion has even been made that thousands and perhaps millions of dollars might be saved, without any impairment whatsoever in our national defense, if retired officers were barred from any position in a defense contracting organization.

I am not aware whether any evidence exists to support such a charge. It may well be that there are instances where retired officers have used their abilities improperly to the detriment of the country and at a waste of the taxpayers' money. That, of course, will be one of the things to which this committee will address itself in the course of this inquiry. But it would be my own feeling that such instances of a betrayal of trust will be very few and far between, and that as a general rule it may be assumed that the retired officers of this country, regardless of their rank, are loyal, honest and conscientious individuals who are no less anxious to serve the interests of their country after their retirement than when they were in uniform. Certainly those retired officers who now occupy positions of importance in the General Electric Co. and Alco Products in my home city—and there are a substantial number of them—most definitely meet this standard.

And so I believe it would be a grave mistake if this committee were to proceed on the assumption that there is something inherently wrong with a retired officer going to work for a defense contractor, and I do not believe that the committee intends to create any such impression. On the contrary, there would seem to be evidence to suggest that this kind of procedure is actually extremely helpful to the national defense. In the first place, the defense contractor greatly benefits from the advice and recommendations of individuals who have spent their lives in the defense field. How better could a civilian manufacturer understand the requirements of the defense program than with the help of someone in his own company who had been closely connected with that kind of program? In the second place, what more natural thing for a retired officer to do than to find retired employment in the field with which he is most directly familiar and in which he has spent his life? All of us, as members of the Armed Services Committee, are well aware that the retirement income for officers is not excessive. Most of our officers are retiring these days at comparatively young ages, many while their families are still in the process of completing their education, which is the period of heaviest demand on one's income. To expect that a retired officer should live and provide for his family entirely on his retirement pay is, of course, completely unrealistic. Only recently our committee approved the Navy hump legislation which would force senior officers out of the service earlier than they would normally except to retire, and we acknowledged the economic burden this would place on them by providing for the payment of a special separation bonus to such officers. Many of these officers, by the way, though in the rank of captain, will be promoted to flag rank upon their retirement, and therefore would fall within the terms of the original Santangelo amendment. Wouldn't we be causing them a grave injustice to force them out of uniform ahead of the normal period of time and then foreclose automatically to them the one civilian field where they would be most likely to find employment?

Actually, if our defense program is to succeed—and judging from the continuing behavior of the Soviet Union we will have a defense program of some magnitude with us for a long, long time to come—then there must be the closest possible liaison and understanding between those in the military service and those in the manufacturing field. How better can we hope to achieve this necessary liason than by means of a free and untrammeled interchange of personnel?

If there are abuses then of course these should be dealt with. But it would be my recommendation that any legislation designed to prevent any such abuses be directed toward the specific abuses the committee uncovers rather than toward retired officers and defense contractors generally. Surely we need not throw out the baby with the bath. This was the basic flaw in the Santangelo amendment; and had it been enacted the whole defense program would have ground to an abrupt stop.

Specifically, the implication that retired officers employed in Defense Establishments is a bad thing would seem to be based on the assumption that defense contracts are awarded by one or two individuals, in which case personal friendships and individual favoritism might be controlling. Frankly, my own limited experience has been that this is not the case, that before any contract can be awarded the decision must pass through many different hands and many different boards. Personal acquaintances might well enable an individual company to grasp more quickly Defense Department requirements and be able to locate more readily the first stage in the procurement process, but they would not be likely to have any decisive influence on the outcome.

I would respectfully suggest that the committee direct its attention to this particular field. If it develops that important contracts can be awarded by single individuals on the basis of nothing more substantial than favoritism, then in my judgment corrective legislation ought to address itself to the contract-awarding machinery, to insure a close check on the actions of any single individual.

These are only tentative suggestions, Mr. Chairman, and I make them with some hesitation in view of my status as a very junior member of this distinguished committee. I know that the subcommittee has very broad experience in the whole field of defense procurement which cannot be duplicated by any individual member. But what disturbs me most about this investigation, Mr. Chairman, is what I might describe as a cloud no bigger than a man's hand, suggesting that we in America may gradually be moving back toward the view of a bygone day that might best be expressed by the term "the devil theory of war." I had thought that as a result of our experiences in World War II and our experience during the cold war that has followed it, that we had at last grown out of the rather naive assumptions that were prevalent in the 1920's and 1930's that the military operations of World War I were not the result of broad political, economic, and social forces at work, but rather were the result of the schemings and machinations of one of two sinister and evil individuals.

I hope we are not today allowing ourselves to fall into the same trap by implying that the heavy financial and psychological burdens of continuing to stand up against the massive threat of Soviet communism are not the result of equally massive political and economic forces at work in the modern world, but rather have been caused by the evil machinations of just a few individuals and that when these individuals are removed we can live quietly and easily and cheaply once more. Can we honestly believe that there is some sort of "devil" explanation of this kind for the high cost of military budgets? Can we honestly believe that if we only push aside one or two retired generals or admirals we can provide for our military security on a painless and almost costless basis?

As a boy, I grew up in a day, Mr. Chairman, when the professional mililtary men of this country were not held in very high regard. It was quite fashionable when I was in college to sneer at anyone in uniform and to assume that no individual worth his salt would ever be so silly to consider a professional military career. I hope, Mr. Chairman, we never go back to that kind of thing again. Thank God that, in spite of that common view, we had able career officers ready when World War II came, to win the victory for America. And unless we can continue to attract and retain in our armed services the ablest and most competent men and women to solve some of the fantastically complex problems that confront us in maintaining our national security, we will be in desperate straits indeed in the years ahead.

Let this subcommittee certainly root out all evildoing that may exist. But let us not also lend ourselves, even unwittingly, to the support of any campaign that would suggest that those who have dedicated their lives to the defense of their country are actually men and women who are undermining it. Let us do nothing that will, even indirectly, discourage wise and intelligent men and women from going into the career service of our country. Let us instead recognize that this Nation has indeed a right to expect those who have served in uniform to continue to make their skills available to the defense of their country as long as life and breath permit.

New Park in Tri-State Area—Tennessee, Kentucky, and Virginia

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, July 13, 1959

Mr. EVINS. Mr. Speaker, the National Park Service has recently announced the opening, this summer, of the Cumberland Gap National Park in the area of three States, Tennessee, Kentucky, and Virginia. This new park appropriately dedicated on July 4 last

will offer vast scenic beauties and recreational opportunities to those who visit the three-State area. Mr. Warner Ogden has written an interesting account of this historic and scenic wonderland park. His writing appeared in the New York Times on June 7, 1959, and under unanimous consent I include this report in the Appendix of the RECORD.

The report follows:

A NEW PARK IN THE APPALACHIANS—CUMBERLAND GAP TRACT SET ASIDE IN MEMORY OF THE PIONEERS

(By Warner Ogden)

MIDDLESBORO, KY.—Daniel Boone blazing the Wilderness Trail through Cumberland Gap in 1775, had a major role in bringing drama and romance to a famous pass.

Now the new Cumberland Gap National Historical Park is an American shrine to preserve the memory of the pioneers who passed through there for the conquest and settlement of the lower Ohio and Mississippi Valleys, and the Northwest.

Travelers today can follow in the footsteps of the Indians, the early settlers, the Civil War strategists with their "Long Tom" cannon on the Pinnacle, and the seekers of fortune who came here with English capital in the Gay Nineties for a short-lived industrial boom.

Now, however, travelers come by good roads over the path of the pioneers to the more than 20,000-acre midland Gibraltar of America in a scenic area where the corners of Kentucky, Virginia, and Tennessee meet. It is easily reached by U.S. 25–E and U.S. 58.

VISITOR CENTER

A new visitor center, with museum and theater, will be completed this month, just off U.S. 25–E, near the northern entrance to the new park. Various events have been arranged in the area in connection with the park dedication July 4.

The main program will be a 2-day celebration at Middlesboro July 3 and 4. On July 3 there will be judging of historic window displays; a golf match between professionals and amateurs on what is called the oldest golf course in the United States in continuous existence; arrival of a pioneer Thomas Walker wagon on the Wilderness Road; a parade; a barbecue, and a homecoming jamboree with variety shows.

Then on July 4 there will be North-South "skirmish" teams, an official luncheon, presentation of State flags of all the States and the dedication of the park at the Visitor Center, with fireworks at night.

President Eisenhower was invited by a three-State delegation which went to Washington. Members have been hopeful that he would accept. When they mentioned the "oldest golf course," the President laughed and quipped, "That would be an inducement."

OVERLOOK TERRACE

The park is being rapidly developed by the National Park Service. An overlook terrace has been completed on the Pinnacle, highest peak in the park, from which may be seen parts of several States, including the Great Smoky Mountains, 80 miles to the south, on clear days. Wide horseshoe parking grounds, an information center and a visitor shelter with displays have also been built near the crest of the Pinnacle. Paths through pine-scented woodlands lead to the overlook, to Civil War fortifications, to the old road up which "Long Tom" was hauled, and to other points of interest.

For a historic step into the past, tourists can stop at the new visitor center. The museum is in the exhibits room on the second floor of the center. Twenty-three exhibits cover a period of history beginning prior to the coming of the explorers and on into the 20th century, with emphasis on the pioneer period. In the museum are displays showing the background of the pioneers and their role in the Nation's history.

Of special interest is a diorama showing Daniel Boone and his axemen blazing the Wilderness Road. There are also small models of an early Kentucky fort and a Civil War supply wagon.

A small theater, open without charge, seats 150 persons. The audio-visual equipment includes an automatic slide-synchronized sound program unit, a 16-mm. movie projector and conventional slide projector.

"The automatic unit combines a narrated historical story and description of principal park features with slides showing historical events and scenic views of the park," Dean Guy, park superintendent explained. The movie is being presented at frequent intervals daily to aid the visitor in understanding and enjoying the park.

Two observation areas at the Visitor Center give panorama views of the gap.

A new road leads from U.S. 25–E to the parking area of the Visitor Center and a new road is being completed from the Visitor Center to the Skyland Road, which goes up to the pinnacle. There are 4 miles of park roads open to the public.

SCENIC WILDERNESS

Among the park's sights are Cudjo's Cave at Cumberland Gap, discovered by Dr. Thomas Walker in 1750, and a scenic wilderness known by the names of the Devil's Garden, Sand Cave, and White Rocks. This area encompasses a 20-mile segment of the Cumberland Mountains wall, which is split by the great pass through which the pioneers poured.

Among nearby attractions is Lincoln Memorial University, with its Lincoln room, at Harrogate, Tenn., which is also open to visitors.

Dr. Robert L. Kincaid, historian and former president of Lincoln Memorial University, had much to do with the creation of the new park. He and others in Kentucky, Virginia, and Tennessee began their efforts 35 years ago. Dr. Kincaid impressed Washington with the need to preserve the historic area.

"Cumberland Gap has been the scene for a vast pageant of American history," he reported. "Although deep in the interior of the early West, it spans nearly three centuries of white civilization in the continent. Gabriel Arthur first passed through it in 1673 over the well-worn Indian trail known as Athawominee or the Path of the Armed Ones. Dr. Thomas Walker, making a tour into the West in 1750 for the Loyal Land Co., chartered it officially for the first time. Nineteen years later Daniel Boone passed through with some companions on his first long hunt in the Kentucky land.

"However, it was not until 1775, when he and a band of 30 axmen cut the Wilderness Road to Kentucky, that the famous pass began its major role in the settlement of the Northwest. With this event Cumberland Gap leaped into national significance."

It was Henry Clay who, while riding to make a speech to mountaineers, paused in the historic pass and turned his ear to the silent forests which spread out before him. In reply to a query from someone who broke his revery, the great orator said, "I am listening to the tread of the coming millions?"

This three-State region today looks for millions through the years ahead to come to the new historical park. Any information desired on the area may be obtained free from the Middlesboro Chamber of Commerce office, which has a list of accommodations available, including hotels, motels, and restaurants.

Middlesboro, a town of 15,000, was originally named Middlesborough after a coal and iron center in England by that name. It has a main street over 100 feet wide. Parallel streets are named after English shires.

OUTDOOR DRAMA

At Pine Mountain State Park, near Pineville, Ky., 12 miles from Cumberland Gap, the outdoor drama, "The Book of Job," opens in Laurel Cove, a natural amphitheater, in June. The drama will run to July 25, Monday through Saturday nights at 8:30.

From the mountains, the first of the Tennessee Valley Authority lakes (Norris Lake) is reached by U.S. 25–E, just a few miles south of Cumberland Gap, on the way to Great Smoky Mountains National Park.

Cross Country With the On-to-Oregon Cavalcade—IX

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

Mr. PORTER. Mr. Speaker, the On-to-Oregon Cavalcade has reached the State of Idaho, and is well on its way across that State. The cross-country trek has included one wedding—in Kemmerer, Wyo. The bride was Miss Judy Roudebaugh. The groom was Mr. Al Hollaman. Both are Oregonians. Under leave to extend my remarks in the RECORD, I include the ninth on-the-trail report written by Robert (Rudy) Roudebaugh, father of the bride and driver of the Drain wagon. It covers the days June 20 through June 29, and appeared in the July 2, 1959, issue of the Drain, Oreg., Enterprise.

The report follows:

DAUGHTER'S WEDDING BIGGEST EVENT ON WAGON TRAIL FOR RUDY

(By Robert (Rudy) Roudebaugh, driver of Drain covered wagon in the 2,000-mile trek to Oregon from Independence, Mo., retracing the historical Oregon Trail)

June 20 and 21: Arrived at the Green River Camp at 11:30 for the weekend. Green River was high, but went down 2 or 3 feet this weekend. Janell helped a little lamb get back to its mother. It took her about an hour. It was the cutest thing she's done on the trip. Al Hollaman and Judy Roudebaugh arrived here at camp about midnight.

June 22, 5:56: All hooked up and ready to roll. 6:44: We sure had a tough pull to get out of our camp this morning. We are now entering Lincoln County. Al and Judy have been taken to Evanston for their blood test so we won't see them until this evening. The way things look they will be kept pretty busy. All that you see along here are sheepherder wagons on every point. We can still see a peak of Windy River Range, also snow peaks in Utah. The sun is shining but it is windy. 11:20: Arrived at Taylor grazing land.

June 23, 6:05: On Highway 128. It is the slickest oil we have ever been on for the mules. Ki and Janell have gone into Kemmerer to get ready for the wedding. 7:22: A logging truck is going by. It had about 60 or 70 logs. Stakes are about twice as high as the ones out there (Oregon). Looked like all 32-foot logs. There were no binders on.

9:58: Crossed Willow Creek. 10:03: Going by sawmill and planer. I understand the mill cuts about 70,000 board feet a day. 11:19: Arrived in Kemmerer, elevation is 6,924 feet, population 1,667. 11:24: Went over the Hams Fork River. 11:30: Arrived at the city triangle for Judy's wedding. There

was a large crowd, between 500 and 800 people.

WEDDING ON THE TRAIL

The wedding was held in front of the Oregon Trail marker across the street from the mother store of J. C. Penneys. It was the only wedding ever held in Triangle Park. I gave the bride away and Janell was maid of honor. Sheryl Carnine was bridesmaid with Don Work acting as best man. At the very, very last minute, my mother arrived from Lexington, Nebr. (Mrs. James Roudebaugh).

It was the most wonderful wedding two young people could ever had. Judy made the most beautiful bride, all in white. Many thanks to Mrs. Edna Erickson. She made Judy's wedding dress. By the way, Judy was about 20 minutes late getting to the wedding. 12:04: Judy and Al drove the wagon away from the triangle.

12:45: Arrived at camp at the Kemmerer sale ground. 2:00: A wedding reception was held at the Frontier dining room. All the wagon train personnel were present and many of my old friends of Kemmerer were also there. They had a beautiful wedding cake furnished by the Kemmerer Bakery. They received many lovely gifts.

I visited with an old boss of mine, Ralph Sutton, most of the afternoon. I worked for him 22 years ago. He also showed us the trail for tomorrow past his ranch. 7:30: The people of Kemmerer gave us a banquet in honor of the bride and groom. My mother and I were both asked to make a speech. Ralph Sutton's mother came from Salt Lake City to see me tonight. I was always treated like one of the family. It was one of the biggest days I've had on the trail.

June 24: People in Kemmerer had us for breakfast at the Frontier Cafe this morning. 5:52: All harnessed up and ready to roll. Judy and Al are riding with us today. 6:29: We are leaving Kemmerer. 6:37: We are crossing over Ham Fork River. 8:15: We are pulling a steep hill. All the people got off to walk. 8:28: Elevation 7,510 feet. 9:25: Elevation 7,663. The road branches off at the old Sutton ranch. We are also going by the lone pine tree which is an old landmark. The old tree hasn't grown in years. 11:11: Elevation 6,362 feet. 11:47: Elevation has gone up to 7,805 feet.

Last night we visited the grave of Nancy Hill, who died on July 4, 1847. We also saw three other graves of unknown men. 12:12: Arrived at camp. We are staying at a place called Immigrant Springs. John McDermott and the Cormier family have traveled the last few miles behind the wagons. Paul rode with the Carnines and Bobbie rode with me. Ki, Al, and Judy rode in the car with the rest of them. Five-year-old Bobbie calls me his wagonmaster. Janell has been down watching some sheep about a quarter of a mile away.

June 25, 5:30: Al and Judy have left for home. 6:02: We are headed northwest. The sun is out bright but it is still hazy. This camp we stayed at was an old watering hole for the pioneers on the Oregon Trail. It was so pretty and green with ice cold water. I wish we could have stayed longer. (It even had some trees.) There was snow pretty close to camp. Some of the wagon people went up and brought some snow back for our coolers. 6:22: Elevation 8,035. 7:31: Janell just got out of bed. 7:46: Elevation is now 8,400. A spring in the seat broke. 8:00: Going down a hill to Sublet Creek. 8:30: Just going down a hill. We had to lock the wheels to slow our speed. Ki walked and Janell said, "If I ride all the way down I wouldn't be chicken." 9:14: We are going to start down another hill, and will lock our wheels again. 10:24: Drove off of Rocky Hill into Rock Creek. 10:36: Ki's brother, Bob Weaver and family from Springfield, Oreg., showed up and we sure were surprised to see them. His two boys rode with me to Cokeville (Sam and Bob). 11:22: Hit the oil road. We have sure seen a lot of Hereford cattle along this road. 11:25: Crossed Spring Creek. 12:07: Arrived at camp along Spring Creek at the edge of Cokeville. Its population is 600 and the elevation is 6,192 feet.

June 26, 5:25: It has started to rain. Doc has a sore neck. 6:18: We are on our way, northwest on Highway 30. Ki is on cook shift. 6:28: Crossed Spring Creek. 6:36: Crossed Smith Fork River. Sagebrush is a little bigger along here. 9:21: Leaving Wyoming and entering Idaho and Bear Lake County. Idaho was admitted to the Union on July 3, 1890, and Wyoming was made a State July 10, 1890. Stopped to rest and had coffee at the State line. 9:46: Heading across Idaho. 10:15: Crossed Thomas Fork Creek. 10:30: Pulling up Webber Hill. We had to rest three times. The summit elevation is 6,395 feet. 12:15: Arrived at Mariner Jensen ranch on Bear River. We will make camp here. The Bear Lake Rangers and a riding club from Paris, Idaho, gave us a fried chicken dinner and we were entertained by the Montpelier Lions club trio who have entertained all over the United States. The Boy Scouts from Eugene and vicinity are going to stand guard for us tonight.

June 27, 5:55: Waiting for Roy this morning. 6:07: We are heading west. Bear Creek Rangers are riding on saddle horses with us. Vicki Jensen is riding with Janell and me. She is 11 years old and her father owns the ranch where we camped last night. Doc and Jan are up on the bit today. The weather now is rain. It is also chilly. 7:07: We are following Bear River foothills. Ki has gone on ahead to do the laundry. 8:05: We have dropped down into the valley which is about 2 miles wide. Janell and Vicki are in the seat driving and I'm here in the back writing to my faithful readers of the Drain Enterprise. So many people have admired the spreader rings Mel Ross of Drain has lent me for this trip. 8:36: The valley has widened out. We have added saddle horses and riders.

CAVALCADE REACHES IDAHO

9:02: Entering Montpelier, Idaho. It is the first town in Idaho, population 2,682. It has rained all morning. 9:11: We are now going by the hospital where "Pop" Weaver Clark is staying. He is our oldest member and needed a rest badly so he will be in the hospital for a few days. We went out of our way so he could see us go by. 9:27: Stopped by the post office for the mail pickup. Very few people were out to see us. 10:06: We made camp at Bear River County Fairgrounds and we will stay here for the weekend. The wagons traveled 16 miles today. Janell and Vicki brought the wagon into the circle. 2:00: We went to the high school where we took showers. Janell went to the show and Ki stood the 9 to 11 o'clock guard with me.

District Recreation Programs Showing Growth Each Year

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 8, 1959

Mr. DENT. Mr. Speaker, on more than one occasion in the past few months I have had an opportunity to call to the attention of the membership the great demand for a better understanding of the need for off-production-line activities and job opportunities.

The following article from one of the fine daily papers in my district, the Greensburg Tribune Review, clearly helps to point up this situation.

In our future planning we must give more emphasis to recreational employment opportunities. This basically will be one of the answers to automation and shorter workweeks.

I recommend the following to the membership of the House as required reading:

DISTRICT RECREATION PROGRAMS SHOWING GROWTH EACH YEAR

Recreation, the original do-it-yourself fad, is today a growing tribute to the leadership of the professional.

A soaring population, booming suburbs, and America's growing preoccupation with group activities have all but abolished the corner lot that once served as a combination playfield and meeting place for another generation.

As the farm became a shopping center and the small town a hub for building developments, the neighborhood recreation center, that corner lot, vanished, the victim of an ever-expanding and land-hungry economy.

What was first viewed simply as "growing pains" soon gave evidence of becoming a serious illness.

To cure this illness, government on all levels turned to the professional recreation director, the individual trained in youth work and capable of developing and putting into practice programs to provide a maximum number of people with the best possible facilities.

It hasn't been an easy job.

IN MANY DISTRICTS

Public apathy, unsuitable facilities, and low budgets have made a difficult task even harder.

Public apathy, unsuitable facilities and low budgets have made a difficult task even harder.

Fortunately not all communities have ignored the problem. Many are, in fact, providing excellent recreational facilities and programs bridging the gulf between the do-it-yourself venture of another age and the out-and-out commercial and resort establishments.

Central Westmoreland County residents have been particularly fortunate in this respect. Outstanding recreation programs are now in effect in most of our larger urban communities and in some of the more heavily populated rural areas.

ESTABLISHED PROGRAM

Greensburg, Jeanette, and Latrobe, for instance, have long-established organized recreation programs under full-time professional directors. Hempfield Township's program is rapidly approaching a similar status despite unusual geographical problems. And many other smaller communities are supporting a small amount of activity principally in the summer seasons on a part-time basis.

And an overall program is being conducted by the Westmoreland County Recreation Commission aimed chiefly at adult programs, coordination of local programs, long range planning and small community activities.

In communities maintaining an organized recreational program, policy is either established or approved by a recreation board or commission on which municipal government officials and school board members are represented. They in turn participate in the financing of the program usually on an equal basis.

The chief gap in the programs offered both on a year-around and seasonal basis is the adult program, ignored for the most part or limited to periodic lectures and craft classes. However, it is in this area that the county program—still more or less in the developing stage—is expected to enjoy its greatest success.

COVERS WIDE FIELD

In almost every instance the local recreation groups make an effort to cooperate with

churches, service clubs, YMCAs and youth groups in the formulation and conduct of their programs. This cooperation has proven to be of immeasurable assistance in promoting wider participation in recreation activities.

Thus Greensburg's widespread program covers playgrounds, playlots, football and baseball, arts and crafts, dancing, operettas, volley ball, basketball, tennis, ice skating and in cooperation with outside agencies, swimming, golf, gym and handball.

The Greensburg program is developing on a large scale every year and particularly since the partial development of Lynch Field, destined along with St. Clair Park and Mount Odin Park to provide the city with a well-rounded program for every age group.

Jeannette, and Latrobe have similar extensive programs, particularly Latrobe where the recent construction of a community swimming pool near the present athletic field offers a tremendous recreation potential.

Experts who have studied the problem of recreation in the central Westmoreland area have pinpointed the present programs—adult activities, recreation buildings, and swimming pools. Progress is being made toward a better rounded adult program, but the swimming pool and recreation buildings are largely hamstrung by a lack of funds.

WELL ORGANIZED

All recreation groups plead a lack of money. Thus, recreation leaders find themselves unable, because of insufficient facilities, to satisfy the public demand for participation in the program and, because of the insufficient facilities, unable to acquire the financial support necessary to expand the program.

But, despite the difficulties involved, there is every reason to believe that the immediate Greensburg-Jeannette-Latrobe area has as extensive and, within financial limitations, well-organized overall recreation programs as any similar area in western Pennsylvania.

Each of the three municipalities have organized full-time directors and employees, municipal parks, nearby State recreation areas, an outdoor swimming pool in Latrobe and one in the planning stage in Greensburg, indoor facilities in cooperation with church and school officials, and easy access to at least six outdoor commercial swimming pools.

The immediate area is also likely to enjoy added facilities when the county program which tentatively plans a system of parks as well as the arts and crafts programs fulfills its early promise.

Thus, at least for those living in the tricity area, the recreation future for both children and adults appears bright.

And there is every indication that government is at last recognizing its full responsibilities in the same field. One of the most effective fighters for additional recreation facilities has been Congressman JOHN H. DENT.

Congressman DENT sees the shorter workweek, the increased use of the automobile, and the resulting freedom of movement and the improved standard of living, as presenting a challenge to government, local, State, and Federal, to set aside lands and provide facilities for even greater recreation programs.

Effect of the Midwinter and Spring Floods

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 29, 1959

Mr. SIKES. Mr. Speaker, I believe that the address delivered by the Honorable Leo A. Hoegh, Director of the Office of Civil and Defense Mobilization, on "Effect of the Midwinter and Spring Floods," at the 46th national convention of the National Rivers and Harbors Congress on May 14, 1959, will prove of interest to my colleagues and it is with much pleasure that I am having it inserted in the CONGRESSIONAL RECORD:

ADDRESS BY LEO A. HOEGH, DIRECTOR, OFFICE OF CIVIL AND DEFENSE MOBILIZATION, AT THE 46TH NATIONAL CONVENTION, NATIONAL RIVERS AND HARBORS CONGRESS, MAYFLOWER HOTEL, WASHINGTON, D.C.

Providing Federal assistance in natural disasters is a program of historical development. The first nationwide plan to help disaster victims was launched by the Red Cross. In 1881, this excellent organization widened its sphere of wartime activities to include assistance in natural disasters. The aid extended was so effective that in 1900, Congress chartered the American National Red Cross as a quasi-government organization, charged with the responsibility of providing natural disaster victims with food, clothing, medical care, and shelter. We owe a debt of great magnitude to the Red Cross for the assistance rendered to the people of our Nation.

The organization, concerned largely with relief of human suffering was not equipped to handle the highly technical problems—repair of bridges, streets, and dams, clearing of debris, repair of sanitation facilities—the almost inevitable results of natural disasters.

The Surplus Property Disaster Act of 1947 was the first positive action toward making available Federal assistance in natural disasters, but it became ineffective when wartime surplus goods were exhausted. In 1950, Public Law 875, now known as the Federal Disaster Act, was passed.

The history of disaster assistance was recognized in this legislation by the division of responsibility between the Red Cross and the Federal Government.

This division still applies—the Red Cross is geared to relieve human suffering and the Federal agencies are geared to repair public facilities and render other services essential for the preservation of life and property, when required to supplement State and local efforts.

The Disaster Act was administered originally by the Housing and Home Finance Administration. In January 1953, that responsibility was shifted to the Federal Civil Defense Administration, and—under the terms of the Reorganization Act of last year—to the Office of Civil and Defense Mobilization.

The similarity between natural disaster and over-all civil defense activities is apparent. We consider it basic that in any emergency, disaster needs are met first by the individuals and families and by the local government. Support action comes from the State and then from the Federal Government, if required. The first line of defense—whether it be in making ready for disaster or the havoc that follows—must be the individual.

At the State and Federal level the impact of natural disaster normally requires far less diversion of resources than would be required in an enemy attack. It is significant, however, that the procedures for meeting immediate disaster needs are virtually identical. The need for gathering information, the assessment of damage, the establishment of support requirements follow the same basic procedural patterns.

The challenge of a natural disaster gives the Federal agencies, as well as State and local governments, a chance to perfect their administrative organizations and to develop and refine techniques whereby the ability to meet and surmount the obstacles of the greater disaster of war is increased.

A request for Federal assistance must be made by the Governor of the affected State and must include certain specific information—an estimate of the severity and extent of the damage and the total funds and resources required to alleviate the damage; action which will be taken by the State and local authorities; an estimate of State and local funds, personnel, equipment, material, and other resources available; and an estimate as to what Federal assistance is required.

It is recognized that in many cases complete information on all four prerequisites cannot be obtained prior to making the request. For instance, the extent of the damage caused by hurricane Audrey in Louisiana in 1957, could not be immediately ascertained, but the need was obvious and the request for Federal aid had to be based on preliminary estimates, even though incomplete and fragmentary, and then later substantiated by specific information.

After July 1, this year, minimum requirement provisions become effective whereby the Governor of the State involved in requesting Federal assistance in a particular disaster must certify that total expenditures within the State for disaster relief purposes will exceed a specific minimum amount. Disaster relief expenditures or obligations for the 12 months preceding the Governor's request, over and above nominal expenditures, may be considered as part of the minimum expenditure required. The Joint Federal-State Action Committee recommended this change and suggested a schedule ranging from $250,000 in some States to $3 million in others. This was approved by the Governors' conference and the schedule was published in the Federal Register on April 9.

There are regular lines of action that are to be followed in the event of natural disaster. As stated earlier, recovery begins at the local level. The local chapter of the Red Cross looks after the welfare of individuals affected by the disaster. Local civil defense officials work with the Red Cross and in many cases become, in effect, Red Cross workers. In wartime, the role would be reversed.

If it appears that the disaster is beyond the local government's capability to handle, aid is sought from the Governor of the State. The Governor mobilizes the appropriate State agencies. His capability has been multiplied many times over through the establishment of his State civil defense office with its corps of trained personnel. If the disaster is of sufficient magnitude, an appeal is made to the President through our regional director and my office.

We also lend assistance through the civil defense program in emergencies not of sufficient scope to be considered major disasters, under Public Law 875. Here are some examples:

In the tragic fire at Our Lady of the Angels School in Chicago last December, OCDM was asked to help. We broke into our civil defense stockpile of medical supplies in Seneca, Ill., and furnished extra large burn-dressing bandages to treat the victims.

In Mansfield, Ga., the new city-owned pump fell 437 feet to the bottom of a new well during installation. The town had no water for 3 days. Civil defense emergency equipment was used to pump water from a nearby lake.

Mount Pulaski, Ill., suffered a damaging sleet and snow storm last winter. Phone and power lines failed. Local officials offered the grade school as a heated refuge but power failed over the entire city. Civil defense secured a generator and established a power hookup so lights and heat could be furnished.

Following the tornado which struck St. Louis in February of this year, and which was subsequently declared a major disaster by the President, the Associated Press reported the following: "The St. Louis Civil Defense unit went into full-scale operation for the

first time since it was organized in 1951." An editorial stated: "Such a disaster vindicates the civil defense organization, for in it are men and women trained and equipped for emergency tasks of many kinds. They are able to work with police and firemen of whom, at such a time, there are never enough. Trained hands can save many a life. Civil defense, when it is taken seriously by a community, supplies these trained hands. * * * When it went into action in St. Louis, the civil defense organization paid back every cent of money and every hour of work went into it."

In each of these instances, with the exception of the St. Louis tornado, there was no declaration by the President of a major disaster under the Disaster Act as the magnitude of the damage was not sufficiently great to warrant it. Nonetheless, people were suffering and they needed help. Civil defense, trained for service in the event of war, was able to render effective help in these disasters.

The work of OCDM in administering the disaster law is largely a task of direction and coordination. There are many Federal agencies whose specialized duties fit into the pattern of disaster relief. Some have emergency authorities under which they can take action without the invocation of Public Law 875, and others have emergency authorities which must be triggered by invoking this law. When the law is invoked, OCDM directs all Federal assistance provided by the various agencies, in addition to administering the financial assistance available from the President's emergency fund.

One of the most destructive disasters in recent years was Hurricane Audrey and its tragic visit to Cameron, La. This was just before I assumed the responsibility as Administrator of the Federal Civil Defense Agency and I flew down there and met with Governor Peterson and General Gruenther, at the request of the President. Of course, I had come into contact with the Federal disaster assistance program while serving as Governor of Iowa. The official records of the Federal Civil Defense Administration indicate the way the civil defense organizations channeled the assistance of the various Federal departments and agencies into this disaster area to provide immediate and effective relief.

Disaster is ever present as evidenced by a Union Pacific accident in Olympia, Wash., on March 13. While we are prone to speak of natural disasters as a result of winds, earthquakes, flood and fire, when 15 railroad cars crashed through the depot in downtown Olympia, and buried themselves in buildings on the opposite side of the street, here was a different type of disaster.

But here, too, civil defense played an important role. A civil defense communications truck and civil defense personnel assisted in controlling the crowds which gathered. Floodlights and base communications were furnished.

Here is a quote from an Olympia paper: "Our civil defense unit demonstrated how efficiently it works in time of disaster. I am certain there is no doubt in the minds of the people as to their efficiency."

While tornadoes, hurricanes, fires, and other catastrophes cause considerable havoc and the damage runs into millions of dollars each year, I know I do not need to tell this group that floods continue to be the greatest source of destruction. The New England floods in the fall of 1955 cost the Federal Government over $30 million. This was over and above what the States and local governments spent. The west coast floods in the winter of 1955–56 cost another $11 million in Federal assistance alone. The tristate floods in Virginia, West Virginia, and Kentucky in January 1957 required $2,500,000 in Federal assistance.

So far this year, four major disasters have been declared and three of these were caused by floods, the other being the St. Louis tornado I mentioned earlier. Ohio, Pennsylvania, and Indiana suffered heavy damage because of severe weather, heavy rains, unseasonal thaws of heavy snows, and ice jams in rivers, which resulted in some of the worst floods of recent years. Eighty-six of Ohio's 88 counties were affected by the floods. In Pennsylvania, 24 counties received heavy damage and the situation became particularly tragic when a break in the flooded Susquehanna River overflowed into a mining area, causing the death of trapped miners and disrupting mining operations in many communities. Thirty-six counties in Indiana required Federal assistance.

Federal allocations under these three declarations amount so far to $5,500,000.

We sincerely hope that groups such as yours will have a measurable effect in developing and implementing policies that will help to prevent such widespread destruction which costs so much in human suffering and misery, and disrupts the economy of many communities.

The most important truths are these: (1) Individuals and families cannot avoid the personal responsibility of being prepared to meet disaster; and (2) the elected official of the local, State, and Federal Government is the responsible leader in his jurisdiction during an emergency.

These responsibilities are clearly set forth in the national plan for civil defense and defense mobilization. They are equally as appropriate to floods, tornadoes, hurricanes, and fires as they are to enemy attack. I want to emphasize, too, that every person in this room has a fundamental, inescapable responsibility for civil defense preparedness of this nation.

As individuals, you must know these five things:

1. The warning signals and what they mean. A steady blast of 3 to 5 minutes means take action as directed by your local government. You should know this local plan. If you do not, turn your AM radio to the conelrad frequency—640 or 1240—for official direction. A wailing tone or short blasts for 3 minutes means take cover immediately in the best available shelter.

2. Your community plan for emergency action. If you are in a target city, you will be asked to either move out or to take the best available shelter. The decision is a local one. If you are not in a target city, you should take cover.

3. How to protect yourself and your family from radioactive fallout. You should construct a fallout shelter and stock it with a 2-week supply of food and water, a battery radio, first-aid kit, and essential items for survival. Designs and plans are available.

4. First aid and home emergency preparedness. This is essential for everyday living, but crucial in case of a nuclear attack.

5. How to use conelrad—640 or 1240—for official directions and instruction. Other radio and television would be silent.

It will be the constant effort of the Office of Civil and Defense Mobilization, through administration of the Federal Disaster Act and through our responsibilities in the nonmilitary defense field, to provide quick, effective, operative assistance when disasters strike our Nation. But every American must be prepared to do his share.

Private Power Almost Matches TVA for AEC

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 1, 1959

Mr. BOW. Mr. Speaker, the Knoxville, Tenn., Journal recently printed a series of articles by Mr. Dudley Brewer, on payment in lieu of taxes made by TVA and its power distributors. I believe Members of Congress will be particularly interested in the article of June 18, "Private Power Almost Matches TVA for AEC." Fifteen companies comprising the Ohio Valley Electric Corp.—OVEC—supply power to AEC. Among them are the Ohio Power Co., Cincinnati Gas & Electric Co., Columbus & Southern Ohio Electric Co., Dayton Power & Light Co., Ohio Edison Co., Toledo Edison Co., and Monongahela Power Co.

Under leave to extend, I include the article mentioned:

PRIVATE POWER ALMOST MATCHES TVA FOR AEC

(The following report on costs of electricity furnished to Atomic Energy Commission by Tennessee Valley Authority and two privately owned suppliers is an outgrowth of a recent series of articles on payments in lieu of taxes made by TVA and its power distributors.—EDITOR'S NOTE.)

(By Dudley Brewer)

Although it is not generally known to the public, privately owned utility companies are doing almost as a big a job as Tennessee Valley Authority in supplying power to three major Atomic Energy Commission installations.

They are doing it at nearly the same rates as TVA but without the complete tax exemption which the Federal power agency enjoys on power sales to AEC. The private utilities are Ohio Valley Electric Corp., which has Indiana-Kentucky Electric Corp. as a subsidiary, and Electric Energy, Inc.

According to the Federal Power Commission, a total of about 51,361,203,000 kilowatt-hours of power went in 1958 to the AEC installations at Oak Ridge, Paducah, Ky., and Portsmouth, Ohio. Of this 27,885,737,000 kilowatt-hours was supplied by TVA at Oak Ridge and Paducah while 23,475,466,000 kilowatt-hours was furnished at Paducah and Portsmouth by OVEC and Electric Energy, Inc.

Thus nearly 46 percent of the supply came from the private companies.

The average rates per kilowatt-hour paid by AEC were as follows: To TVA at Oak Ridge 3.9 mills, to TVA at Paducah 3.69 mills, to OVEC at Portsmouth 4.03 mills, and to Electric Energy, Inc., at Paducah 3.86 mills.

In 1957 the comparative rates paid were: To TVA at Oak Ridge 3.97 mills, to TVA at Puducah 3.89 mills, to OVEC at Portsmouth 3.91 mills, and Electric Energy, Inc., at Paducah 3.86 mills.

So it is seen there is hardly any difference between the TVA and private utility rates to AEC.

TVA has two distinct advantages. Up to now it has not hard to pay interest on the millions of dollars invested in its power facilities out of the U.S. Treasury. Last year OVEC paid out $12,908,695 and Electric

Energy, Inc., $5,673,554 in interest on their funded debt.

And TVA is exempt from all taxes. It pays no Federal income tax whatsoever but does distribute to State and counties 5 percent of its gross power revenues as tax replacement. However, all power sold to AEC and other Federal agencies is excluded from the 5 percent.

Last year OVEC paid a total of $3,631,703 in local, State, and Federal taxes, and Electric Energy, Inc., paid $1,005,306.

TVA spokesmen were quick to point out that these tax payments were low in proportion to revenues when compared with taxes paid by private electric companies generally. Inquiry shows this is true although the two concerns apparently pay all taxes that are applicable to them. They enjoy no exemptions.

As a matter of fact, OVEC's taxes in 1958 figured at 5.12 percent of revenues and those of Electric Energy, Inc., were 3.36 percent. By contrast, total local, State, and Federal taxes of power companies generally averaged 23.2 percent of revenues.

The biggest difference is in Federal income taxes, which average about 13 percent of revenues for all power companies.

The reason for the difference is this:

OVEC and Electric Energy, Inc., were formed by groups of electric companies for the primary and almost exclusive purpose of supplying AEC. They were permitted by regulatory authorities to capitalize with an extremely high ratio of funded debt and a minimal ratio of equity investment. In other words, they were financed mostly with bonds and long-term loans, but little by issuance of stock.

The Federal tax laws allow interest paid on bonds to be deducted for income tax purposes. Consequently, the amount of income subject to Federal tax is relatively small.

Last year OVEC's Federal income tax was $383,348, while revenues were $70,885,342; and Electric Elergy, Inc., paid $355,398 in income taxes from operating revenues of $29,899,314.

Biggest item for these companies is their local real and personal property taxes. For OVEC these amounted in 1958 to $1,233,354 in Indiana, $1,249,169 in Ohio, and $125,000 in Kentucky. Electric Energy, Inc., paid real and personal property taxes of $418,900 in Massac County, Ill., and $37,573 in personalty tax in McCracken County, Ky.

West Virginia Welcomes a Giant

EXTENSION OF REMARKS

OF

HON. KEN HECHLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 13, 1959

Mr. HECHLER. Mr. Speaker, my State of West Virginia rapidly is becoming a leader in efforts to attract new industries. We know that we have many of the features which industries are looking for, and we have been accelerating our programs for explaining these advantages. We look forward to the day when the State no longer will depend on the ebb and flow of the coal market, but will have a broadly based, diversified economy.

Now I am happy to report that another of the world's great corporations has recognized our immense potential, and may serve as a beacon to lure additional businesses to our area. And this is no raid on another section of the country—it will not take one dime from any other region's pockets.

The Montecatini Societa Generale per l'Industria Minerari e Chimica of Milan, Italy, has just announced plans to build a magnificent new $10 million chemical plant on the Big Sandy River near Neal Wayne County, about 8 miles from Huntington.

The benefits which will be derived from the Wayne County plant—located in an area sorely wounded by the still-current recession gripping our State—should be immense.

Montecatini is locating a plant in our district of the United States when many American industries are resituating their plants in foreign nations. This should be an object lesson to American corporations, who need only to look to Montecatini to reaffirm that American workers are the best labor supply in the world—and that they fully deserve to be the best fed, best housed, and best paid.

In fact, I had the pleasure recently of meeting with the company's senior American representative, Mr. Lucio Lucini, of New York. Mr. Lucini has had long experience dealing with industrial labor both in America and abroad, and he made a remark about the reasons for Montecatini's selection of the Wayne County site that I regard as exceptionally pertinent. Not only did the firm decide upon the Wayne site for the usual advantages such as coal, water, power, and accessibility to markets, Mr. Lucini said, but also because of the human element.

This factor, less tangible but no less important to an industry seeking sites to expand or relocate, was not inconsiderable in Montecatini's selection.

We liked the people—

Mr. Lucini told me.

The working people of West Virginia are good people. They are quick to learn complicated jobs, they are conscientious and they work hard. This was one of our big considerations.

I believe this clinches arguments in favor of West Virginia for new plant sites. West Virginia is an ideal location from a standpoint of abundant raw materials and other blessings, but it also has the kind of people with which industry likes to be associated.

And if the Montecatini company is happy to be working with our West Virginians, it is equally true that the people of West Virginia are happy to welcome Montecatini.

This company has become truly global in scope since its founding as a small copper mining concern in 1888. Today, it embraces an industrial empire of 174 plants in 25 different nations, employing 60,000 persons.

The firm has kept up with the tremendously rapid and complex changes taking place in the chemical world of today. Five percent of the company's gross income is poured back into fundamental or applied research, and another 1 percent for the education and added training of its workers on every level.

It is hardly surprising that Montecatini is one of two great Italian firms cooperating on the first application of atomic energy developed in Italy—and I should like to point out that this will be peaceful atomic energy, not war production.

The Wayne County plant will be producing another fabulous new product which Montecatini research has developed—the marvelous discovery Moplen, which may be as important to the plastics industry as the development of nylon a couple of decades ago.

Mople, described by chemical experts as a true breakthrough in the polyolefin chemical group, is going to be one of the real workhorse plastics of the future. It has broken the so-called 100° centigrade barrier which defied many earlier plastics compounds.

Moplen's high melting point, low density, excellent electrical characteristics, rigidity, toughness and tensile strength make it ideal for a galaxy of uses.

Moplen is a product evolved from a research miracle by Dr. Giulio Natta, who found a means of actually altering the molecular structure of the gaseous olefin chemical group—derived from petroleum—to meet given needs in the manufacured or finished form.

Thus, Moplen can be literally tailormade as it is being produced to provide specific qualities for the product into which it is to be fabricated.

This will make its application in the plastics field incredibly wide as production expands. And our plant in Wayne County will be one of the pioneers in manufacturing this miraculous new product for industries and consumers alike all over the world.

So keen was the interest in Montecatini's new venture that a bond issue of $10 million for construction of the new plant through an American subsidiary was oversubscribed almost as soon as it was announced.

Montecatini's Wayne works will provide needed jobs for our West Virginians, a vital new product for the world's future, and a closer bond between America and a stanch European ally.

With all these benefits in sight, it is no wonder that West Virginia extends a cordial welcome to Montecatini, and looks forward to many years of happy and fruitful association.

It is altogether possible that Montecatini will blaze a trial for many, many other industries to recognize the great potential of the Ohio Valley, "the American Ruhr," and other sections of West Virginia, and locate new industries there.

George E. Stringfellow's Remarks on the Shriners' Hospitals for Crippled Children

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 13, 1959

Mr. RODINO. Mr. Speaker, some years ago my attention was directed to the valiant effort Mr. George E. Stringfellow was making in the fight against

the spread of cancer. It was then I learned of this outstanding citizen's dedicated, unselfish work in behalf of his fellowman.

George Stringfellow who was busy enough as the vice president of the Thomas A. Edison Industries of the McGraw-Edison Co. and as director of a number of nationally known corporations was never too-busy to devote himself unselfishly to humanitarian activities.

Mr. Stringfellow who has been the recipient of honorary degrees from various colleges in recognition of his accomplishments is a doctor of humanities, doctor of fine arts, and a doctor of law. He was made an honorary member of the New Jersey Medical Society and was the recipient of the American Cancer Society award for his leadership and work in founding and supporting the New Jersey division of the American Cancer Society. Mr. Stringfellow was cited by the Brotherhood Committee of Christians and Jews for bringing about a better understanding among the three religious sects. In 1958 he received the 1958 Academy of Medicine of New Jersey Annual Citizens Award "for rendering extraordinary service for the health and welfare of the public."

It is therefore, a privilege, Mr. Speaker, to include in the RECORD the following brief history of Shriner's Hospital for Crippled Children prepared by Mr. Stringfellow:

BRIEF HISTORY OF SHRINERS' HOSPITALS FOR CRIPPLED CHILDREN

(By George E. Stringfellow, of East Orange, N.J., Imperial Potentate, A.A.O.N.M.S., 1958–59)

It was my privilege to witness the Shrine Oyster Bowl football game in October 1958 at Norfolk, Va. The game was played by the stalwart young men of the Naval Academy and the equally stalwart young men of Tulane University.

The game is one of more than 80 played each year in various sections of the country for the benefit of the Shriners' Hospitals for Crippled Children.

The Oyster Bowl game has been promoted since its inception by Khedive Temple, A.A.O.N.M.S., Norfolk, Va. Last year's game produced a net profit of more than $80,000.

Incident to that game was a huge parade of high school bands, the Shrine temple organizations of Virginia, and a number of beautiful floats from the territory surrounding Norfolk. The float of Khedive Temple was devoted to the Greenville Hospital unit. Riding on that float was a little 4-year-old boy, the son of a merchant seaman.

This little boy romped and played on the float, jumping, dancing, and even running. He was happy and so were the group of Shriners who watched and guarded over him. Eighteen months before the boy was admitted to a Shrine hospital. He could only crawl. He had never been able to walk, because he was born with club feet. His feet were so malformed that if he had been able to stand upright, he would have been walking on the tops of his feet instead of the soles.

This is not an unusual case. It happens all over North America and in Hawaii, where the Shriners have established 17 hospitals with more than a thousand beds to care for children with deformities they would carry with them throughout their lives, except for these hospitals. Instead, the little boy in Norfolk and thousands of others who have been patients in Shrine hospitals, today are leading normal lives, contributing their full share to our American way of life.

These hospitals have been called the world's greatest private philanthropy. The story of these hospitals is filled with romance. It is a story of men with reverend minds and merry hearts, a faith in God, and a desire to be of service to those who cannot help themselves.

In its 1919 session, the Imperial Council of the Ancient Arabic Order, Nobles of the Mystic Shrine, elected W. Freeland Kendrick as its imperial potentate. At that time, Noble Kendrick was the tax collector of Philadelphia, and was later to become that city's most distinguished mayor.

The Kendricks were childless and as a result devoted much of their time to entertaining friendless and orphaned children who were inmates of the various homes of the city. Among these institutions was one for incurables. On one occasion Noble and Mrs. Kendrick took four of these deformed youngsters on an automobile ride through the city's parks.

Noble Kendrick never forgot that visit to the home for incurables and he resolved that when he should become imperial potentate of the Shrine he would endeavor to have the organization care for as many of these crippled children as possible.

About that time, 1918, a new hospital was established in Atlanta, Ga., owned and operated by the Scottish Rite Masons of that city. This hospital was for crippled children of that area who could not pay for treatment or correct their deformities. This hospital was the fulfillment of a dream of Dr. Michael Hoke, an orthopedic surgeon of Atlanta, and Noble Forrest Adair, the head of the Scottish Rite bodies.

Noble Adair was also one of Atlanta's Yaarab Temple representatives to the Imperial Council which met in Portland, Oreg., in 1920, at the end of Noble Kendrick's term as imperial potentate.

It was at the Portland session that Noble Kendrick sponsored the movement within the Shrine to build a hospital for crippled children. His resolution would probably have failed had it not been for Noble Adair who delivered an inspiring message that has become known throughout shrinedom as the "bubbles" speech. Noble Adair spoke from firsthand knowledge. He had built such a hospital in Atlanta, as Noble Kendrick proposed to have the Shrine build for North America. Noble Adair had seen the twisted bodies enter the Atlanta institution and leave it straightened. He had been inspired by the happy smiles and the discarded crutches of the crippled kids. He knew what could be done and he knew Shriners needed in their lives an objective above and beyond fund and frolic.

And so it was that the imperial council approved in Portland the policy to establish hospitals. The authority to establish these hospitals was handed to a committee of seven men, headed by Noble Sam Cochran of Dallas, Tex., and I doubt that in all history there have ever been seven more dedicated.

The basic rules and regulations they established were so sound they have never been changed. For admission to the hospital, a child must be under 14 years of age, and in the opinion of the doctors, one who can be improved or cured by orthopedic help. The children must come from families unable financially to pay for their treatment. They may come from all races, be of any color, and have faith under any creed.

The first hospital was opened at Shreveport, La., on September 16, 1922, the second in Honolulu on January 1, 1923, and the third in St. Paul on March 12, 1923. The last to be opened was in Mexico City on March 10, 1945.

It cost close to $6 million a year to operate these hospitals. The money is provided by the 830,000 Shriners, each of whom contributes $5 per year, from the proceeds of football games and circuses conducted by the various temples, and from an endowment fund to which anyone may contribute either as gifts or bequests.

In addition to regular work of the hospitals, each hospital treats thousands of youngsters as outpatients—children who may need posthospital care, or whose difficulties may be corrected without surgery.

May I remind you again that no patient has ever paid a penny for the care received, although there are former patients without number who have contributed to the endowment fund, or who at special times contribute to the welfare of the patients, such as at Christmas.

The work of these hospitals has, for Shriners, been a labor of love, a labor which is above the call of duty. Shriners have enjoyed the privilege through the years and so have hundreds of others who are not members of our fraternity, for example, the players in many of the football games.

The first of these football games was the now famous East-West all-star game in San Francisco, which has been called football's finest hour, and which originated the slogan, "Strong legs run that weak legs may walk."

It is needless to go into statistics or to tell you of the many crooked bodies that have been straightened. Your own imagination can give you the picture. We invite you to visit any 1 of our 17 Shrine hospitals. What you see may shock you for a moment, but the shock is only momentary. Then you see the smiling faces. You will hear the laughter. Then you will know why we Shriners are so very proud to remember Nobles Kendrick, Cochran, Adair, and Dr. Hoke, and all the others who have done so much, including the present head of our 17 hospitals, past imperial potentate, the honorable Galloway Calhoun, a symbol of civic virtue and illustrious son of the Lone Star State.

H.R. 4700

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, July 13, 1959

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement which I have submitted to the Committee on Ways and Means in support of H.R. 4700:

STATEMENT OF HON. LEONARD FARBSTEIN, OF NEW YORK, ON H.R. 4700

May I first congratulate this committee for holding hearings on H.R. 4700 which is of the utmost importance to our older men and women.

The miraculous advances of this century in the medical sciences have resulted in longer and healthier lives for the people of this Nation. The number of persons 65 years and older today is 15 million and is expected to reach almost 25 million by 1980. At that time this age group will constitute between 9.0 and 10.6 percent of the population.

I join the rest of you here today who are concerned with the plight of our older men and women. What will these aged look forward to after years of hard work? Most of them will be forced to live on low and limited incomes. Many of them will suffer from any one of the numerous long-lasting and expensive chronic diseases. These diseases continue each year to make up a larger total of the illnesses in this country. In

addition, chronic illnesses are more likely to affect the elder than any other age group. The dilemma of the older person is how to meet ever spiraling medical costs on fixed retirement incomes.

It is my sincere conviction that the best solution to this problem is embodied in H.R. 4700, introduced by the Honorable AIME J. FORAND. This practical and sensible measure proposes the inclusion of coverage for certain medical expenditures within the existing social security system. Beneficiaries of old age and survivors insurance would receive hospital, surgical and nursing home benefits.

In my opinion, this plan has two major advantages. In the first place there can be no hidden exclusions or cancellations in a publicly supported system. Secondly, the cost for the program would be shared by nearly the entire working population at a time when they are well able to afford the low increase in payroll deductions necessary to finance the program.

This problem has received the careful study and attention of a number of groups. Even those who cry out against the approach of H.R. 4700 cannot ignore the serious plight of the aged in meeting their medical costs. Most recently the Secretary of the Department of Health, Education, and Welfare submitted a very thorough report to this committee on this subject. I concur with Representative FORAND'S judgment that the report pointed clearly to the urgent need for passage of H.R. 4700. Among other very interesting facts, the report showed that in 1957 more than 80 percent of the hospitalized social security beneficiaries had medical bills of $1,000 or more.

I do not ask that we ignore the great advance in coverage of medical costs by nonprofit and commercial insurance companies. Nevertheless, I am astounded by a recent report in the New York Times which quoted the New York State Labor Department's monthly magazine as stating that an average of $2 out of every $3 spent by Americans on health were not covered by insurance policies.

For the aged the problem is especially serious because the cost of insuring the elderly is much higher than for the rest of the population. It is, therefore, not surprising that a recent study of the National Opinion Research Center shows that only three out of eight persons 65 years of age or older had some form of voluntary health insurance coverage in 1957. Nor is it astonishing that of this number an even smaller percentage were fully covered for hospital costs. The same study reports that more than half of these persons favor Government insurance.

Within recent months there has been a floor of publicity on plans especially designed for persons 65 and over offered by commercial and Blue Shield companies. Let us not be misled by the outward claims of these plans. Their shortcomings are evident upon careful examination. The premiums are high, the benefits low. Often no more than half the average cost of hospital room and board is covered for a time shorter than usually needed. Exclusions for preexisting conditions and limitations on services covered further limit the usefulness of these plans to the aged.

The failure of voluntary health insurance to meet the needs of persons 65 years and older is clear. It is equally evident that the most effective way of meeting their demands is through a fair broad-based, well-run system. Our Social Security System meets these criteria.

New York has been in the vanguard of attempts to improve health insurance coverage for her population. I am sure I speak for the people at home when I urge the passage of H.R. 4700 as another step in this direction.

Our increased national life expectancy is a precious gift, but it also offers a pressing challenge. We have the opportunity to lessen one of the heaviest burdens of our older citizens, their staggering health bills.

H.R. 4700 is a worthy national solution to a national problem.

Why TVA Self-Financing Bill Should Be Approved

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, July 13, 1959

Mr. EVINS. Mr. Speaker, as we know, the House has passed the TVA self-financing bill. It was passed by a vote of 245 to 170.

Last week the other body also acted favorably on this legislation. This bill was passed by a vote of 73 to 17. Two years ago the Senate also passed a similar bill by a vote of 61 to 20.

I express the hope and the belief that the President will be fair and approve this legislation when the bill comes to his attention.

First. The President himself first proposed this legislation to the Congress in his budget message on January 17, 1955. The President has repeated his request for self-financing legislation for TVA in his budget messages of 1956, 1957, 1958, and again in January of this year—on five separate occasions.

Second. Committees of the Congress have worked for 4 years to write a reasonable and workable bill.

Third. Extensive hearings have been held—five sets of hearings—on this legislation in both Houses of the Congress.

Fourth. Both the House and the Senate have acted favorably on this bill and there has been 5 years of debate on this measure, both inside and out of the Congress.

Fifth. The bill represents a reasonable compromise of many views. It is considered satisfactory in the main, not only to the TVA, but also to the private utility companies bordering on the TVA area.

Sixth. The Secretary of the Treasury has expressed his approval of desirable features of the financing phases of this bill—and indeed all approved the measure except a limited few who want TVA destroyed and dismembered.

Seventh. The bill puts a fence around TVA—a territorial limitation is prescribed—and not a kilowatt of power can be sold outside the area.

Eighth. The TVA will make a far greater return of payments into the Treasury that under the present law.

Ninth. TVA is a creature of Congress—will remain under the control of the Congress. The President can make recommendations for changes at any time and the Congress can enact changes at any time.

Tenth. All three members of the Board—Chairman Vogel, former Congressman Hays and former Deputy Director of the Budget Bureau, Jones, have all been appointed by the President, and surely they can be depended upon to carry out the provision of this legislation in a responsible manner.

With the territorial limitations, with Treasury Department control, and congressional control, and Presidential control through the naming of the Board members, no further control should be desired.

When we are appropriating millions for the development of water resources throughout the country—and billions throughout the world—surely it is just and fair that the citizens of a great area would be given the privilege of voting bonds for self-financing, bonds that are taxable and bonds that are not included, but outside, the national debt.

I express the hops again that the President will be objective and fair and not disapprove this needed and meritorious legislation. Such approval would permit the TVA to operate in a businesslike fashion, but without undue political and partisan influence and to a large degree eliminate the annual congressional fight over TVA's operations, and would be in line with statements and assurances of the President of his friendship and support for this great agency of the Government.

Resumption of Foreign Ministers' Conference

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 13, 1959

Mrs. BOLTON. Mr. Speaker, today in Geneva the Western Foreign Ministers resume negotiations with the Soviets on the future status of West Berlin and its more than two million inhabitants. As the conference reconvenes, it is well to recall just where responsibility for the present difficulty lies; with Nikita Khrushchev's ultimatum of last November. While the Kremlin representatives have endeavored to soften the harshness of its impact, this brutal threat remains the key to Soviet policy in Germany. Their goal is no less than complete withdrawal by the West, and the subsequent replacement of freedom with Communist tyranny.

Despite repeated threats from Moscow, President Eisenhower and Secretary of State Herter have made it abundantly clear that the United States will not retreat from its basic responsibilities in West Berlin. At the same time we have advanced a series of constructive proposals, looking forward to the reunification of Germany by democratic means. So far, the Communists have refused even to consider these proposals.

In yesterday's New York Times there appeared an excellent editorial on the resumption of the Geneva negotiations. Believing that this perceptive analysis of the issues involved merits wide consideration, I include the editorial with my remarks:

[From the New York Times, July 12, 1959]

GENEVA: ACT TWO

As the Foreign Ministers' Conference reopens in Geneva tomorrow there may be several diplomats on the allied side whose feelings are, as Secretary Herter suggested in his Thursday press conference, unprintable.

The Russians may or may not be trying to solve the Berlin problem that they themselves have created. They may have offered British Prime Minister Macmillan some sort of deal because they really want a settlement. Or they may just be playing the old game of trying to split the allies. They continue to hint at concessions that are not concessions. It means nothing at all, for example, for them to say they are willing to continue the present status of West Berlin until 1961. They already have said the same thing in different words.

As far as anybody can tell—or will tell—the situation adds up to what it was on June 19, when the conference recessed, or indeed, what it was on May 13, when it opened. The allies proposed nearly 2 months ago to unite the two parts of Berlin and the two parts of Germany by democratic process. They tied into this proposal a plan for an internationally supervised reduction of armaments. The Russians have never dealt seriously with these proposals. They have never budged from their basic position that all of Berlin ought to be left at the mercy of the East German Government, and that Germany should be reunited, if it is ever reunited, on terms that would leave it under Communist domination.

In plain language, Moscow proposed the retirement of the Western Powers from their legitimate position in West Berlin and the betrayal of more than 2 million of West Berlin's inhabitants to an alien tyrany. Nothing that Mr. Gromyko said in Berlin, nothing that Mr. Koslov has publicly said in his visit to this country, nothing that Mr. Khrushchev is known to have said to a former Governor of New York State and other callers, or has uttered more loudly in public speeches is any indication of a Russian willingness to allow the people of Berlin and all of Germany to determine their own fate.

Secretary Herter made it clear on Thursday, and again yesterday, that we would not budge from our basic position, which is simply government by the consent of the governed.

In lesser matters we will make concessions. The Macmillan government in Britain, or the De Gaulle government in France, will not break with us on matters of principle. We may have to confer with them again at the summit, or at some lesser altitude, to settle questions of procedure.

But the issue of the talks that are to be resumed tomorrow lies with Mr. Khrushchev and his agents. The question whether the Kremlin is to bestride the world like a colossus has to be settled sometime. It might as well be settled now before passions rise too high and fires are lighted that might consume the world. There can be peace, there must be peace, but there is no peace in slavery.

Time To Take the Long Look

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 23, 1959

Mr. PORTER. Mr. Speaker, Editor Ralph E. McGill, of the Atlanta Constitution, is a highly respected member of his profession. His observations while in Havana, Cuba, recently appeared in his syndicated column for July 9, 1959, in the Washington, D.C., Evening Star. The column, "Cuba Needs Castro To Succeed," follows under the leave to extend my remarks in the Appendix of the RECORD:

CUBA NEEDS CASTRO TO SUCCEED—POLITICAL REVOLUTIONIST VIEWED AS HOPE OF PEOPLE TO EASE THEIR INEQUITIES

(By Ralph McGill)

HAVANA, CUBA.—Here, seeing Fidel Castro's bearded soldiers strolling along the Prado, and on the streets of this ancient and beautiful city, one thinks of the Pageant of History.

Cuba has had her share—Columbus, Diego Velasquez, Cortez, De Soto, pirates, and British and Spanish rule.

Now, in the long pageant, appears Fidel Castro.

His story is too new to belabor. But, let us recall, in this attempt to find understanding, that this is his second appearance on the stage of Cuban history. His first was very brief. On July 26, 1953, he led a small group of 75 men in a desperate attack on the Moncado fortress near Santiago de Cuba. It failed. Castro was arrested. Plots to kill him were thwarted by friends, and the court, not yet dominated by the Batista forces, heard Castro's defense. This was more than 5 years ago. None of it was then permitted to be published.

In a long, eloquently written defense, Castro said—almost 6 years ago:

"We call on the people, the 700,000 Cubans who are without work * * * the 500,000 campworkers who dwell in miserable shacks, who work four months out of the year and are hungry the rest, sharing the misery with their sons, who do not have an inch of land to plant and whose existence should move more to compassion if there were not so many hearts of stone; the 400,000 industrial workers and stevedores whose retirement funds, all, have been embezzled * * * whose salaries pass from the hands of the boss to the usurer, whose future is a pay reduction and dismissal, whose life is perennial work, and whose rest is the tomb. We call on the 100,000 small farmers who live and die working a land that is not theirs * * * who die without possessing it; who cannot love it nor improve it, nor plant a cedar or an orange tree to beautify it because they do not know the day when a sheriff or rural guard will come and tell they have to go."

Castro was 27. He spoke for more than an hour. The judges heard him out. They then sentenced him to 15 years at hard labor. His first appearance in the pageant of history was ended.

A year later the story of the attack, the atrocities, undenied against some of the captives, became known. So did Castro's eloquent emotional words. On May 16, 1955, he and the survivors were released from prison after long agitation for an amnesty. In January of the next year he and 12 men reached the Sierra Maestra mountains. He was once more in the pageant. The pageant will continue through the centuries ahead.

Fidel Castro is an episode * * * a new type revolutionary, a political revolutionist, not a military. The odds tremendously are against him. But if he does not succeed, it is not comfortable to consider the next scenes in the pageant.

Americans, who are themselves heirs of revolution, fall into a commmon human error of comparing everything with their present situation, laws, customs, and comforts.

Here is why the odds are heavily against Castro. The labors of Hercules are less in comparison.

Most of his people are dependent on agriculture—perhaps 60 percent of them. Most of them are landless. The average yearly earnings of thousands of them is less than $100. This is true not merely in Cuba, but all Latin America. Cuba is but one of those in the spotlight. The long-term issue is not Castro—but the stability of Latin America. It is not now Communist. There is no head of a government who is Communist.

But even Castro cannot stem the tide of discontent if he cannot remove some of the inequities which have so long been smoldering in the minds of millions of Latin peoples.

Something like one-quarter of the world's population of more than 2.5 billion people today live in what can be called rich countries. These peoples average a per capita income of about $1,000 per year. These peoples are mostly the Europeans, the Americans, Canadians, Australians, New Zealanders, and so on.

From somewhere between a half and three quarters of all the people in the world are definitely and excessively poor with an average income of about $100. There are at least three with this income for each making $1,000. And the gap between "have" and "have not" nations widens fearfully—ominously.

This is the problem of Cuba—but it is also that of other Latin countries and of Asia.

It is against this backdrop we must see Castro—and the continuing pageant—if we are to understand.

Operation Bootstrap—Reservation Style

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 13, 1959

Mr. BERRY. Mr. Speaker, among others who have unequivocally endorsed "Operation Bootstrap — Reservation Style" is the Economic Development Commission of Bismarck, N. Dak.

In their letter of endorsement under date of July 7, they enclose a copy of their letter to the Honorable Don L. Short, Republican, of North Dakota, part of which is of particular interest to all Members of Congress and to the public generally. These figures illustrate what is meant by the Indian problem. They are proof of the statement I have made in many occasions to this body that the Indian problem is actually a white man's problem, that it has been created because of our failure to provide opportunity to the Indian people, or I should say, to make available the possibility for the Indian people to provide opportunity for themselves.

Operation Bootstrap, which is an Indian self-help bill (H.R. 7701), provides a means for the Indian people to provide opportunity for themselves. Further proof of the need will be found in the figures presented in the letter of Lawrence S. Schneider, director of the North Dakota Economic Development Commission, which is in part as follows:

You might be interested to know that in the Aberdeen area (in which North Dakota is included) 32 percent of the Indian family heads, ages 20 to 45, have attained this age living on unearned income. It will be quite difficult to change their attitude enabling

them to successfully compete in a business economy unless a long-range program is devised.

According to the 1956 census, there are 34,200 Indian people in our area (11,000 in North Dakota). Over 38 percent are in the fullblood Indian group, 22 percent in the three-fourths to fullblood Indian group, or 60 percent, have three-fourths degree or more Indian blood. Conversely, only 34 percent of the off-reservation population is in this three-fourths to fullblood group. This would appear to indicate that the group who will find it most difficult to relocate successfully is still on the reservation.

Another very important factor is that 44 percent of the resident reservation population is under 16 years of age. Unless the efforts of all concerned are combined toward establishing these 15,000 young people as self-sufficient members of society, our reservation problem will become greatly exaggerated in the years to come.

Any program of providing job opportunities for Indian people will benefit the Government financially, for it is estimated the cost of maintaining a reservation family is about $4,200 per year.

The Trinity River Project

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 13, 1959

Mr. UTT. Mr. Speaker, the gentlemen serving on the House Appropriations Committee, in marking up the public works appropriations bill, are certainly to be highly commended for refusing to spend needless funds for the construction of the Trinity River power facilities. However, an amount for this purpose was included in the nearly $80 million by which the Senate increased the House-approved bill.

This action by the other body seems particularly regrettable in view of the fact that the legislative committee had announced that hearings will be held on July 24 on the bills providing for joint development on the Trinity, whereby a private utility has offered to build and operate the powerplants itself. The House Interior and Insular Affairs Committee, having jurisdiction over the proposed legislation, has, in effect, been improperly circumvented by the decision on the other side to appropriate prior to the legislative committee's consideration and action on the merits of the pending bills. Considering the matter from the aspect of proper legislative procedure, I believe the criticism is well-taken that an appropriation for a project, with full knowledge that the legislative committee is about to hear the testimony on bills providing for an immediate saving to the Treasury of $60 million in construction costs, is certainly premature and highly questionable. Therefore, I submit, Mr. Speaker, that the House conferees should stand by the sensible decision of this body and refuse to accede to the demands from the other side concerning amending H.R. 7509 to provide for Federal construction of the powerplants on California's Trinity River.

Turning now to the merits of the proposed Trinity bills, scheduled for consideration and action by the Legislative Committee next week, I would like to quote a few excerpts from some of the many editorials appearing in the California press, unqualifiedly endorsing the joint development proposal. The Chico Enterprise-Record, widely noted for its sensible, accurate, and thorough analyses, has recently published a number of excellent articles which give the background and whole story on Trinity. The editor, Mr. A. W. Bramwell, first tells us that—

The main purpose of the Trinity River project is to help solve California's water shortage by making use of water which currently is being wasted away into the Pacific Ocean. As authorized by Congress, the project will use a tunnel system (now under construction) to divert Trinity water through the mountains and into the Sacramento River. In that way, the Trinity River will be enabled to play a useful role by adding to the irrigation water supplies of the huge Central Valley project, which serves the rich agricultural lands of the Sacramento and San Joaquin Valleys.

A secondary aspect of the Trinity project is the production of electrical power with turbines spun by the falling water of the diversion system. Under original legislation setting up the huge Central Valley project, Congress specifically stated that power revenues from Central Valley projects (such as Trinity) should be used as a means of "financially aiding and assisting" development of the Central Valley projects water features. In other words, Congress intended that profits from power production and sales should be used to help pay the costs of the Central Valley projects.

For that reason, Secretary of Interior Fred Seaton 2 years ago recommended use of President Eisenhower's partnership plan on the Trinity project. Under that recommendation—which was based upon exhaustive research and study by the Interior Department—the Pacific Gas & Electric Co. would finance construction and operation of the project's power facilities and would pay the Government for the use of the project's falling water.

Seaton explained that the partnership plan would save the Federal Government (taxpayers) more than $60 million in construction costs. The Government (taxpayers) also would receive $175 million from Pacific Gas & Electric Co. for the purchase of the falling water over the years, and the utility firm would pay another $145 million in taxes to Federal, State, county, and local governments over the life of the contract. Taken together, they add up to a saving of $380 million for the taxpayer.

In that way, Seaton explained, the power facilities of the Trinity project actually would help pay for the project, in keeping with the intent of Congress in its Central Valley project legislation. The partnership plan has been opposed, however, by advocates of socialistic public power, who, Mr. Bramwell points out, want the Government (taxpayers) to finance the power facilities so that the power can be earmarked for preference customers at cheap rates. But the preference customers (including mainly the Sacramento Municipal District) comprises only 7 percent of northern and central California's users of electric power. He calls our attention to the fact that under the all-Federal plan, preference customers would be able to buy the power at rates less than what it cost the Government to produce that power. In other words, 93 percent of the poeple (taxpayers) would be financing the plan so that 7 percent (the preference customers) could get electric power at rates cheaper than the rest of us pay.

From the June 16 issue, I again quote excerpts, one of which reads—

It might be said that the demands by public power advocates that the Government construct the Trinity power facilities is a graphic example of one reason why the Government debt keeps going up: the Government is inclined to waste too much money doing things that might better be done by private industry. As a matter of fact, the Trinity case becomes an even more graphic example when one considers that—under the plans set forth by the public power advocates—the Government actually would invest a huge sum in the power features and then turn around and sell the power for less than the cost of its production. Estimates accepted by both sides say that it would cost the Government around $60 million to build the power features. Then it would cost 8.9 mills per kilowatt-hour to produce the power. And then, under contracts already in effect, the Government would sell that power to preference customers for about 4.5 mills per kilowatt-hour, about one-half the cost of production.

As related in an earlier editorial from the same newspaper—

During recent sessions of Congress, those opponents have managed to stalemate the partnership issue and keep it from obtaining a floor vote, despite the fact that a majority of the House Interior Committee last year approved partnership and officially urged the Government not to appropriate funds for construction at Government (taxpayer) expense.

The editor draws the following conclusion in another statement, concerning the financial aspects of the matter at hand, when he speaks of "the relationship between the ever-growing national debt and such undertakings as the Trinity River project. If Congress insists upon forcing the Government into money-wasting ventures, then we can be sure that the national debt will keep going up. A reversal of those wasteful spending practices will be required to start a trend the other way for the good of the taxpaying citizens of the Nation. Adoption of the partnership plan for Trinity would be a good place to start."

The Trinity story has been accurately spelled out by the above excerpts, which I call to the attention of the House conferees on the Public Works Appropriations bill and urge them to uphold the House decision not to spend needlessly for the Trinity River powerplants prior to next week's consideration of the proposed joint development bills by the House Interior Subcommittee on Irrigation and Reclamation.

The Unemployment Situation

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 9, 1959

Mr. DINGELL. Mr. Speaker, I am as elated as anyone else that unemployment, according to the most recent

statistics, has declined to 4.9 percent or about 3,389,000 unemployed.

I do not, however, let this general feeling of euphoria, so prevalent in the administration and in many business groups throughout the country, blind me to facts which are almost as distressing as those we faced during the days of the 1957–58 recession.

Today 179 areas are classed as distressed labor markets, and in these areas the rate of unemployment remains 10.8 percent.

While economic recovery has reduced the unemployment rate in nondepressed labor markets to 4.2 percent, the situation in the other areas is as grim as ever.

Thirty-two of the distressed labor markets are classed as major by the Department of Labor and 132 as smaller. There are some 15 others which are too small for inclusion in Federal figures.

The highest unemployment rate in the Nation is 23.1 percent in the Biddeford area of Maine. Uniontown and McConnellsville, Pa., and Pikeville, Ky., have 22.8 percent out of work. St. Helens, Oreg., has 20.6 percent and Astoria 20 percent unemployed. Some 20 other labor markets show more than 15 percent jobless and 66 range from 10 to 15 percent.

A statistic which should give us further pause is that in 70 of these areas substantial unemployment began as early as 1957, and that in one area the rate has exceeded 6 percent since 1951. There has been substantial unemployment in 17 areas since 1952, in 8 since 1953, and 15 since 1954, in 13 since 1955, and in 16 since 1956.

My own city of Detroit has been classified as an area of substantial labor surplus since 1956.

What we must face is the danger that these individual distressed labor markets may expand again into general nationwide unemployment. This will be very much with us and will continue to be a problem on the American scene until such time as vigorous action is taken to provide opportunity for the people in these areas, and to expand our force of workers to provide full employment to all our people everywhere.

It is fine to say that the unemployment situation is well in hand, but it should never be forgotten that our country still has a substantial number of unemployed who must live but who can in turn contribute nothing to the economy until they are able to work.

With new employees entering the market by the high school and college graduating classes setting forth on their search for work the problem will become magnified with each passing year.

The Misnamed Measure

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 13, 1959

Mr. DAVIS of Georgia. Mr. Speaker, one of my constituents, Mr. Wade H. Wright, of Atlanta, wrote me recently to offer his appreciation for my support of H.R. 3. In his letter he also congratulated all of my colleagues who supported this bill. Mr. Wright enclosed a tear sheet from the June 29, 1959, issue of the Wall Street Journal entitled, "The Misnamed Measure." This editorial comment of the Wall Street Journal is very interesting and I commend it to my colleagues in Congress. This editorial in very appropriate language states that the Congress in passing this bill will only restate what the U.S. Constitution already provides for, namely, that it is the duty of the Congress and not the Court to write the law. Under unanimous consent to extend my remarks, I include the editorial herewith:

THE MISNAMED MEASURE

The House of Representatives the other day passed and sent to the Senate a bill introduced by Representative HOWARD SMITH of Virginia that deserves careful and honest debate if the public is ever to weigh its value accurately.

We say that because opponents of Mr. SMITH'S measure have consistently identified the bill as a curb on the Supreme Court. The basis of the charge needs examination, just as the intent of the bill needs clarification.

The bill is not an involved measure, nor is it written in foggy language. It is composed of two sections, and the heart of the measure is found in section 1:

"No act of Congress shall be construed as indicating an intent on the part of Congress to occupy the field in which such act operates, to the exclusion of State laws on the same subject matter, unless such act contains an express provision to that effect, or unless there is a direct and positive conflict between such act and a State law so that the two cannot be reconciled or consistently stand together."

Section 2 says, in short, that when Congress enacted laws aimed at subversion or sedition it did not mean that the States could not enact their own laws on the same subject. This section unquestionably arose from a belief by supporters of the bill that some Supreme Court decisions misinterpreted the intent of Congress, as in the Nelson case, when the Court seemed to say that the States could enact no laws against subversion. Since that time, however, the Supreme Court has clarified the Nelson decision. In the recent Uphaus case the majority made clear that the States did have the power to enact their own laws against subversion. Thus section 2 of Mr. SMITH'S bill is no more a curb on the Court than the Court's own latest decision.

Section 1 will not curb the Court, either, for it does not attempt to deny the Supreme Court any jurisdiction whatsoever. The Supreme Court will still have the power to say whether an act of Congress or an act of any State violates the U.S. Constitution.

What Representative SMITH'S measure does, and only does, is to make clear that when Congress passes a law it does not mean that the States cannot pass their own laws on the same subject, such as kidnaping or bank robbery. Mr. SMITH'S bill makes plain that when Congress does mean to supersede State laws in some field of legislation Congress will say so. But the bill also says that the Supreme Court has all the rights and power it ever had to overrule State law where it conflicts with or cannot "consistently stand together" with Federal law.

None of this seems, in our view, to be an attempt to curb either the Supreme Court's jurisdiction or its powers granted under the Constitution. It is a simple clarification of the intent of Congress that the Court should not read into a law something that is not there.

To read into a law something that is not there is the same as writing the law, and writing the law is the prerogative, not of the Court, but of Congress under our republican form of government. Only to the extent that it prevents the Court from misinterpreting the intent of Congress concerning the rights of the States to legislate could Mr. SMITH'S measure fairly be called a curb of any sort.

And if that is what the critics of the bill mean when they say it will "curb the Supreme Court," it seems to us that they are offering the best argument of all for its passage by the Congress.

A Warning on Mutual Security Cuts

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 13, 1959

Mrs. BOLTON. Mr. Speaker, as we prepare to go to conference on the mutual security legislation for this year, it would be well to weigh the possible consequences of reductions that have been made in the military assistance and defense support programs. President Eisenhower has carefully pointed out that these programs perform a vital role in the maintenance of free world security and cannot safely be cut below minimum levels. With increasingly dire threats emanating almost daily from the Kremlin, it would seem a poor time to decrease our effectiveness.

The New York Times of July 9 contained a very thoughtful editorial on the potentially dangerous reduction in the program. Believing that this article commends itself to our careful consideration, I include it with my remarks:

WARNINGS ON MUTUAL SECURITY

In the face of persistent congressional moves to slash the mutual security program at a time of impending showdown with the Communist bloc, responsible leaders of both parties have now joined forces to prevent a serious blow to the free world's defense structure.

Thus President Eisenhower, at his press conference yesterday, warned Congress that it will jeopardize the security of the Nation and the vital interests of the free world if it cuts the program below safety levels. He more than hinted that if this happens he will resort to the extraordinary step of calling a special session of Congress in an effort to rally more popular support behind the program.

In the same vein Senator JOHNSON, leader of the Democrats who have been mainly responsible for the cuts, has warned Congress to stop gambling with national security.

These warnings were sounded when two-score Senate Democrats combined with a dozen Republicans to rebuff both President Eisenhower and the Senate's own Foreign Relations Committee by cutting the authorization for the program to $3,543,320,000, or $383,500,000 below the President's request (aside from an extra authorization for the Development Loan Fund) and $633,500,000 below the even higher committee recommendation. Despite these warnings the Senate passed the authorization bill at that figure, which comes close to the House authorization, cut to $3,542,600,000.

Fortunately, the Senate did defeat further meat-ax proposals made by Senator ELLENDER

and Senator MORSE, though it is significant of congressional irresponsibility that 34 Democrats and 3 Republicans joined in support of what amounted to a move to scuttle the whole program, made, of all people, by Senator GRUENING from our newest and strategically most exposed State, Alaska.

Since Congress usually cuts the President's mutual security requests, the present reductions may, perhaps, be regarded as not too excessive. But they have been made almost exclusively in military and defense support aid, and that will scarcely impress either the Soviets or our allies and friends as testimony of our determination to help the free world resist the threats of war so freely scattered about by Premier Khrushchev. The bills of both Senate and House must still go to conference and this gives responsible congressional leaders a chance to rectify glaring mistakes.

Company-Owned Stores Hit in New Bill

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following text of a column from July 6 issue of the Cincinnati Enquirer which was written by Mr. Edward Wimmer, vice president of the National Federation of Independent Business. In view of the fact that my bill, H.R. 2729, will be considered in public hearings on July 21–22, I would like to call the attention of this body to Mr. Wimmer's remarks as to the need for this legislation:

COMPANY-OWNED STORES HIT IN NEW BILL: WOULD CURB BIG PACKERS; BENTLEY BILL IN PUBLIC INTEREST

(By Ed Wimmer)

The charge has been made to Congress and various Government agencies, over and over again, that big manufacturers are subsidizing their own retail stores to such an extent that independent dealers are being forced out of business by their own suppliers.

Tire dealers, for example, have had to face devastating competition from stores operated by the huge rubber companies, from which they buy their products, and records submitted by federation vice president, George J. Burger, show that tire makers have demoralized entire markets where they had strong independent dealerships, leaving them weakened or out of business.

According to Mr. Burger (who has pointed out these evils for more than a quarter century), the big tire makers about 2,000 stores, handling hundreds of products and pricing their own goods to these stores in any manner they see fit. In his appearance before the Committee on Interstate and Foreign Commerce, at which time he testified in favor of the Bentley equal pricing bill, H.R. 2729, Burger declared:

"If something is not done by this Congress to halt the discrimination being practiced by manufacturers in dealing with their own retail outlets, we will end up with certain major industries controlling all production and distribution of many commodities.

"Working closely with Congressman ALVIN BENTLEY, of Michigan, and his staff, our office helped to draft H.R. 2729, for the express purpose of forcing all manufacturers to charge their own stores exactly the same prices they charge their other customers; thereby ending a type of subsidy that is dooming countless thousands of small businesses. When we polled our more than 125,000 members on this legislation, 82 percent of the mandate ballots voted favored passage of the bill, and other organizations have reported similar approval."

Consider the statement of Mr. Sam Sullivan, prominent Laredo, Tex., shoe dealer and a leader in the fight to stop the giant shoe manufacturers from swamping the independent shoe dealers and their smaller suppliers. Said Mr. Sullivan:

"Most of our problems, monopoly-wise, stem from producers by one means or another, going into competition with their own customers, buying them up or knocking them out in other ways. With the ax they have, we don't stand a chance."

Gasoline dealers, faced with competition from giant suppliers who build huge station operations out of excess profits, have gone out of business by the countless thousands.

Congressman BENTLEY included a statement in the CONGRESSIONAL RECORD from James Cassedy, general counsel of the National Auto and Flat Glass Dealers Association, which listed "82 dealers" who said they were being "forced out of business by store operations and policies of Pittsburgh Paint & Glass Co." The Michigan Congressman commented:

"A point that I would like to bring out, is that under present conditions there are no real incentives for younger men with ambition to take the plunge and become retailers on their own, and I believe that an increasing number of independent retailers of all kinds, is a healthy situation to have in all our communities in the United States."

CURBS BIG PACKERS

In 1920, the biggest meatpacking firms accepted a Government consent decree, terminating operation of packer owned retail meat stores. Now the packers are asking the courts to lift the decree on the grounds—that giant chainstore systems (many of which are operating packing plants), have become so powerful that the giant packers have lost their "bargaining power" at the retail counter. They want to open meat store chains of their own to compete with the big food chains saying it is necessary if they are to "protect nationally known brands now being used to lure customers into stores where they are sold other brands."

All in all the Bentley bill is in the public interest and ought to be supported as such.

Soviets Bit the Hands That Saved Them

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 13, 1959

Mr. HOSMER. Mr. Speaker, Vice Adm. H. G. Rickover pretty well carved up and laid out on the table Deputy Premier Kozlov's line of phony propaganda chatter during the latter's recent pilgrimage to the United States. The sharp-tongued, quick-witted admiral's remarks were well reported by the press. But so the Kremlin can know that ordinary U.S. citizens also are capable of drawing a bead on the Soviet's basic noncomprehension of the fundamentals of civilized conduct, I commend to their reading the following letter to the editor printed by the Long Beach Press Telegram newspaper on July 10th:

HOW UNGRATEFUL CAN RUSSIA GET?

EDITOR: Russia's First Deputy Premier Kozlov seems to be quite a charming visitor. But his call for coexistence and world peace in one breath and threats of war in another make it sound very insincere and hollow.

Who does he and Premier Khrushchev think they are to even question our rights in Berlin, Germany? When they should be grateful to us for making it possible for them to even be in Germany. The Germans would have wiped them out if it had not been for the English and Americans.

They would not even be in Germany had we not furnished them with materiels and ships to fight with. Outright gifts plus money they borrowed have never been paid back.

How ungrateful can the Russians get? They should be trying to show a little appreciation instead of demanding that we give up the things we fought and died for.

What do they think we should get out of World War II? A vast graveyard and hand all the rest over to them? If they want their peace talks to sound sincere they should be peaceful and quit stirring up trouble by demanding our rights.

Let us not fall for such insincere talks and charming personality.

MRS. B. HARDIN.

Special Munitions Lobby Report

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

Mr. DENT. Mr. Speaker, recently Congress started to awaken to the great dangers in the high defense spending program. First, the situation was highlighted by Congressman SANTANGELO'S proposal concerning the employing of retired high ranking military officers by munition manufacturers.

One of the crops harvested out of the cold war, Russian scare, sputnik-missile race, is the high profits made by the munition manufacturers who get the bulk of the $41 billion—$41 billion—budgeted yearly for defense.

The most powerful vested interest skillfully manipulating its unparalleled influence on Capitol Hill is the military-munitions lobby.

In view of the tremendous amounts spent directly and indirectly—defense, veterans' payments, foreign military aid, and so forth—the Congress has named a special subcommittee under Congressman ED HÉBERT, Democrat, of Louisiana, to make an investigation of the whole picture and to come up with some answers and recommendations for the future. This, of course, only tells half the story. The amount of money spent for this and related expenditures such as the interest on the national debt and all of this can honestly be charged to defense because between foreign aid and national defense, direct spending in the last 11 years has amounted to well over $400 billion, or about 35 percent more than the total national debt. This represents 80 percent of the national budget.

When the president, National Manufacturers Association, and the National

Chamber of Commerce bombarded Congress and the press with demands for reduced spending, they failed to tell the people that after we take out farm subsidies, the people only get about 15 cents out of their tax dollars spent for health and welfare, social security legislation, education, public works, transportation, recreation, flood control, stream clearance, and any and all other personal and public services.

The day must come when the people of this country will awaken to the fact that while the President was vetoing a domestic housing bill, he was at the same time asking for more money for foreign economic aid to build schools, roads, bridges, factories, and, yes, even housing in foreign countries.

No matter how much a person wants to help his needy neighbors in foreign countries, it just doesn't make sense to say you cannot afford housing and education and highways here at home while spending $108 billion in foreign aid in 11 years in foreign countries.

One thing is sure and that is that all of the money advanced by the United States to build public and veteran's housing has been and is, being paid back by the citizens and veterans who bought the homes, but little or nothing, comes back except a lot of criticism about the money we spent in some foreign aided nations.

While the whole country has its attention focused on Beck, Hoffa, the Teamsters and juke boxes, 95 percent of all the contracts for defense spending are given out without competitive bids. The people ought to know a little more about this and the connections between the Defense Department, contracting corporations, and retired military personnel. The corporations have learned they get the best results when retired officers represent them in their negotiations for contracts.

This week, the U.S. Navy made a public announcement that in their preliminary examinations and investigations started as a result of the Hébert subcommittee, on the hiring of retired military personnel that at least 300 cases have been uncovered where there appears to be conflict of interest on the part of the retired naval officers employed by these corporations.

In line with the legislation dealing with conflict with interest of labor officials, it might be proper for Congress to consider legislation on this admitted conflict of interest, which reaches down into the pockets of every taxpayer in the United States.

Senator DOUGLAS, Democrat of Illinois, recently exposed the fact that 88 corporations doing business with the $41 billion defense allocation have lured 721 retired officers from the rank of colonel up. This does not count the hundreds below colonel grade doing small, but meaningful jobs for these large contract procuring corporations.

It is no secret that many of these retired generals, admirals, and so forth, derive salaries, bonuses, and special stock options that make Jimmy Hoffa look like a piker insofar as salaries and gratuities are concerned.

Note: This is no defense of any person accused of racketeering in labor; it is just to show that while someone is yelling "thief" at labor, his accomplices are walking out the front door with the family treasures.

Of the $41 billion spent directly for defense, about $10 billion goes for personnel wages, salaries, and so forth in the Department, both military and civil. The remaining $31 billion is up for grabs by the contract-hungry corporations whose profits are reflected in the greatest stock market boom in all history.

One cannot help but wonder here in the Capital how little the people really know about their budget, taxes, Congress, and especially their own Government.

Behind the scenes these retired officers know the intricate procedures and redtape of the Pentagon. Even more, they know the personnel of the Pentagon. It is hard to disregard the human factor in noncompetitive negotiations in which billions of dollars are spent for defense.

Some 94 percent of all defense procurement contracts are written on a cost-plus fee basis. No one even attempts to maintain that this is an efficient operation. Waste is extensive. Skilled manpower is stockpiled at cost to the Government. And the type of unchartered work that many of these contractors undertake frequently negates the possibility of a yardstick.

Nevertheless, the General Accounting Office has issued numerous reports in recent months on major cases of overcharging by defense contractors. Boeing Aircraft in Seattle, for example, submitted target costs for spare parts that were $5 million too high. The Georgia division of Lockheed negotiated target prices $4.1 million more than expenses incurred. A number of other companies have been named, too.

The problems which face the Congress to secure effective legislative control of the complex Military Establishment are almost overwhelming. The military, in fact, has become an independent colossus due to several factors. An important one is that the entire operation is so complex that few, if any, Members of Congress have sufficient time or background to develop a thorough grasp of the problems.

New light on the entire defense picture is urgently needed—pressures, influences, and other improper activities. Perhaps it could point the way in which we can learn to live with the all-powerful military in a democracy.

This report is an extra report to be followed by a report on the labor reform education, housing, veterans, and tax proposals, later this month or early in August.

One thing is sure, we cannot balance the budget without balancing all of our expenditures including defense and foreign aid.

Trinity River Power Project

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 26, 1959

Mr. GUBSER. Mr. Speaker, the chairman of the Subcommittee on Irrigation and Reclamation of the House Interior and Insular Affairs Committee has announced the intention to consider on July 24 the administration's proposal for joint development of the Trinity River power project by the Federal Government and the Pacific Gas & Electric Co.

The Trinity River division of the Central Valley project in California, as authorized by the 84th Congress, directed the Secretary of the Interior to study and report back to Congress on proposals to sell the falling water to a non-Federal agency. He did so, and recommended that the company's offer be adopted by Congress because: First, the company, not the Federal Government, would put up the $60 million to construct the power facilities; second, through the sale of the falling water the Government would gain $175 million in CVP surplus; third, the Government would gain $83 million in Federal taxes; and fourth, Federal construction of the powerplants would result, the Secretary said, in a financial drag and a drain on water development.

More than 230 California organizations have actively supported joint development of the Trinity project power facilities; these include irrigation groups, the California and the American Farm Bureau Federation, business groups, the International Brotherhood of Electrical Workers, AFL–CIO, as well as some 80 daily and weekly newspapers and other publications.

The House Interior and Insular Affairs Committee last year heard the testimony, but a vote was not permitted. The American Farm Bureau Federation spokesman, accompanied by the President of the California Farm Bureau Federation, testified, in part:

> It is clear that the interest of water users is to obtain from Trinity the maximum contribution to Central Valley project that the marketability of the power will warrant, and that this objective will be furthered by private development. * * * Why should the users of water and power on the various units of the Central Valley project be required to pay or help pay for the Federal Trinity powerplants? We believe this would defeat the purposes as declared by Congress in enacting the Central Valley Project Act of 1937. The net result is that, in order to comply with the intent of Congress in authorizing the Central Valley project, relating to revenues from electric energy "as a means of financially aiding and assisting" the project, it is necessary that joint development of the project be authorized by the enactment of the proposed partnership legislation.

He then went on to show that if the Federal Government were to construct

the facilities, it would not only be out the construction costs, the falling water payments, and the taxes which the company would pay, but the water users would be deprived of their just due.

I quote from the federation's statement again:

We see no reason for the entry of the Federal Government into the power business on the Trinity division of the Central Valley project when the Pacific Gas & Electric Co. is ready, willing, and able to participate in joint development of the project.

After detailing the financial benefits to the taxpayers and water users which would be lost under Federal construction, California's ambitious plans for solving its water problems were cited:

A great deal of irrigation development remains to be accomplished in California. To make such developments a reality, the State will need maximum revenues from power to assist irrigation development. The recently published California water plan outlines for ultimate construction 270 reservoirs, with a total capacity of 60 million acre-feet and hundreds of miles of canals to transport water from surplus to areas of deficiency. This program will cost between $12 and $13 billion. In addition, water resource development projects have been authorized by the Federal Government, which will cost millions of dollars.

The senior Senator from California, on March 5, 1959, inserted in the CONGRESSIONAL RECORD a series of tables showing that there remains to be completed on active, authorized California projects about $850 million of Federal funds. Should the House also pass the San Luis bill—the Senate-passed version calls for $290 million—the California total would be well over a billion dollars.

The Friant Water Users Association, representing the majority of the Central Valley project water users, have recently declared that if Trinity is constructed federally, an increase in the rates for non-Federal customers should be demanded in order that power will financially aid and assist water development, as intended by the original act authorizing the Central Valley project.

The Washington Post and Times Herald, on June 30, 1959, carried a UPI report of a press conference at which Interior Department Secretary Seaton also said he has not dropped his position favoring partnership development of electric power by private industry in the Government's Trinity reclamation project in California. If Congress orders the Federal Government to spend $60 million for power facilities on the project, Seaton said the money would have to be taken from other western reclamation projects unless Congress votes extra money for the Trinity job. Seaton said chances of getting extra money would be very slim.

There is no more reason to deprive the Central Valley project water users of their intended benefits than to deprive other western projects of needed money; neither would be necessary, and the Federal Treasury would be far ahead, under joint development.

About the Housing Veto

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 23, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the July 11, 1959, issue of the AFL–CIO News:

WHAT THE VETO MEANS

President Eisenhower's veto of the Housing Act of 1959 has exposed the essential phoniness of his antispending, anti-inflation campaign.

The bill he vetoed was a compromise measure passed by both Houses of Congress with bipartisan support. It was designed as a moderate proposal to help meet America's critical housing needs, to enable our cities and their people to take a long forward step toward a better way of life by eradicating slums and providing decent housing for all Americans.

The veto comes on the heels of the President's request for lifting the interest rate ceiling on long-term Government bonds, a move which would force up interest rates all through the economy. The price of money and its effect on general price stability apparently do not concern the President. But the slight cost of providing decent housing for Americans is inflationary.

The net effect of the President's economic policies as revealed in the housing bill veto and the no-ceiling-on-interest-rates proposal is to build fewer houses at higher prices.

This philosophy carried over into the other areas of American economic life spells economic stagnation and a new cycle of boom and recession in the year ahead.

The President's failure to understand the problem of economic growth and his obsession with inflation and spending can only lead to more vetoes of reasonable social welfare legislation and a slackening in America's dynamic economy. It will be to the detriment of the Nation and the free world.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Caylor to Kozlov—Memo on Independence

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, July 14, 1959

Mr. JOHNSON of Texas. Mr. President, Arthur Caylor, a distinguished columnist of the San Francisco News, has spelled out with clarity and dramatic impact the salient ingredient of our most cherished national heritage—independence.

Mr. Caylor has done this in a notable memorandum, published in the July 3, 1959, San Francisco News, and addressed to Soviet Deputy Premier Frol Kozlov.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAYLOR TO KOZLOV—MEMO ON INDEPENDENCE—OPEN LETTER TO FROL KOZLOV, SOVIET FIRST DEPUTY PREMIER

SIR: They say you'll succeed Khrushchev. They say you're over here to learn about America because, pretty soon, you'll be making the big decisions as between this country and Moscow.

So I make bold to invite your attention to something on which you may not have been briefed before you left home.

The biggest thing there is for you to see in America, you can perhaps see best tomorrow.

Tomorrow is Independence Day.

As such it's the symbol of the something we've got that you people haven't got.

It's the something you can't compensate for with more factories, more automobiles, more missiles, more 5-year plans, more this-is-for-your-own-good oppression.

Independence is the difference between you and us, sir. And it's a difference we intend to keep until we die.

I hope you won't be fooled because you can't see independence, or measure it with a machine, or examine it in a test tube.

But I'd like to assure you, that while we don't celebrate the Fourth of July as our forefathers did, Americans hold their independence as dear as Patrick Henry held it. Don't think otherwise.

Now hear this. When you're Mr. Big you won't understand America unless you realize that, to Americans, independence means both a free state and a free people.

Universally, sir, freedom has only one form—freedom from government.

A man can be free only in the degree his government allows him to be free. He can be enslaved only in the degree his government decrees his enslavement.

And a nation can be free only by escaping the domination of other governments.

Sir, I beg you to do me one favor. Tomorrow, on Independence Day, read our Declaration of Independence. It will tell you how—while Catherine still reigned in Russia—we shook off the tyranny of England's George III not to found a new nation but to free a people.

It will explain how it happens that Americans enjoy an inalienable right which goes beyond the inalienable rights of life, liberty and the pursuit of happiness.

It's the inalienable right to live in a state which can never push its people around—a state which lacks all powers except those granted it by the consent of the governed.

This concept, sir, is not always easy to grasp. When Mr. Mikoyan was here, someone threw an egg. His reaction was mildly bitter. In Russia, he said, you protect the people from the hoodlums—not vice versa.

It showed, sir, that Mr. Mikoyan did not understand America, will never understand America, and has no feel for the essential thing that will make America forever great.

Mr. Khrushchev, too, often sounds as if he so hopes Marx is right about the triumph of your system being inevitable that he's blind to the thing you can see if you really look for the meaning of Independence Day tomorrow. So, sir, it's up to you.

But please, one other thing. When you read the Declaration you'll be struck by the thought how different things would be in Hungary today—if that country had been allowed to shake off certain of the very tyrannies our Founding Fathers complained against in George III.

He quartered soldiers. He subverted judges. He combined with others to subject us to a foreign jurisdiction.

Please take, sir, no offense. My purpose is not the sly dig. Rather I wish you a fine Fourth, a glorious Fourth, a Fourth, indeed, that will somehow see to it that, even if Marx is wrong about America, and Mikoyan and Khrushchev too, Kozlov can still be right.

ARTHUR CAYLOR.

Constructive Action, Not Bluff and Reaction

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 14, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an address which I delivered on June 13, 1959, at the Sixth Congressional District Democratic dinner in Fond du Lac, Wis., be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CONSTRUCTIVE ACTION, NOT BLUFF AND REACTION

My State of Minnesota, and our neighbor, Wisconsin, lie in the heart of one of the great farming areas of the world.

Now farmers tend, by and large, to be a frugal lot. They live close to the soil—and close to the knuckle as well.

So all this Republican talk about sound dollars and budget balancing is aimed right at the farmers of America.

Well, nobody should be fooled by this line of talk because it is strictly phony.

The truth is that this Republican administration that brags so much about economy has racked up a total deficit of $19 billion.

The truth is that on June 30, 1959, this country is going to end up with the largest peacetime deficit in our history.

The truth is that this Republican administration has been the biggest peacetime spender in history.

The trouble is, they spend on the wrong things. And then they turn around and use the economy argument as a phony excuse for inaction on the right things.

Let me give you a couple of examples.

As a result of the Republican tight money, high interest rate policy, the American taxpayers will pay $2½ billion more in interest on the debt this year than they did when the Democrats left office. And the outlook is for even higher interest costs, since the administration wants to lift the lid entirely on interest rates. The sky would be the limit.

The Republicans see no problem in saddling the taxpayers with an extra $2½ billion annually in interest payments. But when some of us propose a program to give surplus food to the jobless, the aged, and the needy, these same Republicans tell us the country cannot afford it.

The fact is that we could provide food, through a food stamp plan, to every unemployed family, every person under social security, every widow and orphan—for far less than the rise in interest costs under this Republican administration.

Yet this administration wants to lift the lid on interest rates while keeping the lid on food for the needy.

Another example: I have proposed the establishment of a Youth Conservation Corps, patterned after the CCC of the 1930's, to put our young men to work preserving our precious natural resources. This is a program designed to add to America's natural wealth.

But the Republicans say we cannot afford it. It will cost only about one-tenth of the Republican rise in the interest rates—but still they say we cannot afford it.

There is another field in which spending has skyrocketed under the Republicans—and that is on our farm program.

Today the farm program costs four times as much as it did when the Democrats left office.

Now if the Republican farm program were doing its job keeping farm income and farm prices up—it would be well worth the cost.

But what do the Republicans have to show for spending four times as much on the farm program?

This is what they have to show:

Lower farm prices—down 20 percent since the Republicans took office.

Lower farm income—down $3 billion a year since the Republicans took office. Fewer farms and fewer farmers.

The people ought to know the truth about this Republican talk about economy.

It is poor propaganda—and it is the strictly Republican excuse for a do-nothing, caretaker administration.

By now, the bluff and reaction of the GOP should not be a surprise to anyone.

Ever since the day Republicans took over the administration in Washington, some of us have been repeatedly warning that they were going to wreck our farm programs—and ultimately wreck the farm economy in the process.

That is one thing in which they have succeeded.

Earlier today, it was my privilege to address a nonpartisan gathering of Wisconsin farmers at the annual meeting of a rural electric cooperative in Ellsworth. At that time, I outlined the alternatives we face in national farm policy—and offered some guidelines for action in building a new and better farm program.

We Democrats want to accentuate the positive. We want constructive action, as our answer to Republican bluff and reaction.

We refuse to rest our case on complaints about abundance or surpluses, as the Republicans prefer to say. We prefer to use our brains to develop ideas for using that abundance—and seeing that farmers are properly rewarded for producing it.

When the American public buys an automobile, they expect and know that the price they pay for it will cover all costs of production plus quite adequate profits.

The price of that car has been set by the huge corporations in the industry, by tailoring output to demand at a profitable price.

American citizens accept this as proper and just. We think the price of a car should be enough to provide an American standard of living to those who produce the car, and we know that managers and vice presidents are necessary. We honor and accept the profit system in the automobile industry.

But what about agriculture? Why do we have a double standard? Why, for example, shouldn't we honor that same system on Wisconsin's dairy farms?

We Democrats certainly aren't against auto manufacturers making a profit.

We would just like to see that same privilege extended to our farmers, who make up the bulk of the economy in the Midwest. And we are determined to do something about it, whether Ezra Benson and the GOP likes it or not.

As we are meeting here in the agricultural heart of America in these lush days of June, there is every prospect of a bumper crop of farm production.

In most parts of the world, this prospect would be rejoicing and thanksgiving that the Lord had endowed the earth with richness and had brought forth the fruits of the earth in such abundance.

But not in America, I am sorry to say—no, ashamed to say.

Here in America, the advent of summer and the prospect of abundant farm production is the occasion not of rejoicing, but of hand wringing by the leaders of Government, and of groaning complaints that this abundance should be inflicted upon us.

Now wouldn't it be far better for all of us to be concentrating on ways of seeing that everyone has an opportunity to share in that abundance?

We cannot talk unceasingly of prosperity, and turn our backs on those who, through no fault of their own, do not share in that prosperity.

In the past week, I have been conducting and participating in hearings on legislation of my own and of other Democratic Senators designed to assure more adequate diets for the Nation's unemployed, for the recipients of social security and old age and survivors insurance benefits, the people on welfare of various kinds, the blind, the indigent, the dependent children.

In all good conscience, we must expand the distribution of our surplus commodities to these unfortunate people. But I favor even more strongly a food stamp plan which would supplement the purchasing power of these low income groups and enable them to get a more balanced diet than any direct relief distribution of surplus commodities can provide. Such a food stamp plan could boost consumption of eggs, butter, cheese, poultry, milk, and similar perishables so necessary to build better health—and so important to our agricultural economy.

Just as we have still untapped opportunities for wiser use of our abundance at home, we have even greater potential in using this great blessing as a vital force for peace throughout the world.

It is difficult to believe that with over half of mankind hungry tonight, the leaders of the richest Nation on earth should regard its abundance of food and fiber as an affliction—a problem.

"Give us this day our daily bread" is still the prayer of human beings in the far corners of the earth.

It is the cry of hungry—the feeble plea of the old man begging on the streets of Cairo, the child whimpering for milk in Bombay, the weary African mother trying to convert a few scraps into an evening meal for her family.

For several years, some of us have been advocating a more imaginative use of our farm abundance. It has seemed to me that piling up vast quantities of food in a world of misery and hunger is morally wrong, economically wasteful, and politically dangerous.

Morally, we are losing sight of the Great Teacher's admonition to feed the hungry and clothe the naked.

Economically, we are paying hundreds of millions of dollars a year in storage costs for commodities which are already beginning to deteriorate.

Politically, we are creating an unfavorable image of Uncle Sam abroad when we wring our hands over our surplus food problem in full view of the world's hungry inhabitants.

I wonder if we fully realize the power of food in our relations with other countries. Is it possible that many of the underdeveloped nations now receiving expensive military shipments from the United States would be more impressed and better strengthened by less costly shipments of food?

Personally, I become more convinced each day that our most powerful material asset in building a world of peace and freedom is our food abundance. It seems probable to me that the remarkable productivity of the American farmer, if properly used, can be a more decisive factor in the struggle between freedom and communism than the sputnik. The hungry multitudes of Asia, Africa, and the Middle East are far more interested in bread, medical care, and schools than in any number of jets and sputniks. Does anyone wonder what the crafty Khrushchev would do if he had America's surplus food to use in his international operations?

The Senate will soon be considering the President's request of $3.9 billion for next year's foreign assistance program. Of the $3.9 billion the President has requested, $2.6 billion is for military aid, including defense support and the contingency fund; $1.3 billion is requested for economic and technical assistance.

Many of us in the Senate are becoming more concerned each month with the heavy emphasis of the foreign aid program on the side of military hardware. A sizable amount of such aid is going to undemocratic governments that rule over people suffering from poverty, hunger and disease. It seems doubtful such people would make very good fighters for freedom.

After pouring millions of dollars in military equipment into Iraq to bolster this country against communism, we saw our military aid used by Iraqi military leaders to destroy the loyal government and then engineer a working alliance with the Russians.

American military supplies, poured into Pakistan, have so frightened her neighbors that Afghanistan has made a deal with Russia for arms and India has taken a hundred million dollars out of her economic development program and placed it in orders for military equipment with the British and French.

In still other instances, guns and tanks sent by the United States of America have been used by unpopular dictators, not to fight communism, but to resist local reform movements demanded by the people.

For these reasons, I have supported amendments in the Foreign Relations Committee which will cut millions of dollars from our military shipments to underdeveloped nations. At the same time, I will continue to push legislation that I have introduced calling for an expanded use of our farm surpluses overseas as well as in the United States.

As you may know, I have introduced a comprehensive Food for Peace Act for that purpose.

Highlights of the Food for Peace Act are as follows:

1. The sale of surplus farm commodities for foreign currencies to the extent of $2 billion a year for the next 5 years.

2. Outright grants of food surpluses to countries experiencing famine or chronic hunger.

3. Continued encouragement to church groups and other voluntary private agencies that wish to distribute surplus commodities overseas on a direct people-to-people basis. This section of the bill also includes grants of surplus farm stocks to public and private agencies for use in the United States in the school lunch program, nonprofit summer children's camps, charitable institutions, including hospitals, and needy citizens.

4. Agreements with friendly countries to establish foundations to promote education, health, research, and other projects from foreign currencies accruing to the United States through the sale of farm surpluses. We could literally convert surplus farm commodities into education and health.

5. A Peace Food Administration under the President to direct the various operations provided for in the legislation.

Under Public Law 480 we have already made a start on moving surpluses to other countries. But much more needs to be done. Included in this program is a truly fine section which permits the churches and other private institutions to distribute surplus commodities overseas. The church world service groups have done a magnificent job with this most valuable program. In my view, this particular activity is the finest single example of the kind of people-to-people relationships that the world desperately needs. It needs to be encouraged, and expanded manyfold.

"Food for peace" is more than a slogan. It offers a partial solution to our agricultural problem, and will at the same time relieve much of the suffering of a world that looks to America for leadership in this crucial hour.

The Food for Peace Act, if put into operation, would offer us a dramatic way to show the world we care more about people living than about people dying.

And let us never forget that there are many more people in this world who want to live than want to die.

I have enlisted on the side of the living.

Let us not forget, too, that millions of people have lived under conditions of tyranny and terror for so long that there is nothing more that can be done to frighten them.

What they seek is help, guidance, friendship, understanding.

What this world needs today is not massive retaliation, but massive doses of health, education, and food.

We need some guided missiles to the hearts and minds of men—missiles of technology and science, missiles of schools and education; yes, missiles of medicine and medical care—of jobs and industry, of public works and public welfare.

It is to the creation of these missiles that we must dedicate our talents and our energies.

This world will not be saved or spared by missiles of war with thermonuclear warheads.

Important as they are for our national security and our defense against the aggressive, imperialist communism, it will take more than defense to build a peaceful world.

We must wage peace, while we defend ourselves against attack.

We must move on the offensive, and declare war against mankind's most ancient and terrible enemies of hunger, disease, poverty, and ignorance.

This declaration of war must be more than a war of words.

It must be a war of deeds—the kind of deeds that we Americans have demonstrated our ability to accomplish and perform.

We need our bold, new food for peace program, dedicating our God-given abundance to serving the needs of humanity—rather than complaining about it.

We need a dramatic, worldwide health for peace program, with vastly expanded international medical research—and perhaps a white fleet of mercy ships carrying our medical know-how and wonder drugs to the disease-ridden and suffering in the far corners of the earth.

We need to launch a broad program of world educational development—a plan of education for peace.

The first step would be for the Congress of the United States to declare to the free world that we share their beliefs in the values of education, and that we are ready to work with them in building up their own educational systems to train their own people.

We should declare our readiness to support a 10-year effort for worldwide development of democratic education—and I have just recently outlined a plan for financing it out of foreign currencies we receive from the sale of American farm commodities abroad.

These are truly the works of peace.

These are the kinds of deeds that made America what it is today.

They are the kind of deeds that helped bind up the wounds after World War II, through successful completion of the Marshall plan.

They are the kind of deeds by which our country's great voluntary, church, and nonsectarian groups have brought a message of kindness, compassion, and helpfulness to millions of people throughout the world.

They need to be multiplied manifold, to present the real image of America for all to see—a country truly dedicated to people, progress, and, above all else, peace.

This is our Democratic answer to Republican bluff and reaction—an answer of constructive action.

Rising Hospital Costs Point Toward Need for Health Insurance

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, July 14, 1959

Mr. NEUBERGER. Mr. President, despite the disturbing and cruel increases in the cost of living during recent years, medical care costs have risen even more. This is particularly true of hospital rates.

Measured by the consumer price index, the cost of living generally has risen 23 percent since 1947–49. Yet medical care has soared 44 percent, with hospital-room rates more than doubling.

These burdens are so excessive, particularly on elderly people who usually suffer the most costly and lingering illnesses, that some form of national health insurance seems imperative.

I ask unanimous consent that a thorough and documented column by the noted economic analyst, Sylvia Porter, as published in the Oregon Daily Statesman, of Salem, of January 10, 1959, be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

YOUR MONEY'S WORTH—MEDICAL CARE SKYROCKETS FAR BEYOND NORMAL COST OF LIVING

(By Sylvia Porter)

NEW YORK.—At least 1 out of 10 of us will become a bed patient needing medical care in 1959—and every one of us is a potential hospital case.

If you do become a hospital patient this year and if you don't have adequate insurance against the soaring costs, you'll find the psychic shock of the bill to your pocketbook nerve almost as great as the physical shock of an operation to your body.

For the cost of medical care has been skyrocketing in the past few years, has risen far more than the overall cost of living. Measured by the official consumer price index, the cost of living has increased about 23 percent 1947–49. Simultaneously, the cost of medical care has jumped 44 percent.

Hospital room rates have more than doubled. General practitioners' fees have climbed 39 percent. Dentists' fees have gone up 34 percent. Surgeons' fees have risen 26 percent.

Only the pace of the rise in transportation costs has topped the pace of the rise in medical care expenses. The cost of medical care has gone up much more than the cost of food, housing, apparel, etc.

If you have not been ill recently or had an enforced rest in the hospital, you may regard yourself, as the Federal Reserve Bank of Philadelphia puts it in a superb study of medical costs and the value of health insurance, "a superman—perpetual strength in perpetual motion."

But even if you have escaped the misfortune of a hospital illness, you surely are aware of the zooming costs of one and, although you agree with the Philadelphia Reserve Bank that "health isn't free," you surely have grumbled a few "whys" about the bills.

Here, therefore, are a few of the "whys":

Hospital costs have been ballooning because salary and wage levels have been rising, and hospitals must compete with industrial and commercial concerns to get the employee skills and talents they need.

Hospital costs have been zooming because their own housekeeping expenses have been increasing. As improvements in diagnosis and treatments have shortened the average stay of a patient, the average per day cost of handling a patient has gone up. The higher turnover in patients increase a hospital's overhead, and the hospital's patients pay that overhead.

Hospital costs have been climbing because our rapidly growing population is using more hospital services than ever before. Today the annual admission rate to hospitals is 12 percent of our total population against 8 percent a generation ago.

Hospital costs have been rising because hospitals are offering more services than ever before—more diagnostic and treatment services, more private and semi-private accommodations, more out-patient service—and it costs money to perform all these new and expanded functions.

And actually, none of the statistics I've quoted tells the whole tale. For the official medical care index measures price changes only of the same quantity and quality of items brought by city families in 1947–49—and we're not buying the same quantity and quality of medical care as a decade ago. A patient may pay hundreds of dollars for the use of a life-saving machine that wasn't even in existence in 1949.

Again, to quote the Philadelphia bank, "you can't pay bills with index numbers"—and although I can't prove it, I'm positive the rise in the most of medical care averages out to a lot higher than 44 percent.

What's more, there are no signs whatsoever that the rising trend is ending. And even if it were ending—and all our hospitals were modernized, adequately staffed, completely efficient—the size of a typical hospital bill to a typical American family would be a shock.

The answer, then? The answer is, of course, health insurance.

Right now, about 70 million people own insurance policies protecting them against hospital expenses. Right now, about 55 million subscribe to more than 80 Blue Cross plans operating through the Nation and in 1957, Blue Cross paid about $1 billion in hospital bills.

But, while this represents great progress over the conditions of past decades, there still are immense gaps in the insurance, there still are millions utterly without protection, there still are few who can financially survive a catastrophic physical illness.

It is against this background that the demand is persisting that Congress help by developing what the Democratic Advisory Council called for only a month ago—a comprehensive health insurance program.

Impressions of the U.S.S.R.—University Students Favored

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, July 14, 1959

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Impressions of the U.S.S.R.—University Students Favored," written by Dr. F. Cyril James, president and vice chancellor of McGill University, and published in the Montreal Star of July 2, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IMPRESSIONS OF THE U.S.S.R.—UNIVERSITY STUDENTS FAVORED

(By Dr. F. Cyril James)

The boy or girl who completes the program of the 10-year school, which is now the standard throughout the U.S.S.R. is under no compulsion to continue his, or her education at a university or at one of the many institutes that have already been mentioned. He, or she, will be 16 or 17 years of age, and able to seek a job in industry, in the civil service or on one of the collective farms.

But the U.S.S.R. is anxious to encourage all lads and lasses of outstanding ability to attain higher educational qualifications and the policy that is followed is similar, in its basic principles, to that by which outstanding scholars and scientists are encouraged to become professors. In the first place, university students are exempt from military service—both during their undergraduate years and after they have graduated. In the second place, a university student from a poor family is likely to receive a cash income (by way of scholarship) as good, or even better during the 2 final years, than he could earn in any job likely to be open to him. In the third place, he realizes that a degree or diploma is absolutely essential if he ever wants to attain any of the posts—in industry, Government, or university life—that carry the highest salaries. High incomes and high prestige blend to create strong inducement, and a very large proportion of the high school graduates in Russia want to go to college.

PROCEDURE

How does the ambitious high school graduate attain this goal? The first hurdle is the matriculation examination at the end of his 10th school year. This is a nationwide examination, identical for all schools in the U.S.S.R., which is set, and marked, by examiners appointed by the Ministry of Higher Education in Moscow; i.e., by the ministry responsible for the universities and not the Ministry of Education under which the schools are operated. It is not a school-leaving examination as we know it but is intended to measure the ability of the individual to enter upon a course of higher education, and heavy emphasis is placed upon the command of modern foreign languages, the Russian language, chemistry, mathematics, and physics.

The student who fails this exam is automatically excluded from the university. The student who passes must then consider what course he wants to take, and to which university he wishes to apply, for the standard nationwide examination is acceptable to all universities and institutions.

OPENINGS

This decision is an important one because the number of places in the freshman year is substantially less than the number of applicants. An average for the whole of the U.S.S.R. would seem to be above five applicants for each place, but the ratio varies in the institutions that we visited from a low of 3 to 1 to a high of 50 to 1, and it is perhaps worth mentioning that the highest ratios were in music and ballet dancing.

The reasons for the variation are two. In the first place, the Government of the U.S.S.R. guarantees a job in his chosen field to every student who satisfactorily completes the university course. To do this, the Government must now decide how many chemists, geologists, teachers of English and operatic tenors (to name but a few examples) will be needed in the summer of 1964. This estimate, which is carefully made on the basis of a great deal of data, determines the total number of places that will be available for freshmen next autumn at all the institutions of higher education in the U.S.S.R. In the second place, in determining the exact number of places at any one institution, the Government in Moscow is, generally speaking, trying to prevent any substantial increase in the size of the older universities like Moscow—now 22,000 students—and Leningrad—about 12,000 students—and to encourage the growth of newer institutions in the south and east. An applicant of good, but not outstanding, quality therefore has a better chance of admission at Irkutsk or Samarkand but, since all Russian universities (like their Canadian counterparts) want to have a student body of diverse geographical and cultural background, an outstanding applicant from Turkestan or Armenia will have a better chance of admission to the University of Leningrad than a boy whose home is in that city. The problems of the admissions office at a Russian university are strangely like those in Canada. Academic grades, geographical residence, health, aptitude, and sometimes—although we seldom admit it publicly—the position and aggressiveness of the parents must all be taken into account before deciding which out of the many applicants are to be admitted.

THE COURSES

Let us follow the lad who is one of the successful fifth of the applicants. He is admitted to the university of his choice, and embarked on the program of studies that leads to the diploma which is his goal. The details of the curriculum naturally vary from one subject to another, and it would be tiresome to attempt elaborate comparisons. The information, in great detail, is available in official publications of the U.S.S.R.

Some general comments, however, apply to all fields of study—medicine, engineering, music, or chemistry. The course covers 5 years, and leads to a diploma that is roughly equivalent to the master's degree in North American practice. During the first 3 years, the student will be expected to attend classes 6 hours a day for a 6-day week—and substantial work is required of him outside classes. The academic session is 10 months, with a short break between the two semesters, and the student is encouraged to take a real holiday during the two summer months rather than to seek gainful employment. During the last 2 years the number of classes is sharply reduced, so that the student has more time for individual study and the preparation of his thesis, but it is quite clear that the Russian student, when he graduates, has done two or three times as much work, much of it more intensively, than the man who graduates with a bachelor's degree at a Canadian university. Conversely, in the professional fields, the Russian student of law or medicine graduates in a shorter period than his Canadian counterpart, since these courses (like all the others) take no more than 5 years from matriculation.

PARTY STUDY

The required courses—required in all faculties at all institutions—must once again be mentioned. No mater what his specialty, our student must take a course in the History of the Party in each of the first 2 years, a course on political economy in the third year, on dialectical materialism in the fourth and on historical materialism in his final year. In order to graduate, at the end of the 5 years, the student must pass comprehensive examinations in his special subject (e.g. physics) which are set by the university, and a series of examinations, set by the Ministry of Higher Education for the whole country, on the required subjects mentioned above. He must also write a thesis in his special subject, and defend it publicly before the faculty and the senior students.

This is a stiff academic program, but if the student has to work hard he also enjoys several advantages over the youngsters who did not gain admission to university. First of all, there are no tuition fees whatever—no fees of any kind since education is completely free to those who have the ability and the strength of character to undertake it. Secondly, as I have said earlier, the student is exempt from the call-up for 3 years military service which comes to all other young men on their 19th birthday. In the third place, the Russian student is guaranteed such financial aid as he needs to carry on his studies.

STIPENDS

More than 80 percent of all the students at institutions of higher education in the U.S.S.R. receive "stipends"—the Russian term that covers both scholarships and bursaries. At the Lomonosov University in Moscow 85 percent of the students are in receipt of stipends this year, at Leningrad 82 percent, at Kiev 90 percent, at the Institute of Foreign Languages (where there are many young women students from well-to-do families) 60 percent. For the country as a whole approximately 25 percent of the total university budget is allocated for the payment of such stipends.

The precise amount of the individual stipend varies widely, being determined in each case (usually by a joint committee of students and faculty) on the basis of both financial need and academic performance. If the grades of the student fall to C he is apt to lose the stipend until his grades improve; if he maintains an A average the stipend is increased by 25 percent, and for the most brilliant students in the last 2 years there are a few princely awards of as much as R1,000 per month. The typical range of stipends would, however, be from R250 to R500 per month—subject to the 25 percent increase for A grades—and this compares favorably with the wages that the student would be likely to earn if he left college and went out to find a job. Good students in the last 2 years, when the load of academic courses is lighter, may also get appointments as part-time laboratory assistants at approximately R450 per month in addition to their stipends and—as a last point—these stipends are paid for all 12 months so that the student may have money for his summer holiday as well as for his living expenses during the academic session.

BOARD STUDENTS

For out of town students there are hostels at all Russian universities and student cafeterias where good meals can be purchased at comparatively low prices. The quality of the hostel accommodation varies enormously. In the magnificent new buildings of the Lomonosov University in Moscow—the show piece of Russian higher education—the best accommodation is as good as that at any Canadian university and better than some. At Kiev, which is still in the process of rebuilding after the devastation of the Second World War, many of the hostels are old private houses where five, six, or seven students share a room. But, in spite of the differences in quality, all of the hostels are amazingly cheap. In the places that we visited the rates ranged from R10 per month in Kiev to R30 per month in Moscow—which is low either in comparison to the student stipends or to the rates that students have to pay in North America.

FOREIGNERS PAID

It should be pointed out, moreover, that students from foreign countries are, at all Russian universities, eligible for stipends and for accommodation in the hostels on the same basis as students from the U.S.S.R. We met and talked with students from China, India, Indonesia, and other parts of southeast Asia, as well as exchange students from Great Britain and the United States. Most of them, as one might expect, are at Moscow or Leningrad, but each university in the U.S.S.R. is eager to attract students from foreign countries, recognizing that a significant part of the process of education is the impact of students upon each other. The foreign student, like the student from a distant part of the U.S.S.R., often has a better chance of a larger stipend than the student from the city in which the university is situated.

Quite clearly, students and professors constitute a privileged class in the U.S.S.R. More

educated men and women are needed by the country, and the Government is willing to offer the inducements that will attract the best brains in the country.

Where Is My America?

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 14, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an address entitled "Where Is My America?" which was delivered by Prof. Yahya Armajani, of Macalester College, in St. Paul at that college's cap and gown day on May 12, 1959, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHERE IS MY AMERICA?

(By Yahya Armajani, Macalester College, Cap and Gown Day speech, May 12, 1959)

Thirteen is unlucky in most parts of the world. I remember my father in Persia used to count "11, 12, extra, 14, 15." However, for some curious reason, our son from an early age, has consireded 13 to be his lucky number. I see that by osmosis it has become my lucky number, also. For in this my 13th year of work at Macalester, I have been honored to speak on this occasion by the best senior class ever to graduate from Macalester. Indeed ever since they asked me to speak, I have remembered how I have always thought this to be an outstanding class ever since they entered as freshmen.

In choosing the subject "Where Is My America?" it is not my intention to teach you a lesson in geography. Although the good Lord knows that you need it—the good Lord that is and Dr. Hildegard Johnson. However, I will not take time for that. Neither am I going to deliver a Fourth of July oration.

Last year on my way to the Soviet Union, I visited a Persian friend in New York. Like me he had studied under American missionaries and had learned about America long before coming here. Like me, he had been disappointed in some things which he had seen here. We were discussing some of the problems of the day and our experiences in this country. He turned to me and said that someday he wanted to write an article entitled "Where Is My America?" He was in quest of the America introduced to him in the school in Persia and exemplified in the life of American missionaries. He will probably never write his article because he is a diplomat and diplomats are cautious about expressing such sentiments. Consequently I have borrowed his title and am taking this opportunity to speak on the subject.

Professor Boorstin of the department of history at the University of Chicago wrote an article a few weeks ago, entitled "We the People, in Quest of Ourselves." He has this to say: "We Americans are a people in quest of ourselves. Ever since our birth as a nation we have been trying to find a mirror in which we can see our true image. * * * Other people have had only to live up to a role assigned by their past, but we Americans have been trying to guess the role demanded by the future."

Now it is tragic that Americans believe that they do not have a past to live up to. It is indeed very sad to realize that a nation at the helm of the free world should have to guess the role demanded by the future. I don't know what the Europeans think of America, but I do know that the peoples of Asia and Africa believe that the professor's statement is as tragic as it is false. Americans do have a past to live up to, because the peoples of Asia and Africa are enthused and inspired by that past. They simply cannot believe that Americans have to guess at their future steps, when they themselves are guided in their future by America's past. Indeed the intensity of the resentment of the peoples of Asia toward America is directly proportional to the disappointment they feel that America is blind to her own past.

CONCEIVED IN LIBERTY

The peoples of Asia and Africa look upon the United States as a country conceived in liberty. Not only in our school in Persia, but in hundreds of other schools across the world and in countless gatherings, the Declaration of Independence of America and the Bill of Rights have been studied. People have been inspired by them and have come to believe that this country is conceived in liberty for which the soul of the world is yearning.

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable Rights. * * * That to secure these rights Governments are instituted among Men, deriving their just powers from the consent of the governed * * *."

These words may ring dull in your indifferent ears, but I want you to know that they are stirring thousands of people in Asia and Africa to action. These are concepts novel and exciting to millions who had been led to beleive that they were endowed by their creator with nothing except misery and starvation. When the Persians wrote their constitution in 1905, they did it with the idea that all people are created equal. When the Turks started their Republic, they did it with the idea that government derived its just powers from the consent of the governed. In 1945 the people of Vietnam, just before they were pushed into the arms of the Communists, not only quoted the American Declaration of Independence but followed it by stating their grievances against the French as your forefathers had done against the British.

In the light of all this, it is said that the heirs of such a tradition should be groping in quest of something to live up to. However, it is unfortunately true that only a small minority in this country is enthused by these concepts and uses them for the advantage of all. It seems to me that it is also true that a minority, on the other hand, abuses these concepts for its own selfish purposes. But the vast majority of the people of this country, God forbid that you be among them, are indifferent—so much so that these concepts are held without honor, and indeed are suspect, in the country of their origin.

Justice Douglas (in his book, the "Almanac of Liberty") relates that he atended a lawyers meeting in the Far West, where a person was discussing the background of the Bill of Rights. After the meeting, the justice heard one lawyer say to another: "There goes a Communist if I ever saw one." Is this America?

No doubt the fact, that freedom was being ridiculed and individual integrity trampled under feet, prompted the General Council of the Presbyterian Church in the United States of America to issue a manifesto which said, among other things: "Some congressional inquiries have revealed a distinct tendency to become inquisitions. * * * Treason and dissent are being confused. The shrine of conscience and private judgment which God alone has a right to enter, is being invaded." Is this America?

In our own State of Minnesota, there is a bill in the legislature to suppress a minority, called the Hutterites. A few weeks ago a Lutheran minister, no less, wrote these words to the Minneapolis Tribune: "Why must America be a haven for all oddballs? If they want to live, work, and worship like the rest of us, they have the opportunity. But until they do, I believe legislation is a must. Already it is two years too late." Where is the America which was conceived in liberty, and where are the Americans who wrote the Declaration of Independence?

BORN IN REVOLUTION

The people of Asia and Africa believe that America is not only a country conceived in liberty but also born in revolution. "That whenever any form of government becomes destructive of these ends, it is the right of the people to alter or abolish it." I daresay there is not a person in Asia who doesn't believe that these words were written for his condition. If there is anything that the peoples of Asia and Africa want today, it is change, for they are living under governments which, on the whole, are destructive of these ends. They are aroused when they hear that they have the right to alter or abolish it. To whom shall they go except to the country which was born in revolution and gave them these concepts. And yet when they ask you for bread, you give them stone. They expect sympathy but you show resentment, for you have grown soft and contented, and you don't like change or revolution anymore. Your double standard is confusing and they cannot understand why you hail the Hungarians who rebelled against the tyranny of the Soviet Union as freedom fighters, while you denounce the Algerians who are fighting against the tyranny of the French as rebels.

Who do you think said this? "I hold it, that a little rebellion, now and then, is a good thing, and as necessary in the political world as storms in the physical. * * * It is a medicine necessary for the sound health of government." Lest you be tempted to say: There goes a Communist if I ever saw one," may I remind you that you have raised a monument to this man in Washington. His name is Thomas Jefferson, and he wrote this in a letter to Madison.

Or who do you think said this? "This country with its institutions, belongs to the people who inhabit it. Whenever they shall grow weary of the existing government, they can exercise their constitutional right of amending it, or their revolutionary right to dismember or overthrow it." You may say, "Surely, there goes a Communist if I ever saw one." But before you even think it, let me say to you that you have raised a huge monument to this man also in Washington. His name is Abraham Lincoln and he uttered these immortal words in his first inaugural address.

If you place the concept that man has a constitutional right to amend and a revolutionary right to overthrow, in the minds of millions of people who have grown weary of existing conditions, then the result is revolution. The question is not whether there will be a revolution—indeed, revolution is upon us. The question is which way will it go? Will it go the way of Jefferson, Lincoln, and Wilson, or will it go the way of Marx, Lenin, and Stalin. The initiative is yours if you bestir yourselves and take it.

LIVING UNDER LAW

The image that the Asians have of America is not only of a country conceived in liberty and born in revolution, but also of a people who live under law. The idea that people must live under law rather than the whim of individuals is not so new, but what is very new is that it is possible for states

to live under law. Indeed there are many otherwise intelligent persons among us who believe that it is not possible for states to live under law. The relationship between states is not governed by law but by treaties, which may be turned into scraps of paper without notice, and by unstable balances of power. If I may be permitted to generalize, the history of Europe in the last five centuries has been the monotonous story of alliance, balance of power, disintegration of the balance, and war.

This country was in danger of going that way if it were not for revolutionary men who were not afraid to be different. They proposed laws governing the Thirteen States as they had laws for individuals. They proposed that each State exchange a part of its sovereignty for the rule of law, in the same way as an individual exchanges a part of his sovereignty for the same purpose. Many who were enamoured of the word "sovereignty," believed that the scheme would not work. Nevertheless it was carried out. Thirteen grew into twenty and still there were people who though it was impossible. Twenty became forty, and 40 increased to 48 and still people said it was impossible. In our own time the number became 50 in the face of the opposition of people who thought it impossible. Now there are 50 of them and each, by giving up a part of its sovereignty, has added unto itself the sovereignty of 49 other States. The strength of the State of Minnesota is the strength of 50 united States; and the weakness of Minnesota is the concern of 49 other States.

You have proved that it is not only desirable but also possible for States to unite under the law. It is beginning to catch the imagination of the world. The Arabs have taken steps to form a federal union. The Africans are talking about it. The Indonesians have formed one. Everyone believes that peace will come to war-torn Europe when they form a United States of Europe.

This you have accomplished. This you know and to this you must witness. What can be more 100 percent American than for you to work for a federal union of the world under law? What can be more natural than for the citizens of the United States of America to work for the united states of the world under law? Why shouldn't you take this light from your past endeavor to change the weak United Nations into a strong instrument of world government under law?

Where is America which was conceived in liberty? Where is the Nation that was born in revolution? Where are the people who believed it was possible for States as well as individuals to live under law?

Some time ago a discerning student from Persia, he had to be a Persian to be discerning, told me that America was like a giant that is tired: like a boxer who is in the ring in spite of himself. This reminds me of a story which I read in the Reader's Digest—where else? "When a sudden storm blew up at sea a young woman, leaning against the ship's rail, lost her balance and was thrown overboard. Immediately another figure plunged into the waves beside her and held her up until a lifeboat rescued them. To everyone's astonishment the hero was the oldest man on the voyage—an octogenarian. That evening he was given a party in honor of his bravery. 'Speech, speech,' the other passengers cried. The old gentleman rose slowly and looked around at the enthusiastic gathering. 'There's just one thing I'd like to know,' he said testily. 'Who pushed me?' "

It is said, isn't it, that a nation conceived in liberty, born in revolution, and living under law, should be groping as in darkness and not using the shining lights it has inherited. I am persuaded that all of you are intelligent enough to see the danger to your basic liberties and are dedicated enough to take up these causes as your own, no matter in what situation of life you find yourself. However, to spur you on, I want to offer a prayer as a parting gift and wish for you certain things.

I wish you sickness and hunger; not so much that it will sap all your energies, but enough that you realize that the majority of the people of the world do not have enough food and cannot even hope to have medical attention.

I wish for everyone of you anxiety for finding a job or for the security or health of your family; not so much that you will become hysterical and lose your balance, but enough that you may discover the inner resources which you have in you to meet the challenge of the hour.

I wish that all of you will become victims of injustice; not so much that you will be completely frustrated, but enough that you may realize that you cannot have justice without paying the price and making the cause of universal justice your own.

I wish you will become victims of tyranny; not so much that you will be completely broken, but enough that you may learn that no one can offer you liberty as a gift—you must attain unto it and safeguard it with constant vigilance.

I wish you will become victims of the rule of man when an individual tramples your personality under his feet because he doesn't like the color of your skin or the manner of your speech or just because he enjoys doing it; not so much that you may become bitter, but enough to make you appreciate the rule of law and hold it high and defend it with your will and intellect.

I wish for everyone of you an experience of disappointment in people and institutions from whom you have expected much; not so much that you may become cynical, but enough that you will realize what others feel about you when you let them down.

And in all good things and profitable endeavors, I wish you God's richest blessing.

Transportation in World Civilization

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 14, 1959

Mr. VAN ZANDT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following interesting and informative address titled "Transportation in World Civilization," which appeared in the July 9, 1959, issue of the Altoona (Pa.) Mirror and which was delivered by James M. Symes, president of the Pennsylvania Railroad Co., at the recent convention of Lions International in New York.

The address follows:

TRANSPORTATION IN WORLD CIVILIZATION

I consider it a great honor to meet and address this distinguished gathering from all parts of this hemisphere and the rest of the civilized world. Your presence here under one roof is an example of one of the pleasant jobs that modern transport can do—bring people like yourselves together from all ends of the earth, and do it economically and comfortably.

I was asked to talk to you on "Transportation in World Civilyization." As a transport man all my life, I am happy to do so. But transport is a complex activity and can get mighty technical; so, with your permission, I will discuss it in a very informal way—the way you might talk to friends about your particular business over a cup of coffee. This will let me emphasize the human and more interesting side.

First I shall try to demonstrate that transport has had a lot to do with getting man civilized. In fact, it is a pretty good rule of thumb that, in countries where it is easy for people and goods to move about, the standard of education and of living is likely to be high. There are very sound economic and sociological reasons for that, and we'll go into them in a moment.

How did this come about? How did transport happen to pace the growth of man's knowledge, comfort, and well-being—which added together make our material civilization? Well—as Al Smith used to say here in Madison Square Garden—"Let's look at the record."

There seems to be little doubt that woman was the first beast of burden. She not only carried her child; she carried the things that man began to use. Primitive man spent a lot of time on the move, hunting for food and seeking out or avoiding his enemies. He needed his hands free for hunting and fighting—at least that was his story—and so it fell on his wife to carry the household gear, any provisions on hand, and any game he brought down.

Incidentally, our modern American wives—especially suburban wives—sometimes complain that they are still beasts of burden. I hope you foreign delegates understand that this is an exaggeration. All they do, actually, is spend the first 16 years or so of their children's lives transporting them to school, to the doctor for shots, to dancing class, to the shoe store about feet that change size and shape every year, to birthday parties that neighborhood children always seem to be having, and so on. A serviceable wife also fetches groceries, gets her husband's suit from the cleaners when she remembers to, meets him at the commuting station if reminded to, picks him up at an airport 40 miles away at 2 o'clock in the morning, and odds and ends like that. He helps out by letting her use the family car—when he doesn't need it—and by sturdily carrying his own briefcase.

But to get back to primitive woman as the first form of transport. Her first relief came when her husband began training animals to help with the heavier hauling. In various places these have included and still include the ox, the donkey, the reindeer, camel, elephant, llama—and the two you and I know best, the horse and the dog. The horse became so important that owning one made you a man of distinction and this provided various cultures with their names for "gentleman." A Spaniard on a nice looking caballo or horse was a caballero; a Frenchman on a suitable cheval or horse was a chevalier; a well-mounted Englishman was a cavalier. The dog has also provided a name or two—but we'd better not mention them here.

We might note to, in passing, that some of these animals that early man trained to transport provided valuable byproducts. A fellow who owns a herd of reindeer, for instance, is not just in the trucking business—he is also in the milk, meat, and hide business. A fellow with a herd of camels is also nicely fixed: aside from transport to sell, he is also in the milk, meat, skin, and hair business. Modern industry did not invent diversification.

Nor are operational difficulties anything new. A passenger camel can do a hundred miles a day; in freight service he can handle a thousand pounds. But his feet are tender as a baby's when he gets off sand, so his run has to stop wherever the sand stops. The

elephant can move mountains, but he is a professional invalid and always reporting sick. The only fuel suitable for a reindeer is reindeer moss—which grows only in certain places; the llama can operate only in high altitudes, and so on. Obviously, any civilization built on this hit-or-miss array of transport would be at best elementary and local.

Meanwhile, primitive man found that animals can drag more than they can carry. This basic discovery—which is the principle of the railroad train—led to sleds and then to the wheel. Someone has said that the wheel is the most important invention of man. Everything that moves—from our trucks and trains—is built around the wheel.

Probably man's first wheels were cross-sections of a tree trunk with a hole burned in the middle, and thousands of years before written history there were rough carts of one sort or another. Today civilized man spends at least some of each day on wheels. This is especially true in America, where there are probably more wheels than in the rest of the world put together. This makes it embarrassing that the American Indian is one of the few primitive peoples that never found the secret of the wheel. When the white men came he was still lugging his belongings around on the back of his wife or on two trailing sticks.

Meanwhile, helpful as the wheel was to our ancestors, it was not what gave civilization its first big push forward. That came—and as a land transport man I regret having to admit this—with the beginnings of water transport. Early man lived mostly in clusters in river valleys, and as far back as the stone age he had learned to get about on rafts and in small boats of skin, bark, or hollowed logs.

The first of our Western civilizations grew up along the banks of the Euphrates River. Then the Egyptian civilization grew up along the Nile—which not only provided a means of water transport, but fertilized the farms on its banks with regular spring floods. As to land transportation in that civilization, I am sure all of you remember the drawings of the slaves pulling stones on crude sleds to build the pyramids.

Then the Greeks, Phoenicians, and Romans began to build larger ships with sails and one to three banks of oars. The motive power for these boats was very dependable. They put a slave on each oar and used a whip for a sparkplug. If the slave didn't produce enough motive power, they got another slave. It was transportation, but hardly what we would call civilization. In these boats the traders ventured around the Mediterranean and as far north as Britain, looking for markets and for products to take home and sell. World trade of a rudimentary sort had begun, and with it the competition for raw material and markets that has been going on ever since.

This in turn brought on the wars such competition can cause. Eventually Rome won them all. She set up her empire, giving the Western World its first extensive taste of orderly and constructive existence under law—in short, of civilization. To hold this civilization together, and to encourage trade within it, she supplemented her ocean fleets by a system of roads fanning out over Europe. You, of course, know all this. I recall it to you only to remind you that it was water transport that got Roman civilization spread around the Mediterranean, and the addition of land transport that held the empire together and developed it. In short, the world's first large-scale transport system helped to produce and maintain the world's first large-scale civilization.

When that civilization fell, from corruption within and barbarian assaults from without, large-scale transportation almost disappeared from the earth for 1,000 years. The Roman fleet vanished and her system of roads disintegrated. Europe was not to know such extensive and unifying transport again until the railroad and the steamship came, almost 1,500 years later. Nor has Europe, up to this day, known for more than a few decades at a time the freedom from war that Roman transport encouraged and her legions enforced.

The first result of the disintegration of the Roman transport system was that economic, social, and political life became local. In time a feudal society developed that is remembered chiefly by some long-winded poetry about knights in armor and their wretched squabbles. For centuries neither people nor goods traveled freely; there were not the facilities and it wasn't safe. The economy was mostly agricultural, with some manufacturing and trading in the few towns. The rich—that is, the landowners—lived in drafty castles and the poor—which was almost everyone—lived in the fields and worked like animals. What sense of social responsibility and of civilization there was resided largely in the church.

It was a revival of transport that started Europe up out of this static mess. The kings and princes organized the crusades and sent thousands of men marching east to free Jerusalem from the Mohammedans. This was the first mass movement of people in Europe since Attila the Hun had swept in from Asia, and it reminded people they could move. It also brought Europe again in contact with the Middle East with its fine steels, dyes, perfumes, and medicines. Samples of these luxury products brought back by the crusaders stimulated a demand for them, but presently quite a few ships were busy in the trade. Shakespeare's Merchant of Venice was in this business. The vessels were small but the cargoes were valuable: they were what transportation people today call high-rated commodities.

Meanwhile this trade had cracked the shell in which Europe had been living. Voyages of discovery became the fashion, and Columbus sold Ferdinand and Isabella on putting up the money for a discovery voyage to find the Indies by going west. It is a sobering thought that he discovered America with a fleet of ships that weighed only 200 tons. You could load the *Nina*, the *Pinta*, and the *Santa Maria*, on three railroad flatcars, and one passenger car would hold the entire crew. A small tool of transport had done the job of opening half a world up to civilization.

It was ocean transportation also that started and developed the world empires of Great Britain, France, Holland, and other European states. Colonization has since become an ugly word to many of the colonized, but the fact does remain that it was by colonization that civilization spread out of Europe, including to what is now the United States, and that sea transport made it possible.

From the time of Columbus until pretty well into the 19th century, transport remained largely by water. This was true in both the Old World and the New. Rivers and lakes were the main highways of travel and commerce. Man widened their reach by connecting them up with canals, especially in Europe. Even after Mr. MacAdam, the Scotch engineer, developed his broken-stone road, overland traffic remained slow and cumbersome. The coach and four was the height of luxury and speed. As late as 1776, it took 14 days to travel the 393 miles between London and Edinburgh. You can do it now in an hour and a half by air or 6½ hours by rail.

In fact, the wheel did not begin to approach its potential until it found out how to do without the horse. The horse had always been man's most useful and flexible powerplant; we still measure work output in terms of horsepower. But with the industrial revolution leading the way to mass production, there was getting to be more heavy hauling than the horse could handle; with populations spreading out from the seacoasts and river valleys, there was getting to be more travel than he could accommodate. And then man was provided with the iron horse, the railroad.

As a railroadman all my life, I would be happy to talk on for hours about the contributions, past, present, and future, that railroads have made to man's economic progress. But you already know most of the story as it applies to your own country, and so I shall just mention the more significant highlights.

I think we should begin by reminding ourselves that our interest here is less in the technology of transport than in what transport can do for people. I believe, too, we should remind ourselves that we are thinking of people in terms of civilization, and that if the philosophers will excuse us we are discussing civilization in the form of tangible benefits to whole populations. I do not mean by this to belittle man's sense of intellectual and spiritual values, but I will leave them to the philosophers, and as a transportation man confine my remarks to the realities of daily life. China, for instance, was producing philosophers, poets, and spiritual leaders when my ancestors in northern Europe were half-naked savages. Today the shoe is on the other foot; it is we who have time for, and access to, the things of the mind and spirit, while they live by the hundreds and millions in hunger and squalor—and we will continue to do so until they have built economies like ours which benefit everyone in them. So we need feel no embarrassment here that we are seeing civilization as bountifully created benefits, bountifully shared.

As an example of how early railroads took up their share of this job of creating and distributing benefits, I might cite the origin of my own railroad. It was built to connect Philadelphia with the newly opened West and its branches tapped the great coalfields of Pennsylvania. Coal was at the time the Nation's almost only source of large-scale industrial energy. Much of this coal happened to be in Pennsylvania—but most of the ore that required its energy to make iron was farther West. So the railroads took on the job of getting the coal and the ore together in the steel plants at Pittsburgh and beyond, and then hauling the manufactured steel away.

This is, incidentally, still almost one-third of our business. I mention this fact because it illustrates something that does not catch the public eye—and yet is the very foundation of heavy industry. This is the ability of a mass carrier like a railroad to move bulk materials like ore and coal not by the cartload or the truckload or the bargeload—but in millions of tons. And not merely to move it, but to move it at costs that are a small fraction of the final price of the finished product. Can you imagine how little steel would be made, and how much it would cost, if all its coal, ore, coke, furnace stone and finished product had to move by individual truckload, instead of by whole trains that converge day and night on the plants? And the same is true of a great many other basic raw materials and products of a mass-production economy like ours.

Another thing about the railroads that is hard for us to realize today is how much the coming of the railroads drew people together. In Europe they overcome geographical and national boundaries, making travel and trade easy. In America, which is 3,000 miles across, they annihilated distances it had taken months to cover by horse and wagon. This new facility of movement tied thinly settled areas into the economy, and opened unsettled areas to settlement. The California gold rush of 1849 called attention to the west

coast; the transcontinental railroads made it part of the Nation. California, which once had a few thousand Spaniards, gold miners and barkeepers for its population, is now one of our most populous States—and its garden vegetables, citrus fruits, wines and so forth appear daily on tables thousands of miles away.

The freight train—especially after refrigerator cars came in during the 1870's—changed the Nation's pattern of eating. Fresh meats, fruits, vegetables, and seafoods came to be marketed hundreds and thousands of miles from where they are produced. A city no longer had to rely on a surrounding ring of garden farms and dairies, nor synchronize its eating habits with what was locally "in season." It could choose, at competitive prices, between California and Florida oranges, among potatoes from south New Jersey, northern New York, Maine, Michigan, and Idaho. That sort of thing is more than a superficial frill on the standard of living: it keeps prices in line—as alternative sources of supply always do. And fast and efficient transport makes this possible.

The railroads had freed man from pacing himself and his economy to the horse. Now the internal combustion engine came along and made it even easier for man and his goods to get about. The first important use of internal combustion was in the automobile. But even more important than the invention of the automobile was the development of mass production which made it widely available. Federal, State, and local governments moved quickly to build hard-surfaced roads—and the automobile population boomed. Soon there were also trucks and buses and airplanes. Modern diesel engines began to throb in the holds of tugboats and lake and river boats—and they cut the costs of hauling by water wherever there were good waterways. Again a generous Government, urged on by Congressmen from the river and harbor communities, spent hundreds of millions of dollars, deepening harbors and waterways.

Americans fell in love with the automobile and the airplane—as their grandfathers had with the railroads. Their development in size, number, and performance exceeded even the most optimistic predictions year by year. Today we have many more automobiles than families—57 million automobiles as against 51 million families. There is a truck of one sort or another for every five families. In addition to all the commercial airplanes, there are now 65,000 privately owned planes flying around the country. The Nation's total investment in transportation is around $365 billion, which is even bigger than our national debt. The major part of this investment is for the automobile and its facilities—only a tenth of it now is in railroads.

In other countries, as you know, the automobile has not grown in this proportion. In most countries the railroads still do a larger part of the overall transportation business than they do here—about in the proportions we knew a generation ago. This does not mean, however, that we are a generation ahead of the rest of the world, for the causes of our railroads' shrinking share of the business have been partly artificial.

I have mentioned the tax-free highways, airways, and waterways that have been built alongside thousands of miles of railroad. Government money—including taxes paid by the railroads—has given these other types of transport an artificial advantage in competing for the most profitable freight and passenger business. The result of this uneven treatment is that the basic workhorse of America's transport system—the railroad—is not growing as it naturally should, while the general economy and other forms of transport are booming.

As a railroadman, this situation worries me beyond the fears for the welfare of my own industry. It poses, I think, a real threat to America's prosperity—for it imperils the economical and self-supporting mass transportation of freight and people that our growing population and our growing industrial, economy require.

I should mention one other threatening aspect of the situation and that is the importance of mass transport to national defense. Twenty years ago when America set up shop to be the arsenal of democracy for World War II, the railroads hauled 90 percent of all military freight. Today our Federal, State, and local governments—in their enthusiasm for promoting the newer modes of transportation—often forget the workhorse job that railroads did before, and the unhappy possibility that such a job may have to be done again.

Meanwhile, Russia is relying primarily on railroad transportation. They are doing everything they can do to expand and modernize their railroads. Railroad construction is also a prime objective of the Chinese Government. Both countries are seeking the form of transportation which does each job best, at the lowest cost in resources and labor—and in most cases they are building railroads.

Curiously enough, this mention of the two big Communist countries gets us back to our subject of transport as a means of raising the standard of living and therefore of spreading civilization. Last year a friend of mine spent several weeks traveling on the Russian railroads. He was astonished at the great amount of building materials for homes and consumer goods factories they are hauling. Who knows?—it may be that for all the threatening noises their diplomats make, they may inadvertently do what the Western World has done: attain a high standard of living based on good transportation. If they do that they would then find that it is better to enjoy peace than to subjugate satellite nations.

If they were to succeed in this program—and convince China to adopt it—the Western World could stop worrying about almost a billion potential enemies. And that, I suggest, would be the biggest thing that transportation ever accomplished for civilization.

Award to Senator Thurmond

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Tuesday, July 14, 1959

Mr. JACKSON. Mr. President, on June 13, 1959, the Military Government Association held its 12th annual conference at the Shoreham Hotel in Washington, D.C. I had the privilege of participating in the banquet which culminated the conference.

A main event of the evening was the presentation to Senator STROM THURMOND, immediate past national president of the association, of the highest award which the association can bestow—the 1959 annual award for outstanding contributions in the field of civil affairs and military government.

The annual award was presented to Senator THURMOND by Dr. Eli E. Nobleman, the national president of the association.

I ask unanimous consent that the remarks of Dr. Nobleman in making the presentation be printed in the Appendix of the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

Mr. Toastmaster, distinguished guests, members, and friends of the Military Government Association, every once in a while, in the lifetime of each of us, an opportunity arises to do that which one really wants to do. This is the opportunity which has come to me in my lifetime. For it is now my solemn task to officiate at one of the most important events of this 12th annual conference—the presentation of the annual award of the Military Government Association for 1959.

You may ask yourselves why this occasion is of such significance to me. If I may be permitted to digress for a moment, I will tell you the same thing I told the Vice President of the United States about 2 months ago, when Senator THURMOND and I had occasion to consult with him with respect to a matter concerning the association. He asked me how I, a gentleman from New York, came to be associated with Senator THURMOND, a gentleman from the Deep South. I replied then as I reply now—that it was my privilege, during part of World War II, to serve under the command of the recipient of the 1959 award.

My association with this outstanding officer, gentleman, and scholar since that time has been and continues to be one of the finest and most inspiring experiences of my life.

The task of selecting an individual for this award is usually very difficult, because many persons have made significant contributions in the field of civil affairs and military government. However, the association does have two ground rules—one, that the recipient must not be in the Active Army; and two, he must not hold an elective office in the association. The association presents its distinguished service citations to worthy persons who are connected with the Defense Establishment or who hold positions of leadership in the Government.

Our procedure in choosing the recipient begins with a determination which is made by our Standing Committee on the National Award. After this committee has made its choice, the names are circulated among the national board of directors who must signify their desires in writing.

The man whom we honor this evening is no stranger to this organization. However, a brief review of his life and accomplishments is in order.

STROM THURMOND was born in Edgefield, S.C., on December 5, 1902. He graduated from Clemson College in 1923, studied law at night, and was admitted to the South Carolina Bar in 1930.

It becomes apparent as we learn more about this unusual gentleman that whatever he does he does superlatively. For example, we find that between 1923 and 1929, STROM THURMOND was a teacher in a county school; from 1929 to 1933, he was county superintendent of education; between 1933 and 1938, he served as city attorney and county attorney and also State senator; between 1938 and 1946, he served as circuit judge.

Elected governor of South Carolina in 1947, he occupied that office until 1951, serving, in 1950, as chairman of the Southern Governors' Conference. He was a delegate to the Democratic National Convention in 1932, 1936, 1948, 1952 and 1956, serving in 1948, as

chairman of the South Carolina delegation and national committeeman. He was elected to the U.S. Senate on November 2, 1954, for a term ending January 3, 1961, the first man in history ever to be elected to the U.S. Senate as a write-in candidate. On April 4, 1956, he resigned from the Senate in order to place the office in a primary election, pursuant to a promise made to the people during the 1954 campaign. He was renominated and reelected to the Senate in 1956, without opposition.

If his civilian career may be considered remarkable, his military career is equally outstanding.

Volunteering for service in World War II on the day war was declared, General Thurmond served with Headquarters, First U.S. Army, between 1942 and 1946, in both the European and Pacific theaters. He participated in the Normandy invasion with the 82d Airborne Division; and was awarded 5 battle stars and 16 decorations, medals and awards, including the Legion of Merit, Bronze Star medal with a "V," Army Commendation Ribbon, Purple Heart, Presidential Distinguished Unit Citation, Belgian Order of the Crown, and French Croix de Guerre.

He is a brigadier general in the U.S. Army Reserve and holds a mobilization designee assignment as Deputy Chief, Office of Civil Affairs, Department of the Army.

After distinguished service as national president of the Reserve Officers Association, General Thurmond was elected national president of the Military Government Association in 1957, for a term commencing January 1, 1958.

As one who has been a member of this association since its establishment in 1947, I can say without any hesitation that during the year 1958, the association's achievement, accomplishments, and gains were nothing short of phenomenal.

However, I would like to make it clear that General Thurmond's activities on behalf of civil affairs and military government and in support of the objectives of the association did not start in 1958. On the contrary, he has been working for many years to further our objectives, and his appearance before the Davis committee in 1953, and his continuous efforts through the years to obtain recognition of the importance of the CAMG function at all echelons of the Army have been most effective in the attainment of such objectives as a separate branch for reservists, a career pattern for Regulars, an office of Chief, Civil Affairs in the Department of the Army, and so forth.

He has worked continuously to increase the stature and the role of CAMG. He has by word and deed demonstrated its role as an integral part of the military forces.

Senator THURMOND has given of himself with complete selflessness and with a devotion to duty far above and beyond the call of duty.

His activities and his unselfish devotion to the needs of others bring to mind the story which is told of the man who was 80 years of age and who was planting a large orchard of peach trees.

"Why do you, at your advanced age," he was asked, "plant these trees? Surely you know you cannot hope to live to eat their fruit."

"I know," the old man replied, "I know I'll never live to pick a peach from any of these trees, but all my life I've been eating peaches from trees that someone else has planted. I want to plant some trees now to pay for the fruit I've eaten."

Such a man is Strom Thurmond. By hard work, brilliance and ingenuity he has reached high office in the Nation and in our Association. He has nothing to gain personally from additional labors in this association. Yet, he continues to work tirelessly and unceasingly so that those who come after him may benefit.

General THURMOND, it is my proud duty, on behalf of the Military Government Association to present to you the highest award which the Military Government Association can bestow—the 1959 annual award for outstanding contributions in the field of civil affairs and military government.

Governor Harriman's Talk With Khrushchev

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 14, 1959

Mr. HUMPHREY. Mr. President, Gov. W. Averill Harriman has just had a most interesting visit in the Soviet Union, which he has been reporting from time to time through the press. At the end of his long trip in Russia, he had two extensive discussions with Premier Nikita S. Khrushchev. A report of these discussions is carried in an article which appeared in the New York Times on July 3, 1959.

Mr. Harriman confirms the impression I got of Premier Khrushchev when I talked with him last December. He emphasizes Khrushchev's great confidence in communism and in the Soviet Union. Khrushchev again pointed out how he expects the 7-year plan to succeed. Mr. Harriman says Khrushchev is convinced that the Communist system will prevail throughout the world and that we in the West are on the way out.

Mr. President, I ask unanimous consent that Governor Harriman's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HARRIMAN GIVES ACCOUNT OF TALK WITH KHRUSHCHEV

(By W. Averell Harriman)

PARIS, June 29.—At the end of my long trip through the Soviet Union, covering about 17,000 miles, I have had two extensive discussions with Premier Nikita S. Khrushchev. He revealed with unmistakable clarity his complete confidence that the Soviet Union can within relatively few years gain supremacy over the United States.

"We will demonstrate the advantages of our system and set an example to other countries which they will follow," he said to me.

BASIS OF CONFIDENCE CITED

The grounds for Mr. Khrushchev's confidence, he made clear to me, are threefold.

First, he has supreme faith in Marxism. Communism, he believes, is a higher form of human organization and eventually capitalism must cede to it.

Second, he is certain that the Soviet economy will make long strides in catching up with us, especially in heavy industry, during the current 7-year plan.

Third, he is deeply ignorant of the facts of American life and its potentialities.

Stalin, he acknowledged, laid the foundations for the rapid progress now being made in the Soviet Union. However, not until his death was it possible to take the initiative and release the energies essential to that progress.

"In Stalin's later days," Khrushchev told me, "he became overbearing and distrustful of his colleagues. He would not let us do the work he was no longer capable of. He did not always use his great authority for proper purposes. It was very difficult for us."

I suggested that we had had similar difficulties with Stalin in foreign affairs and Khrushchev readily agreed. In fact, in international affairs, Khrushchev said repeatedly, "Stalin was not blameless."

I went on to point out that Khrushchev had recently stated publicly that I had made a number of anti-Soviet speeches and I suggested that he had made even more anti-American ones. To this he also agreed.

I ask whom Stalin had chosen to succeed him. Khrushchev replied a little sourly: "He never selected anyone. He thought he would live forever." Then he revealed, for what I understand is the first time, his story of Stalin's last days.

"One Saturday in March of 1953 we all went as usual to Stalin's dacha [villa] for dinner," he said. "He was in fine spirits and we had a good time. Then we went home. Next day we waited for the telephone call Stalin usually put through to us on Sundays, but it never came. On Monday evening the head of his bodyguard called us to say Stalin was unwell.

"Beria, Bulganin, Malenkov and myself hurried out to his dacha and found him unconscious. A blood clot had paralyzed an arm, a leg, and his tongue. We stayed with him for 3 days, but he remained unconscious. Then for a moment he came out of his coma and tried to joke with us. Pointing to a painting over his bed of a baby lamb being fed with a spoon by a little girl, he indicated by gestures that now he was as helpless as the lamb.

"A few minutes later he died," Khrushchev went on. "I wept. After all, we were all his pupils and deeply indebted to him. Like Peter the Great he fought barbarism with barbarism, but he was a great man."

PREMIER THE DRIVING FORCE

Khrushchev left no doubt in my mind that he is the driving power behind both the industrial and agricultural expansion which is taking place wherever I have been in the Soviet Union.

At the end of the war, Stalin had told me of his plans for industrial expansion including 60 million tons of steel a year. Then Soviet production had been reduced to 12 million tons and I thought this goal could not be reached for many decades.

But already, only 14 years later, it is 55 million tons, and in Karaganda alone I had seen another 3,200,000-ton plant coming into operation. In northern Kazakhstan I had watched Soviet engineers uncovering iron mines with a total annual capacity of 80 million tons. But Khrushchev told me the Soviet Union is presently exploiting only half its potential.

I asked whether he had the manpower to carry out his ambitious program. "We have plenty of labor," he replied, adding however, that much of it is at present tied down by unproductive practices in agriculture.

"Some of our collective farms are using two and even three times more workers than they should," he acknowledged. "We shall take them away when we need them to work in industry."

I had no doubt that he had the power to do so. Earlier he had admitted to me that his word is law in the Soviet Union.

He was equally confident that the Soviet food problem was being solved. I had myself seen the virgin lands which he is plowing up and sowing to grain. I pointed out that even some Soviet scientists were afraid that

plowing up the steppe would create another dust bowl.

"Despite two severe droughts," he replied, "the project has already paid for itself, and we have made a profit of nearly $2 billion." Besides, he continued, the area is producing the cheapest grain in the entire country. "The skeptics are already blushing for shame," he added.

POWER OUTPUT STRESSED

Nor is the power to electrify the farms and drive his industry worrying him. From the Volga River to deep in Siberia I had seen suge hydroelectric plants rising. New coal and gas deposits, he told me, had opened the possibility of much cheaper thermal power stations, which he now proposes to build. "By 1970," he said, "we shall be within 70 percent of America's 1957 power output."

With his great plans to "catch up with America," I asked him if he was not underestimating the United States capacity to expand. His economists had told me they calculated American economic growth at only 2 percent, which is hardly more than its population increase.

If this was the best information he was getting, I suggested he fire his economists and hire someone who knew the American economy better and could report more accurately what was taking place there free of dogmatic prejudices. Far from the stagnation which his economists predicted, I told him, the American system was in "its most creative period."

Anastas I. Mikoyan, First Deputy Premier, had now joined the discussion and together he and Khrushchev stubbornly supported their economists' findings. Though the American democratic system was still far from its end, Mr. Khrushchev said, it was inevitably heading in that direction. He charged that American prosperity was due largely to profits made during both World Wars.

But when I explained the absurity of such statements, it seemed to make little impression on him.

"You have become so rich that until now you have been able to bribe or buy off your workers with high pay and living standards," he said. But, he added, "one day they, too, will overthrow your capitalist system."

As he described the inevitable triumph of communism, Mr. Khrushchev talked forcefully, leaning forward and wagging his forefinger under my chin. His small, piercing eyes peered intently at me and his round cheeks were flushed with emotion. As he grew more intense, he spoke with a marked Ukrainian accent, just as Stalin had spoken with a Georgian one.

"In 5 to 7 years," we will be stronger than you," he said. "We developed the hydrogen bomb before you. We have intercontinental missiles and our rockets carry warheads many times larger than yours."

I interrupted to tell him that this sort of talk hardly allayed American fears of Soviet aggressive intentions. He replied that Americans had misunderstood Communist doctrine on the possibility of war.

Earlier doctrine, he explained, had defined imperialistic war as inevitable. However, he continued, the 20th Soviet Communist Party Congress had revised the dogma and declared such wars to be avoidable, though not impossible. Furthermore, he added, the 21st Party Congress had confirmed this view. Thus war is no longer necessary. He seemed to think that we should accept without question the decrees of party congresses as predetermining our future history.

Toward the end of our long discussions, Khrushchev brought up the Berlin problem and reiterated in the most forceful language the Soviet position as stated at Geneva. I told him with equal vigor that the American people and both political parties were solidly behind the President in his stand to protect the freedom of the 2 million people living in West Berlin.

Nevertheless, he appears to be so confident of his strength that he is determined to force a solution of the problem. Furthermore, in the long run, he is firmly convinced, the Communist system will prevail throughout the world and that we are on the way out.

This is the challenge we face.

Budgeting for Defense and for Health: The Contrast

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, July 14, 1959

Mr. NEUBERGER. Mr. President, the Senate today resumes consideration of a gigantic appropriation bill dedicated to the maintenance of the defense of our country and its citizens. Three weeks ago we passed another bill—puny by comparison—which contains an item significant and urgent to the defense of our peoples. I refer to the Labor, Health, Education, and Welfare appropriation bill, which includes a small but significant $480 million item for the National Institutes of Health, center of our important Federal medical research activity. The NIH appropriation represents an increase of some $136 million over the House appropriation and $186 million over the administration's inadequate budget request.

In the June 1959 issue of the Bulletin, official publication of the National Tuberculosis Association, I have written, under the hearing "Budgeting for Defense Against Disease," of our urgent and desperate need for increased expenditures for medical research. Because this article points up the significance of our two types of defense and the differing budgetary emphasis which we have chosen to give each of them, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BUDGETING FOR DEFENSE AGAINST DISEASE

(By RICHARD NEUBERGER)

When I returned to Washington and my Senate duties in February this year, following my successful treatment for cancer, one of the newspapers which commented editorially on my recovery was an Arizona paper circulated in a sunny locale to which tuberculosis sufferers have flocked. The editorial writer noted that in earlier days the tuberculosis patients had even formed clubs and had a camaraderie among themselves. But, the writer continued, thanks to medical research, great gains have been made in the conquest of the disease, and such groups have lost their fatalistic nature.

My doctors have just given me a clean bill of health after operation and treatment for a disease whose cured victims are organizing "victory" clubs. Like thousands of tuberculosis sufferers, we owe our lives to the advances of modern medicine; we are living symbols of the results of medical research.

The debts that all Americans owe to medical research are many. Human happiness and decreased suffering is one. The 5 years that have been added to the average lifespan in the last decade, resulting in added productive strength for our Nation, is another.

Indeed, were it not for the medical research of the last quarter century, about all our doctors would have in their familiar black bags would be bottles of aspirin and stethoscopes. The amazing vaccines and antibiotics that today we take for granted in the treatment of everything from the common cold to the most complex infectious disease are results of the research during this brief period.

Yet the investment which has purchased these benefits is trifling when compared with the amounts Americans spend on such items as chewing gum, permanent waves, and tobacco.

In fiscal year 1959, for example, a little more than $34.2 million was appropriated from Federal sources for heart disease research. Americans spend 11 times that amount each year on permanent waves.

Under the leadership of Senator LISTER HILL, of Alabama, I have worked in the Senate to increase the Federal appropriations to the National Institutes of Health for all medical research. We have succeeded in some measure. The appropriation for fiscal year 1956 was $98,458,000; the 1959 figure was $294,383,000. But compare either of those totals with the more than $300 million that we spend annually on chewing gum.

Cannot an economy that includes annual expenditures of $6 billion for research on missiles and armaments spare more than a pittance for research into the saving of human life?

MORE RESEARCH FUNDS JUSTIFIED

Fifty million Americans now living will die of cancer, but the Federal Government devotes 50 times as much to farm price supports as it does to cancer research. With a background of such staggering statistics, I believe greater Federal appropriations for medical research—such as my proposal for an additional $500 million for cancer research through the National Cancer Institute—are not only thoroughly justified but urgently needed.

The argument for increased funds follows the three principles which must guide all effective medical research. Larger research appropriations would:

1. Insure continuity and stability in medical research. Our able researchers would be assured that their salaries were no longer based on the uncertainties of annual congressional approval. Thus these people could avoid the inevitable temptation of abandoning laboratories for the greater financial rewards of private medical practice.

2. Permit expansion of basic as well as applied research. Military science and technology are not the only fields which have benefited greatly from basic research. Fundamental studies originally thought only distantly related to patient treatment have resulted in important forward steps in medicine.

3. Recognize that medical research cannot move forward by any arbitrary schedule, and that researchers must be free from financial limitations that cramp the ingenuity of the mind.

MEDICAL RESEARCHERS NEEDED

Research—be it basic or specialized—requires researchers. Provision of necessary funds for research programs is nothing without trained minds to utilize them. Yet the rigors of obtaining a medical education are

great, especially financially. The newly graduated M.D. and his family too often have heavy debt loads. Many of these students find their economic position so precarious that they feel forced to employ their skills in private practice, where monetary rewards are, of course, greatest.

I have introduced legislation in Congress which, if enacted, can assist in supplying the trained medical researchers we need. My bill would amend the loan fund program of the National Defense Education Act, which Congress passed last year, to give medical researchers benefits now enjoyed by elementary and secondary school teachers. That is, loan recipients who enter medical research would be permitted to write off up to 50 percent of their loan and interest under the Defense Education Act.

I recognize that my proposal is not a panacea for all the ills of our medical research personnel problem. We are still faced with inadequacies in the facilities and finances of our medical schools. And medical research itself does not possess the natural glamour or remunerative appeal of private medical practice.

There is no questioning its significance, however. Medical research has touched the very life of all of us. In little more than a decade, its products have cut the fatality rate of once dread diseases like influenza and rheumatic fever by as much as 83 percent. I write and speak and vote in the Senate today as a personal testimony to medical research.

Our Federal budget includes unquestioned billions for the defense of the American people against potential foreign enemies. We can and must afford more for the defense of our people against disease—through investment in medical research.

More Partisanship Needed

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 14, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial from the Peoria Journal Star of July 9:

MORE PARTISANSHIP NEEDED

The row in the Democratic Party may be blamed on two false ideas of the purpose of political parties. The sooner we get rid of these ideas the better.

The first of them is that the principal job of a party is to elect its candidates. Without stopping to think, most people would agree with that idea. But consider what it implies.

It implies that any kind of public deception is justified in order to get votes. It is true that the public is often misled and betrayed by politicians, but the people demand some degree of honesty. Such cynicism about politics as exists today is largely traceable to the failure of successful candidates to redeem campaign promises. The theory that the party's first job is to get its candidates into office cannot be supported.

The principal job of the party is not to elect its candidates. It is to declare certain principles and to stand by them. A conservative party ought to be conservative even though defeat is certain. It was the failure of the GOP to do this that has reduced it to its present low standing. And it is the trend of Democratic liberals toward conservative policies that is now causing the quarrel in that party.

The second false idea is that there is something wrong in vigorous partisanship. According to this notion, the middle of the road is the proper place. It was this wrong concept that misled Ike through his first administration.

The truth is that good politics and good government require robust partisanship. Middle of the roadism is wishy-washy and leads to irresponsibility in partisan politics. It confuses voters and makes voter mandates impossible.

There are always opposites in political ideology and there should always be parties who accept the opposites and stand willing to champion them. The alternative is to have candidates who don't really stand for anything, but pretend to stand for what they believe the people want at the moment.

That is what certain cautious Democrats in Congress are doing now. And the forthright Democratic national chairman, Paul Butler, is right in scolding them for it.

The job of a political party is to declare principles and champion them with the most vigorous partisanship, not to elect candidates by parroting public opinion polls.

Report of the Committee on Irrigation and Reclamation to the National Rivers and Harbors Congress

EXTENSION OF REMARKS
OF
HON. J. EDGAR CHENOWETH
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 14, 1959

Mr. CHENOWETH. Mr. Speaker, I include in my remarks a copy of the report of the committee on irrigation and reclamation to the National Rivers and Harbors Congress' 46th national convention which was held in Washington in May. This report was submitted to the convention and accepted on May 15. I had the honor to serve as chairman of the committee, but much of the credit belongs to Ival V. Goslin, engineer-secretary to the upper Colorado River Commission and to William Welsh, secretary-manager of the National Reclamation Association.

I call attention to the fact that more than half of the funds for reclamation comes from the sale of public lands, certain minerals, and the repayment on reclamation projects. Irrigation allocations are returned to the Treasury without interest in accordance with reclamation law first enacted in 1902.

Irrigtaion is a sound investment for the Nation. For instance, every 4 years the value of crops produced on reclamation farms equals the total appropriation for Federal reclamation which started 57 years ago. It has been estimated that the Federal Government has received more than $5 billion in Federal taxes from reclamation projects and adjacent trade territories. The land irrigated would be nonproductive without water and good people to work the land. Irrigation projects produce food for a growing, expanding population. Only about 2 percent of the products on irrigated farms add to our surplus agricultural products. It would not be possible to have an abundance of cheap vegetables without the irrigation of good land.

The report follows:

REPORT OF COMMITTEE ON IRRIGATION AND RECLAMATION

INTRODUCTION

Two years ago at the 44th annual convention of the National Rivers and Harbors Congress, President Overton Brooks announced the creation of the committee on irrigation and reclamation. The assembly approved the forming of this committee, adopted its report, and made the committee a permanent part of the National Rivers and Harbors Congress.

Purposes of the irrigation and reclamation committee

This committee has been directed to deal only with matters of general policy.

At its inception the purposes of this committee were defined as the formulation of a policy and a program for the continued, orderly development by reclamation and irrigation of our water and land resources in the arid and semiarid regions of the West, and to suggest ways and means whereby the National Rivers and Harbors Congress may better cooperate and coordinate its efforts with the advocates of reclamation and irrigation.

Committee personnel

The personnel of the committee on irrigation and reclamation are listed on page 1 of this report. This committee is interested not only in irrigation and reclamation, but in flood control projects, rivers and harbors projects, and, in fact, all phases of water resource development.

PROGRESS

In this committee's report for 1957 to the National Rivers and Harbors Congress, several policy and procedural recommendations were outlined. These were designed as guides and suggestions for implementing basic principles. The adoption of these recommendations by this organization has contributed greatly to a better understanding of water resource problems. It is gratifying to note that sponsors of projects are recognizing new possibilities for coordination of efforts and cooperation in developing water and land resources. This new spirit and its resultant accomplishments constitute progress—not because during the past year we feel that the program of project development has been accelerated to the point necessary or desirable—but because future results will prove the wisdom of united efforts.

As a result of cooperative efforts, Congress enacted a public works appropriation bill for fiscal 1959 that contained 65 unbudgeted water development projects of which 9 were reclamation new starts.

During the past year, several projects were started under the Small Reclamation Projects Act. Presently, there are four project loan applications pending before the Interior and Insular Affairs Committees of Congress. There are at least four additional projects under this act pending before the Department of the Interior. It is anticipated that these latter four projects will be submitted to Congress during its current session.

RECLAMATION IS MORE IMPORTANT TODAY THAN EVER BEFORE

Population increasing, productive land decreasing

The population of the United States continues to increase at a rate that provides

approximately 3 million more mouths to feed each year. At the same time, we are losing more than a million acres of good agricultural land every year to highways, airports, municipal and surburban developments, industrial and military establishments, and by other means. These two opposing but interrelated influences pertaining to our need and capacity to produce, speak for themselves.

Will agricultural production increase fast enough?

Our total farmland has remained about the same for the past 40 years. About the only means of increasing our farm acreage is through reclamation and drainage. It is doubtful whether production on our existing farmlands can be increased fast enough to meet the future demands of our growing population.

Another fact that has not been fully appreciated is that reclamation projects contribute only insignificant amounts to our crop surplus accumulations. As an example, wheat, upland cotton, corn, tobacco, and rice are the crops that have been giving the greatest headaches to our agricultural experts. Of these crops, only 2.2 percent of the wheat is raised on irrigated lands, and 5.3 percent of the upland cotton, 0.46 percent of the corn, 0.54 percent of the rice, and none of the tobacco come from reclamation projects.

Reclamation is for the future

Many years are required, often a quarter of a century or more, to bring a major authorized multiple-purpose development into agricultural production. For instance, the Colorado River storage project and participating projects will require about 30 years for completion; the Columbia River Basin project at least 40 years, the Missouri River Basin project about 75 years, etc. An average reclamation project requires at least 10 years for completion and often longer. In many instances, it takes equivalent amounts of time to bring projects to the authorization stage.

RECLAMATION'S NATIONAL VALUES

Economists and financial experts have found that the overall reclamation program has proved to be an economically sound and financially feasible enterprise for the Federal Government. Every 4 years the value of crops produced on reclamation farms equals the total money appropriated for Federal reclamation since its inception 57 years ago. The cash value of the crops produced in 1957 was more than $900 million. Since the reclamation program was initiated in 1902, $13,277,661,000 worth of crops have been produced. The Federal Government has received nearly $3,500 million in Federal taxes derived from reclamation projects and adjacent trade areas since 1940. Irrigation farmers have repaid the Federal Treasury more than $134,789,000.

As emphasized many times, from a financial standpoint, reclamation projects repay the investment in many ways besides repaying to the United States all of the costs allocated to irrigation features without interest and the costs allocated to power and municipal water supplies with interest. Reclamation portions of Federal multiple-purpose developments create economic returns in the form of stabilized downstream flows for industrial waters, pollution abatement, and other benefits that are not reflected in the financial feasibility of irrigation use of water. Western reclamation projects develop floodwater as the irrigation water supply; thereby, accomplishing flood control as an important byproduct. Flood control projects, as such, become less necessary because of irrigation water supply storage.

RECOMMENDATIONS

The following recommendations are believed to embody principles essential to a well-rounded, yet progressive, reclamation program that would be correlated with and complementary to a national program of development, utilization, and conservation of our Nation's water resources.

We are again confronted this year with a lack of budgetary recommendations for new starts. There are still prevalent in the land many irrational and misinformed influences that are waging relentless opposition against effective and progressive water resources development. Much of this opposition seems to be founded on the false premise that water resource development should be considered solely as an antirecession program to give the economy a boost when needed. This viewpoint fails to recognize the fundamental concept underlying the development of our natural resources which is to meet the demands of our growing population and expanding economy and at the same time, maintain our high standard of living. The National Rivers and Harbors Congress should support the position of the 10 Missouri River Basin States' Governors and the 4 Upper Colorado River Basin States' Governors in their efforts to modify the no-new-starts policy.

Reclamation, flood control, and other water resources developments create new wealth, a vital prerequisite to the maintenance of our national economy and our world leadership. We must stress the development of such new wealth within our country in order to continue investments in similar new wealth-producing projects in foreign lands.

It is recommended that:

1. Where opposition to water development programs exists, officer members of and delegates to the National Rivers and Harbors Congress should act without delay to neutralize or combat such opposing influences with any effective means available at local, State, and national levels.

2. Congress should appropriate funds for the construction of authorized projects for which advanced planning has been completed. Construction should not be subjected to a stop-and-go policy because that procedure is too costly and inefficient. Construction funds for reclamation portions of multiple-purpose developments should be accelerated to $300 million per year and maintained thereafter at a level that would be relatively consistent with the annual gross national product.

3. The Congress of the United States should maintain and exercise its right to determine the policy and criteria under which all Federal water development projects will be authorized and constructed. This constitutional principle should be emphasized in the appropriation of funds and the designation of their use.

4. On multiple-purpose projects, wherever practicable, the development of water resources should be preceded by basinwide planning.

5. Power revenues derived from Federal projects should be used on a basinwide or areawide basis to assist in repayment of irrigation costs on Federal reclamation projects beyond the ability of the water users to repay.

6. The principle of the interstate compact should be encouraged in order to avoid litigation between and among States and to preclude domination of the development and control of natural resources by Federal agencies.

7. Procedures under which Federal water resources projects are investigated and reported should be simplified. The creation of a Board of Review or the Office of Coordinator would mean another obstacle in water resource development and should be opposed.

8. Basic land and water inventories, soil and water research, snow surveys and stream forecasting should be continued, expanded and modernized in order to provide adequate data for current and future planning.

9. The use of conservancy-type districts capable of levying taxes on project beneficiaries as agencies to execute repayment contracts with the Federal Government should be encouraged in order to more equitably allocate costs of a project and meet the burden of expensive and complex project construction.

10. In planning and constructing water resource projects the principle of supplying supplemental water to lands presently inadequately irrigated should be given priority over bringing new lands into cultivation.

11. It is further recommended that the National Rivers and Harbors Congress, through its executive offices and appropriate committees—

(a) Accelerate its campaign in support of a water-utilization program designed to fully develop our land and water resources placing special emphasis on starting new water development projects that are financially feasible and economically justified and are now ready for construction;

(b) Continue to bring to the attention of the executive and legislative branches of our Federal Government the need for a continuous, progressive, planned program of project authorization;

(c) Urge and actively support adequate appropriations for investigating and planning water-use projects;

(d) Support legislation requiring compliance with and adherence to State water laws by Federal agencies.

SUMMARY

In summary, the purposes of the committee on irrigation and reclamation of the National Rivers and Harbors Congress shall be to promote the development, control, conservation and utilization of the Nation's water resources, to work for the continuation of the services and the coordination of activities of Federal agencies dealing with water resources, to cooperate with and assist in securing authorization and construction of Federal water-use projects which meet with the approval of States and local agencies, to assist water users of the Nation in the economic development of river basins, to preserve the rights and interests of the States in their water resources, to promote the enactment of legislation favorable to these principles, and to oppose legislation detrimental to the orderly and progressive development of the river basins of the United States of America.

The committee on irrigation and reclamation unanimously approved the foregoing statement and recommends that it be adopted by the National Rivers and Harbors Congress.

IVAL V. GOSLIN,
Secretary.

Citizens Foreign Aid Committee Speaks

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 14, 1959

Mr. SCHERER. Mr. Speaker, while the House has passed the foreign aid authorizing legislation, it will be considering the appropriation bill for the fiscal year 1960 within the next few weeks.

Dr. Melchior Palyi, of Chicago, an eminent economist of sound competence, as a representative of the Citizens Foreign

Aid Committee, testified before the House Appropriations Committee recently. Dr. Palyi's reasoning and conclusions are of such significance that I feel all readers of the CONGRESSIONAL RECORD should have the benefit of his analysis of our foreign-aid program. There follows an excerpt from his testimony:

Our global boondoggling systematically and relentlessly erodes our currency.

In the 8 years to the end of 1958 our accounts with the outside world showed a cash deficit aggregating $13 billion. Accordingly, a $4.8 billion decrease of our gold reserve and a $9.2 billion increase in our short-term debt to foreign countries occurred, this despite the fact that our international trade balance produces every year a huge active surplus. But foreign aid and the lending activities of the Bretton Woods institutions, the Export-Import Bank, and so forth, totaling $5 billion or so annually—plus the $3 billion to $4 billion (net) spending of our troops abroad—permitted our trading partners to cover their balance of payments' deficits (caused by their self-made inflations). They also provided them, Western Europe in particular, with the means to draw gold from, and to accumulate dollar reserves in, this country, on top of lending money to other countries in huge volumes. Last year Britain's net capital exports amounted to $700 million; those of Germany to over $1 billion.

Nor is that the end of the story. The gold supply of the Western World is rising at the annual rate of nearly $1.3 billion; we receive not a "yellow cent" of the new gold. Again Europe's central banks and private hoards are the chief beneficiaries. As to private hoards, two examples may serve as illustrations. The official French stabilization committee estimated last November, that the French public's hidden holdings of gold, dollars, and other foreign values amounted to $10 billion—pretty close to the $11 billion post-World War II donations and "loans" France received. Or take India. Her balance of trade shows an $800 million deficit, and her official monetary reserves are declining; but privately, she has imported an estimated $400 million of gold.

Yet, Europe still receives aid from us, if mainly the military variety—about $1 billion worth in each, 1957 and 1958—which is just as dollar-earning, or dollar-saving, as is the so-called economic aid.

Briefly, we are left with a gold reserve of $20 billion and a short-term debt to foreigners amounting to—$20 billion, including an estimated $3 billion in dollar notes held abroad. But undermining the dollar's health and stability is only one of the effects of foreign aid. It was a prime force in promoting inflation in Europe, as it is now, and even more so, in the underdeveloped areas. Everywhere, it is a prime method to establish, and to solidify collectivist practices, pulling the rug from under the free enterprise system.

The erosion of the U.S. dollar proceeds unabated through several channels. We have donated, lent and spent money, and keep so doing, to 70 countries. Virtually every single one of them still maintains discriminatory import restrictions against our exports, notwithstanding the tremendous postwar increase of our commodity imports, our rapidly growing tourist expenditures, and private capital investments abroad. Foreign aid carries no small share of responsibility for the accelerating rise of our imports and the decline of our exports. Foreign aid was instrumental in equipping the low-wage foreign competitors to the detriment of our own businesses—providing them with a very strong, new argument in favor of higher American tariffs.

Western Water Projects Aid Entire Nation

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 14, 1959

Mr. ENGLE. Mr. President, the national dividends which accrue from western reclamation are, sooner or later, understood and apreciated by every national administration of whatever political party—even the present administration. Commissioner Floyd Dominy of the Bureau of Reclamation stated the case admirably in his testimony on the public works appropriations bill that was passed by the Senate last week. The Sacramento Bee commented on this in a significant editorial in its issue of June 30. I ask unanimous consent that the editorial may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Sacramento Bee, June 30, 1959]
WESTERN WATER PROJECTS AID THE ENTIRE NATION

Western reclamation projects, far from being the drain upon the taxpayers in other States they are claimed to be by critics of the program, are returning huge sums of money to the Federal Treasury.

This long has been recognized by westerners. But confirmation coming from the Federal commission of reclamation in an administration which has paid much homage to the eastern concept should be effective in stilling this unwarranted criticism.

Testifying before a Senate appropriations subcommittee, Commissioner Floyd E. Dominy said the returns to the Federal Treasury from these projects far exceed the outlay of Federal funds.

Dominy stated benefits from the projects since 1940 have exceeded $3,500 million Federal income taxes from projects areas, because of the higher earnings of the inhabitants, have increased by $340 million.

By transforming deserts into productive lands, the tax base is broadened enormously so that governments from the Federal level down to the school districts profit in huge measure from the projects.

Dominy pointed to the fantastic growth around Phoenix, Ariz., and the fact that taxes in the area of the Colorado Big Thompson project increased fourteen fold as proof of his statements.

Dominy was speaking of the benefits from irrigation and avoided mention of public power which is an integral part of almost all of the reclamation projects.

Were Dominy to apply the same yardstick to the benefits from public power developments the results would be even more striking. For while Federal funds advanced for irrigation are noninterest bearing, the power funds are repaid with interest and in addition provide large subsidies for water.

In areas supplied by water, the introduction of low cost public power has been a tremendous factor in attracting business, shoring up the economy and providing a better way of life for the people. Without the project "breadwinner" of electricity, many of the water projects would be of dubious feasibility.

To say the western reclamation program is costing taxpayers in other States is so much hogwash. As a matter of fact, unlike most governmental operations which represent only outgo, the reclamation projects are a sound business proposition, and even the critics must know it.

Communist Gains in Latin America

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, July 14, 1959

Mr. JAVITS. Mr. President, it is all too often a demonstration of human frailty that when the alarm sounds, we are disturbed by it briefly and then switch it off to return to our repose. Unfortunately, this morning behavoir pattern has extended to our posture with regard to Latin American relations. Recent events in Guatemala, the Caribbean, Bolivia, and elsewhere have monetarily shocked us into lively interest in Latin American problems but too often as a people we have slipped back into a role of complacency, content with speeches about hemisphere solidarity, while the Communists are busy at burrowing and building. There appeared in the July 10 New York Post a thought-provoking editorial by Arnold Beichman on Communist infiltration south of the border which should interest every Member. I ask unanimous consent that the editorial may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SOUTH OF THE BORDER
(By Arnold Beichman)

BRUSSELS.—It is one of the more sobering facts of American life that Latin America, even for those who consider themselves informed, comes under the heading of "dutiful" interest. Dramatic events spark a momentary flareup of curiosity—Bastista's overthrow, NIXON'S ill-fated tour, the Bolivia business—and a self-flagellating resolve by Americans that from now on they must really get acquainted with what's going on down below.

So for a few issues of Time or Newsweek, they stop skipping the Latin American sections and read the news stories datelined Bogota or Buenos Aires. But then the resolve evaporates.

This block about Latin America is particularly marked in those circles where the internationally minded intelligentsia roam. And it is no mark of lamentable ignorance for a careful newspaper reader, who can tell you at a shot where the Dalai Lama is living or discuss the latest unpleasantness in Iraq, to look blank when you ask him about a fellow in Brazil named Jango Goulart.

This passivity could be the subject of another essay. But all this is by way of preface to a report on the astounding increase in Communist influence throughout Latin America. The report, issued by the International Confederation of Free Trade Unions, whose world headquarters are located here, makes it quite clear that never before has

the danger of communism been so great in South America and never before have trade unions in South America been so Communist-infiltrated.

Country by country, the ICFTU cites the current record:

Argentina: The Socialist Party is divided into two factions. Although there is no formal agreement with the Communists, in practice the labor and political leaders of one of the factions support Communist maneuvers and fight those democratic labor unions which opposed "united fronts."

Brazil: The local newspapers have reported the signing of a pact with the Communist Party by the Vice President of Brazil—that's Jango Goulart, ranking leader of the Brazilian Labor Party. The Brazilian Communist Party, says the ICFTU, has infiltrated the army, the teaching profession, unions, political parties, and the Ministry of Labor.

Chile: Socialists and other political groups have joined the Communists in a united front called "FRAP," of which the Chilean labor movement is a major supporter.

Ecuador: The Communist Party dominates the trade union movement through the Ecuador Confederation of Labor, whose leaders for the most part are Socialists.

Uruguay: The Socialist Party is backing a Communist drive for a united labor organization. Leaders of the Confederacion Sindical del Uruguay who oppose this united front program are being or have already been expelled from the Socialist Party.

Venezuela: Communists have never been more active in trade union affairs. Next November, an organizing convention will be held to establish a national confederation of labor and avowed Communists will be given participation.

The ICFTU analysis points out that Latin American people "tend to expect immediate solutions to all their political and economic problems when they pass from dictatorship to democratically elected governments." Since South America is suffering from all the problems brought about by insufficient foreign capital investment and instability of markets for the primary commodities they must export to live, it is a made-to-order situation for the Communists.

"If the incipient democracies of Latin America," says the ICFTU report, "cannot solve their present economic crisis, they will inevitably be swept by another wave of dictatorships."

And they won't all be military rightist juntas. Remember Guatemala.

The National System of Interstate and Defense Highways

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 14, 1959

Mr. MICHEL. Mr. Speaker under leave to extend my remarks, I would like to include House Resolution 143, of the 71st General Assembly, House of Representatives, State of Illinois:

HOUSE RESOLUTION 143

Whereas it was declared by the Congress in the Federal Aid Highway Act of 1956, to be essential in the national interest to provide for the early completion of the National System of Interstate and Defense Highways, to meet the needs of local and interstate commerce, the national and the civil defense; and

Whereas the Congress has committed the Federal Government to the program of completing the National System of Interstate and Defense Highways by setting forth the authorizations for appropriations for a 13-year period in the 1956 act and making subsequent appropriations therefor; and

Whereas the State of Illinois, along with the components of the highway construction industry, consisting of labor, contractors, material producers, and equipment manufacturers, have at great expense enlarged their facilities to accomplish the task within the time limit set by Congress; and

Whereas after 3 years of intense effort the State and the many components of the highway construction industry have reached a point where the program is being executed expeditiously and economically; and

Whereas it has come to the attention of the House of Representatives of the 71st General Assembly of the State of Illinois that no provision has been enacted by Congress for financing the apportionment of Federal interstate funds authorized for fiscal year 1961; and

Whereas if no apportionment of Federal interstate funds for the fiscal year 1961 is made within the next 2 months the award of contracts for interstate construction in Illinois will be suspended after September 14, 1959; and

Whereas the economic impact of the suspension of contract awards will be disastrous to the components of the highway construction industry consisting of labor, contractors, material producers, and equipment manufacturers, who have enlarged their facilities to accomplish the program; and

Whereas the interruption of the program will result in delaying the completion of this vitally necessary System of Interstate and Defense Highways, and will also result in widespread unemployment: Now, therefore, be it

Resolved by the House of Representatives of the 71st General Assembly of the State of Illinois, That the 86th Congress of the United States be respectfully requested and urged to take the steps necessary to insure the continuation of the program for constructing the National System of Interstate and Defense Highways without interruption and without stretchout; and be it further

Resolved, That the secretary of state is directed to send a copy of this preamble and resolution to each of the Members from Illinois in the Senate and House of Representatives in Congress of the United States.

Adopted by the house, June 24, 1959.

PAUL POWELL,
Speaker, House of Representatives.
CLARENCE BOYLE,
Clerk, House of Representatives.

Reverie in Washington

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, July 14, 1959

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Reverie in Washington," published in the Washington Evening Star of July 10, 1959. The editorial contains excellent advice for the executive branch of the Government.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REVERIE IN WASHINGTON

The Greeks used to consult oracles. Our traveling politicians consult Khrushchev. But the practice is becoming a sort of one-way street. Senator FULBRIGHT might be persuaded to set up a new exchange system, under which every interview between Mr. Khrushchev and a roving American politician would be balanced by an interview between some traveling Russian and Mr. Eisenhower. One benefit would be that instead of merely confusing American citizens, the Russian citizens would also be confused, and we could thus do away with unilateral confusion in favor of bilateral confusion.

At any rate, our thoughts along such lines took form in fantasy, and an imaginary article that Ojezn, the great Moscow magazine, recently printed about the exciting report of V. Averfrol Harrimanshikov on his conversation with President Eisenhower. Mr. Harrimanshikov once served as Russian Ambassador to the United States. Later he was Commissar of the Province of Omsk-Tomsk, and hoped to become Russian Premier. But he was thrown out by Nelsiviski Rockefellotoff, who also has his eye on being Premier. Traveling in the United States, Mr. Harrimanshikov had two long talks in early June with Mr. Eisenhower—one at the White House and the other at the President's retreat in Gettysburg. Well, Mr. Harrimanshikov now has written a long article about these talks for the Moscow magazine, and here are some of the things he says:

"The President proved to be a genial host, affable and friendly. He was gracious enough to talk with me for 3½ hours at the White House and for 4½ hours at his dacha—a total of 8 hours, which is quite a lot of time. * * * He served good Scotch in moderation and fine food in abundance. He seemed to be full of vim and vigor, though he was slightly cocky, I thought * * *. He expressed boundless admiration for the people of our country, and he repeatedly spoke of his burning desire for peace in the world, provided, of course, that we help him shape the sort of world he wanted, and for a cordial, warm, completely trustworthy, yet one-sided, spirit of togetherness in American-Soviet relations * * *. Nevertheless—and this startled and even alarmed me—there were moments when his ruddy, pleasant face would darken and he would use harsh and almost savage language.

"The President at one point (this was at his handsome dacha, which he modestly calls a farmhouse) banged the table with his fist, shook his finger at me, roared like a lion, and declared as follows, in what struck me, frighteningly, as a sinister tone: 'Your Nikita Khrushchev and your other bigwigs talk menacingly about places like Berlin and Formosa. Well, let me tell you something: That's no way to ease tension or promote peace, and if you start a war, you can be sure that we'll fight back. We'll fight back, and we'll finish it, with everything we've got, if necessary—everything, including our rockets, our Polaris submarines, our Strategic Air Force and all our other instruments of massive retaliation. Make no mistake about it, my friend. We can lick you with our hands tied behind our backs. If we don't wipe you off the earth with our missiles (with wild monkeys in them) we'll crush you by the superior strength of our economic development.'"

But then, according to the Harrimanshikov account, "Mr. Eisenhower relaxed, smiled, told several good American jokes, and insisted, with what seemed to be genuine fervor, that there was no reason why our two great countries could not become the dearest friends in the world." As for the "harsh and almost savage" language, Mr. Harrimanshikov warns the Russian people in his magazine article that it should not be shrugged off as mere bluff, and he urges Premier Khrushchev to do everything

possible to cultivate friendly relations with the President—or else.

What we find interesting in our dream about Mr. Harrimanshikov is the idea of the press of the U.S.S.R. opening up its pages to hot-off-the-griddle memoirs by Soviet dignitaries returning from chats at the White House. American readers are accustomed to this sort of thing, the other way around. Why not let the Russians in on it? The cause of peace would be served.

Maybe, just maybe. Nearly anything seems possible in a reverie.

Fiftieth Anniversary of NAACP

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, July 14, 1959

Mr. JAVITS. Mr. President, the National Association for the Advancement of Colored People, at its convention this week in New York City, is marking the 50th anniversary of its founding. The goal of the NAACP for the past half century has been the attainment of the full enjoyment of the personal liberty and individual rights and freedom of American citizens for that approximately one-tenth of our fellow citizens who are Negroes. In this effort, the NAACP has rendered a high order of further service and sees within the predictable future still greater gains for equal opportunity. I ask unanimous consent that an editorial from the New York Times of July 13, noting the 50th anniversary mark of NAACP progress in behalf of our Negro fellow citizens and in behalf of the Nation, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE NAACP AT 50

The convention of the National Association for the Advancement of Colored People, meeting this week at the Coliseum, celebrates two important events: The organization's 50th anniversary and what it describes as "the beginning of the end" of massive resistance to desegregation in the South. Both its achievements and its goals for the future were scheduled to be reviewed during the 7 days of convention sessions in a program brightened by many stars—including Governor Rockefeller and Senators HUMPHREY and SCOTT—and ending with a huge rally at the Polo Grounds on Sunday afternoon.

The NAACP can be proud of its accomplishments and the Negroes of this country deeply thankful for its existence. So can Americans of every color and race who know—even though they may not openly admit the full implications of their knowledge—that "all men are created equal" and have equal rights to "life, liberty, and the pursuit of happiness." During the 50 years of its career the NAACP has built up an extraordinarily effective task force in the struggle for what it believes to be the Negro's rightful aspirations, "working always within the framework of the American constitutional system," through support of legislation, court actions, and public education.

The 1958 report, presented to the convention, maintains that the advocates of segregation lost ground on every front last year. It cites particularly the Supreme Court decision of September in the Little Rock case, which amplified and clarified the historic ruling of 1954 barring segregation in public education, the election to Congress of liberals of both parties who favor the strengthening of civil rights legislation, the alienation of public support for segregation which followed the closing of the schools in Little Rock and Virginia, and the revulsion of feeling aroused by the bombings of schools and churches. The target for the future is "the complete elimination of all vestiges of second-class citizenship under which Negro Americans still suffer"—in employment, housing, registration and voting, education, transportation, and public accommodations.

We congratulate the NAACP for its outstanding accomplishments under the distinguished leadership of its chairman, Channing H. Tobias, and its president, Arthur B. Springarn, and if its able and tireless executive secretary, Roy Wilkins. And we applaud their ambitions for the future. May they be amply fulfilled.

Strauss Footnote

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 14, 1959

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Washington Evening Star of June 25, 1959, entitled "Strauss Footnote."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of June 25, 1959]

STRAUSS FOOTNOTE

One of the Democrats who voted for confirmation of Lewis Strauss as Secretary of Commerce was Senator GORE, of Tennessee. And one of his reasons, he said, was that he feared rejection of the nomination would be damaging to the prestige of the President in a time of international crisis.

This week the Tennessee Senator inserted in the CONGRESSIONAL RECORD the following Associated Press dispatch from Vienna, Austria:

"The Senate's refusal to confirm Lewis Strauss as Secretary of Commerce was reported by Communist bloc broadcasters in Austria today as follows: 'This was a blow at Eisenhower's prestige, the like of which no President had suffered in three decades. But then Strauss was a big banker who got his admiral's rank for producing atom bombs, and he was also noted for advocating the most reactionary views in domestic and foreign policies of the United States.'"

Any resemblance between this Communist interpretation and some of the more extreme accusations lodged against Admiral Strauss in this country is, we assume, purely coincidental. Nor are we arguing that a Senator's vote in a matter of this kind should be dictated by Communist reaction. A Senator's vote, after all considerations have been weighed, should be a matter between the Senator and his conscience.

Certainly, however, the effect of an adverse vote on the President's prestige is one relevant consideration. We think that Senator GORE's point was well taken.

Implementation of World Refugee Year

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, July 14, 1959

Mr. KENNEDY. Mr. President, in the Washington Post and Times Herald for July 11, there appeared an editorial concerning the need for legislation to implement World Refugee Year. It calls attention to the obvious need for this legislation, pointing out that World Refugee Year was sponsored by the United States, but we have yet to demonstrate our support in some tangible way.

I ask unanimous consent that the editorial and a letter which appeared on the same page of the Washington Post and Times Herald, written by Hyman H. Bookbinder, legislative representative of the AFL–CIO, be printed in the Appendix to the RECORD.

There being no objection, the editorial and letter were ordered to be printed in the RECORD, as follows:

REFUGEES IN LIMBO

Not so long ago, this country went to the United Nations and helped rouse the support of 52 nations for proclaiming July 1 the beginning of World Refugee Year. Well, the year has started now, but sad to report, the country which sponsored this humane project is lagging badly in doing its part. It would be a lamentable commentary if Congress does not soon take some action on the modest measures now seemingly lost in the legislative mill. The reproach from Hyman Bookbinder, published elsewhere on this page, could not be more to the point—indeed, it speaks especially well for labor that a representative of the AFL–CIO should appeal to Congress to open the door just a little.

Senator KENNEDY and Representative FRANCIS WALTER have introduced similar resolutions which would authorize the admission of more refugees on a parole basis. These proposals—which fall far short of a needed overhaul of the restrictive McCarran-Walter Immigration Act—seem an absolute minimum if any help is to be given to the displaced persons now languishing in Europe and North Africa. Additionally, Senator HUMPHREY has succeeded in tacking on a $10 million appropriation to the Senate version of the mutual security bill in order to help finance resettlement. The House-passed version contains no such provision, and hence it will be up to the Senate conferees to press for the addition of the badly needed funds. Surely it would be shameful if the United States should fail to honor the pledge implicit in its sponsorship of World Refugee Year.

A HAVEN FOR THE HOMELESS

July 1 marked the beginning of World Refugee Year. Fifty-two nations have already announced participation in this im-

portant United Nations project. President Eisenhower has called upon all Americans to join in efforts to find solutions for the tragic plight of millions of refugees.

The writer had the privilege recently of participating in the White House Conference on Refugees. The deep concern which Americans feel for the plight of refugees all over the world was reflected in a resolution adopted by the 200 delegates who represented a crosssection of America. That resolution called upon the administration and the Congress to "raise their program objectives both with regard to Federal appropriations and immigration to the United States in order to further the aims of World Refugee Year."

Unfortunately, the year has already begun and there has been no action by the Congress to implement our participation in it. The voluntary agencies, both religious and nonsectarian, who have over the years done so much good work on behalf of refugees have made plans for special activities during the year, but meaningful official action should be approved by the Congress as quickly as possible.

The U.S. Committee for Refugees, a committee of citizens representing every segment of American life, has proposed a modest program of $10 million in additional funds and 20,000 visas for refugees over and above regular quotas.

The AFL–CIO, in testimony presented to the Senate Judiciary Committee, has stated that, in addition to approving a special refugee program, the most appropriate thing the Congress could do during World Refugee Year is to liberalize and humanize our basic immigration policies. It was recommended that our national quota be increased from 155,000 to 250,000, and that the national origins quota system be abolished.

These basic immigration policies, contained in the Walter-McCarran Act, reflect neither the humanitarian, compassionate, democratic convictions of most of America nor the actual immigration practices of the United States in the years since the act was passed. As a consequence, it has been necessary to pass special legislation on numerous occasions.

There has been perhaps too much heat, and not enough light, in the public debate over the Walter-McCarran Act. If it is true that the act reflects discrited notions of racial superiority, as I believe it does, it does not follow that its authors or its supporters are "bigots" or "racists." And, on the other hand, if it is true that the act's critics desire to change the law in order to allow more people, with less difficulty, to get to the United States, as I do desire, it is not true that we advocate unlimited numbers of immigrants or that we don't care whether subversives or criminal elements come in.

In advocating a more liberal immigration policy, organized labor is fully conscious of its responsibility to its members. An immigrant might every now and then actually deprive an American of a job. But it must not be forgotten that many jobs are created by the influx of immigrants. Many immigrants have proved to be creative, imaginative industrialists who have built great businesses. Every immigrant, moreover, is a customer for the goods and services which all Americans produce. Our history shows that the great waves of immigration to this country were followed by great gains in our national prosperity.

It is to be hoped that before World Refugee Year ends, our statute books will contain a basic immigration law that will truly reflect the humanitarianism and liberalism of the American tradition.

HYMAN H. BOOKBINDER,
Legislative Representative, AFL–CIO.

University of Santa Clara Honors James K. Carr

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 14, 1959

Mr. ENGLE. Mr. President, I wish that my associates and others may have the opportunity to read a recent editorial by Paul Bodenhammer, editor of the Redding Searchlight in Redding, Calif.

Mr. Bodenhammer has singled out James K. Carr for noteworthy commendations on the memorable occasion of Mr. Carr being appointed to the board of regents, Santa Clara University. The thoughtful and worthy remarks reflect the esteem in which Jim, as he is fondly known, is held by everyone with whom he is acquainted. Many of our associates in the Congress of the United States came to know Jim when he served as consultant to the House Committee on Interior and Insular Affairs. From this worthy period in his career, his imagination, initiative, and judgment have been and will continue to be sought more and more in water and conservation policy matters throughout the great State of California.

Mr. President, I wish that my colleagues in the Congress of the United States may share with me a refreshing and comfortable feeling for a dynamic personality on the California scene. I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Redding Searchlight, June 18, 1959]

UNIVERSITY HONORS BUSY JIM CARR

A local boy who keeps making good in the big city is James K. Carr, a Redding native now living in Sacramento.

Santa Clara University, his alma mater, has just made him a member of its board of regents, and he is helping develop the plans and financing for a $2 million engineering center on the campus.

Earlier this year he was appointed to the State water board, succeeding Clair A. Hill, of Redding. Carr's father, the late Francis Carr, was a member of the State's first water board and was one of the leaders in the movement to create the Central Valley project.

Jim Carr, too, has been deeply involved in the Central Valley project. As a young engineer just out of Santa Clara, he went to work on Shasta Dam during its construction phases. He later became assistant regional director and district manager of the Bureau of Reclamation. It was on his initiative that the Bureau built the road which gives a scenic approach to Shasta Dam. He was responsible, too, for planting 2 million young pine trees on the bare hillsides near Shasta Dam, where copper smelter fumes in mining days had killed off the vegetation.

Carr then went to Washington, D.C., to serve as consultant to the House Interior and Insular Affairs Committee, which deals with reclamation matters.

He is now assistant general manager of the Sacramento municipal utility district. Since he knows both politics and engineering, he frequently represents the district in its dealings with the State and National Governments.

He has a sense of humor and a great capacity for making friends. He also has phenomenal energy which allows him to do three jobs at once while cheerfully planning several others.

Is Dependable Service a Thing of the Past?

EXTENSION OF REMARKS
OF
HON. J. ALLEN FREAR, JR.
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Tuesday, July 14, 1959

Mr. FREAR. Mr. President, a few days ago I received from Mack & Co. a letter written by Harry J. Mack, one of the partners of the company, addressed to clients and friends, entitled "Is Dependable Service a Thing of the Past?"

Mr. President, I think Mr. Mack emphasizes in the letter some of the qualities which are necessary for a young businessman to meet success in life. I am sure it will be of interest to all Members of the Senate. Perhaps it may find interest among many other people, so I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

IS DEPENDABLE SERVICE A THING OF THE PAST?

MACK & CO.
Wilmington, Del.

To Our Clients and Friends:

Amidst the breakdown and flaunting of laws and the flagrant disregard for the rights of others, we also have another form of breakdown and defection, one that relates to promises of performance associated with the rendering of services of various sorts. In other words, the failure to keep one's word or promise for gain or profit as opposed to the nonperformance and breakdown of purely social obligations.

Who, at one time or another, has not been the victim of poor, or, perhaps, a failed service? A time honored business expression of a bygone generation was "his word is his bond" is, unfortunately, no more and is just a memory out of the past. It is the exception in today's world of business and professional organizations to find responsible services. Promises by the plumber, the contractor, the electrician, the carpenter, the roofer, the store clerk, the deliveryman, the tailor, the automobile mechanic, the handyman, the maid or cleaning woman, the prospective employee and many others, all give their solemn word that they can be depended upon to do as promised, or that a specific condition will be met. In many instances these promises are merely idle statements, implying at best a "maybe" or "perhaps", which fails to materialize as promised. All of which fits into a common pattern, the economic cost of which, in all probability, would make a sizable dent in the national debt, to say nothing of the

cost in frayed nerves, loss of tempers and even the loss of friendships.

The principles of doing business should not rest upon hyprocrisy or deception. On the contrary, such promises should be inviolate, a man's word should be his bond. This is especially true if the businessman hopes to grow and develop on the basis of reputable service and customer goodwill. Poor standards of service should not be rewarded, but should be encouraged to do better. The failure to keep promises is a major defect that permeates an entire organization and evinces itself in other respects, such as shoddy workmanship, poor quality of materials, dragging delays and similar uneconomic behaviorisms.

It is bad enough when one defaults in a social obligation, but when the defection of broken pledges becomes commonplace in the affairs of business, it is high time to pause, reflect and change for the better. Quality, truth and integrity should be the cornerstones of business dealings. Promises and commitments should not be given lightly, but thoughtfully and meaningfully. The businessman, whether he be tycoon, self-employed mechanic or a hopeful aspirant to professional or business status, should realize that in the long run he will be the principal loser if his word does not become his bond. Chicanery is the tool of the counterfeit.

Business establishments, whose functions necessitate services incidental to the transaction of business, would do well to investigate and assess such values in terms of sales, profit, customer goodwill, and the general benefits flowing out of these departments and functions. The complaint department, if one exists, tells only part of the story. What the businessman really should know is too often not told or revealed to him; these things he finds out the hard way, after the impact on his business finances and reputation. It would be most unusual if the employee squealed on himself or his pal regarding harmful acts or bad practices. It is not only what is apparent and in sight that should be of concern, but the enigma of it all concerns the unseen and the unknown. When a danger is known, protection can be timely given, but when the danger is hidden and not known, punishing damages in the form of loss of trade or business can result.

What can be said apropos the defections in the services of the general run of business establishments is doubly so as regards the purely service-type enterprises. Repair type services, in particular, appear to be in the forefront of all other service indictments. Contracting organizations also come in for heavy criticisms for making date-line promises never kept. The rising tide of criticisms having to do with faithless promises apparently are not restricted in scope to functional services as delivery, shop, contractual, but appears to be extending and reaching into all fields and touches upon every aspect of human need. There is no substitute for honesty, truthfulness and integrity of service, big or little, other than the putting of these self-same attributes into practice.

HARRY J. MACK.

Foreign Aid Wreckage

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, July 14, 1959

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Foreign Aid Wreckage," published in the Washington Evening Star of July 11, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOREIGN AID WRECKAGE

President Eisenhower cannot escape some of the blame for the Senate's deep cuts in military assistance to our allies. Had he stuck by his original dedication to long-term economic aid, favored by the State Department, he would have enjoyed substantially greater Senate support for the military funds. As it was, the coalition of Republicans and conservative Democrats which the Treasury and the Budget Bureau rallied for the successful assault on economic aid ended up steam-rollering almost the entire mutual security program before disheartened supporters of the bill were able to stop them.

In the circumstances, the President's last-minute threat to call a special session on military aid was quite futile. He now has no effective means of dealing with the forces of reaction and despair which he helped to stir up and which combined to defeat him. The hopes of only a few weeks ago that a truly imaginative and bold new approach to foreign aid, embodying a sustained economic effort in the underdeveloped countries and a thoughtful reappraisal of military assistance burdens, have gone a-glimmering. By the time the Appropriations Committees finish the job, it is likely that the severest damage will have been done, and supplemental appropriations, if not a special session, almost surely will be required early next year.

While the Treasury and the Budget Bureau are busy congratulating themselves on having "saved" a few dollars, we hope the President will reflect on what he has lost. In our judgment he has been misled into sacrificing his last chance to launch the vigorous program of economic assistance which his own advisers in the State Department have so urgently pleaded for, and in the process has helped to bring about the weakening of our military position as well.

Significance of Imports in Rye

EXTENSION OF REMARKS

OF

HON. ODIN LANGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 14, 1959

Mr. LANGEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement to the U.S. Tariff Commission, Monday, July 13, 1959:

STATEMENT BY CONGRESSMAN ODIN LANGEN, MINNESOTA'S NINTH CONGRESSIONAL DISTRICT, TO THE U.S. TARIFF COMMISSION; MONDAY, JULY 13, 1959

First, may I express my gratitude to the Commission for having taken the necessary steps to instigate a public hearing regarding a matter of real importance to the producers of rye throughout our Nation. I should, as well, express my gratitude to the Commission for having provided me with the opportunity of presenting this brief statement in this manner.

While rye is not one of the major farm commodities in my district, it is a commodity that does play a substantial part in the farm economy throughout my district and the State of Minnesota, because it is a crop that can be quite generally raised throughout the district and particularly in the marginal farming area. It is a crop which carries a great deal of significance to a number of our farm people. In my district it has a further significance, for it is one of the few winter crops that can be raised in this area. Being a very hardy crop, it has the ability to withstand the winters in northern Minnesota, making it valuable from the standpoint of weed control as well as its potential of increased farm income. Because of these facts, the investigation that is before the Commission this morning is of prime importance throughout my district and the State of Minnesota.

It is my understanding that the investigation has been instituted to determine whether rye might be imported in such quantities as to render or tend to render ineffective, or materially interfere with, the price support program for rye presently carried out by the U.S. Department of Agriculture pursuant to section 301 and 401 of the Agricultural Act of 1949, as amended. In direct response to that question, in my humble opinion, importing of rye is surely very materially interfering with the price support program. Figures taken from statistical reports prepared by the U.S. Department of Agriculture indicate that we have about 12 million bushels of surplus rye on hand today. They further indicate that during the last ten years, from 1948 through 1958, our surpluses of rye have grown by something over 4¼ million bushels. This growth is not particularly alarming or cause for too great concern until we recognize that during that same ten year period, the total production of rye within the United States has not during a single year equaled our total disappearance of domestic use and exports.

During this ten year period from 1948 to 1958, we have produced a total of 46.5 million bushels less than our total disappearance, while during this period of time, we have imported 52.7 million bushels. This surely indicates substantially that our producers of rye have not by their doing created the present surplus, when we again note that during this period our surplus increased by only 4.5 million bushels.

The real significance of this to the producer of rye is that since 1950 the price support for rye has been reduced from $1.28 a bushel on the national average to 90 cents a bushel for 1959, a drop of 30 percent during a period when not a single bushel of surplus was produced. A further result has been the large investments by the Commodity Credit Corporation in the surplus bushels on hand plus large payments of storage each year, running well over a million dollars a year.

Surely these facts indicate very clearly that imports of rye do materially interfere with the price support program for rye presently undertaken by the U.S. Department of Agriculture in that first, they have substantially increased the amount of dollars invested by the Commodity Credit Corporation in the surplus bushels on hand; secondly, they have increased the cost of storage for these same surplus bushels over the years; and finally, they have substantially reduced the income to the producer of rye throughout our Nation. These facts alone should be sufficient evidence and reason for reducing the import quotas on rye. However, the effects are even farther reaching in that they also play a part in the overall agricultural surplus problem. Some additional acres might have been devoted to the production of rye, of which we have shown so clearly that the farmers have produced no overproduction. These acres would have been taken out of the production of other crops such as oats, barley, flax and others, of which we also have surplus stocks today which are costing the Commodity Credit Corpora-

tion large amounts of money in storage costs.

At this point, I should as well point out that the very same conditions exist as far as oats and barley are concerned. In fact, in both of these crops, the producers of oats and barley have not raised as much oats or barley during this same 10-year period as our domestic use and export program have consumed.

To substantiate the points that I have just made, I am submitting, together with this report, statistical data which will show the total production as well as total disappearance through domestic use and exports, the history of the surplus on hand, and the prices received by the producers of rye during the past 10 years. These facts surely indicate beyond any doubt that the import program has cost the American taxpayer substantial amounts of money. It doesn't seem fair or just to me that our farm program should be charged with this expense, inasmuch as the producer of rye has not during the last years produced a single bushel of surplus rye. Nor does it seem fair that the American producer of rye should have been caused to suffer the 30 percent loss in income.

As we look to the future and ponder a possible solution to the very difficult agricultural problem, it would surely seem that here is one instance in which action might be taken that would substantially alleviate the agricultural problem, and at the same time provide the real oportunity to increase the income to at least a segment of agriculture. Further consideration might be given to the imports of other crops which are causing the same kind of difficulties and the same kind of experience, both in cost to Government and reduced price to producers.

With these facts in mind, it is my hope that the Commission in its deliberations, and its wisdom, will give adequate concern to the significance of imports in rye to the point of where we can look forward to the elimination of these surpluses that have been created by imports. This will result in a reduction in the cost of our agricultural program and an increase in income to the producer. Such action, in my opinion, would be of significance and benefit, not only to agriculture, but to the taxpayer and the consumer as well.

I thank the Commission again for the opportunity of presenting these observations.

Resolution Adopted at Democratic Party Relations Conference

EXTENSION OF REMARKS

OF

HON. PAT McNAMARA

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Tuesday, July 14, 1959

Mr. McNAMARA. Mr. President, this past weekend—the 1959 Democratic Party Relations Conference meeting in Washington—adopted a resolution calling on Congress to implement the Democratic Party platform and pledges.

Delegates to the conference endorsed Democratic National Committee Chairman Paul Butler—and said that a Democratic victory in 1960 requires action in Congress now.

I ask unanimous consent that the text of the resolution be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

TEXT OF RESOLUTION UNANIMOUSLY ADOPTED BY DELEGATES TO DEMOCRATIC PARTY RELATIONS CONFERENCE—JULY 11, 1959, SHERATON-PARK HOTEL, WASHINGTON, D.C.

The 1959 Democratic Party Relations Conference, attended by representatives of 24 States, the Virgin Islands, and the District of Columbia, hereby resolves:

1. The platform of the Democratic Party represents the great liberal policies and programs to which our party has historically been dedicated and upon which our Party won its overwhelming victory in 1958.

2. We call upon the Democratic leadership in Congress to bring about the enactment of legislation implementing the policies and programs of our party platform and the pledges made by the Democratic candidates during the successful 1958 campaigns.

3. In the field of civil rights, we call upon Congress to enact the Douglas-Celler bill which has been endorsed by all major civil rights groups in America. This bill provides an orderly procedure for the desegregation of our public schools and our public facilities and includes part III authorizing the Attorney General to bring suits to protect constitutional rights under the 14th amendment. Neither the bills proposed by the Republican administration nor those relying upon conciliation is remotely adequate to insure compliance with the Supreme Court's historic desegregation decisions. We call for the defeat of all legislation aimed directly or indirectly at weakening the Supreme Court or threatening its independence.

4. Looking to the 1960 Democratic Convention, we call for a vigorous and forthright civil rights plank in the party platform which will make crystal clear the determination of our party to eradicate every vestige of second class citizenship in America. Adequate and meaningful protection of the right to vote and prevention of all forms of segregation and discrimination must be included in that plank.

5. We wholeheartedly endorse and commend the action of Chairman Paul Butler in calling upon the Democratic leadership in Congress to support the policies and programs of our party platform and to use their positions to enact the liberal legislation promised by Democratic candidates during the 1958 election. A Democratic victory in 1960 requires action in Congress now. Chairman Butler has sounded the call to colors for that victory. We urge all our fellow Democrats, inside and outside Congress, to respond to that call and to rally behind the chairman's inspiring leadership.

Guilt by Association Is Un-American and Its Practice Should Stop

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 14, 1959

Mr. SANTANGELO. Mr. Speaker, daily complaints have been pouring in to the effect that the newspapers, magazine writers, and media of expression are defaming and maligning directly and by innuendo Americans of Italian origin. Some purveyors of news do it under the pretext of news reporting, some for ulterior motives, some for profit, and others for political purposes and advancement. Whatever the motives or reasons might be, the effect is that a group of people, who have contributed much to the American way of life, has been adversely affected in many fields of endeavor. Pride and reputation have been hurt and feelings aroused.

It is high time that the defamation of a proud ethnic group for the sake of profit be discontinued. Let the criminals of every race be prosecuted where evidence warrants prosecution—and no ethnic group has a monopoly of virtue—but let not a race whose blood courses through the stream of American life and whose offspring have shed their blood in defense of these United States be pilloried and condemned by the practice of guilt by association.

An editorial from Il Progresso, one of the great New York newspapers bespeaks the sentiments of Americans of Italian origin, details the growing complaints about unfair publicity, and calls for corrective action. This appeared as an editorial in the issue of Il Progresso on Sunday, July 12, 1959. I submit this editorial for the readers' consideration.

HIGH TIME FOR ACTION

For more than a year and a half there has been an ever increasing torrent of abuse and vilification directed against Americans of Italian origin, who comprise one of the most important segments of American life. A systematic campaign of defamation has been given wide circulation through slanted articles in nationwide newspaper chains and magazines, and books, which become best-sellers through the artful drum beating of modern press-agentry. But the most frequent offenders are television and motion pictures through ganster portrayals on their screens, using Italian names for the evil characters or what are easily recognized as Italian types.

One need only turn his TV dial and lo and behold, there is one of those bloodcurdling sagas in which the unsavory villain is pictured as a hoodlum with Italian features.

Many years ago Il Progresso spearheaded a drive to eliminate the racial identification, in news items and stories, of elements caught in the toils of the law. That campaign was widely commended by public officials, editors, and publishers who agreed that the sins of the few should not be visted on the many; and for years no accused or convicted person was identified, in the public prints, as to race or color.

What has happened to change all this? In November of 1957 a group of Americans of Italian descent met in a small New York State village called Apalachin. Some of them had criminal records. The purpose of their meeting has never been explained. But if they were meeting for some nefarious undertaking, we not only do not condone them, but we denounce them and their ilk, for this tiny group of 60 furnished the pretext for bringing discredit and contempt on more than 12 million loyal, law-abiding, decent Americans of Italian origin who daily make their valuable contribution to the enrichment of our country in every field of human endeavor.

Since that day, sensation-seeking organs spawned the specter of a sinister international organization of criminals, presumably composed exclusively of men of Italian or Sicilian extraction, which they call the maffia. And they have been making a roman holiday of the terroristic activities of these men

and their henchmen, attributing to them infiltration into and control of many legitimate businesses and undertakings, including labor unions. And in passing they mention Italian products and Italian communities which defer to the maffia.

If this crime syndicate exists in fact, the conclusion is inescapable that all law-enforcement authorities, city, State, and Federal, have broken down. We cannot conceive of the distintegration of the FBI, the Treasury and Immigration Departments, and we resent this inference, as much as we deplore the insinuations against our people.

Like ourselves, many social, civic, and fraternal organizations, as well as many individuals prominent in industry, in commerce, in civil service, and in the judiciary, have openly decried the patently unjust association of all Americans of Italian heritage with the criminal acts of the few.

In this connection we are happy to note that two U.S. Senators, HUGH SCOTT, of Pennsylvania, and KENNETH B. KEATING, of New York, have taken up the cudgels against the defamation of our ethnic group and have urged a national investigation. In letters to Attorney General William P. Rogers and Secretary of the Treasury Robert B. Anderson, the two Senators ask a full report on the alleged existence of a nationwide organization of criminals; what is being done to eliminate such a conspiracy if it exists; and, if no conspiracy exists, a that two U.S. Senators, HUGH SCOTT, of statement to that effect. They also ask for a statement of policy of both Departments of Government to protect the civil rights of people mistakenly identified with criminal acts, and instruction to Federal agents to beware of defamatory public statements about any minority group.

The letters go even further, when they point out that "the most serious of all have been the statements issued by some law enforcement officers and Senate investigating teams" which tend to associate all Americans of Italian lineage with the unholy delegates of crime and vice. The letters also state: "This is as heartless as it is untrue."

We most heartily endorse the position of Senators SCOTT and KEATING. It is high time for action. We have been patient too long. We are aroused as never before and we want an end to the ill-founded, vague condemnation of a fine, loyal, and industrious people who—since the discovery of America by one of their forbears—have given it their full measure of devotion.

American Red Cross Memorial

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 14, 1959

Mr. SPRINGER. Mr. Speaker, on June 25, 1959, the first American Red Cross memorial was dedicated in honor and memory of the men and women of the American Red Cross who have given their lives in the service of mankind in peace and in war. This memorial stands in Red Cross Square here in Washington, D.C. The memorial consists of four bronze figures, each about 7 feet tall, on a 5-foot marble base. I had the rare privilege of being present at the dedication of this memorial. It was a touching ceremony, participated in by Red Cross men and women from all over the land.

E. Roland Harriman, chairman of the American National Red Cross, was chairman of the meeting. Dr. Felix deWeldon, the sculptor and builder of the memorial, gave a memorable interpretation of the meaning of the statue. Gen. Mark W. Clark was the principal speaker and had previously headed the National Memorial Committee.

This dedication was on the 100th anniversary of the Battle of Solferino, Italy. The founder of the idea of Red Cross was present at that battle and saw the terrible suffering of those on both sides, which drove him on to take up active part in relieving suffering by those in battle, as well as innocent citizens who took no part.

On the same day that the memorial was dedicated in Washington, another memorial was dedicated in Solferino, Italy. The Italian memorial, made of stones from all the countries having Red Cross societies, marks the spot where, during the Battle of Solferina, the Red Cross idea was born. It bears the inscription, "Tutti Fratelli," meaning, "All are brothers."

I was particularly interested in the dedication of this memorial in Washington because Alf R. Thompson, of Mattoon, Ill., in my congressional district, served as chairman of the American Overseas Association Committee and was general finance chairman of that committee and also of the National Memorial Committee, which were instrumental in the construction and erection of the memorial which is located in the garden of the American Red Cross here in Washington. This memorial was the brainchild of Alf Thompson and he is given the greatest credit for the accomplishment of this worthy project. He was the founder of the American Overseas Association and that association on this occasion presented him with the presidential citation of that organization.

The citation reads:

Alf R. Thompson, founder, president, adviser, and loyal friend to the American Overseas Association, he has lent his strength and stature unstintingly to the accomplishment of its aims. No friend in need has ever found his hand withheld and many have found help without seeking it. For many years he has served the Red Cross as a volunteer. In peacetme he has been a leader in his community, State, and Nation and guided efforts which established the world's first memorial to Red Cross heroic dead. In the First World War, he was an Army officer in Siberia; in the Second World War, he supervised Red Cross services to combat troops in North Africa, Italy, and France.

A man of integrity, he has earned the affection of hosts of friends who see in him the wisdom of the words, "Live truly and thy life shall be a great and noble creed."

It might be said that Alf Thompson has earned his life of dedication to the cause of helping others. In addition to his fine work in Red Cross, he has been a civic leader in Mattoon and the State of Illinois. There has not been an activity in Red Cross in that great State that he has not had his hand in. This is but small recognition of the excellent work which he has done throughout the years. It is wonderful to know that at least he has been recognized for what he really is—a good man who has practiced the rule of doing for others as he would have them do unto him. In the words of St. Matthew, chapter 25, 21st verse: "* * * thou has been faithful over a few things, I will make thee ruler over many things: enter thou into the joy of thy Lord."

Xavier University Fills Need

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 14, 1959

Mr. SCHERER. Mr. Speaker, recently Xavier University marked a significant milestone when it graduated its first class composed of career Federal administrators from a course in business management. Those of us here on Capitol Hill who are daily wrestling with problems which are becoming increasingly difficult and complex can more than appreciate the value of such a course to the Government. Xavier University is to be congratulated on its farsightedness.

Mr. Albert W. Highsmith, one of the fine executives of General Electric was the speaker at the graduating exercises. His remarks are highly significant, and I know will be of great interest to all of us in Government:

I certainly appreciate this opportunity of being with you tonight and having a part in this event marking a most desirable step forward for self-government.

I must confess, however, that after I had accepted Mr. Martin's invitation to meet with you, I had certain very pronounced misgivings. Most of the speaking that I have been doing of late has emphasized the need for my audience to take an active interest in the affairs of government. This hardly seems a necessary topic for discussion with a group of men who have already accepted this need and are devoting their lives to serving their country through careers in Government.

In fact, as I usually develop the matter, I point out to my audience that those of them who cannot serve in Government can still have a voice in Government by taking an active part in politics. This, I fear, is an even more inappropriate subject for a group covered by the Hatch Act.

So, after much tossing and turning at night and the gnawing away of several hangnails, I decided it would be appropriate to discuss some of the history and principles of business management with this group of Government officials who have been studying the matter.

At this point, however, let me say that I hope the fact that my message is directed primarily to those graduating from this course will not be interpreted by the others present as license to sleep through the remainder of the meeting. Some of you may have a disturbing tendency to snore. This might be distracting for any who are not asleep. I assure you it would be most disconcerting to the speaker.

It is also possible that since it is your Government, too, and since the basic principles of business management can be applied to any organization, there may be something of interest in my remarks for all of you. At any rate, I request that you not sleep and I beg that you not snore.

I bring you my remarks from the viewpoint of an outsider looking in as far as

Government is concerned. (And, this circumstance, I have found, leaves a speaker a great deal of freedom of expression that is not possible when he must practice as well as preach.) However, I have not always been an outsider in the matter of Government.

For 2 exciting years I had the privilege of serving in the ranks of Government as a member of the staff of the Postmaster General. And, for an equal time, I had the magnificent experience of standing in the shadow of the mightiest oak of American statesmanship, Herbert Hoover, helping in some small way as he painted a detailed picture of Government for the people of our Nation.

Too, I share something in common with members of your families. My own revered father has served with pride and dedication in the ranks of the Federal Government for almost four decades.

So, you see, I am not an outsider after all, but one of you by legacy and previous condition of servitude.

You have just completed a course designed to help you more efficiently manage those operations of the Federal Government with which you are charged. This is a most encouraging and seriously needed step. I congratulate Xavier University for offering the course and I commend each of you for giving your time and energy beyond the call of duty to take advantage of it. I hope that many others will emulate your examples.

It is interesting to note that the very first instance recorded of man's efforts to apply principles of business organization to his activity was directed toward Government.

If we turn the pages of history back some 3,300 years, we find recorded in the Book of Exodus a moving account of the efforts of Moses to lead the Israelites out of the wilderness. In the 18th chapter of this ancient record, we find Jethro, Moses' father-in-law, pointing out to Moses that he shouldn't try to carry all the burden of government himself but should share the job of management.

Thus Jethro emerged more than 3,000 years ago as the first management consultant in recorded history. He brought to Moses sound business advice that is being advanced today as modern scientific management and is still applicable to business and government.

First and foremost, Jethro called on Moses to stop and look at his problems from a long-range point of view and stop trying to meet each problem as it arose—stop letting the morning mail determine the day's work—but rather to plan and organize for the long pull.

Now, Moses was no slouch as a manager. He was one of the most magnificently equipped men in all history by training and wisdom and he worked hard and with significant success. But he had the same blind spot that many managers have even today: he tried to carry the whole load by himself. Jethro pointed out that this was not only hard on Moses, the manager, but that it made the people soft and did not offer any opportunity for them to develop so competent successors would be ready to take over when Moses was no longer there to guide them.

After he had identified the problem, Jethro, the consultant, submitted a plan to meet it.

He recommended that the people be taught the laws and ordinances that were to govern them. These were to be Moses' policy statements and operating instructions designed to help people act on their own initiative on most matters without having to go to higher levels for decisions. Such policy statements and operating instructions are the basis of operation in modern business today, and, if my memory serves me, I believe that there are a few written rules and regulations for similar purposes in government.

Then Jethro submitted the idea of a position guide or job description to further guide the people in their individual responsibilities—as he said "in the work they must do." This is certainly still a sound principle of management used in both business and government management.

And, finally, Jethro recommended that Moses delegate authority to line management by appointing men to manage thousands, hundreds, fifties and tens. He even gave Moses criteria for selecting managers when he said that they should be "able men, such as fear God, men of truth, hating covetousness." These are still valid specifications for good managers.

In the 33 centuries since Jethro advised Moses, there has been some expansion of his basic theories of business management. General Electric's professional business management course, which is offered to members of our management, breaks down the work of a manager into four basic elements: planning, organizing, integrating, and measuring. The only one of these that Jethro did not spell out was measuring and that was certainly implied.

Perhaps we would do well at this point to quickly review these four elements of management and to note how they apply to management in government equally as well as in business.

The first step in planning is to determine the objectives of the manager and his group. This necessitates a look at both the past and the present to determine trends that may affect the future. And, incidentally, here is one of the basic differences between management where one is dealing with people and, say, engineering where one deals with things. Before an engineer starts to construct a bridge, he draws a blueprint and follows it closely at every step. A manager, on the other hand, must stop and examine the impact of each step in his program on the shifting foundation of human reactions and compensate for any changes that result. His plans must remain flexible if he is to attain his objective and planning must be a never-ending process closely tied to measured results.

Incidentally, let me emphasize that a good manager must never be afraid to admit that he has made an error. If he is to earn the respect and support of his people necessary to success, it is much more important to convince them that he is honest than that he is infallible. They will never believe he is infallible anyway. This applies to the business of government as well as to management.

In determining objectives as part of his work in planning, a good manager must anticipate future situations and be bold and forthright in choosing the best from the many alternatives that inevitably present themselves in any given situation involving people.

A second step in planning is the establishment of policies. These policies will serve as his long-range guidelines. In formulating them, the manager must reflect a broad understanding of human values and keep a realistic balance between the requirements of the moment and long-range objectives. And, then like Moses, he must communicate these policies so they can serve to guide all in the organization.

The third step in planning is that of actually formulating specific plans and schedules and spelling out realistic standards of performance to be used in implementing those plans. He must consider manpower—both managerial and otherwise; facilities and equipment; and financing—among others.

He is then ready for the manager's next big job—organizing. This was Jethro's long suit.

The first step in organizing is to determine and classify required work into manageable components and jobs. Then he must segregrate that work into an orderly structure, grouping like work together into organizational components and individual jobs. He must clearly define the responsibility of each individual and unit and to whom each is accountable for performance. Then, of course, the manager faces the job of designating specific individuals to fill stated positions, making sure that he has the best man for each job.

The manager must also spell out the methods and procedures to be followed in performing the work. Of course, I do not mean that you as a manager must spell out in detail every operation for each level of your organization. Rather you must give broad direction and let the lower level managers expand upon that direction and apply it to their specific tasks.

The next major element of management is that of integrating the various components of the organization. It is in this area that communication plays its most important role. Integrating is simply having the right hand and left hand know what the other is doing and why, so that their combined efforts will have maximum combined impact. This requires two-way communication. It is at least as important to listen as it is to talk. We must never assume that we already know how people feel or are reacting.

It is in integration that some of our most serious management failures are found. It is not unusual to find a man who is an excellent manager when it comes to planning and organizing but when it comes to integrating and building a work climate in which people accept their assignments voluntarily and perform them in a friendly, cooperative, dynamic, and productive manner, he fails because he does not understand people. I think that the basic and most necessary ingredient of a good manager is the ability to understand and appreciate what makes people tick.

The fourth element of business management is that of measuring results. A carpenter does not measure a board only to see how long it is but rather to see what adjustments will have to be made if it is to perform the job he has designated for it. Similarly, a manager never measures results just for his information. His objective in measuring is to get direction for making improvements in the overall mechanism and make it ever more effective.

We in business have a basic measure that is not so readily applicable in government and that is the measure of profit. If we do not make a profit, we have failed. You do not have so clear cut—or final—a measure of your result. This, perhaps underlines the need for constant review of organization in government.

Jethro's consideration of the management of Moses' government of the Israelites was not the only look that has been taken at management in government. They have been many and most have found similar problems. A more recent study, and one of which I have a bit more intimate knowledge, was made by the Hoover Commission.

Its report on personnel and civil service is probably of great interest to you. Submitted to Congress in February 1955, in this report the Commission said: "Our task force has found, and we agree, that the Government's personnel on the whole is competent, faithful, and in numerous specialties, distinguished. The greatest weaknesses is in expert managerial direction. Management needs to be improved at all levels, from the noncareer political appointees and the career administrators, down to the firstline supervisors."

The Commission submitted 19 recommendations for action to meet this need.

It found that a severe contribution to the problem resulted from the failure to clearly delineate between the proper roles in government of career and noncareer officials.

The Commissioners felt that the establishment of broad policy and political defense of that policy, when defense is necessary, is a proper function of noncareer elected and appointed officials. After all, the people delegate to the party in power the duty to establish policies and programs and they hold that party accountable at the polls for action in these regards.

At the same time the Commissioners recognized the indisputable need for competent, nonpolitical administrators or managers to give stability and continuity to government in the implementation of the policies and programs of the Government.

The problem arose from the fact that too often noncareer appointees were, out of necessity of the workload, handing over parts of their responsibility for setting and defending policy to career employees. The Commission recognized that it could seriously impair the usefulness of a career employee to a future administration if he had been placed in the position of defending contrary policies of another administration.

They recommended, therefore, that there be a clear delineation of the proper role of both career and noncareer government officials to eliminate undesirable overlap.

The Commission also recognized a need to introduce a higher degree of professionalism into government management—a problem revealed regularly since the days of Moses and Jethro.

In the instance of career employees, it recommended creation of a senior civil service, composed of a few thousand politically neutral persons of proven competence and ability in their fields given sufficient incentive in pay and status to attract and keep men and women of the highest caliber in management position in government.

This was but one step.

I believe that courses like the one in which you have been engaged can contribute a great deal toward this same end—professionalism in government management. They can provide government managers like you with the know-how to give their service the highest tone of professionalism in their dealings both with the people within their jurisdiction in government and in dealing with the public at large as government. Many of the principles are the same.

The unfortunate fact is, however, that very few managers in our government have had the opportunity that you have to participate in a course like this. This fact underlines for you one of the most important responsibilities of a professional manager: that of helping his associates develop their full capacity. I urge you to ever be attentive to opportunity to impart to your associates the knowledge that you have gained here at Xavier during this course. In that way you can multiply your contribution to bringing professionalism and maximum efficiency into the management of our Federal Government.

Today the vast majority of Americans would immediately identify international communism as the greatest threat to our American way of life. The brief parting of the Iron Curtain 2 years ago revealing in all its horror the blood bath of Hungary, the more recent heartless crushing of the independence and religious fervor of Tibet, the whole host of promises solemnly made by the Kremlin and ground under heel when they no longer served its purpose, the seething cancer of the Berlin situation—all of these and others have served to dramatize the threat of godless communism.

But history has shown us that the most obvious threat is not always the most dangerous. Sometimes the very lack of drama of a threat compounds its danger because it does not shock citizens into alertness and action.

Arnold Toynbee, the eminent historian, has reported that of the 21 great civilizations of world history, 19 have fallen, not at the hand of maurauding invaders, but rather from internal collapse.

In our own instance, such collapse could come from a government that destroys the ambition of men by trying to be all things to all men, a government that drains away the vitality of the nation in excessive taxes and feds the devouring monster of inflation, a government grown so large and cumbersome that it becomes unmanageable and topples of its own weight.

As professional administrators in government, it is not your role to determine the policies of government. Yet at the same time you can, through effective administration, contribute to keeping our Government sound by holding the costs of operation down and keeping it well organized and well managed. This is your challenge, and it is a challenge that is more overwhelming than any that ever faced management in business. Every American—indeed, every man, woman, and child, present and future, in the free world and even those behind the pall of communism who would dare to dream of being free—has a stake in your success. Your tool is good management.

With that tool it is you who is truly the first line of defense for our way of life.

Indianapolis Star Continues Fight

EXTENSION OF REMARKS
OF

HON. GORDON H. SCHERER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 14, 1959

Mr. SCHERER. Mr. Speaker, in the next few weeks the House will vote on the foreign-aid appropriation bill. I am sure that not only those of us who oppose this program but also everyone else will want to scan each of the items more carefully than ever before. Two excellent editorials by Jameson G. Campaigne, editor, which appeared in the Indianapolis Star on June 7 and 17, indicate why we must do so:

WHY HELP COMMUNISTS?

Last December the Star had an editorial titled, "Foreign Aid for Communists," pointing out that since 1946 millions of dollars of U.S. aid has been sent to Communist countries. We also noted that as late as 1955, 1956, 1957, and 1958, U.S. tax money was still going to some Communist countries.

Recently the International Cooperation Administration privately circulated in Congress a 9-page memorandum refuting our editorial which was printed in the CONGRESSIONAL RECORD.

The burden of this refutation is that most of the money sent to captive countries was sent before they had Communist governments. It says, "98 percent of the grant aid to Czechoslovakia was supplied before the Communist coup d'etat in 1948." This is, of course, true. But what is ignored is this important fact: Czechoslovakia was occupied by Soviet troops, as was Poland, and American aid was distributed only by sufferance and often by order of Communist Russian officials. Many of the UNRRA funds supplied by the U.S. taxpayer were actually used, particularly in Poland, to advance the cause of communism and to hide from the people the fact that it came from the United States.

Whether Czechoslovakia, Albania, or Poland had Communist governments when they received U.S. aid is not the point. They were Communist controlled because Red troops were controlling them. Witness the fact that Czechoslovakia wanted to accept Marshall plan aid in 1948 and the Soviet Union said no, so the Czechs obeyed.

The ICA does not dispute the fact that American aid has been going to Communist countries in more recent years. They say, howveer, that it was given to the people and not to the government, except in the case of Communist Yugoslavia. What difference does that make? Money we supply for relief of people in Communist states is money the Soviet Government does not have to supply. By that much U.S. tax money strengthens each Soviet regime.

It is our contention that any sort of taxpayers' aid to any country controlled by the Soviet Union, directly or indirectly, helps the Soviet Union. Back in 1946, 1947, and 1948 we opposed sending American aid to countries controlled by Communists. We opposed the sending of around $500 million to the Soviet Union right after the war. We knew, which too many in our State Department apparently did not, that it is the Communists' intention to bury us and to seize control of as much of Europe as it could. Whatever aid we gave them helped them in this aim.

It is the contention of our foreign aid enthusiasts that foreign aid helps keep other nations independent of communism. Well, we gave foreign aid to Albania before it became Communist. Did our aid prevent the Communists from taking over there or in the Balkans or in Poland and Czechoslovakia? It helped the Soviets take over.

We are giving money to Communist Poland. What for? Have we helped the Polish people throw off the chains of communism by doing so No, we have helped Communist boss Gomulka solve some of his economic problems and he now has tighter control of Poland than ever—with our help.

The same is true of Tito in Yugoslavia. No doubt Tito would have been thrown out on his ear by the Yugoslavs if we had not supported him with money and goods.

We believe all U.S. aid of any kind to Communist nations merely helps them stay strong and prepare for their eventual attack upon us. Our cultural exchange programs, disaster relief, food shipments, and trade with the Soviet bloc do not help us at all. They help only the Communist dictators.

The ICA memorandum also refutes the Star editorial which claimed that neither the press nor the Congress knows how foreign aid money is spent. They reply that Congressmen can see how much military aid goes to each country—but that the press and the people cannot be told. They say that all other aid is a matter of open record.

Why, then, did the General Accounting Office, an arm of Congress, last March accuse the ICA of refusing to let them see the evaluation reports on aid to China, Laos, Pakistan, India, Bolivia, Brazil, and Guatemala? Why was it necessary for the Comptroller General's office to send auditors to Pakistan to discover that 271 American officials needed 229 cars, 529 refrigerators, 650 stoves, and 666 air conditioners, all paid for by U.S. taxpayers? Why didn't ICA inform Congress that 15 percent of the rice sent to Pakistani flood victims was sold to them on the black market?

The ICA has recently investigated itself to prove that the book, "The Ugly American," is a distortion based on untruth. Not surprisingly ICA thinks ICA is doing very well and

errors are minor and few. But after they investigated, did they report to Congress that ICA helped build a big citrus packing plant in Lebanon which has never been used? Did they let Congress know that U.S. taxpayers' money was spent to help build a $20 million housing project in Lebanon that nobody has ever lived in?

No. These facts about foreign aid are not open to Congress or the public—unless the press or some other governmental body finds them out.

THE UGLY AMERICAN

The International Cooperation Administration just investigated itself as a result of charges against American foreign aid and foreign policy operations in southeast Asia in the novel "The Ugly American." ICA says "The Ugly American" was grossly exaggerated.

Yesterday we received the House Committee on Government Operations report, "U.S. Aid Operations in Laos." This report is truth, not fiction. But a careful reading of it makes it clear that "The Ugly American" didn't exaggerate half enough to catch up with the truth. Listen to this:

U.S. dollars were given to the Laos Government which deposited a like amount in a special account. The Lao Government borrowed local currency from the National Bank of Laos for its projects. Dollars thus served as currency backing until converted into Laos currency by sale to importers. "It was apparently the intention," says the report, "to limit inflation. So unsuccessful has this system been that the cost of living in Laos has doubled between 1953 and 1958." Strike one for "The Ugly American."

Because U.S. officials imposed an unrealistic official rate of exchange and poured more money into Laos than the economy could absorb, "Excessive use of cash grants and relaxed laxity in import controls have, in effect, led to the financing of capital flight by the U.S. aid program, in a country where one of the primary needs is for local investment." Strike two for "The Ugly American."

"The technical cooperation program has been quite small. * * * Aid activities having a direct impact on the rural villagers have been slight. * * * Benefits from commodity imports * * * were limited to relatively few Laotians." But in 1958 special elections were held in Laos. Ambassador J. Graham Parsons decided to combat possible Communist gains by Operation Booster Shot, a program of more than 90 work projects including well digging, irrigation and flood control, repair of schools and temples, roads, airfields and construction of hospitals was begun. This village aid program produced the following results in the elections: "The election was a Communist victory * * * of 21 contested seats the Communists won 9 and their sympathizers 4." Strike three for "The Ugly American."

A contract was let for roadbuilding. "The total amount of this contract was 37,400,000 kip (Lao currency) or, at the free market rate of 100 to 1, $374,000. * * * However, 10 days after the contract was signed, the contract was amended to provide for the conversion of the 'contractor's earnings' into U.S. dollars at the official rate of 35 to 1. This increased the value of the contract from $374,000 to $854,000, increasing the cost of our aid program by $500,000." Strike four for "The Ugly American."

"Edward T. McNamara was public works and industry officer for the USOM/Laos. * * * He was in a position of initiating and supervising numerous USOM construction contracts (and to) exercise, and did exercise, considerable influence upon both USOM and the Laos Government to secure award of contracts to Universal (construction company).

"In return for these favors, he received from Universal money, stocks, and airline tickets totaling at least $13,000. This he admitted under oath." McNamara then left ICA, apparently scot free. He then turned up as vice president of Transportation Consultants, Inc., which was under an engineering contract with USOM/Laos. Strike five for "The Ugly American."

"Haynes Miller was an ICA end-use auditor assigned to Laos. * * * Miller's compiled material and leads he provided could have led ICA to uncover such matters as McNamara's corruption, and to remedy deficiencies in the contracts and performance of the Universal Construction Co."

But as soon as Miller made his reports available to ICA officials and the Ambassador, he was removed from the Laos mission charged with being unable to adjust, of having obvious signs of nervous disorder, and associating with low French, some of whom were opium addicts and scorned by other French.

According to the committee, "Miller was one of the few qualified French linguists in the mission, probably the most linguistically competent of the American employees." He was also the one most sought out on a social basis, in a real wish to adjust Laos and French nationals.

The Ambassador's charge of nervous disorders against Miller was rendered without benefit of medical advice. This is contrary to State Department regulations. Yet after Miller informed Parsons of the messy situation in Laos he was removed on Parsons' recommendation and Parsons informed Washington that in Laos our credit is high. Strike six.

A Robert Manley disapproved a housing project for ICA personnel to build 25 houses. He estimated that contractors would get a windfall of $50,000 in exchange profits. The project was started, but never finished. USOM Director Carter dePaul tried to persuade his successor, Carl B. Robbins, to sign a contract for repair and construction of the houses. Robbins refused, for he hadn't seen the project. When he did see it, he "found them in very bad condition. To complete them would have been an economic nightmare."

"Another group of 12 houses occupied by mission personnel was located in a saucerlike area without any natural drainage. * * * In the wet season * * * accumulation of water was so serious that the residents were reduced to wearing boots and using boats. * * * Each house had been costing the Government over $300 a month for maintenance alone. These houses had originally cost the Government $30,000 each." Strike 7.

That same Carter dePaul sold his 10-year-old Cadillac and a record player to Universal Construction Co. for local currency which "our Embassy in Laos converted * * * into $3,038, representing payment to dePaul of about three times the amount he could obtain on the open market." Strike 8.

The committee report sums up. The decision to support a 25,000-man army "to promote stability" has had effects which "detract from that stability."

Too much U.S. cash put into Laos resulted in "speculation in commodities and foreign exchange, inflation * * * corruption, and destruction of any stability, political or economic."

"The aid program has not prevented the spread of communism in Laos. In fact, the Communist victory in last year's election, based on slogans of 'Government corruption' and "Government indifference' might lead one to conclude that the U.S. aid program has contributed to an atmosphere in which the ordinary people of Laos question the value of the friendship of the United States."

Here we see truth is indeed stranger than fiction. Sometimes, however, truth and fiction coincide. Is it a coincidence that "U.S. Aid Operations in Laos" and "The Ugly American" tell the same story?

Should Colleges Make "Loyalty" Dirty Word?

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 14, 1959

Mr. GROSS. Mr. Speaker, it is apparent that some persons have lost sight of the real purpose of the National Defense Education Act, which is to insure trained manpower of sufficient quality and quantity to meet the national defense needs of the United States.

Under the circumstances, it is difficult for me to understand the logic of persons who contend that the act's loyalty oath requirement is an invasion of academic freedom. While I question the necessity of a special oath, I do believe that loan recipients under the act should be required to take an oath of allegience to the Constitution of the United States.

In my opinion, the stand taken by the Waterloo (Iowa) Daily Courier on this issue is sound, and as part of my remarks I desire to include the following editorial which appeared in the Courier's June 24 edition:

The Grinnell College Board of Trustees has voted to decline participation in the Federal student loan program until the so-called loyalty oath requirement is repealed.

This, we believe, shows emotional thinking by people who should, above others, be able to think clearly. To prevent its students from obtaining Federal student loans for a trivial reason such as this represents an obsession with a doctrinaire fear that academic freedom will be invaded.

The purpose of the so-called loyalty oath is to prevent Communists or others who advocate the use of force in settling political issues from receiving Federal aid in obtaining an education. Does the Grinnell College Board of Trustees believe that Federal student loans should go to such students? The question ought to be answered; and it ought to be answered by a simple "Yes" or "No."

We would be inclined to agree that the loyalty oath is a nuisance and probably ineffective. Indoctrinated Communists will take a perjured oath and their number is so small that an attempt to prevent them from participating in the loan program may be more effort than it is worth. And it may reasonably be argued that a negative, I-don't-believe, type of oath is a poor way to teach loyalty. As Representative H. R. Gross suggests, perhaps an oath to uphold the Constitution of the United States would be a better way to promote affirmative loyalty.

Everyone agrees, of course, that a college has a right to refuse participation in the Federal program. And we do not believe that the people on one side of the loyalty oath controversy are any less patriotic—in the broadest sense—than those on the other side.

But the Grinnell action seems to say: We don't believe a government has a right to distribute governmental aid only to those who are loyal to it. Yet there is an absolute contradiction between democracy and those systems which advocate the use of force to settle political issues; and both concepts cannot for long survive side by side in the same society. Just as the right of free speech is limited by penalties for slander, so academic freedom is limited by the necessity of keeping society on a path in which reason

replaces hate and majority rule replaces killing of the opposition.

We believe academic circles need to do some rethinking of the loyalty issue. The McCarthy era conditioned many people, like an old prizefighter, to come out punching at the sound of a bell. Do these people really believe that the welfare of America is served by teaching that "loyalty" is a dirty word?

Operation Bootstrap, Reservation Style

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 14, 1959

Mr. BERRY. Mr. Speaker, I have again asked permission to make comment regarding the Indian industrial self-help bill, patterned after the Operation Bootstrap program of Puerto Rico.

In the past few days I have received letters from three reservation superintendents, men who live with this Indian problem, men who work with this Indian problem and men who have dedicated their lives to the task of helping to provide opportunity to the Indian people.

Through the years I have not only worked with these men but have the greatest respect for their efforts and their ability. The first letter under date of June 29 reads in part as follows:

I was very pleased to receive your Operation Bootstrap for the Indian people. I think it has a great deal of possibilities and I assure you that I will do all I can to help develop thinking concerning the contents of the material you sent me.

I wholeheartedly agree that what our people need is opportunities on the reservation as well as opportunities off the reservation.

The next letter under date of July 1 reads in part as follows:

I have read with interest the comments under "Operation Bootstrap For the Indian People" and the other material in connection with this subject. We have also discussed this matter with our joint advisory committee which is composed of our top department heads and tribal administrators and representatives of the tribal council.

It is the opinion of our advisory committee that your idea has considerable merit and that it would receive the support of people at the reservation level. As you probably know, the tribal council at this jurisdiction has gone on record supporting industrial development and has indicated that they would give serious consideration to providing financial assistance if a workable plan is developed. With the completion of the Oahe Dam and its related benefits, we can visualize conditions favorable to industrial development in central South Dakota. We have made preliminary inquiries and studies in this field and feel that there is a good potential for interesting industry in locating in this area.

As you have pointed out, natural resources of the reservation cannot possibly support the resident population in a satisfactory manner and if some other source of income can be developed, our people would be able to raise their standard of living.

The third letter was received this morning and is dated July 10. It reads in part as follows:

Receipt is acknowledged of your letter and a copy of your proposed bill for the industrial development of Indian reservations. We, of course, feel that this is a step in the right direction and is the only way that economic security can be established in this area.

Obviously, agriculture is not the only answer and until something to bring jobs to the Indian country is established, the low economic standards of this area will continue.

We have tried, unsuccessfully, to bring industry here, working with the tribal council. * * * While there may be differences of opinion on the exact provisions to be placed in such a bill, we feel sure that no one will take exception to the general idea.

We do not have any particular comment concerning any of the provisions of the bill and although, as we say, there may be individuals objecting to one or more of the various provisions, we feel that the bill generally is good and we do not at this time recommend any change.

Mr. Speaker, action on an industrial program is long past due. The Indian people are entitled to greater opportunity. They are entitled to a program that will provide opportunity and economic security, both on and off their reservation areas. Operation Bootstrap, reservation style, is tailored to do that job.

No Fairy Tale

EXTENSION OF REMARKS
OF
HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 14, 1959

Mr. WALLHAUSER. Mr. Speaker, the President of the United States has, in a very unusual and intriguing manner, stated a fact of life.

This was in connection with a conference that he held at the White House with Mrs. David G. Fernald of Upper Montclair, N.J., a valued constituent of mine, who was recently elected cochairman and Ned Cushing of Downs, Kans., who is the new chairman of the Young Republican National Federation.

This editorial appeared in the Newark (N.J.) News on July 13, 1959, and makes good reading:

NO FAIRY TALE

President Eisenhower thinks we might begin telling our children and grandchildren a new kind of bedtime story. It would explain to them how the future of all American youngsters is mortgaged because of heavy Federal spending and the big national debt. One of these tales of prudence, the President suggested, could start: "I am not supporting you—you are supporting me."

The President passed the idea along to Ned Cushing of Downs, Kans., and Mrs. David G. Fernald of Upper Montclair, the new cochairmen of the Young Republican National Federation. He was discussing with them the need for wisdom and restraint in public spending.

The President has good reason for wanting to get the message across to the young.

For two decades Federal policy was influenced by an economic philosophy which found virtue in debt and deficit spending. Regard for the taxpayer's dollar was identified with reaction.

The effects of this thinking penetrated down to the family level. Many came to assume that debt is a normal condition of domestic finance and installment buying an inevitable method of household procurement.

Now spendthrift economics are under growing attack. Public debt is coming to be recognized for what it is, a liability that must be paid off and that meanwhile imposes heavy interest charges. Fewer now believe that by spending money it doesn't have the Government can create prosperity.

But as we can learn by listening to congressional debates, such truths percolate slowly. President Eisenhower was suggesting, masking his seriousness in a whimsicality, that sound financial ideas must be planted early in young minds, before they can be led astray by easy-money trickery.

How To Solve a Metropolitan Sewage Problem

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mr. JOHNSON of Colorado. Mr. Speaker, under leave to extend my remarks, I include in the RECORD the final story on Metropolitan Denver's sewage problems written by Bill Miller for the Rocky Mountain News, and published June 29.

It was my privilege on July 6 to sit with the Joint Sanitation Commission in the Colorado Governor's office to discuss with metropolitan political and sanitation leaders the steps to solution such as here proposed.

Also, I was proud to report to them how the House of Representatives had passed the bill of the distinguished gentleman from Minnesota [Mr. BLATNIK], and how H.R. 3610 would encourage municipalities to join in constructing and operating more economical and effective sewage treatment plants.

People will not forever tolerate filthy water for cooking and bathing. Government at all levels may as well take the action necessary and do it with sensible management and less cost. The time is now.

I was pleased to hear Dr. Roy L. Cleere of Colorado's Department of Public Health say he was prepared to enforce Colorado's new law requiring secondary sewage treatment. He will be lenient, he said, only if good intent and prompt, satisfactory progress is made in the next few months.

The Denver metropolitan area will be helped to solve its problem by prompt enactment of H.R. 3610.

The article follows:

NO QUICK SOLUTION TO SEWER PROBLEM

(Last of a series, "Metropolitan Dilemma")

(By Bill Miller)

There is no quick, inexpensive panacea available to cure the sanitation ills of the Denver metropolitan area.

But, unless specific remedies are taken, the sewer problems will increase, as will the cost of solving them.

If there is a long-range solution to the problem—and many believe there is—it can be summed up in two words:

Metropolitan authority.

Such an authority would not necessarily be limited to the one problem of sewage collection and disposal. It would cope with water, health, parks, air pollution, police and fire protection.

STARTING POINT

But sewage disposal and prevention of stream pollution offer a starting point from which metropolitan citizens can try working together for the good of all.

In discussing sewage, two basic facts must be kept in mind. Sewage disposal cannot be separated from water supply and the Platte River drains the entire area.

Here, then, are steps to be taken to alleviate sewage and pollution problems now and eventually solve them.

1. Establish a metropolitan sewage authority.

2. Halt construction of small, inadequate sewage plants.

3. Stop creation of small political sanitation districts.

4. Update available studies and surveys in population, future land use, stream flow, water supply and water rights, and similar data.

5. Using this data, form a long-term plan for the entire area and adhere to it.

6. Adopt State laws, to bring consolidation of overlapping districts.

7. Enforce existing sanitation standards if they are realistic and amend them if they are not.

There are many reasons why a metropolitan sewage authority is recommended as the most feasible solution of sewage problems in the Denver area.

ALL LEAD TO PLATTE

All drainage ditches and creeks eventually lead to the Platte River. An authority with control of all area sewage could build and operate three or four basic, complete plants at strategic points along the Platte.

Then, instead of having 21 haphazardly run plants, the area could have 3 or 4 efficiently operated disposal units that would handle all sewage.

Existing plants would not be abandoned immediately. It would take several years to plan, engineer, and build the bigger plants and connecting lines.

Existing plants, even after construction of new ones, would continue in service until their life span is exhausted. The new plants, however, could immediately pick up and process the overloads. As the other plants wear out, the new ones gradually would pick up the entire load.

Using per capita cost as a basis, it has been proven that a large number of small sewage treatment plants are more costly than a well-designed plant serving the same population.

EFFECTIVENESS

Black & Veatch, Kansas City consulting engineers, say:

"Of the Denver area data, operating costs for the 3 complete treatment plants show per capita operating costs for 1 of them, serving 26,000 people, to be approximately $0.92 per year as compared to $1.68 for 1 of the smaller plants serving 7,000 people. Annual per capita operating costs for Denver, serving 550,000 people with primary treatment, were $0.62 in 1956."

In addition, plants are only as effective as the operation staff. It is virtually impossible, Black & Veatch say, to staff small plants with highly trained, competent personnel.

By concentrating sewage treatment at three or four major plants, more competent personnel, attracted by an adequate wage scale, would be hired.

Black & Veatch maintain that most plants in the Denver area are not satisfactorily operated and produce poor effluents.

"The result has caused nuisances and imposed a public health hazard on municipal water supplies," the firm said. "Consolidation of sewerage facilities will provide important benefits."

Consolidation and creation of major plants are not easy goals.

One of the biggest obstacles is water law and the rights of downstream users.

Take Denver, for instance.

Its main plant processes an average of 54 million gallons of sewage a day. The effluent is dumped into the Platte.

Irrigation users siphon off Platte River water, through the Burlington ditch, directly below the sewage plant, and others.

With a giant consolidated plant below the confluence of the Platte and Clear Creek, Denver could pipe its primary effluent the short distance to the new plant for secondary treatment.

COURT DECISION

Glenn Saunders, Denver Water Board attorney, points to the Supreme Court's ruling in *Pulaski* v. *Trinidad*. The Court held that running sewage water through a plant doesn't change the character of the water.

The user, Denver in this example, must return the flow to the stream for the benefit of downstream diverters. If Denver's 54-million-plus gallons bypassed the Burlington ditch, it could cut streamflow from these users.

The same is true in Clear Creek.

A proposal now under study by the joint sanitation commission calls for a giant pipeline from a point somewhere below Golden to the site of the proposed new plant.

All sewage effluent from all areas along the creek would be dumped into the pipeline. This certainly would prevent pollution of the creek. But if there were no effluent, waterflow in the creek would be reduced and downstream users would have far less water.

When Blue River water, a fresh supply, comes to Denver through the Roberts Tunnel the question of reuse will arise.

Saunders says the Denver Water Department wishes to work with all citizens in the area to make his water available for reuse. He points out that engineers have estimated that 97 percent of all water used for domestic purposes eventually finds its way back to streams, one way or another.

BASIC QUESTION

The reuse question is a basic one. But it can be answered.

The foundation of Colorado water law is found in section 6, article 16 of the consitution. This section protects the right of diverting unappropriated waters of any natural stream for beneficial use and stipulates further:

"When the waters of any natural stream are not sufficient for the service of all those desiring the use of the same, those using the water for domestic purposes shall have the preference over those claiming for any other purpose, and those using the water for agricultural purposes shall have preference over those using the same for manufacturing purposes.

"When a lower referred use such as agriculture has the prior appropriation, its water can be taken for the higher domestic use only by condemnation, that is, payment must be made as for any other property right."

If the area is to build major plants, then construction of additional small ones should be halted immediately.

Colorado's Legislative Council, in a 1955 report on special districts, came to these conclusions:

Financial procedures of many such districts are lax; many do not follow acceptable budgeting or accounting practices; there are conflicts with general property tax laws; there are innumerable laws on the same subject; there is no uniform method of forming special districts.

RECOMMENDATIONS

Among the council's recommendations:

"A more flexible method of consolidating existing districts, coupled with statutory permission for several districts to finance and operate joint facilities would be helpful."

All sanitation districts have elective boards and the power of taxation.

The Colorado Tax Commission report of 1957 shows, for example, that 25 water-sanitation districts in Jefferson County collected almost $500,000 in revenue in a 1-year period.

Abolishing special districts, however, challenges the right of citizens to govern themselves.

However, most people are unaware of the many districts in which their homes are located.

CITIZENS' RIGHTS

For instance, in January of this year the Clear Creek Valley Water and Sanitation District asked voter approval to spend $140,000 for a secondary sewage treatment plant.

The district, which takes in the area between Clear Creek and Arvada, serves approximately 1,000 homes and a population of 4,000.

Only 32 votes were cast. Twenty-five voters gave their approval for the expenditure. Seven voted against it.

Adoption of the State laws forcing consolidation of districts would not take away the rights of citizens to govern themselves.

Under such consolidation provisions could be made for voters on a metropolitan basis to accept or reject the idea of a metropolitan sewerage authority.

But the State health department or some State agency should have the power to protect the health and welfare of the general population.

The State already has the right, under the Dr. Wells bill passed by the last legislature, to tell districts what standards have to be met. It also has the duty to approve or reject any sewage plant any district plans to build.

The Federal Government helps bear sewage plant costs. It pays up to 30 percent but not more than $250,000 for a plant.

Under Public Law 660, Colorado was allotted a total of $635,700 for such projects in 1959. The money has been allocated and additional Federal aid will not be available until 1960.

Several amendments to this law are being considered by the present Congress. One would raise the per project maximum to $500,000. Another would permit each district in a consolidation program to obtain a full grant, rather than, as now, only one grant for the entire consolidation project.

No. 5 is another basic recommendation.

LONG-TERM PLAN

A long-term plan must be formulated and carried out.

Otherwise, small districts will continue to form; small plants will continue to be built to take care of pressing needs; sewage treatment needs will never catch up with the population; streams will continue to be contaminated.

We have taken the step in highway building. Communities recognize that master

highways, crisscrossing political boundaries, have to be planned years in advance. The same must be done in treating metropolitan sewage.

The joint sanitation commission has taken the first step.

Composed of representatives of most districts and towns along Clear Creek as well as Denver, the commission has agreed to study building a major plant near the confluence of the Platte and Clear Creek. It would provide complete treatment from Golden to the Platte as well as taking care of Denver's secondary treatment needs.

The commission hopes to finance the study (cost $10,000 to $15,000) through voluntary contributions of existing districts. The study would update Black & Veatch and other reports and the commission also plans to:

Outline adequacy of treatment of each plant in the basin; study effects of effluent on irrigation and domestic water intakes, approximate costs of developing the treatment plant and lines; estimate time of construction and suggest formulas for sharing costs.

FOR THE FUTURE

The Black & Veatch basic plan calls for eventual metropolitan plants at Englewood, by enlarging the existing plant; continued use and expansion of Denver's northside plant; expansion of the North Washington plant at the confluence of the Platte and Clear Creek; and a South Adams County plant, also on the Platte, north of Thornton.

Estimated cost of such facilities, in 1957, was $23.5 million.

That's a lot of money. But it will cost even more for individual districts and towns to solve the problem independently. And the problem will have to be solved.

Why Send Our Money Elsewhere?

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Titusville (Pa.) Herald of July 11, 1959:

WHY SEND OUR MONEY ELSEWHERE?

The National Education Association last week voted overwhelmingly to start a grassroots campaign to flood Congress with telegrams urging support for a massive program of Federal aid to education.

However, one of the very few persons to vote against the resolution at the association's annual convention was a delegate from Virginia who expressed some very sound wisdom. "To me it seems incongrous to send $1 to Washington just to get 60 cents back," he said.

This sentiment applies to many other States, including our own. Pennsylvania is a "have" State. The Federal Government will tax its residents to raise money for any aid to education. After using up some of this tax money in bureaucratic administration in Washington, the aid will be distributed throughout the Nation in the form of outright grants. With Pennsylvania suffering its own financial woes, why should the money of its citizens be given to the "have not" States, the very States which are luring away our industry with ruthless competition?

The responsibility for the financial problems of education rest not with the Federal Government but with the State and local governments, preferably the latter.

Life of Accomplishment

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 14, 1959

Mr. RANDOLPH. Mr. President, I ask unanimous consent that an article I wrote for a nationally circulated magazine more than 3 years ago on the life of a splendid West Virginian, Mr. Raymond M. Davis of Morgantown, be printed in the Appendix of the RECORD.

Mr. Davis, whose forebears were among the pioneers of our native hills, has remained true to the tradition of the hardy folk who settled West Virginia. Although the physical frontier has long since been conquered, men like "R. M." have carried their imagination, their industry, and their capacity for doing good to new frontiers.

Thus, I am reminded of Mr. Davis as an early advocate in the superhighway concept. And, for the past 18 years, he has devoted much of his energies and talent to the cause of world peace. Indeed, Mr. Davis was the original stimulus for the Department of Peace proposal I introduced as a Member of the House of Representatives in 1945, and again befor this body in the present session.

Although Mr. Davis recently retired from the active management of the coal mining operations in which he had substantial interest and ownership, he continues a creative life by contributing to many worthwhile causes and by his constant helpfulness in matters affecting the youth of his community, the State, and the Nation.

I commend this article to my colleagues as an illustration of the strengths and virtues of one of America's earnest exponents of a free economy whose horizons were and remain broad and objective.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LIFE OF ACCOMPLISHMENT

(By Jennings Randolph)

If Raymond M. Davis, of Morgantown, W. Va., had not been born, Horatio Alger would have had to invent him.

For in R. M. Davis, multimillionaire coal magnate, we have a robust symbol of success on Main Street—success achieved in the Alger tradition of "Struggling Upward."

Davis' success has been made possible because early in life he set a goal from which he has never deviated. Like Diogenes and his lamp, R. M.'s goal served to keep him on course when the going was particularly rough. Faith in the worthiness of his goal plus a personal philosophy which allies action to the ideal enabled R. M. Davis to move forward in the face of adversity that would have probably broken a less dedicated man.

Davis was born and grew up on a farm in the hills of West Virginia. Recalling his early days, he says:

"I have worked on a farm, plowed with a root-cutter plow, suffered the hardships and enjoyed the pleasures of hard physical work. On cold mornings, I have driven the cows from their places that I might warm my bare feet where they had lain. My education has been chiefly in the school of hard knocks."

His formal schooling ended at the age of 15 when he went to work in the West Virginia oil fields—turning over all his earnings to his father until the age of 21. He spent his spare time at nights learning telegraphy, hoping that he could use it to build a better future.

In 1905, Davis married Fannie Wilson. He and his young bride followed Greeley's advice and left for Los Angeles on their wedding day. However, the only opportunity—in fact the only job—Davis could find there was as a streetcar conductor. He traveled the trolley route for 2 years before he and his wife returned to West Virginia.

Davis stayed in the transportation field for the next few years—only he switched from trolleys to trains. Starting out as a $30-a-month telegrapher he went from yardmaster to train dispatcher to car distributor on the Morgantown and Kingswood Railroad.

By this time Davis and his wife had two young daughters—Alice and Mary.

The mining and selling of coal is the major industry of the Morgantown area, and around it young Davis set his goal. He believed he could have a wonderful future in the coal business. Each month he and his wife managed to save a little from his $50 dispatcher's salary and in 1915 he quit his railroad job and leased 10 country mines. He hauled coal by horsedrawn wagon to the railroad siding, loading it in cars for shipment to market. The next year he and a friend purchased some acreage along Scott's Run of the Monongahela Railroad, opened a new mine, and launched themselves full scale in the coal industry.

Everything that happened in the next several years seemed to indicate that R. M. Davis did have a wonderful future in the coal business. By 1924 his position of modest yet solid prosperity enabled him to build the home of his dreams.

The depression of the thirties dealt him a blow which didn't cost him everything—only his worldly possessions. As he puts it, "I lost every cent—including our home and furniture."

When the smoke had cleared, Davis discovered that he had only $2.85 left in the bank, with judgment for endorsements on former company notes of approximately $150,000.

His partner immediately went into bankruptcy but Davis refused to follow.

"I believed that I could work my way out of the situation."

And so R. M. Davis tightened his belt, flexed his muscles, both physical and spiritual, and proceeded to turn his adversity into an advantage.

People in Cleveland owned and operated a Morgantown mine—Bunker mine—along with several others throughout the country. Davis knew that they cared little about Bunker even though its potential was tremendous. He decided to lease it.

Only 6 weeks elapsed between the time Davis was out of the coal business and the time he was back in.

"For the next 3 years—grim depression years," Davis says, "I had to forgo the lunch habit, as I didn't have enough money to include that meal in my daily diet." But his shirt was starched, his suit was pressed, and he kept a smile on his face.

Sales were made over the telephone at night—when long-distance rates were cheap-

er—because phone calls cost less than travel fare.

Thus disciplined and guided by a scale of values which refused to temporize with honesty and personal integrity—which would not countenance hurting others in the solution of his own problems—R. M. Davis began to move forward again. His only collateral was his reputation.

Within 7 years, Davis had paid off all his outstanding debts and satisfied his judgment creditors. He bought Bunker Mine in 1935.

Today the mine has no indebtedness. Its daily capacity is 5,000 tons, with reserves estimated at more than 40 million tons. Davis, at 74, is still active in the sale of all of the coal produced there—maintaining 8 to 4:30 office hours 6 days a week as president of the Davis-Wilson Coal Co.

The house which he had built in 1924 and lost in 1930, he purchased and moved into once more in 1944. The homecoming of Davis and his wife was the occasion for thousands of congratulatory expressions from friends and admirers throughout the Nation.

Repossession of his roots and comparative security did not mean that R. M. Davis was going to retire into a life centered only about coal and coupon clipping. His eyes were set unflinchingly on world peace with youth education at the base.

At his request, I had already (in 1942) introduced a measure into the U.S. House of Representatives, recommending that the President invite foreign governments to send representatives to attend an international constitutional convention for the purpose of drafting a constitution in the interest of world peace.

At a hearing, members of the House Foreign Affairs Committee listened with rapt attention as Davis, the star witness in the testimony, read his 16-page statement recommending that the United States should take the lead in spreading the gospel of peace throughout the world. After he had finished the late Representative Charles Eaton, of New Jersey declared:

"Mr. Davis, you may be unschooled, as you tell the committee, but you are certainly not uneducated. That is one of the finest documents I have ever listened to."

This measure was reintroduced in 1943 and twice during 1945. In the latter year the creation of a Department of Peace was urged, with a Secretary of Peace at its head. The argument behind this proposal which I introduced in June 1945, was as reasonable as it was timely. Why spend billions preparing for war, but nothing trying to prevent war? If a Defense Department is needed to keep abreast of the best implements of war, why not a Peace Department to maintain, at all times, the best implements of peace?

Even prior to this, late in 1942, hundreds of copies of Davis' booklet, "Proposed New International Order," were distributed to every Member of Congress and to the leaders of nations all over the world. In January of 1945, he published his "Constitution for a United Nations Government" which received widespread approval at the San Francisco United Nations Conference. Davis was selected by the State Department to act as observer at that Conference and was cited by Dean Acheson for his active part in stimulating interest in the establishment of an international organization for world peace.

As already pointed out, at the base of R. M. Davis' blueprint for peace lies education.

In June of 1945 he wrote President Truman urging the creation of a Department of Peace. He stressed that one of the chief functions of such a department should be to encourage our colleges, universities, high schools, churches, and religious organizations to offer programs designed to develop a better understanding of the fundamental relationships of all peoples of the world.

"Every encouragement should be offered to scholars to study and write in the field of world problems," he declared. Toward this end he published in 1946 another book, "The World Begins To Live."

As usual, Davis not only proposed but acted in terms of his proposal. In 1947, he sponsored an essay contest for high school students throughout West Virginia on the subject, "Creating a Department of Peace Within Our National Government."

Shortly after the essay contest, he established a $5,000 scholarship at the University of West Virginia to encourage study in the field of international relations.

The momentum generated by one educational enterprise led to another. In 1949, Davis and his wife gave $265,000 to the Wesley Methodist Church in Morgantown for constructing and furnishing the Wesley Youth Center. Last April they provided $70,000 for enlarging the present plant. About 100,000 high school and college students and other groups use this youth center annually.

R. M. Davis is alive to the value to our international relationships of a spiritually fit youth population here at home.

While his vision of a Department of Peace has not yet materialized, a most significant step in that direction was taken on March 19 of this year. On that day, President Eisenhower created an unprecedented Cabinet-level post of Special Assistant to the President for Disarmament Problems. The post, popularly referred to as the "Secretary of Peace," was created with a view to easing world tensions in the atomic age and was given to Harold E. Stassen.

There can be no doubt that this development in "facing up" to our current world responsibilities was due in large part to the unflagging efforts of R. M. Davis. And while it does not precisely hit his target, it brings that target into the clearest focus to date.

On December 19, 1954—just about 3 months before our new Peace post was established—Davis wrote a letter to President Eisenhower. He began by referring to recent remarks made by the President.

"It is time for all of us to renew our faith in ourselves and in our fellow man. The whole world has been far too occupied with fears. It is time for people throughout the world to think again of hopes, of the progress that is within reach."

Davis then took up in his own words:

"A Department of Peace, Mr. President, can and should be established within the framework of the Government of the United States to achieve the objective which you seek. We are a creative and peaceful people. This is our opportunity to prove to men and women throughout the world that America means business in building a dynamic approach to the coordinated effort for peace in the positive rather than in the negative."

In the positive rather than in the negative. Probably no words could describe more aptly the way R. M. Davis has seen life—and the way he has lived it.

And the life of R. M. Davis is a testimonial to the fact that it is not as important into what circumstances a man is born as where and how he goes from there.

Born into poverty, Davis became a multimillionaire. Without benefit of extensive formal schooling, he influenced the thinking of eminent statesmen and encouraged education for youth. He did not accomplish this by passively sitting on the sidelines of life.

He was allocated a certain number of years—his lifetime—on the face of the earth just as is every other human being. What he did with that lifetime was up to him—just as it is with every other human being. R. M. Davis chose to cram each one of his days full of constructive action to back up his beliefs. Result—a life of accomplishment.

Senator Johnson of Texas Stands Firm

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 14, 1959

Mr. MANSFIELD. Mr. President, on Monday, July 13, the Washington Evening Star published an article entitled "JOHNSON Hews to Own Line," written by Cecil Holland, a very able staff writer for the Evening Star. In Mr. Holland's article, the philosophy of the majority leader is set forth in great detail. The Senator from Texas explained his position to Mr. Holland understandably and reasonably.

I am in full accord with the views expressed by the majority leader.

Mr. President, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JOHNSON HEWS TO OWN LINE—SENATOR WON'T LET ATTACKS BUDGE HIM

(By Cecil Holland)

Senator Democratic Leader JOHNSON intends to pursue his own legislative way, unswayed by Republican attacks and criticism from liberals within his own party.

He made this clear in an interview in which he also emphasized that he will not undertake to pass legislation which has little chance of White House approval simply to create party issues for the 1960 Presidential and congressional elections.

The overwhelmingly Democratic Congress, in Senator JOHNSON'S view, can best serve the party by enacting as constructive legislation as possible in the national interest.

Nor does he admit for a minute, as critics within his own party contend, that the 86th Congress has been laggard so far in the 1st session. Despite what National Democratic Chairman Paul M. Butler thinks, Senator JOHNSON believes the Congress already has made a good record and will make a better one before the session ends.

With regard to the complaint of Mr. Butler and other Democratic liberals that the Democratic leadership has adapted itself too much to the administration's thinking on certain legislation, Senator JOHNSON said:

"In this world, none of us ever gets everything that he wants. I think the real test is whether we take what we have and do the best we can with it."

Senator JOHNSON said the Republican attacks on the 86th Congress as a spender was an effort to tear down its record in view of national polls showing it was held in the highest favor of any Congress in its history. The June Gallup poll, the Senator said, showed 61 percent of the people approved the Democratic Congress as compared to 58 percent in the Roosevelt landslide in 1936.

SEES GOP DESPERATION

"The Republicans are desperate because they are continuing to drop in the national polls," the Senator commented. "You can see how desperate they are every Tuesday morning as they leave the White House after meeting with the President.

"No longer is this a meeting where programs for the best interest of the country are worked out. It has turned into a partisan meeting where the White House steps are used to propagandize and smear the Congress.

"They have become so desperate now that their political committees and political man-

agers and their political newspapers are trying to create division in the Democratic Party. The only way they can defeat us is to divide us."

Senator JOHNSON said that a year ago they were "hollering socialism" at Democratic proposals for combating the recession. Their new line, he added was to divide the Democrats.

"Some Democrats are getting sucked in and will continue to contribute to the comfort of the Republicans. But the voters are not going to be misled."

BACK-DOOR "RAIDS" DENIED

Senator JOHNSON said part of the Republican propaganda was the charge that the Democratic Congress has resorted to backdoor raids on the Treasury by authorizing programs that would be financed by Treasury borrowing rather than direct appropriations.

He said administration officials concede that the only socalled backdoor financing to become law was requested by the administration—and represents a total of $4.5 billion for the International Monetary Fund and the World Bank.

"We won't have any backdoor financing that isn't recommended and approved by the administration," the Senator said.

Junior Legion Baseball Great Program

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 14, 1959

Mr. MUNDT. Mr. President, while the sports world attention is focused on the recent all-star baseball game—one of the great attractions of the year—and the remaining months of the Major League season, throughout the land tomorrow's big league ball players are reaching an important point in their season.

I speak now of the junior baseball program sponsored by the American Legion, and originated in my home State of South Dakota at Milbank. More than 18,000 Junior Legion baseball teams are competing this year in this wonderful sports program sponsored by one of our outstanding veterans organizations.

As the weeks pass, these teams will participate in elimination tournaments, starting with local district tournament contests, leading eventually to the State tournament. The final goal, of course, is to enter the American Legion's national finals—the world series for our youngsters—and become the champions.

However, the importance of the Junior Legion program does not rest in the national finals, but as it is carried out in each community. Legion posts which sponsor a local baseball team are providing the youngsters of their community with an excellent competitive summer activity as well as taking a firm step in combatting juvenile delinquency.

In citing this fine program, Mr. President, I wish to call to the attention of my colleagues an excellent editorial which appeared in a recent edition of the Aberdeen (S. Dak.) American-News. I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TEAMWORK, FAIRPLAY ARE WHAT COUNT

From 29 teams in 1926 to more than 18,000 in 1959 is only a part of the American Legion's record accomplishment in junior baseball. During those years it has graduated more than 15 million boys from its ranks. Of these, more than 2,000 have become major league stars. This in itself is a record not equaled by any other activity.

Of the thousands of games played, teams have won and lost but every boy who has participated has graduated a winner regardless of the outcome of the game. The American Legion believes that a boy on the ball field benefits in many ways. He learns the lessons that aid in the development of a citizen of responsibility. Legionnaires do not suggest that the boy who is concentrating on the next pitch or the double play is aware of the lesson of life he is learning while playing ball.

But in later years he will realize that in learning to work with his teammates, play cleanly and fairly and to accept his responsibility, he was learning to respect the rights and dignity of his fellowman. He was learning how to be a responsible citizen. In addition he was developing his coordination and physical stamina.

When that citizen of tomorrow takes his position in the affairs of our Nation he will have the moral and physical strength needed to meet the challenge America will face. American Legion junior baseball could ask for no finer tribute nor could it serve any greater cause.

Two factors have been instrumental in the building of this fine activity. First, the unselfish devotion of those adults guiding the program and second, the support, interest and encouragement of the many fans. The community would do well to offer more opportunity to our young people through activities of this type, and only through support can we expect to give every boy the chance to be a "winner" through this worthwhile activity.

Charting a New Middle East Policy

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, July 14, 1959

Mr. WILLIAMS of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an article from the June-July issue of Land Reborn, written by the distinguished senior Senator from Minnesota, Senator HUBERT HUMPHREY. In connection with our thinking to chart a new course toward the Middle East, Senator HUMPHREY presents three sound basic principles of American foreign policy which should serve as a guide to all of us who are concerned about one of the world's most troubled areas.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHARTING A NEW MIDDLE EAST POLICY
(By HUBERT HUMPHREY)

The topic that I am to speak on should be looked upon as a challenge rather than a promise. As a U.S. Senator, I have attempted to interest myself in the broad areas of the political, economic and social life of our Nation and the world. This by itself limits one's knowledge. But there is an interdependence among major public issues.

You cannot, for example, be a liberal abroad and a reactionary at home. You cannot believe in the dignity of man, his right for equal protection under the law, the fullest participation in all the activities of communal life abroad, and then deny these same rights back in the United States. The trouble is that too frequently our foreign policy objectives are distorted, weakened, limited and, at times, made totally ineffective by the sins of omission and commission in the body politic of the United States of America.

One of the first things we need as we chart a new course, not only toward the Middle East, but anywhere, is to recognize that when we practice racial or religious discrimination we decisively limit the effectiveness of our foreign policy. I would suggest to my Christian and Jewish brethren that we are not a majority in the world. But, fortunately, the principles that inspire our faith, the principles of one God and the brotherhood of mankind, are principles that are rather universally accepted by the great mass of mankind.

Let me put it into current terms. There is no doubt but that the incident at Little Rock has cost this Nation dearly on the international scene. This is not just a domestic tragedy, not merely a challenge to law abiding citizens within the United States. We have to understand that. If we reject people because of their color, their national origin or their station in life, our foreign aid money will be wasted.

FIRST, THE PEOPLE

I happen to believe there are three principles in American foreign policy that ought to guide us at this stage of our history—people, progress, and peace. Every policy ought to be directed toward the well-being of people, identifying everything we do—whether medical care, food, technical assistance, economic loans, educational programs, or whatever may be the case—with people, not just rulers, not just the institution, but people. We understand this in America. We politicians understand this at home, so why can't we understand it abroad? I regret to say that our foreign policy has been derelict in its duty toward people. In the Middle East we have it identified with kings and oil rather than with people and water.

I am not one of those who believe that Middle Eastern oil is unimportant. It is very important. The Soviet Union would like it right now. It is very important to the economies of the Western nations. Our identification, however, has been with powerful forces in the area, forces which support the status quo or seek to direct economic development of these resources primarily for their own selfish purposes. We ought to have more identification with people and water for the obvious reason that the water is needed on the land and it means hope for the people.

Progress is the second principle. We Americans are the apostles of progress. We constantly condemn people in business, in politics, in education, and all other pursuits, if they are dragging their feet, refusing to take advantage of modern technology and other improvements. In America progress has almost become a religion. Progress has been our theme, but we can't get the people of

the world to understand it and I will tell you why. Too often we have people who are in charge of things who are afraid. They are afraid of the people with whom they are working, failing to understand the social and economic forces that are at work in the area. They tend to look upon progress as a kind of revolutionary or radical adventure.

Peace is the third principle. We have allowed ourselves to be pictured in the minds of too many people throughout the world as warmongers, rather than as the children of peace.

The truth is that we are a nation of peace, we are a nation of good Samaritans—a nation of generosity, of compassion. This is our history, this is our tradition. But if you pick up any newspaper, any journal, or you listen to any TV broadcast, any radio broadcast, a high percentage of the news and information will be about war, threats of war, new weapons, or other military matters.

It is mighty hard to get the message of peace across. In the 2 days that I was in the Soviet Union, I heard it dinned into my ears day and night. The propaganda that emanated from the Kremlin occasionally mentioned their great weapons as a reminder to the West. But to the people in Africa, Asia, Latin America, the Middle East, day after day they beam in with radio propaganda the words—peace, peace, peace. The atheists are taking on the mantle of peacemaker. What a paradox, what irony!

Why do we let them get by with it? If we are going to insist on whispering the message of peace, then I am afraid that we will have trouble getting our message across.

I ask all Americans to get busy on a little evangelism! We must outline a program of works of peace. We must wage peace. We must believe in peace. We dare not forget the terrible cost and catastrophe of war in this age of technology and science.

What do these things mean in terms of the Middle East?

First of all there is no area of the world, I suppose, which has a more constructive basis of history than the Middle East. The Middle East has been the crossroads of the world and of every invasion, every struggle between the different societies, religions, and forces that make up the area. It has been literally fertilized with the blood and bodies of millions of victims of war. Today much of this area suffers from malnutrition, illiteracy, poverty, frustration, disease, and hopelessness. I don't believe you can build any peace in an area until you start feeding the conditions that are conducive to peace.

There are dictators, large ones, and small ones there are demagogs, effective ones, and less effective ones. Both grow out of a particular kind of social, political, and economic climate. Before we are going to get a peace that is worthy of that beautiful name in the Middle East, we are going to have to strike some mighty blows against man's ancient enemies—poverty, disease, and illiteracy.

Much of this will have to be done, not by government, but by voluntary organizations. The truth is that some of our voluntary organizations, sectarian and nonsectarian, can do more good in the Middle East right now than some of our governmental activities, even if these activities were properly directed.

There is a suspicion on the part of the Middle East toward the West. We have inherited, regrettably, many of the liabilities of yesterday. We have inherited the mantle of colonialism even though we are an anticolonial society. But we have great allies, whom we ought to cherish and not scold, but allies who, regrettably, have had a history of colonialism. Happily they are now shedding it.

I don't believe we can construct an effective foreign policy for the 20th century unless we recognize that the same science and technology which offer the hope of progress, offer the threat of utter destruction.

ACCENT ON THE U.N.

I have long advocated that through the United Nations we seek the establishment of a regional economic development agency for the Middle East. The Soviets are engaging in a very unorthodox and unfair economic offensive in the area. We should say to them as the President did say last August, but has not yet implemented, that we are prepared to place into a fund for the economic development of the Middle East a sum of money equal to that required to implement the so-called Eisenhower doctrine and to be administered by the Middle Eastern countries themselves.

How do we know it will work? We don't know, but I know the present policy isn't working either. At least it isn't working very well. I don't even know whether anybody would accept my proposal, but I know we ought to make the advance. Instead of wondering whether or not the Soviets are going to boycott it, why don't we suggest it. Both the technical and financial aspects will have to be studied carefully. Financial assistance may be available from agencies such as the World Bank, our Development Loan Fund, and certain regional agencies.

We must learn to take the initiative on such matters. We let the last Assembly of the United Nations go by, for example, without vigorously pursuing the statement of policy which our President laid before the United Nations when we were in trouble in the Middle East over Lebanon. Apparently the only time we have real ideas is when we get into such a jam that we don't quite know how to get out. At that time the jam was very significant and the trouble was dangerous and the President of the United States gave one of his best messages.

I am going to suggest here most respectfully that I think it is your duty, and that of everyone else, to remind everyone—Republicans, Democrats, the executive and legislative branchs of the Government—that Middle East regional economic development is something that ought to be implemented.

What else ought to be implemented? There are many bilateral arrangements which can surely be undertaken. We have our programs with the countries of the Middle East and we ought to continue these. We also ought to have arrangements in the Middle East relating to, as I have felt for a long time, the internationalization of certain waterways.

Fortunately, fellow Americans, the sign "United Nations" is acceptable in the Middle East. There are some who do not like it, some who abuse it, and yet it has more acceptance than any other outside force. We ought to maximize its effectiveness with the utmost cooperation. We should not try to run the agencies. We should be willing to put in more of our financing and let the agencies be operated as they ought to be operated on a fair and objective basis under United Nations control.

I also feel that we ought to recognize that certain rivers, like the River Jordan, could be better developed regionally, but if they are not going to develop it regionally, then we sould help some country develop its share of it.

Furthermore, I think we as Americans had better recognize for once and for all that one of the great assets that we have in the Middle East, and which has brought with it obviously some problems, is that living testimonial of democratic institutions, the State of Israel.

I think that one of the most encouraging signs in the last 2 or 3 years is the self-restraint and the self-discipline of the Government and of the people of the State of Israel in the recent Middle East crisis. That kind of political maturity is to be commended.

With her technical know-how and skilled manpower, Israel can make a real contribution to the economic advancement of the Middle East—if the political situation permits this kind of cooperation.

I have heard all about the limitations of this. I am fully cognizant of the animosity which exists because of this state. I am not a Zionist, but I tell you this—looking at it strictly from the point of view of an American, a U.S. Senator, and one interested in peace and security—I say that we would be a great deal better off if we focused upon the positive example of a modern democratic state in this part of the world. Instead of apologizing for what has transpired over there in the last 10 or 11 years, we should point to Israel and say: "If you will bend your efforts the same way, with the same vigor, you will have the same kind of cooperation and assistance from the American people and the American Government and, therefore, we want less antagonism and more cooperation."

I would also caution you to remember that other states in the area can do much to help the nation of Israel. You have listed on the program here the subject, "Israel Looks to Asia and Africa." Let me say: Asia and Africa should also look to Israel.

There are the programs, the technical assistance, the development of trade and commerce—possibly not enough yet—but it helps. The seeds are there for multilateral cooperation. We Americans do not have any mandate to save the world alone. When we get that kind of feeling, we get a little self-righteous. I would suggest that we attempt to get other nations to join with us in carrying the heavy responsibilities of economic development. This goes for our NATO partners and any of the other nations with whom we work.

Then, in our own policies, we ought to have, not only for the Middle East, but for the whole area of the world of the rising new nations, an economic assistance program that is up to the requirements, and not one that just barely scratches the surface.

What I am attempting to say to you is that an international development loan fund program that is on a year-by-year basis, permitting little or no advance planning, is not only inadequate, but wasteful. It never brings into its mechanism the kind of people that can really dramatize through imaginative, constructive projects, the good works that ought to be accomplished.

We need a development loan program for the next 5 years of not less than a billion and a half to $2 billion a year. I am going to develop some proposals along this line in the Senate.

Of course, somebody will say that you cannot pledge each Congress in advance for what it will do. Well, no, you can't pledge it, but with leadership it is as good as a pledge.

One Hundred and Twenty-five Years of Church Service

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 13, 1959

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks, I would like to insert in the CONGRESSIONAL RECORD

an editorial tribute to the First AME Zion Church of Paterson, N.J., on its 125th anniversary.

The following editorial appeared in the July 11, 1959, issue of the Paterson News, of Paterson, N.J.:

ONE HUNDRED AND TWENTY-FIVE YEARS OF CHURCH SERVICE

Over the span of 125 years, the United States emerged from a virtual cocoon stage to become the most powerful Nation in the world. All the inventions which created a veritable new world were conceived in the same period, we moved from horse and carriage to the high-speed autos and the jet planes. The world became as one. We have fought numerous wars in the interim, the Civil War, Spanish American, two world wars, and the Korean conflict.

So the pride of members of the First AME Zion Church of Paterson is understandable as they mark the 125th anniversary of the founding of their first church in Paterson. Though the early records are obscured in the dust of time, it is known that the Paterson church is an off-shoot of the breakaway of a number of Negro clergymen from the white Methodist Episcopal Church of New York City some years before. The first three ministers of First AME Zion were believed to have been part of the seceding group.

Down through the years, First AME Zion Church has ministered to the spiritual wants of Negro residents of Paterson, many of whom became honored citizens in Paterson community life. One of them, Mrs. Jennie Amelia Graham Dry, has been a member for 70 years, and so it is appropriate that special honors are being accorded to her, along with a number of 50-year members who have dedicated themselves to the church.

It is a pleasure to record their respected role in Paterson church life, just as they are being singularly honored by their congregation, augmented as it is by newcomers to the city.

They include Mrs. Viola Adams, daughter of the late Reverend J. Harvey Anderson, former pastor; Miss Bessie Brown, one of the original members of the old Godwin Street AME Zion Junior Choir; Mrs. Carrie Dunn, daughter of the late Dr. John Henry White, former pastor, and the compiler of the church's original history; Mrs. Virginia Dunn, stewardess and the wife of William H. Dunn, trustee, who helped purchase the present site in 1915 along with James H. Dempsey, trustee, who has served as sexton of the church for decades and was on the land purchasing committee; Mrs. Grace Forting, who presented the present organ to the church in January, 1938, in memory of her grandmother, Mrs. Hannah Sisco; and Mrs. Virginia Satchwell, who lent the second Old Godwin Street AME Zion Church $1,000 for the purchase of the organ destroyed by fire in 1923.

The News salutes this sturdy symbol of Negro religious life in Paterson and bespeaks for its pastor, the Reverend Clifford Kirkpatrick, its members, and for the church itself continued fulfillment of a noble heritage.

Progress on Flood Control and Water Conservation

EXTENSION OF REMARKS

OF

HON. NEWELL A. GEORGE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 14, 1959

Mr. GEORGE. Mr. Speaker, in the public works appropriation bill for 1960 the Senate included funds for a start on the Wilson Dam. The importance of this project is portrayed in an editorial published in the Kansas City Star on Saturday, July 11, a copy of which is included in my remarks by unanimous consent.

The orderly progress on water conservation and flood control projects in Kansas is necessary for industrial progress and economic growth. The costs of these projects, once all of them in the Kansas river basins are completed, will be more than repaid to the Federal Treasury through the payment of additional taxes and through the revenue that would otherwise be lost due to devastating floods and lack of water.

THE WILSON DAM IS A TEST FOR THE KAW VALLEY

Eight years after the great flood you can see a fair prospect for the Kaw Valley river control program. At least the Senate has proposed a modest start on the small Wilson Dam. For this purpose the Senate proposes to spend $500,000 in the next year. The total cost of the dam, spread over several years, is estimated at around $16 million.

Compared with the big river control projects, the Wilson Dam is a small item. It is hardly a threat to the budget. On the Saline River it is in the upper reaches of the Kaw Basin near Russell. It could have such little effect on floods in this area that some people might wonder why Kansas Cityans are concerned over it.

The Wilson Dam is important in its own right, but it is now particularly significant as a part of the overall Kaw Valley program. With Tuttle Creek well advanced in construction it is time to bring along another dam to keep the program moving ahead. If Wilson can be started next year, the Kaw Valley interests can then concentrate their efforts on the Milford Dam on the Republican River. This is a step-by-step program.

In addition, Kansas City has a very substantial interest in the part of Kansas that will be protected and irrigated by the Wilson project. The possibilities for irrigation in that part of the State are very substantial. In fact, the dam was first authorized as a project of the Bureau of Reclamation that is primarily interested in irrigation.

We can see no reason for the House to refuse to go along with this Senate addition to the appropriation bill. Any delay would delay the whole Kaw Valley program. A delay of a year would increase by one more year the exposure to floods and droughts. And it would save nothing.

We realize that the Government is operating on a tight budget this year. There is no reason to assume that the financial problem will be eased next year or the year after. If Congress intends to go through with the Kaw Valley program, it had better push it at a steady pace. That is what the Senate is trying to do with the proposed start on the Wilson Dam.

Castro Having Troubles of His Own

SPEECH

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 13, 1959

(Mr. RIVERS of South Carolina asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and to include an editorial.)

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the RECORD, I enclose an editorial concerning one Ralph McGill. Everybody in my neck of the woods knows McGill and his left-wing tendencies. McGill, unfortunately, has finagled Washington's best newspaper to subscribe to his daily column. I think this is because the Washington Star had never been accused of being one-sided. Despite McGill, the Star possesses some of the best correspondents in the Nation.

McGill is now in the process of trying to sell to America Fidel Castro. Castro hates this Government like the Devil hates holy water. Castro is up to his neck with fellow travelers and may not be a Communist, but his brother positively is. At the Communist Congress in Moscow early this year Cuba was cited as one country that carried out the program of the Communist Party in its revolution against Batista. This was no accident. Castro's brother Raul was trained in Russia, and he still has Russians assisting him in Cuba.

Back to Ralph McGill. McGill is trying his best to embellish Castro. This is one job that McGill will find difficult. Castro is giving this country the very devil because his defecting chief of air force is here telling the security committee of the other body something about Castro and that Communists had riddled the Castro setup. Well, you do not have to know anything about Castro. Castro is what he is. Either a Communist or just about 99.44 percent Communist. I suggest McGill direct his talents to explaining to the American people why the American Society of Newspaper Editors invited Castro to this country and how much it cost the taxpayers of this Nation to provide Castro with security.

[From the News and Courier, Charleston, S.C., July 11, 1959]

ATLANTA EDITOR MCGILL WHITEWASHES RED ELEMENTS IN CASTRO'S CUBA

Ralph McGill, liberal editor of the Atlanta Constitution, is visiting Cuba. His dispatches from Fidel Castro's country show that Mr. McGill didn't forget his whitewash equipment when he packed his traveling kit.

Mr. McGill has written articles that apply several coats of whitewash to the Castro regime. In the face of strong evidence to the contrary, Mr. McGill says the Communist element in the Castro government "is not large." The junior officer group in the army, Mr. McGill says, "includes a few Communists and others who have made the old error of thinking the Communist party safely can be included in a popular front."

Though more than 500 Cubans have been shot by firing squads after trials before kangaroo courts, Mr. McGill says: "This is by no means a police state."

He also excuses Castro's unwillingness to hold elections.

"Until there is more stability and the emergence of an opposition," Mr. McGill asserts, "it is more honest not to have a free election."

We wonder whether Ralph McGill has considered the question of how there can be an opposition when Castro opponents are shot or chased from the country.

In giving a clean bill of health to the Castro government, Mr. McGill runs counter

to facts in the public record and to reports of able anti-Communist observers. U.S. News & World Report recently documented widespread Communist influence in Cuba's new regime.

We hope that Mr. McGill will stop in Miami before returning to Atlanta. He might talk with Maj. Pedro Luis Diaz Lanz, former head of the Cuban Air Force under Castro, who was forced to flee July 1 after charging Red infiltration in his country's armed forces. For bringing this matter to the attention of Fidel Castro, Major Diaz was charged with treason.

Speaking in Miami, Major Diaz said:

"I consider all these actions against me due exclusively to the fact that I have always opposed acts that would permit Communists to take prominent positions within the rebel army and within dependencies of the Government."

We cite the McGill whitewash because U.S. citizens must not misunderstand what is taking place in Cuba. The events in that island republic could be more meaningful to the United States than the much-publicized talks at Geneva. If the Communists gain control of Cuba, the Caribbean might become a Red lake and the United States would have a Red satellite 200 miles from its shores.

Address of George Cochran Doub, Assistant Attorney General, Civil Division, U.S. Department of Justice, on Presidential Inability: The Constitutional Problem

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 14, 1959

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of George Cochran Doub, Assistant Attorney General, Department of Justice on Presidential Inability, at the dinner of the Federal Bar Association in honor of the Federal judges of the seventh circuit, Chicago Ill., June 11, 1959:

ADDRESS OF GEORGE COCHRAN DOUB, ASSISTANT ATTORNEY GENERAL, CIVIL DIVISION, U.S. DEPARTMENT OF JUSTICE, ON PRESIDENTIAL INABILITY: THE CONSTITUTIONAL PROBLEM

On March 4, 1881, James A. Garfield, who as a boy drove the mule team of a canal boat on the Ohio Canal, became President of the United States. Only four months later, Garfield drove in his carriage from the White House down Pennsylvania Avenue to the Baltimore & Potomac Railroad depot on Sixth Street intending to take a train to New England. As he walked through the station arm in arm with Secretary of State James G. Blaine, an assassin stepped forward with a cocked revolver and fired two shots at Garfield, striking him in the arm and side. When the lunatic, Charles J. Guiteau, was seized and dragged through the crowd, he cried, "Arthur is President of of the United States now."

Garfield lay in a coma for 80 days completely unable to perform the duties of President. During that period, he performed only one official act—the signing of an extradition paper. The total incapacity of the President during this period, we are told, had a harmful effect on the country. Considerable Government business could not be conducted nor could important officials be appointed. It has been said that the Nation's foreign relations, lacking the direction of the Chief Executive, seriously deteriorated. Only routine business was handled by department heads.

Yet, nothing was done. There was criticism that Secretary of State Blaine was attempting to usurp the President's duties and there were insistent demands that Vice President Chester A. Arthur act. After 60 days, a Cabinet meeting was held in which it was unanimously voted that Vice President Arthur should assume the powers of the presidential office. But would he become President and thus preclude Garfield from returning to office? Opinions were divided. The members of the Cabinet voted 4–3, with Attorney General Wayne MacVeagh among the majority, that Arthur would become President and would thus permanently oust Garfield from office. The majority relied upon the fact that upon the three prior occasions of the death of the Chief Executive, the Vice President had become President and the language of the Constitution concerning death and inability were exactly the same.

The Cabinet resolved that, before Arthur should take this momentous step, Garfield should be consulted about the serious consequence to him which might attend Arthur's assumption of the powers of President. However, this could not be done by reason of Garfield's desperate condition. Arthur himself emphatically declined to take any steps to assume the powers of the President on the ground that he would not be a party to ousting Garfield from office. If Vice President Arthur had believed that he would exercise the powers of the presidency only for the duration of the President's disability, there would have been no reason for his failure to exercise those powers. Considerable sentiment developed at the time for clarification of the law, but after Garfield's death Arthur took office as President and the matter dropped.

If such uncertainty could occur during the peaceful days of 1881, how frightening would be the prospect of similar uncertainty at a time when it is essential that the Nation have such continuity of official leadership as to enable critical decisions to be met and made.

In periods of peace and quiet of the past, this issue may not have been of vital importance but in the dangerous critical days of world leadership, of nuclear weapons, of the touch of the ICBM on the nerve of danger, of a powerful threatening enemy, the problem becomes one of paramount consequence. In times of almost continuous international crisis requiring immediate decisions by the Executive to safeguard the Nation's interests, our future safety could possibly depend upon our ability to have provided clear definitive answers to this constitutional question.

In the event of the inability of the President to discharge the powers and duties of his office, does the Vice President succeed permanently to the Presidency? Or does he act as a temporary pinchhitter during the disability period? Who is authorized to say a President is unable to discharge his duties?

You will recall that paragraph 6 of section 1 of article II of the Constitution provides that "in case of the removal, death, resignation and inability to discharge the powers and duties of the office of President, the same shall devolve on the Vice President." You will notice that the language is mandatory. "The same shall," not "may," devolve on the Vice President. "Devolve" means to pass down, descend, to transfer, and the mandatory transfer to the Vice President occurs in the same way in each of the four situations: removal, death, resignation, or inability to discharge the powers and duties of the office of President. No distinction is made as to what happens in case of presidential inability and the President's removal, death, or resignation.

The Constitution states, "the same shall devolve on the Vice President * * *." To what do the words "the same" refer? What is it that shall "devolve" upon the Vice President? Is it the office of the President? In that case, the President would thenceforth be permanently excluded from his office; or do only the powers and duties devolve upon the Vice President and in that case, his tenure as the Acting Chief Executive would end upon the recovery of the President.

It appears that there was a constitutional question, when the issue first arose, whether the Vice President, in the case of the death of the President, became President or Acting President for the balance of the term, but this doubt has now been settled by established practice.

The question first was presented when President William Henry Harrison died of pneumonia in office in 1841, 1 month after his inauguration, "worn away and destroyed by the hordes of applicants for public office." Did Vice President John Tyler become President or Acting President? Many objected at the time to Tyler becoming President because it was believed that the precedent would establish that the same result must occur when the President became disabled. It was argued that the records of the Constitutional Convention indicated that the Convention had not intended that the Vice President become President under the succession clause but merely that he should exercise the powers and duties of the disabled President until his inability was removed. Daniel Webster, then Secretary of State, was the only Whig who was not greatly alarmed over what the Democrat, Tyler, would do in opposition to Whig policies and interests. Webster took the position that Vice President Tyler actually became President. It was Tyler's initial belief that he would act as President during Harrison's unexpired term, but reflection changed his attitude and in his inaugural address he boldly proclaimed that he had been called to "the high office of this Confederacy."

The first paper submitted to Tyler for his signature had below the space for his signature the words "Acting President." Tyler was incensed and by a stroke of his pen eliminated the word "Acting" and signed as President, and President he became. After him, six other Vice Presidents, Fillmore, Johnson, Arthur, Theodore Roosevelt, Coolidge, and Truman, did likewise upon the death of the President in office. From these precedents, it is now assumed that, in the case of the death of a President, the Vice President becomes President for the unexpired term. Yet, the very way the original doubt was resolved by these precedents has contributed to the problem in the case of the inability of the President to discharge the powers and duties of his office.

When we examine the original articles agreed upon in substance by the Constitutional Convention before their revision by the Committee of Style, we find that they made clear that upon the inability of the President to discharge the powers and duties of his office, the Vice President should exercise those powers and duties "until the inability of the President be removed."

In other words, the framers of the Constitution intended that the Vice President would be acting as President, but would not become the President. Although acting as President, he would remain in the office of Vice President.

The obscurity developed by reason of the revision made by the Committee of Style, which boiled the provision down to the simplified statement that in case of removal,

death, resignation, or inability to discharge the powers and duties of the office, "the same shall devolve on the Vice President."

This interpretation is borne out by the debates in the Convention indicating that the Vice Presidency was originally created to provide for an alternate Chief Executive who might function from time to time should the President be unable to exercise the powers and duties of his office. Indeed, only after the Convention decided upon this standby position did the Convention consider giving the Vice President something to do while he waited in the wings. The idea of assigning him the duty of presiding over the Senate seems to have been an afterthought.

In 1919, President Woodrow Wilson suffered a stroke while leading his great fight for the adoption of the covenant of the League of Nations. At that time the position of the United States had developed into one of world leadership. After our spectacular military and economic exertions in World War I, and at the moment that the leader of democracy was stricken, in the midst of the postwar effort to establish a lasting peace, a dramatic Senate battle over ratification of the Versailles Treaty and the covenant of the League of Nations was being waged.

The illness of Wilson continued from his collapse on September 25, 1919, until the end of his presidential term on March 4, 1921. During this period of 1 year and 5 months, the President was unable to attend any Cabinet meetings or to perform most of his duties. The exact extent of his inability is not clear because his condition was carefully shielded from the public by Mrs. Wilson, his personal physician, and his entourage in the White House. Indeed, even the Vice President and the Cabinet were kept in the dark about Wilson's condition. It is said that for a considerable period of time—although the precise time is subject to speculation—he was completely unable to perform any of the duties of his high office. It has been believed that Mrs. Wilson and the President's physician played a major role in making and deciding matters of large public policy. In any event, the administration of the Government almost was at a standstill for 1½ years.

Without the direction of the President or Vice President, Secretary of State Lansing called 21 Cabinet meetings in an attempt to prevent the affairs of the Government from becoming paralyzed. When Wilson heard of these meetings he accused Lansing of usurping Presidential power and forced this outstanding Secretary of State to resign. Upon Lansing's suggestion that the Cabinet request Vice President Marshall to act as President, Joseph P. Tumulty, Wilson's secretary, replied: "You may rest assured that while Wilson is lying in the White House on the broad of his back I will not be a party to ousting him." At that time widespread discussion again ensued for clarification of the law, but when Wilson's term expired the matter died down again.

Now why did Wilson's personal advisers fear knowledge of his disability becoming known? I believe that there can be no doubt that a primary reason was because of their fear that public opinion would demand that Vice President Marshall take over the powers of the Presidency and, if Wilson should recover, he might face a constitutional fight to regain his office. In other words, the dangerous uncertainty of this constitutional provision was responsible for this deplorable situation. Attempts made to induce Vice President Marshall to act as President failed. The major reason Marshall was unwilling to act was because of the fear that once he did so, Wilson would be ousted permanently from the Presidency.

The pernicious consequences of the belief that a Vice President actually succeeds to the Presidency for the balance of the presidential term, when called upon to exercise the powers and duties of a disabled president, have been in both the Garfield and the Wilson case to frustrate the intent of the drafters of the Constitution that the Nation should have an alternate Chief Executive ready to provide continuous Executive leadership. If it had been perfectly clear that constitutionally the President could resume his powers at any time his disability ended and he was relinquishing the reins only temporarily, this dangerous problem should not have arisen in either the Garfield or Wilson administrations.

Immediately upon President Eisenhower's recovery from his heart attack in Colorado in September 1955 he directed the Department of Justice to institute a full legal study of the constitutional problem with respect to Presidential inability. His purpose was the preparation of a plan for the protection of the Nation in the event any President in the future were to become disabled. After an extensive study of the problem by Attorney General Herbert Brownell, the President reviewed alternative plans and authorized the Attorney General to consult persons outside the Government for their views and criticisms. The President also sought the opinions of the members of the Cabinet at a Cabinet meeting. Finally a definitive plan proposing a constitutional amendment was prepared by Attorney General Brownell, approved by the President, orally presented by the President at a meeting of congressional leaders of both parties and publicly announced in the testimony of the Attorney General before a subcommittee of the Judiciary Committee in the House of Representatives.

President Eisenhower was the first President of the United States who had the courage, the interest and the appreciation of the problem to attempt to correct this serious deficiency of the Constitution. Every prior President shrank from attempting to deal with this delicate matter or manifested no realization of the difficulty.

On March 3, 1958, the President and the Vice President took an historic step in consultation with Attorney General William P. Rogers when they reduced to memorandum form, and published, their own understanding of the constitutional role of the Vice President as Acting President during the disability of the President. The Eisenhower-Nixon understanding was stated in these terms:

"The President and the Vice President have agreed that the following procedures are in accord with the purposes and provisions of article 2, section 1, of the Constitution, dealing with Presidential inability. They believe that these procedures, which are intended to apply to themselves only, are in no sense outside or contrary to the Constitution but are consistent with its present provisions and implement its clear intent.

"1. In the event of inability the President would—if possible—so inform the Vice President, and the Vice President would serve as Acting President, exercising the powers and duties of the office until the inability had ended.

"2. In the event of an inability which would prevent the President from communicating with the Vice President, the Vice President, after such consultation as seems to him appropriate under the circumstances, would decide upon the devolution of the powers and duties of the Office and would serve as Acting President until the inability had ended.

"3. The President, in either event, would determine when the inability had ended and at that time would resume the full exercise of the powers and duties of the Office."

I have no doubt that this unprecedented document although not binding upon future Presidents and Vice Presidents, will become recognized as a notable state paper of our constitutional history.

On the day following the Eisenhower-Nixon announcement a bipartisan majority of the members of the Senate Judiciary Committee, including Senators KEFAUVER, DIRKSEN, HRUSKA, HENNINGS, JOHNSTON, LANGER, WATKINS, JENNER, and BUTLER, joined in sponsoring a proposed constitutional amendment on presidential inability which adopted the administration's proposal with certain changes in section 4 acceptable to the Executive. This proposed bipartisan amendment was promptly introduced in the Congress.

Section 1 restates existing law in case of the removal, death, or resignation of the President.

Section 2 provides that, if a President declares in writing that he is unable to discharge the powers and duties of his office, those powers and duties shall be discharged by the Vice President as acting President. This section assures a President in announcing his own inability that his powers and duties will be restored to him upon his recovery.

Section 3 deals with a situation in which the President is unable or unwilling to declare his own disability. In that case, the Vice President with the approval of the majority of the heads of the executive departments in office—that is to say, the President's Cabinet—shall make this decision. Many scholars agree that the Vice President alone now has the authority under the Constitution to make this determination. Section 3 requires the written concurrence of a majority of the members of the Cabinet.

Section 4 provides that, whenever the President declares in writing that his disability is terminated, he shall resume the exercise of the powers and duties of his office. This provision affords a constitutional guarantee to a President that he will regain the powers of his office when his disability has been removed.

The realities of the situation suggest that it is unlikely a Vice President would attempt to assume the duties of the Presidency unless it were clear beyond challenge that the President was, in fact, unable to exercise the responsibilities of the office. The proposed constitutional provision proclaiming plainly that the Vice President will merely discharge the powers and duties of the Presidential office for the temporary period of disability should negative any motive of usurpation. At the same time, the Vice President should not in the future under the amendment refuse—as Vice President Arthur and Vice President Marshall—to perform his constitutional duty of serving as the alternate executive temporarily when the circumstances require that he do so.

Section 4 will allow the President to resume the functions of his office although there might be a difference of opinion between the President and the Vice President whether the disability has ended. However, in the event of a dispute between them as to this, provision is made for immediate action by the Congress, whether then in session or not, to resolve the issue if raised in writing by the Vice President with the support of the majority of the Cabinet. A two-thirds vote of the Members present in both Houses would be required to establish the continued existence of the President's inability. Thereafter, the announcement by the Acting President that the President's inability has ended or a resolution adopted by a majority of both Houses will restore the powers of the Office to the President upon his recovery.

Historically this problem has never been one of a too aggressive Vice President but rather of a reluctant Vice President, who hesitated to exercise the powers of the President under the present succession clause of the Constitution because of the uncertainty that his action might result in the permanent elimination of the President from his Office.

The essential solution is a clarifying amendment establishing that the Vice President's tenure of the Presidential powers is only temporary. This provision is the foundation of the administration's proposal submitted in 1957, resubmitted in 1958, and the bipartisan amendment proposed in the same year. The proposal implements the original understanding of the members of the Constitutional Convention as indicated in the debates and in the original articles.

There is now presented the best opportunity in our history for the solution of this problem. The time required for the ratification of a constitutional amendment will undoubtedly extend beyond the term of this administration and accordingly will be inapplicable to it. We do not know the person or the party that will occupy the White House in 1961, but we do know that under the Constitution, it will not be President Eisenhower. At this moment in history, the proposed measure can be considered entirely upon its merits without any consideration of personalities or parties.

At the time of each illness of President Eisenhower, as in the case of President Garfield and President Wilson, there was a general recognition of the seriousness of this constitutional problem of succession and clamor by political leaders of both parties and the press that constructive measures be taken for its resolution. Although the problem arises from a permanent inherent defect in our constitutional system, proposals for its resolution now lie dormant in the Congress under the press of far less significant matters. The bipartisan constitutional amendment was proposed over a year ago yet the Senate Judiciary Committee and the House Judiciary Committee have taken no action of any kind.

An informed and responsible public opinion appears needed to secure the action which the interests of the Nation plainly requires.

World's Only Albino Colony Owes Life to "Father" Tippit

EXTENSION OF REMARKS
OF
HON. GEORGE E. SHIPLEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 14, 1959

Mr. SHIPLEY. Mr. Speaker, Olney, Ill., among other things is noted for its unique colony of white squirrels. Olney is my hometown and everyone in the area is proud to have these beautiful animals in our midst. I would like to take this means of letting my colleagues know more about these squirrels by submitting for the RECORD a very excellent article recently published in the Olney Daily Mail:

WORLD'S ONLY ALBINO COLONY OWES LIFE TO "FATHER" TIPPIT

OLNEY, ILL.—When Tom Tippit frantically fired a shotgun at a fierce fox squirrel 56 years ago he became the father of Olney's famous white squirrels.

It is the only known place in the world where there is a colony of these snow-white animals, numbering between 600 and 700.

Started here in 1902, they multiplied and stayed right here in Olney not caring to roam outside the city limits. And no wonder. The children love them, the people feed them, the Chamber of Commerce advertises them, and the law protects them.

"Heaven protects them," said Tom Tippit the other day. "At least it was an act of providence, my firing that shotgun way back in 1902."

It happened in Tippit's woods, when Tom was 15, a mere broth of a boy. Today he is 71. In his attractive little stucco house—still in Tippit's woods—on Olney's pretty residential North Silver Street, he sits on his wide screened porch or looks out his windows at the adorable little white animals. He watches them scamper across the spacious grounds and climb the old, old trees on this same land his grandfather, Matthew L. Tippit, obtained from the Government in 1821. Tom's father, Thomas Tippit, Sr., was circuit clerk 13 years, served in the legislature 12 years, was mayor of Olney and editor of the Olney Times.

Before Tom Tippit entered the plot, Ezra Stroup was out hunting one day in 1902 on his father's farm in Bonpas Township, 4 miles southeast of Olney. According to Bert Michels, Olney's historian, Stroup fired into a bundle in a tree and the bundle fell to the ground with two albino squirrels.

ORDERED FREED

"One," said Michels, "was cream colored and the other was pure white."

Stroup was delighted with his find and he took the squirrels home and after a while, he brought them to Olney in a cage and placed them in a window of Jasper Banks' saloon.

"I don't know about that part of the story," said Tippit. He crossed his legs, leaned back in his chair, and got set to talk.

"I don't know," he repeated, "where they came from originally, but I'll tell you what happened after those squirrels left the saloon. One day my father came home and he said to me and my brother Bert, "You boys go down to Jap Banks' saloon and pick up those two white squirrels. Bring them out here and release them in the woods."

Tom said he and Bert hitched their horse to a cart and headed for downtown Olney. Bert was a little older, so he went into the saloon and brought out the caged animals.

"When we arrived home," said Tom, "We got a ladder and took the cage up in a tree and nailed it there. When we opened the door, the male squirrel started climbing higher. When he neared the top, out of the foliage appeared a large fox squirrel. He attacked the white one, ripping it to shreds. It dropped to the ground like a rag."

CERTAIN DEATH

Tom and Bert were both scared and mad. They saw the female white squirrel leaving the cage and starting to climb higher in the tree.

"I knew," said Tom, "That it was certain death for that white squirrel. Now here's where Providence stepped in. Just the day before I had been given permission to fire the family shotgun, and I did. I thought of that gun, and I ran into the house and grabbed it, I loaded the gun on the run."

When Tom looked up the tree he saw the fox squirrel ready to pounce on the white one. He aimed the gun and fired. The fox squirrel fell to the ground, dead.

"That white female," said Tom, "went up into the tree, and in a few weeks we noticed some baby white squirrels about the place."

As months and years passed, the white squirrels increased in numbers out there in Tippit's Woods. The population grew and grew, and the squirrels spread out all over Olney. They became a common sight in trees and on lawns all over town.

"They were welcomed," said Editor Allen Yount of the Daily Mail, "by residents with such gentle treatment that they became and still remain almost tame."

Yount tells how the pretty white animals received widespread attention back in the 1920's. A newspaperman from Toronto, Canada, was visiting Ernie Hendershott in Olney. He was entranced by the squirrels and wrote a full page article about them for the Toronto paper.

WIDELY PUBLICIZED

"Shortly," said Yount, "newspapers and magazines throughout the country started printing articles about Olney and its white squirrels. The Governor of Arizona, and many others, wrote here seeking a pair of them. He hoped that colonies of them could be started in other places. Although many were caught and shipped away, it is understood that they never develop into a colony in any other place."

Olney became so proud of her white squirrels, the City Council in 1925 passed an ordinance to protect them. There's a $25 fine awaiting anyone caught destroying one or transporting any out of town. In 1943, State Representatives Clyde Lee and Homer Kasserman put through the legislature a bill which placed the Olney squirrels under State protection.

"You can see them almost anywhere in town," said Mrs. Edith Newton, city clerk. She was looking out of the city hall window across busy Whittle Avenue, where cars were streaming by. "I just saw a couple a few minutes ago over there in that tree across the street."

Olney goes all out in glorifying the white squirrels. Every policeman and fireman has an outline of the bushy-tailed animal as shoulder patches on their uniforms.

"They're so tame," exclaimed Mrs. William G. Smight, Jr., 929 East Main Street. "They come up on our front porch and sit on the railing. One day we had guests from Kentucky, and the squirrels just sat there while the guests took pictures of them."

"They're prettiest after a rain," Mrs. Smith said.

"Roaming around town," she explained, "their fur gets soiled and they don't look so white. Right after a rain or snowfall, the lovable little creatures are as white as snow."

BEWARE TRAFFIC

Millard Davis sees scores of the pets every day in the city's 54-acre park, where he lives as custodian, but you needn't go to the park to find them. They're all over town, living close to the people who put out nuts and cornbread for them.

"If we crack the nuts," said Mr. Tippit, "the squirrels eat them at once. If we don't, they usually bury them for a short time. They like hickory nuts best, I believe, but they are hard to find. The squirrels get a lot of pecans."

It probably isn't necessary, but the Daily Mail comes out every few months with an appeal to the people to feed the squirrels.

Tom Tippit and many others are worried now. They are afraid the whole squirrel population is decreasing because of traffic hazards. The squirrels have legal protection and love, but cars are killing them too fast. Every day or so one is found on a street where it was run over by an auto.

"They're smart, though," said Tippit, "I hope they are smart enough to lick the traffic problem. I've actually seen this happen many times in the past year or two—I've seen these little white scamps crossing the streets by walking the telephone and electric wires, high up over the passing cars."

The St. Lawrence Seaway Is Only a Foretaste of What Is Possible in the Future for Americans of Faith and Courage

EXTENSION OF REMARKS
OF

HON. WALTER H. JUDD
OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 13, 1959

Mr. JUDD. Mr. Speaker, there are few things that can happen only once in all of history. One of them is the St. Lawrence Seaway. There was no other place on this planet where a whole new ocean could be created by man. Completion of the seaway will prove to be an event of greater significance than we probably can realize at this time.

The seaway begins at Duluth, Minn., 2,300 miles inland. On July 11 there was an enthusiastic celebration at Duluth of the seaway's dedication. Governors attended from four States, Montana, South Dakota, and Nebraska—which for the first time in their history are given a seaport.

The main address at the Governors dinner on Saturday night, July 11, 1959, was given by the Honorable Fred A Seaton, Secretary of the Interior. Because of the unusual scope and perspective of the address—and its vision of the future possible to Americans of faith and courage—I am including it here:

ADDRESS BY FRED A. SEATON, SECRETARY OF THE INTERIOR, AT THE GOVERNORS' DINNER, HOTEL DULUTH, DULUTH, MINN., JULY 11, 1959

It is of course an honor to participate in the dedication of the seaway Port of Duluth, here at the extremity of the fourth seacoast of the United States on what has now become the fifth ocean of the world.

On such an occasion it seems only fitting to remind ourselves of the fact that the newly opened St. Lawrence Seaway is many things.

First of all, it is a magnificent physical symbol of the friendship between the United States and Canada, and of nearly a century of peaceful cooperation between our two countries.

It is a major source of hydroelectric energy, with a power dam as Massena, N.Y., surpassed on this continent only by Grand Coulee and Niagara—a power dam which will serve consumers on both sides of the international boundry.

It is a pathway for ships—big ships, flying the flags of countries on six continents, exporting from and importing to the infant seaports of Buffalo and Erie and Cleveland and Chicago and Duluth-Superior. In less than 2 months after its opening on April 25, more than 1,500 vessels traveled this waterway. And long after the parades and pageantry of the formal dedications of the seaway end, such deep sea vessels will go on year in and year out, weaving their pattern of peaceful international trade.

Eight American States border the Great Lakes and the St. Lawrence Seaway. They presently have 25 percent of the total number of American farms, 40 percent of the American population, and 46 percent of America's gross income. The port of Duluth-Superior directly serves two—Minnesota and Wisconsin.

Stretching out beyond them is America's heartland, including Canada and western sections of the United States rich in natural resources. To all these areas and to the lake ports which serve them, the new seaway offsets tremendous opportunities for economic expansion.

Opportunities, however, are not gifts. Rather are they circumstances to be seized upon by the bold, the intelligent, and the energetic. So it is that the cities which reap the major rewards to be offered by the seaway will be those which look ahead, plan ahead, and build ahead. It is perfectly evident to me that you in Duluth are well aware of that fact. You deserve congratulations on your Arthur M. Clure Public Marine Terminal, dedicated today, and on the private facilities which will join it in the years to come. I honor you for your initiative and foresight.

As you well know, the total tonnage of cargo through Duluth-Superior has historically ranked second only to that through the port of New York. With the gradual exhaustion of Minnesota's high-grade iron ore reserves, some people have feared that your port would sink in the national scale. The new seaway puts such doubts to flight and brings Duluth new hope for the future.

There is ample evidence to support such a conclusion.

Since 1915 the tonnage through the Panama Canal has increased 10 times. In the past 10 years traffic on the U.S. inland waterways, excluding the Great Lakes, has nearly doubled. Recognizing the leaping growth of our population and economy, we may well expect a repetition of these historic waterway patterns here.

Before the seaway was widened and deepened, the volume of cargo that moved through it every year totaled about 13 million tons. In this first year of the improved seaway, the volume is expected to be nearly twice as great—25 million tons. And in another decade, it should double again, going to 50 million tons, as our population grows past 200 million and the gross national product of our economy leaves the one-half trillion dollar mark behind it.

Tonight is indeed a night for rejoicing over the fulfillment of a dream nearly 3 centuries old. In 1680 Francois Dollier de Casson worked out a plan for a route around the Lachine Rapids at Montreal—a plan, incidentally, which never went into effect. One hundred years later, George Washington caught a glimpse of what might happen to the economy of his new Nation if it could but "open the road" between the Great Lakes and the sea. More than another century later the United States and Canada undertook joint studies of the St. Lawrence, and from 1903 forward vessels with a draft of less than 14 feet could travel up the little seaway.

The big seaway, however, was still a big dream when the United States and Canada signed the Seaway Treaty of July 18, 1932, during the Presidency of Herbert Hoover. It remained but a big dream for nearly another quarter of a century, perennially supported by leaders of both major political parties, never enacted; always a bill, never a law—a permanent portrait, many thought, in the gallery of noble and futile causes.

To those doubters, the seaway was in a class with statehood for Alaska and Hawaii—the class of good things that just couldn't be accomplished.

Today all those doubts have been resolved—affirmatively. The St. Lawrence Seaway is a fact. Alaska and Hawaii have become States. And, I submit to you, it is no accident that all three things happened at long last during the Presidency of one man, Dwight D. Eisenhower.

Largely because of his strong leadership the promises have become realities, and inaction has been translated into action. Having voted for the seaway as a Member of the United States Senate, in 1952, I take pride—I hope pardonably—in the fact that after 25 years of frustrating talk and delay, the necessary legislation was passed by a Congress made up of a majority of members of the same political persuasion as the President. Valuable bipartisan support was given, of course, and for that we should all be grateful.

Just 1 week ago today it was my privilege, at the tri-State border of Kentucky, Tennessee, and Virginia, to dedicate the Cumberland Gap National Historical Park. Through that hallowed historic area in the year 1775, Daniel Boone and 30 axmen drove through the 200-mile Wilder Road making possible settlement beyond the Alleghenies in the fertile grasslands of Kentucky.

Just 2 weeks ago the Committee on Interior and Insular Affairs of the House of Representatives, with bipartisan support, approved legislation establishing the Chesapeake and Ohio Canal National Historical Park—a park preserving for posterity a canal built in the first half of the 19th century, which once carried freight over the 180 miles between Washington, D.C. and Cumberland, Md.

Just 1 month ago it was my honor to dedicate the Glendo Dam in Wyoming—a major new reclamation dam authorized in 1954, and now completed—at a site on the historic Oregon Trail, over which a century ago pioneers pushed westward to the Pacific.

The men who hacked out the Wilderness Road, dug the C. & O. Canal, and trudged westward to California and Oregon were the kind of people who neither accept horizons as impassable barriers nor walk backward into the future with their eyes forever fixed on the past. They were men who seized the future, and the road, the canal, and the trail all remain today as monuments both to their daring and their determination and ability to gaze far ahead.

Among such monuments in our own time, the St. Lawrence Seaway is a towering colossus.

It is, however, only a single symbol of the Eisenhower administration's leadership and the foresight of the Congress of the United States in the fields of commerce and transportation. There are many others.

Going vigorously about the job of meeting the 20th century needs of the American people, the administration in 1956 launched a $38 billion Federal highway program, which in 13 years will have provided the most modern Federal roadways all over America to meet our growing needs for roads, both for defense and economic purposes.

Last year there was established for the first time in our history a Federal Aviation Agency, designed to discharge increasing responsibilities of the Federal Government in the field of commercial aviation.

The view from my office window in the Department of the Interior Building in Washington looks out over the Washington, Jefferson, and Lincoln Memorials. Further out on the horizon is the National Airport. Screaming airliners rise up from behind the trees to pass almost directly over the temple which we have built to honor Lincoln. And as they do, I can't help thinking of horse-drawn carriages of Washington and Lincoln's time plowing up the mud on a rainy day on Constitution Avenue. The airplane is a symbol of a technological advance to a present which would stagger the imagination of our ancestors and of a future which surely would stagger ours.

In your lifetime and mine, one of the most important Federal agencies may well be the National Aeronautics and Space Administration, set up last year to carry out aeronautical and space research and development.

Satellites have been placed in orbit around the earth and the sun and have sent back

their radio messages. The monkeys Able and Baker have made the trip into space and returned to the Pentagon to be the guests of honor at one of the most hilarious and memorable press conferences in the history of Washington. Soon the X–15 rocket plane will attempt to take a human pilot into space and return him safely to earth.

Seven fine, courageous young Americans now stand ready, after the most rigorous kind of training and conditioning, to make the first manned flight in a satellite into outer space.

Moreover, at the urging of the administration, in the past few years the Congress has approved other Federal activities which could well revolutionize transportation right here on our own planet—particularly transportation under, on, and over the water.

Last August 3 the atomic submarine *Nautilus* made the first undersea voyage in history beneath the polar icecap. A week later the submarine *Skate* did the same thing. Currently, the Department of Commerce is working to develop the undersea merchant ship, nuclear powered, as a freight boat of the future, capable of speeds of 30 knots or more.

In just 10 days, the first lady of the United States, Mrs. Dwight D. Eisenhower, will launch at Camden, N.J., the U.S.S. *Savannah*, the world's first nuclear-powered merchant ship, capable of carrying, at a speed of 20 knots, 60 passengers, 130 crew members, and 10,000 tons of cargo. Visiting ports of call all over the world, it will ride the waves as a symbol of the American people's determination to put nuclear power to peaceful application.

Next year the Maritime Administration of the Department of Commerce plans to begin building an 80-ton hydrofoil test craft—a ship that in effect would ride on a wing-like structure, skimming the surface of the water without leaving any wake, reaching the almost incredible speed of 80 knots. If such a ship of commercial size proves feasible—and we shall soon know—it could make the trip from New York to Southampton in England overnight.

In addition, the Maritime Administration has begun investigating the feasibility of the levitation ship—one that wouldn't even touch the water, once underway, that would have its weight lifted above the surface by a jet of air forced downward, and that could speed along carrying tons of cargo and hundreds of passengers at 100 or more knots an hour.

All these accomplishments and plans of the Federal Government, under the leadership of a great President, to me reflect the dreams and hopes and wishes of a people—the American people—who, like the pioneers of the 18th and 19th centuries, have their eyes fixed with hope on the future.

History, I am sure, will vindicate that hope. Probably in our lifetime—certainly in the lifetime of our children—citizens of Duluth and Chicago and Toledo and Buffalo will grow familiar with sights which would be strange indeed to our eyes: Such sights, possibly as atomic-powered freight-carrying submarines, atomic merchant ships, hydrofoil ships, levitation ships, speeding along this great 2,300-mile international seaway and other waterways of the globe, bringing the products of the world to our docks and carrying American products of farm and factory to the ends of the earth.

Faint-hearted despair is frequently a product manufactured by a salesman with a purpose, peddled with such noise, and all too often bought by the gullible. A free country, of course, will not and must not outlaw even the demagogue and the fool. But a free people, while permitting such individuals to talk, can also refuse to listen to them and certainly refuse to follow them.

On such a night as this we can with reason rejoice in great achievements and yet see them only as forerunners of even greater ones to come. Yes; this is a night for being true to our forebears, and in a large sense it is also a night for resolving to do in our time what they did in theirs: Look to the future with intelligence and confidence and courage.

Our Chickens Have Come Home To Roost on the Eaves of the Federal Treasury

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 30, 1959

Mr. COLLIER. Mr. Speaker, the Federal Government began its 1960 fiscal year on July 1 by the forced borrowing of $3 billion in new cash. The money was borrowed by auctioning 258-day Treasury bills on a best-offer basis. The securities were sold at prices which gave purchasers an average interest rate of 4.075 percent. This rate compares with 4.56 percent on an issue of 221-day bills auctioned early in May. Then, a few days later, Uncle Sam borrowed another $2 billion at increased rates.

Why was this new borrowing necessary? It became a must because the Federal Government, already deeply in debt through the spending of funds not covered by tax and revenue income, needed money to meet a host of current obligations. Congress was obliged to again increase the debt ceiling on June 19 for the third time in less than 18 months. Just where this headlong plunge into Federal indebtedness will stop, I do not know. Each year that Congress fails to balance the budget prescribed on the basis of the anticipated income of the Treasury, Federal indebtedness will continue to mount. The President has pleaded for Congress to authorize and appropriate only those funds which the budget income can sustain. Time and time again, Congress has failed to heed this urgent request.

Some folks—particularly that breed of political economist who scoffs at deficit spending and its inflationary byproducts—continue to cling to the baffling theory that "it just doesn't make any difference." Other folks are indifferent—some are resentful of those who believe in legislating with the prudence demanded by the fiscal condition of the Treasury—particularly if this prudence is applied to the curtailment of any program which makes a special interest group the beneficiary of new Federal obligations. Fortunately, there are still many millions of Americans who realize the pitfalls of a loose fiscal policy. But whether those in each of these three categories agree or not, it certainly affects each and every one of us. And it will mean, too, that part of the great American heritage which will befall our children and grandchildren will be a thoroughly mortgaged government.

And here's how our chickens have come home to roost on the Federal Treasury:

The $5 billion which the Treasury Department was obliged to borrow this month to meet Uncle Sam's accrued bills between now and the middle of August will have to be paid back next March out of income taxes when the Treasury starts collecting again from all of us. When Secretary of Treasury Anderson went to the Nation's bankers on two occasions this month to borrow this money to tide Uncle Sam over temporarily, he was obliged to pay the highest rate of interest in the history of the Nation's fiscal transactions.

Moneylenders know that Uncle Sam is already up to his ears in debt. They also know that they can be choosy about the length of their loans and the interest which they must get to make it worthwhile to make these loans. There are still Members of Congress and other self-styled experts out of Congress who feel that they can maintain the 4.5 percent interest rate ceiling on Treasury loans for more than 5 years. But regardless of what anyone thinks, Congress just doesn't set the level of interest rates today. Instead, it is the "market" which sets the level. This market is made up of those who must loan the money—and they have simply told Congress that there will be no loans available to Uncle Sam at any figure less than that which they might derive from private investments. Frankly, you just can't blame them, either.

It does seem almost ironical that the Treasury of the United States, traditionally the soundest and most riskproof agency in the world, is being obliged to pay approximately twice the amount in interest on its borrowing than it did for a similar loan just a year ago.

How does this situation develop?

It it relatively a simple thing to understand. The fact of the matter is that the demand for money is exceeding the supply available. Private investments with sound securities and an apparent ability to repay its creditors on each due date have created a demand which now exceeds the supply of money on the market. Necessarily, the Federal Reserve System is refusing to swell the pool of easy money to meet all of these demands. Hence, the cost of borrowing money is becoming more expensive in the form of higher interest rates charged to anyone seeking loans—whether it is you, I, or Uncle Sam himself.

President Eisenhower and the fiscal experts of the administration are facing the reality of this situation. They know that, if we are going into debt and incurring obligations for which we must borrow money, that any ceiling on interest rates is unrealistic. Uncle Sam will either have to pay the market price for money he borrows when the demand faces him or will just not get it. It is just as simple as that.

It seems to me that Congress is beginning to realize that deficit spending can be a costly and dangerous business—that is, more Members of Congress than apparently understood it in the years and

months past. But, as I have said so many times before, there is just no way this Nation can continue on this deficit-spending spree without suffering the fiscal hangover which invariably follows.

The only remedy to our present fiscal ills which have accumulated over these many years is self-discipline, which must start in the Congress of the United States. Voting for various types of bills which are in excess of the amounts we can afford, predicated upon our Federal revenues, is not always politically expedient. We are learning, I hope, that the expediency of voting funds that create deficits beyond our ability to pay is both costly and dangerous. The biggest job facing the lawmakers today and in the future is simply a matter of facing the facts of life and, in doing so, conveying to many people, seeking more and more Government subsidies and assistance, that the funds are just not available. The only alternative for those who wish to satisfy every constituent's desire is to publicly stand for the tax increases necessary to pay the tab. The day had better soon come when those elected to Congress can no longer run on a platform of more spending and tax reductions, too. It is just a case of the public learning that no one can ride the same horse in two directions at the same time.

It is for this reason, among others, that I introduced House bill 8083 to require rollcall votes on all appropriation bills.

This is an oft-repeated story. But I predicted a year ago that we would be faced with another increase in the national debt unless we began living within our budgetary means. And, since it has come to pass, we can only hope that we may profit from yesterday's mistake.

A Leading Southern Newspaper Exposes Another Case of Yellow Journalism Directed Against the South

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 8, 1959

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from a recent issue of the Shreveport (La.) Journal, subsequently reprinted in the June 24 issue of the Jackson (Miss.) Daily News. I think this editorial particularly significant as it points out very clearly the grossly unfair policies of much of the northern press in reporting racial incidents which occur in the South, as contrasted with their reporting similar incidents which occur in their areas.

The editorial follows:

IT'S TAKEN A LOT OF NUDGING BUT WIRE SERVICE COMING AWAKE

Last Friday the Associated Press teletype machines in the Journal's editorial rooms ticked out eight tiny paragraphs which related that a 14-year-old white schoolgirl in New York had been raped by a Negro.

After reading down to the sixth paragraph we learned that there were six Negroes involved—not just one. And, reading on to the seventh paragraph, we found out that the girl had also been beaten and dragged across the schoolyard—not merely raped.

In the meantime, not a line had been received from the AP's rival, United Press International. A few lines showed up later.

The lack of attention which the New York case was receiving as compared to that which was given the rape of a 19-year-old Negro coed by four young white men in Florida was all too typical. When a crime against a Negro is committed in the South, the northern press turns out en masse for a field day. Newspaper reporters, biased magazine writers, television cameramen with eyes trained for the seamy side of life, and motion picture photographers descend upon the scene and stage a little carnival of their own. When they're finished with their chores, the South is smeared again.

But let a crime against a white person be committed by a Negro in the North and the silence is deafening. Seemingly, the wire services' prize-winning reporters suddenly become blind and paralyzed and are unable to write a single line about the horror which has occurred. Cameramen are away on distant assignments and the ones left behind can't get their equipment into focus. News magazines, which Gov. Orval Faubus of Arkansas says are printed for people who can't think, and picture magazines which he says are printed for people who can't read, are completely disinterested. We're used to this sort of treatment by now.

Still the slighting of the New York rape case by the wire services Friday caused us to make one more protest. We ignored the United Press International but—with tongue in cheek—we sent the following telegram to New Orleans' Bureau of the Associated Press and to the AP's general offices in New York:

"Appreciate 2,000 words on gang rape of 14-year-old white girl in New York. Want comparisons between New York case, in which girl raped by one Negro while five others looked on, and Florida case in which Negro coed raped by four whites. Point out no brutality in Florida, while white girl in New York beaten and dragged to her fate. Appreciate dispatching Relman Morin (the AP's reporter who won the Pultizer prize for smearing Little Rock) to scene. Interview parents. Get editorial reaction North, East, South, and West. Want full picture coverage. Contact president of the American Association of Citizens' Councils in Greenwood, Miss., for statement. Ask NAACP if any 'prayer groups' organized to seek 'justice' for Negroes. Anything from Eisenhower? Please keep story running daily till settled. Please expedite."

Ridiculous requests? Not at all. Every one of these steps would have been taken by the AP and UPI at the urgings of northern newspapers if a 14-year-old southern Negro schoolgirl had been raped by a southern white man on her school grounds in the South while five other southern whites looked on.

Our protests could not have been given better timing. Whether it had anything to do with subsequent developments we do not know, but by Saturday morning it was apparent the Associated Press was giving greatly increased attention to the New York rape case.

For one thing, the AP's reporters had discovered by Saturday that the 14-year-old white girl had been raped by three of the Negroes instead of one, as originally reported. In addition, the AP had discovered that one of the six Negro gangsters involved in the attack had actually held the 14-year-old white girl while the three Negroes criminally assaulted her. And it had reaffirmed the fact that the girl was beaten and dragged across the schoolyard—adding the new information that she was also gagged.

But best of all was this additional Associated Press story which bares the hypocrisy of the Northern press:

"NEW YORK.—New York newspapers, which gave considerable attention to last week's Tallahassee, Fla., race trial, Friday did not front-page the New York rape of a white teenager by six Negro youths. * * *

"The Post gave the New York story a column on page 4. * * *

"The New York rape made page 10 of the Journal-American, page 21 of the World-Telegram, page 5 of the morning Daily News, page 3 of the morning Mirror, page 3 of the morning Herald Tribune, and page 11 of the Times."

We congratulate the Associated Press, the world's largest newsgathering organization, on its awakening to the gravity of the New York rape case.

We still have no details from United Press International, but we are forwarding to UPI a copy of our telegram to the AP.

Laws Against Filth Should Be Explicit

EXTENSION OF REMARKS
OF
HON. KATHRYN E. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 9, 1959

Mrs. GRANAHAN. Mr. Speaker, under leave to extend my remarks I include herewith an editorial from the Philadelphia Inquirer of July 13, 1959:

LAWS AGAINST FILTH SHOULD BE EXPLICIT

Philadelphia over the weekend was the focal point for a double-barreled attack against obscenity. If the constructive suggestions that were made are adopted by lawmakers in Washington and Harrisburg, real progress can be achieved in the campaign to curb purveyors of filth.

U.S. Representative KATHRYN E. GRANAHAN of Philadelphia presided at hearings held in this city by the House Subcommittee on Postal Operations, which is studying ways to combat filth in the mails more effectively. Mrs. GRANAHAN well may have found the key to the problem when she said laws against obscenity must use clearer and more specific language even though it might "be embarrassing in its frankness."

Veterans of Foreign Wars, assembled here in 40th annual State convention, approved unanimously a resolution calling for a new Pennsylvania statute against obscenity that would include "a legally specific and widely-accepted, clear-cut definition of the meaning of the words used to describe violations."

The proposed law would replace the one recently declared unconstitutional by the State supreme court because it dealt in broad generalizations and did not adequately define "obscene" and other words.

A serious obstacle to the writing of sound legislation against obscenity at both the State and national levels has been the reluctance of Congressmen and legislators to use words that are explicit. As a result laws against filth have been handed one setback after another in decisions of Federal and State courts.

The time has come to put aside inhibitions and enact laws that deal with the obscenity problem in realistic language. Representative GRANAHAN and her committee, and delegates to the State VFW convention, deserve active public support in their efforts to stamp out filth in the mails, on the newsstands and anywhere else that it appears.

Laws with teeth—and straightforward definitions—are needed to do an effective job.

Hold the Line on Steel

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 6, 1959

Mr. CHAMBERLAIN. Mr. Speaker, probably never before have any labor-management negotiations been followed with as much interest and apprehension on the part of the general public as in the current steel crisis. Americans everywhere have come to realize that another round of wage-price increases only means they must run that much faster in their relentless race with the cost of living.

The July 13 issue of Life magazine contains an editorial which, I think, merits careful reflection. Under leave to extend my remarks in the RECORD, I include this editorial, which follows:

HOLD THE LINE ON STEEL

Our Nation this week faces a showdown on a domestic issue of crucial importance to the battle against inflation. The showdown is in steel. The issue is whether the vicious spiral of wage-and-price inflation is to be checked or whether a new wave is to be set in action.

The United Steelworkers Union, which deferred a strike for 2 weeks at the President's request, seems nevertheless determined to strike unless the industry makes some wage concessions. Industry spokesmen say they are equally as determined to resist any increase in their costs. Furthermore, they say no wage increase can be made without a further price increase.

As we see it, there are four possible outcomes to this struggle in steel:

A small wage increase without a rise in prices. Such a raise, if held within the limits of productivity gains, would not be inflationary.

A wage increase with a price increase. This would be inflationary and would set off a shock wave of price rises, all over the economy, with further shrinking of the dollar's value.

A cut in steel prices to justify holding the wage line entirely. We have urged this in the past. We still think it would be a mark of statesmanship and would win wide public support to the industry's position. The British industry has just cut prices 2 percent. The U.S. industry is complaining loudly about the inroads of foreign competition. Why not meet it with more competition? The industry, however, seems determined not to cut prices.

No wage increase and no price increase either. The union says it won't stand for the first.

Of these four possibilities the likeliest, unfortunately, is a wage raise larger than is justified, accompanied by another hike in prices. This would repeat the dreary pattern of big business-big labor collusion which has already contributed so much to inflation. The most likely outcome of a strike, if past patterns are repeated, is the sham of a vacation at the consumers' expense—a quick strike, with a quick yielding of a raise, with a quick sequence of jacked-up prices to keep the profit level rising.

A steel strike could even have a medicinal effect on the economy if the industry really were determined to hold both the price and wage line. Despite current wildcat strikes by a few, most steelworkers do not have their hearts in this battle, since poll after poll has shown their main concern is a stable income rather than higher houly rates; they too have grown fed up with illusory raises which are canceled out by price rises. The time is indeed ripe for some important changes in union philosophy, away from wage battles whose gains are self-defeating and toward stabler production and employment.

Of the possible solutions we have outlined, the least harmful of the more feasible ones would be a small raise without a price rise. Great technological advances and new processes in the industry have been yielding rapid gains in productivity. U.S. Steel's profits, which have risen from $3 a share to an estimated more than $7 since 1953, indicate there is room to pass on some of these productivity gains, if not to the consumer, then to labor, without price increases. Since other industries have already raised wages slightly for 1959, the steelworkers can scarcely be expected to settle for nothing. But the big need is for both the industry and the union to consider the public interest as well as their selfish ones. For as steel goes, so goes inflation—and inflation has got to be checked. Let the steel companies and the unions know how you feel. After all, it's your dollar—your pension, savings, insurance and the security of your old age—which are at stake.

Tax Recommendation

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, July 14, 1959

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Sylvia Porter, published in the New York Post. In the article Miss Porter discusses the merits and the beneficial results of the Keogh-Jenkins bill. I hope this measure will be brought up for consideration at this session of Congress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TAX BREAK FOR MILLIONS

(By Sylvia F. Porter)

Tucked into six short paragraphs of the British Government's revolutionary 1956-57 budget is a provision of deepest bread-and-butter importance to all of our Nation's self-employed—small businessmen and professionals, shopkeepers and farmers, accountants and artists.

If you are among the 11 million Americans in this category, send a mental "thank you" to Britain—and read on.

For Britain has become the first major nation in the world to accept the principle that under today's tax laws, a corporation employee covered by a pension plan gets a great tax break not available to the self-employed wanting to build his own retirement program. Britain formally has admitted a glaring injustice exists.

And so Britain soon will allow a self-employed person tax exemption on a limited amount of earnings he puts aside every year in a retirement program.

In our country at least 20,000 corporations have pension plans. Probably 20 million employees pay no taxes on funds placed in the pension pools for them; they pay taxes only when they retire and start drawing their pensions.

But the self-employed gets no similar tax-exemption. Earnings he puts aside in a retirement plan are taxed at today's high rates. The discrimination is clear, undeniable.

For almost 10 years a group of dedicated citizens has been fighting for a law which would establish some tax equality between the self-employed and the corporation executive or employee covered by a pension plan.

Bill after bill has been introduced into Congress with the sponsorship of both Republicans and Democrats—only to be killed because of protests that the move would cost the Treasury too much in revenue.

Right now, there are bills in the House sponsored by New York Democrat KEOGH and Ohio Republican Jenkins which, in brief, would permit a self-employed person to get a tax deduction on an annual contribution to an approved pension plan up to 10 percent of his earned income or $5,000; raise the limit a bit for taxpayers over the age of 55; hold the maximum deduction during a lifetime to $100,000; tax the funds only when the individual starts drawing on the pension at the age of 65.

In his 1952 campaign, President Eisenhower stated flatly that the self-employed had been forgotten in legislation giving tax-exemption to pension plans for corporation employees and he added:

"I think something ought to be done to help these people help themselves by allowing a reasonable tax deduction for money put aside by them for their own savings. * * * If I am elected I will favor legislation along these lines."

During congressional hearings on the Keogh-Jenkins bills last June, Treasury Secretary Humphrey said he would be sympathetic to the proposal when general tax relief is possible.

If, when Humphrey announces the revised budget estimates around May 21, he reveals a substantial budget surplus, a tax-cutting drive will get underway in earnest and, said KEOGH when I interviewed him on this, "the latest official estimates by Congress' own tax experts indicate the annual cost would be only $320 million a year. It is more likely the cost would be only $100 million a year because not everybody eligible to take advantage of the law will start putting money in a retirement fund."

KEOGH is confident that if the bill reaches the floor it will pass. He has over 150 written promises of support and many more verbal assurances. "My firm conviction," he told me, "is that sooner or later—and much better sooner—such legislation will be enacted."

Britain's pioneering move is bound to stimulate action here. When what she has done becomes known in our land, it is certain to rally new support for the legislation.

Now if you—the millions to whom this would mean so much—will wake up and speak up, the moment for translation of theoretical justice into actual justice could be directly ahead.

Legislate for Safer Cars?

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, June 29, 1959

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Mr. Robert Ingalls, published in the Corvallis, Oreg., Gazette-Times:

LEGISLATE FOR SAFER CARS?

Beginning July 7, the House Interstate and Foreign Commerce Health and Safety Subcommittee is slated to hold hearings on a bill designed to force the auto industry to build safer cars. It would require the Secretary of Commerce to determine what safety measures should be built into cars purchased by the Federal Government and, since the Government buys so many cars, it is believed the bill would prompt manufacturers to put the prescribed safety devices on all their cars.

It was hoped by committee members that the auto manufacturers would place more emphasis on safety in designing cars without Federal prodding, but so far little has happened in this regard so the Congressmen think they should step in.

Although the bill leaves it up to the Secretary of Commerce to decide just what safety features should be included, here are some of the devices which are considered by many people to be desirable:

1. Safety belt attachments: It would be relatively easy to put on belt attachments at the factory. As it is, the absence of such attachments necessitates considerable labor in putting bolts through the floor of the car.

2. Deep dish steering wheel: This is a wheel standing out from the steering column. In a collision, the wheel is designed to bend and yet keep the driver from being speared by the steering column.

3. Roll-over bars: Bars atop the roof designed to keep it from collapsing if the car rolls over.

4. Crash paneling: Soft materials on dashboards and other places passengers are likely to hit in case of a collision.

5. Better packaging: This involves the science of placing passengers in the car so as to afford them maximum protection from injury. Suggestions made by various experts include making seats with neck supports to prevent whiplash and placing instruments so they cannot puncture the passengers.

The automobile industry as a whole will oppose the bill under consideration. They contend that the industry is doing all it can to develop safer cars. They claim that not enough is yet known about accidents to warrant dictating what type of safety equipment is best.

It is difficult to guess how the bill will come out in the Congress. If the American Medical Association gets into the act, it will certainly aid its favorable chances because much testimony in prehearings has been given by medical experts who unanimously blame the construction of the automobile itself for many injuries which could be avoided.

While none of the devices suggested may be a panacea for accident prevention because too much depends on the driver, the roads and such other factors, it seems to us the safety devices suggested by the Congress are at least worth a try, and they shouldn't add too much to the cost of the car.

Walters: He Sells America

EXTENSION OF REMARKS

OF

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 14, 1959

Mr. FASCELL. Mr. Speaker, each year since the days of World War II, Walter M. Walters, of Coral Gables, Fla., head of the Miami Reception Center of the U.S. Department of State, has been constantly at hand with his friendly smile and amiable personality to welcome visitors from foreign nations the world over.

His job—one of the Nation's most important: sell America.

Specifically he had to greet, arrange transportation and living accommodations, entertain, and generally assist visiting dignitaries and citizens from other countries with many complex matters. In addition to his own salary and small staff, the Government surprisingly furnished only about $100 a year in entertainment funds. To many, the job would be impossible—to Walter Walters, a job cheerfully accomplished.

He has so many friends, he is so well-liked and so effective, he was able to mobilize community support and effort to assist him and the United States.

Now, June 30, 1959, after 16 years service, Walter Walters has retired. He takes with him into retirement the best wishes for happiness and good health from thousands of friends. To Americans he leaves a heritage of accomplishment and encouragement.

The appreciation of our community is expressed in the following editorials from the Miami News and the Miami Herald:

[From the Miami News, June 30, 1958]

WALTERS: HE SELLS AMERICA

Today is Walter M. Walters' last day in a very important public relations job.

His product is America, Miami brand; his approach is a soft-sell invitation to take a look at the product. And in the past few months his customers have included some Buddha monks from Burma, a professor from the University of Salonika in Greece and the governor-general of Casablanca, Morocco.

Walters is head of the Miami Reception Center of the U.S. Department of State. He retires from Government service today.

For 16 years he has been the U.S. official host in Miami to foreign visitors—diplomats, ambassadors, exchange students, teachers and journalists. He averages 2,800 visitors a year, and he frequently greets them at the airport (sometimes before dawn), finds a place for them to stay, introduces them to their professional counterparts in Miami and arranges for them to see whatever interests them most.

As host, he wants them to be happy with America and to remember her with kind words when they return home.

Officially, he heads a staff of four, and unofficially his staff numbers approximately 60, because many of Walters' friends and Dade public officials open their homes and hours to these foreign visitors.

Walters, who speaks Spanish, French, German, and Portuguese in addition to English, was born in Manhattan, earned a bachelor of arts degree at William College and was a first lieutenant in the Army in World War I.

Educational and military demands out of the way, he decided to fulfill a childhood ambition—to go to Spain. He was working for an American banking firm; requested and got a transfer to Barcelona. His second year there, he and a Spaniard opened their own banking business. It thrived for 17 years, until the Spanish civil war prompted Walters to return home.

Back in New York, he took some postgraduate courses at New York University and Columbia and for a while ran a placement bureau for art history teachers and museum directors.

It was a job offer as cultural relations officer with the State Department in Miami that brought him here in April 1943. He was promoted to his present position in 1946.

Walters, who is tall, thin, affable, and punctual, lives with his wife and four children in Coral Gables. His plans for the future are indefinite, but he does intend to enter private business.

[From the Miami Herald, June 25, 1959]

OUR GREETER AT THE DOOR

The retirement of Walter M. Walters as head of the Miami office of the State Department removes a warm and colorful figure from the local official scene.

Miami's position as Latin American gateway contributed to the importance of Mr. Walter's mission. He was often the first official to greet visiting dignitaries on U.S. soil.

Suave, gracious and a skilled linguist, Mr. Walters eased the way for many a traveler from ordinary citizen to those of highest rank. He was, to draw a parallel, the Grover Whalen of this hemispheric crossroad.

Mr. Walter plans to enter business here and so has a new career ahead. But in the role which he filled so well for the past 16 years he will be sorely missed.

Marketing Data From New Censuses

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 1, 1959

Mr. BOW. Mr. Speaker, the important and interesting work of the Bureau of the Census was ably described in a recent speech by A. Ross Eckler, Deputy Director of the Bureau, to the American Marketing Association. I include excerpts from his talk, as follows:

MARKETING DATA FROM THE NEW CENSUSES

In the course of a decade, about two-thirds of the resources of the Census Bureau are devoted to taking the major censuses, as prescribed each 5 or 10 years. The remaining one-third is used for carrying out the Bureau's program of annual, quarterly, and monthly reports in various fields, including foreign trade and shipping. The percentage required for the censuses varies widely from year to year. In the current fiscal year, the percentage is close to its 10-year average, but next year it will be above 90. The very high percentage during the 1960 fiscal year reflects the fact that we will be at that phase of our 10-year cycle when active work is taking place on almost all our major censuses.

We are now completing the tabulation and publication of our 1957 Census of Governments, we are in the active collection phase of our 1958 series of censuses, covering business, manufacturers, and mining, and we are in the final stages of preparation for the decennial series including population, housing, and agriculture.

A gratifying corollary of this concentration of effort is that we are approaching the period in our 10-year cycle when the supply of statistics from major censuses is most nearly current and, therefore, most useful for marketing research and related activities. The results of the Censuses of Business and Manufactures will still be comparatively current when the figures from population, agriculture, and housing begin to appear in 1960. I do not mean to imply, of course, that

census figures more than 2 or 3 years old are no longer useful for many marketing purposes, but I think we all would agree that the dynamic changes in population and in business structure in many areas are great enough to place a premium upon up-to-date information.

GENERAL CHARACTERISTICS OF CURRENT SERIES OF CENSUSES

* * * * *

I should like first of all to tell you something about the general characteristics of our recent and current program of censuses. These elements, involving emphasis upon timeliness, quality, economy, and reduction of burden on the public, will be of interest to many of you here either because you use our statistics or because your companies have been called upon to supply data for censuses and surveys.

We expect to make important breakthroughs in speeding up census reports. Modern electronic equipment, which has been especially designed for our requirements, is the basis for much of our optimism. In addition, our expanded use of sampling contributes effectively to improvement in the timing of our current and 1960 census reports. We hope to realize the full benefits of the new equipment and programs in our series of censuses for 1958. It is our objective to issue during the present calendar year advance reports on these censuses which will furnish many of the statistics by industry and locality which are most used by marketers.

* * * * *

We believe that our current series of censuses will, in all cases, be better than their predecessors. One feature which we believe contributes to improvement is the extension of the principle of giving business officials, farmers, and individual householders a chance to fill out their own questionnaires, consulting as needed available records, other employees, and other household members. We continue direct enumeration by interviewers or office assistants, when required or appropriate. The advance mailing of questionnaires to each household is one of the important new features of the 1960 Census of Population and Housing. We have learned that the public can be counted upon for very high degree of cooperation.

* * * * *

Another feature contributing to improvement in quality of the new series of censuses is the broadening use of quality control methods in all phases of census taking, including enumeration as well as processing.

* * * * *

A third factor contributing to higher quality is the use of electronic equipment for more detailed editing of returns, particularly those for business establishments.

* * * * *

Improvements of timing and quality usually involve increased costs but this is definitely not true of our present series of censuses. For example, changes which we introduced in the taking of our 1954 Business Census made it possible for us to save one-third the cost of the previous Census of Business with allowances for price changes over the period 1948–54. In our 1960 series of censuses, we found that major opportunities for savings were provided by the wider use of sampling, by the use of modern electronic equipment, and by the more extensive application of production standards in our clerical operations. The savings from these three features are substantial enough to account for a cost reduction of over 10 percent in comparison with what it would cost to collect and publish the same items as in 1950, allowing for increase in the number of people to be enumerated, higher rates of pay, and increases in other costs.

* * * * *

THE CENSUSES FROM 1957 TO 1960

We now turn to consideration of some of the individual features of the new censuses. * * * These are presented in chronological order and thus reflect approximately the order in which the various results will become available.

The 1957 Census of Governments

Those of you who know that State and local governments account for the employment of 6 million persons and for the expenditure of $50 billion per year realize the importance of these governments as providers of personal income and as purchasers for many classes of goods. The detailed information from the governments census on employment and payrolls, on revenues and expenditures by type, and on capital outlays and indebtedness is the only comprehensive source of facts on a uniform basis on the size and characteristics of this important segment of our economy.

A majority of the reports of the 1957 Census of Governments have already been issued and the remainder will become available in the next several months. One major feature of the 1957 Census of Governments was a special survey to determine the relationship between the sales value of property and its assessed value. The results of this study furnish a measure of inter-area differences in property tax burdens as well as of the value of various classes of property (residential, agricultural, commercial, and industrial) shown on local assessment rolls.

The 1958 Censuses of Retail and Wholesale Trade, and of the Service Trades

These censuses, often described under the general heading of "Census of Business," constitute our most comprehensive source of information on the Nation's systems for the distribution of goods and services. These censuses as well as the 1958 Census of Manufacturers and Mineral Industries are now well along in the collection phase, with about 90 percent of the returns already received at our headquarters office.

The first data from these censuses and the figures which are the most important for business use, are the total sales and receipts for States, counties, and cities which will be shown in our preliminary area reports the latter part of this year. These figures represent our most comprehensive measure of the flow of consumer funds to various kind-of-business groups and to various areas.

* * * * *

A new feature of the 1958 census will be the publication of statistics for major business centers located outside the central business districts (the latter were first used in the 1954 census and will be continued for 1958). The statistics for the outlying business centers are planned for inclusion in the appropriate central business district bulletins, scheduled for issuance during the last half of 1960.

Another feature of the 1958 Census of Business will be the presentation of more data for towns and townships. We plan to include in our preliminary and final area bulletins statistics for New England towns with 2,500 or more urban population and statistics for New Jersey and Pennsylvania towns and townships with 10,000 or more inhabitants.

* * * * *

The 1958 Censuses of Manufactures and Mineral Industries

In the last 2 months of this year we expect to issue a series of preliminary summary reports on manufacturing to include (a) general statistics such as employment, payrolls, man-hours, value added by manufacture, cost of materials, value of shipments, and capital expenditures for all important individual industries and for industry groups; (b) general statistics for each State by two-digit major industrial groups; (c) general statistics for the 60 largest standard metropolitan areas by major industry group; and (d) general statistics for the total of manufacturing for most counties.

One of the most important classes of information to become available from the census of manufacturers, and certainly the most important for industrial marketers, will be the advance series of releases for some 300 of the most important manufacturing industries, which will be issued late in 1959 and in the early months of 1960, about 10 months on the average earlier than the corresponding reports for the 1954 census. In these preliminary reports, we will have a product table for the primary products of the industry. The industrial classification in all preliminary reports will be in terms of the unrevised standard industrial classification codes.

In the summer of 1960, approximately 85 industrial bulletins will be issued as they become available, at dates averaging about 9 months ahead of those for the last census. These bulletins will contain data for all manufacturing industries, based on the new standard industrial classification, but it will include transition tables to tie together the results under the old and new systems. The 1958 census reports will provide the first 1958 production statistics to be published on the basis of the new classification. Since our statistics will be available on both bases, companies which have classified their customer lists and other records either way will be able to compare their statistics with our industry totals.

The subject matter content of the new series of bulletins will include several types of information not collected in the 1954 census or collected in less detail. The first of these is the data on distribution of sales by class of customer for groups of products. The second is the supplementary data collected for 1957 as part of our 1958 census program, including supplements to wages and salaries, maintenance and repair expenditures, value of fixed assets and depreciation accounts, and selected additional expense items, such as insurance and taxes. Third, there will be an expanded coverage of materials consumed. In this connection, especially noteworthy is the addition of an inquiry on the consumption of containers and packaging supplies in those industries where such materials represent an important element of cost.

The program of preliminary reports and final industry bulletins for the census of mineral industries is similar to that for manufacturers. In the case of both censuses, the 51 area bulletins (one for each State, including Alaska, Hawaii, and the District of Columbia) will be issued from July through September 1960, about 12 months earlier than for 1954. The area data in these reports will give a great deal of information useful for evaluating regional shifts of particular industries, and the kinds of markets offered by different States for various types of industrial goods and raw materials.

Approximately 12 subject bulletins will be issued in the late summer of 1960. For the most part, these will represent an assembly of selected materials from the industry and area bulletins on such subjects as inventories, capital expenditures, size establishments, and so forth.

* * * * *

The 1959 Census of Agriculture

We believe that the results of the census of agriculture will once again be a mine of information for at least three important classes of business organizations: (1) those marketing specialized products for farm use, such as feed, fertilizer, farm equipment, etc.; (2) those firms for which the farm

market is an important part of the total market for consumer goods; and (3) manufacturers and other organizations which obtain some or all of their raw materials from farms.

Those of you who are interested in the agricultural market will find in the results of the census of agriculture a number of important measures of the size of the farm market by counties. One such measure is the number of farms classified by size and gross income. Another measure is the quantity of production resources on farms and a classification of farms by those resources. For example, a classification of farms by the acreage of particular crops or by the number of different kinds of livestock can be very important in suggesting the market for specialized farm equipment and supplies. A third measure of the size of the farm market in each county will be the figures on gross income by source. The reports of the census of agriculture will furnish other important county data for marketers, such as measures of expenditures for petroleum products, fertilizer, lime, seed, etc., and the kinds of equipment on farms. Most of the data chiefly used by marketers will be available in the county reports for the 1959 Census of Agriculture, which will be published during the calendar year 1960.

The 1960 Census of Population

The Census of Population, to be taken as of April 1, 1960, is the largest of our censuses in terms of the number of reporting units, size of staff required, and publication pages. The results of the Population Census are probably more widely used by business and Government than those of any of the other censuses. This is not surprising, since this census is the only source of much highly detailed information on the number and distribution of the population, extensively classified by social and economic characteristics. Many of the statistics are widely used in sales forecasting, analysis of market potentials, analysis of distribution, layouts of sales territories, location of plants and business outlets, and the determination of samples for research studies.

The 1960 Population Census will include a total of about 25 inquiries, two-thirds of which pertain to what might be called social characteristics and the remainder to economic characteristics, such as work status, occupation, industry and income. Most of the questions will be asked of only one household of four.

The 1960 census will include more new features than any population census in recent history, but many of the innovations are methodological and hence of limited interest to most users of statistics. It is particularly pertinent to note that, thanks to the greater use of sampling and of modern electronic equipment including some especially designed for our own needs, the speed-up of population reports will be especially great. We expect an improvement of more than a year in the publication time of the final population count for each local area. It may be possible to achieve somewhat greater gains in the timing of statistics on age, sex, race, marital status, and other parts of the census.

One of the major extensions of the 1960 Population Census program is the increase in the amount to be published for small areas, census tracts within cities, small urban places, other minor civil divisions, and counties. The number of census tracts has almost doubled over the past 10 years, rising from about 12,000 to about 22,000. Tracts will have been set up for almost every city over 50,000 and for nearly every standard metropolitan area over 100,000. It may be of particular interest to members of this association that we shall provide for counties information on the distribution of individual income as well as on the distribution by family income.

Many of you may be interested in the fact that we are including for the first time a question on place of work and means of transportation to work for persons who were at work at the time of the census. There will be provided a count of intercounty commuters together with data on the means of transportation to work.

Many of you will welcome our plans for a larger amount of family statistics from this census. We recognize that many of the goods sold by business organizations are marketed in terms of families rather than of individuals, and hence information on the characteristics of families is very useful as an indication of market potentials for such goods.

The 1960 Census of Housing

The 1960 Census of Housing will include about 35 inquiries concerning the basic characteristics of the housing unit, the plumbing and water supply, and kinds of equipment and facilities associated with the unit.

The 1960 Census of Housing will include a number of equipment items which are important for evaluation of changes in living standards as well as for analysis of market potentials. Among the new topics to be covered are home food freezers, clothes washing machines, clothes dryers, air-conditioning units, water heating fuel, and number of passenger automobiles available for regular use Other new items of considerable marketing interest are number of bathrooms, source of water supply, and method of sewage disposal, the latter two inquiries being omitted in places of over 50,000.

Another new feature in 1960 will be information on the duration of occupancy of the present housing unit. Information will be provided on the characteristics of housing involved in recent changes in occupancy, thereby making it possible to identify areas of stable occupancy and those in which there is a high turnover.

We shall again include questions on radio and television, identifying in each case the number of housing units with more than one set.

One feature of the 1960 Census of Housing represents essentially a continuation of the 1956 National Housing Inventory, which provided information on types of change in the housing inventory and on the financing of residential properties. We will collect for 17 large metropolitan areas, as well as for the United States subdivided by regions, information on units changed by conversion and merger, units added by new construction or in other ways, and units lost through demolition, fire, or other means.

* * * * *

SUMMARY

I believe that the results of the current series of censuses will prove to be the most valuable ever issued, not only because of their new features, but also because of our emphasis on quality, and on timeliness of publication. We are confident that they will make a real contribution to helping business maintain the pace of economic recovery from the recession levels of last year.

Speech by Lt. Gen. J. L. Huang

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 14, 1959

Mr. O'HARA of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

SPEECH BY LT. GEN. J. L. HUANG

Mr. Fisher, honorable Members of the U.S. Congress, and my distinguished friends, I am deeply honored by this luncheon and feel this honor is not for me as an individual, but rather a tribute to my government and my people, and especially to the valiant defenders of Quemoy and Matsu. May I convey to you on behalf of Free China—our heartfelt thanks for your moral and material support.

During the past 12 years I have been connected with the Combined Service Forces, serving for the last 5 years as the commander in chief. One of the vital activities of this Chinese logistic service was the receiving and dispatching of U.S. military aid materials on their arrival at Taiwan. I am proud to report to you and, through you, to your worthy constituents, that every dollar of your taxpayers' money has been carefully handled and effectively spent by my government. The Receiving of the Aid Material Department (RAMD) under the Combined Service Forces, has dispersed literally millions of tons of military cargo and unloaded more than 3,000 shipments during the last 8 years. There is not a single instance of penalty for overtime demurrages.

The recently retired commander of the Military Sea Transportation Service, Adm. John M. Will, in commenting on the speed and efficiency with which military cargo was dispatched, said: "Your record for handling military cargo is remarkable. You have saved the U.S. Government a lot of money. Incidentally, you have also earned for your country that much more aid."

You know how grateful the Chinese are to your people—and we want to translate this gratitude in terms of the careful handling of your aid program.

And now I would like to avail myself of this opportunity to outline our thinking of these other vital problems of the day—which affect us all.

Firstely, your firm stand on Berlin in face of Soviet threats has won profound respect and endless admiration from the freedom loving peoples all over the world. Your Secretary of State, Mr. Herter, stated the Kremlin rules should realize the depth of the Berlin commitment on the part of the West. He hoped they would refrain from putting to trial, by force, the present right and obligations of the western powers to preserve the freedom of the people of West Berlin. From this statement it appears that it can be taken for granted that the United Staes is not going to be threatened, cajoled or pushed out of Berlin.

Now let us turn to Tibet. The Chinese Communists took over Tibet in 1950. From the beginning of the Red occupation, many Tibetans have resisted courageously. When they resisted, the Communists bombed and burned their monasteries, killed their abbots and priests, and turned their tommyguns on statues of Buddha, an act of blasphemy deeply resented by the Tibetans. They marched in more and more troops. They built airfields for their bombers; and they moved in tens of thousands of Chinese as colonizers. Many children were carried away to the China mainland to be trained as Communists. All of this cruelty and ruthlessness aroused the Tibetan guerrillas. And recently, when the Tibetans thought their Dalai Lama, their God-king was in danger, it even sparked a battle within the capital city of Lhasa itself.

Does not this ruthless, calculated aggression recall the Hungarian crisis? The people who rose against their oppressors in Hungary fought for freedom. So did the Tibetans. Great casualties resulted in suppressing Hungarian freedom-fighters. The same was true in Tibet. In Hungary, however, the

free world did not intervene. In Tibet, it appears next to impossible for military aid to reach the Tibetans. The outcome for both peoples is disastrous.

Of course, there is still some hope for Tibet. The neutralists of Asia are beginning to be aware of and are openly criticizing Peiping for breaking its pledge of autonomy to the Tibetans. Public opinion and the press have been vocal in protest all over Asia. Moreover, all through Asia, Buddhists are united in condemning the Chinese Communists for the suppression of their freedom of religion.

Now, lastly, here is a problem which I think affects all of us—but which is of especial interest to me as a citizen of free China, that is Quemoy. Let us review the Quemoy situation, and consider its implications. In October, 1949, 17,000 Reds attempted an outright invasion with motorboats, junks and bamboo rafts. The Nationalist defenders of the island fought them off as quickly as they could land, either killing them on the beaches or taking them prisoners. None escaped and none returned.

Again, in September 1954, tension gripped the Taiwan Straits. By this time, the High Command of the U.S. Army, Navy and Air Force, who had visited Quemoy and Matsu, realized the extreme importance of defending the offshore islands, both from a military and psychological point of view. But as we are all aware, their views were not universally shared. There was even talk that the island of Quemoy and Matsu were unimportant.

With strong persuasion from the U.S. Government, we reluctantly agreed, in 1955, to make a strategic retreat of Tachen and Nanchi Islands. Implicit in all these was the belief that this was the last concession, and was the end of giving in to the threats of the Communists. Were the Communists satisfied then? Did this stop further aggression? Of course not. The aggressive grabbing of the Communists can never be satisfied and our retreats fanned the flame of aggression, rather than banked it.

Suddenly without warning, on the 23d of August, 1958, the Chinese Reds let loose their big guns in a savage bombardment. That first day, 50,000 shells were lobbed from the mainland into Quemoy. Within 6 weeks, a total of half a million shells had pounded the four islands in the Quemoy group. There was no question at any time as to the courage and morale of the Nationalist defenders. Our greatest problem was to supply and to resupply the offshore islands. The 7th Fleet was said to have the biggest striking power of the U.S. Navy. They convoyed the Chinese supply ships to the internationally recognized territorial waters. From there, the Chinese supply ships had to go it alone. Many heroic sacrifices were made. Yet, in barely 2 months, the Chinese soldiers learned new landing tactics and broke the Communist blockade.

From this we can perhaps draw a conclusion. Appeasement never bought peace anywhere, anytime. In Berlin, you do not intend to give in, you do not intend to sacrifice the freedom of the people of West Berlin to buy off the Russians. We feel the same way about our offshore islands of Quemoy and Matsu. You understood the problems of Hungary. Your hearts ached when the free world found no way to help the freedom fighters resist the Russian tanks. We feel the same way about Tibet.

Therefore, we must remember that Berlin, Tibet, and Quemoy are all one problem. The free world cannot afford to concede another inch to the threat and bluff of the Communist aggression. We must not sacrifice the freedom of other people, as it is not the way to save our own.

In closing, I want to reiterate how grateful we are—and we want to translate this gratitude in terms of the careful processing of your aid program. And, although I do not presume to fully comprehend all the ramifications of your appropriations program, as a recipient of aid—and with the understanding of the tremendous importance throughout the rest of the world, we respectfully urge that you consider most carefully the appropriations program now before you and the attendant difficulties which might ensue.

Thank you so much.

As Talks Resume at Geneva

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following appraisal by Edgar Ansel Mowrer:

WEST RESUMES EFFORTS FOR PEACE AT ANY PRICE

(By Edgar Ansel Mowrer)

Once more Western representatives are back at Geneva negotiating Soviet demands for their own eventual evacuation of West Berlin. Presumably the talks will resume on the basis of one-sided Western concessions first arranged by Macmillan and Khrushchev during the Briton's visit to Moscow and then somewhat grudgingly accepted by our Secretary of State, Christian Herter, against the advice of de Gaulle and Adenauer.

Once more the West has resumed a diplomatic poker game in which we have nothing to win except a reprieve and the Soviets have nothing to lose.

Surely, the citizens of the free countries insofar as they have not been panicked by Soviet war threats, are justified in asking why.

The coziest answer, particularly from Britons, is that the Western position in West Berlin cannot be defended without war and that nobody has any interest in dying for Germany.

This is true but shortsighted. For if West Berlin cannot be defended without war, neither can London, Paris or Washington. Failure to stand at West Berlin will make ultimate war more likely as surely as Britain and France's surrender to Hitler at Munich brought on World War II.

OTHER REASONS

British statesmen, however, have other reasons for the present resumption of negotiations at Geneva. Prime Minister Macmillan hopes to reduce the questions in dispute to manageable compass and settle them at a future summit meeting.

Actually, the only question in dispute at Berlin is how far the West will yield to Khrushchev's threats. There is absolutely no chance—repeat, no chance—of reaching any agreement on the vast problems raised by Soviet imperialism, such as the reunification of a truly free Germany, the liberation of the satellites, etc. To imply that there is is either to deceive oneself or others.

Britain's Foreign Secretary Selwyn Lloyd gives another reason for resuming talks. He believes that it is possible to reach an agreement on West Berlin. This belief is vociferously seconded by such British Labor Party leaders as Hugh Gaitskell and Nye Bevan. Bevan can no longer see "any substantial differences" between the two sides regarding a "provisional agreement" on Berlin, something that Gaitskell calls a "modest understanding" which will "lead to a summit conference without delay."

To which the rejoinder is that if Gaitskell and Bevan can no longer see substantial differences between the side that has a right to stay in West Berlin as long as it pleases and the side that wishes to throw the West out, then indeed the West must secretly have gone very far toward surrender.

The argument in favor of a "temporary agreement" has been further illuminated by Chalmers Roberts of the Washington Post. Studying a recent Soviet statement, he found that Russia had agreed to tolerate (how generous) a "temporary stay" of Western military garrisons in Berlin and a "temporary maintenance of communications with West Berlin as they now exist" in order to permit a coming "all-German committee to discuss the German question."

Aside from the fact that there is literally no chance of all-German negotiations reaching anything but a stalemate or a fight, one simply fails to understand what the West has to gain by transforming today's unlimited de facto rights in West Berlin into any sort of a "temporary status."

Yet Roberts suggests an answer: Having been maneuvered by the Soviets into accepting negotiations over Berlin on Soviet terms, the U.S. administration does not know how to break them off. Nor is it certain that the President desires to break them off so long as there is anybody opposite to talk to. In his recent press conference, he outlined his view.

"We are ready to talk and discuss anything because we certainly do want to find some way of reaching a solution that will not keep the whole world on edge * * * We must do it * * * if we are going to do a real service for the citizens of the world."

ASTONISHING SOLUTION

The President's motive is, as always, commendable. He would presumably be astonished if somebody were to insist that the best method of getting the world off the edge would be to accept a political showdown with the Kremlin and compel it to back down.

But Khrushchev and his traveling stooge, Frol Kozlov, have repeated their threats of war unless they have their way over Berlin. If these threats succeed, they will doubtless be periodically repeated until the West, including Uncle Sam, is stripped naked.

In consequence, our diplomats are back in Geneva engaged in what a bolder generation of Englishmen would have dubbed a "mug's game."

All because British conservatives need an election boost, because the U.S. Administration stubbornly insists on trying to call off the cold war instead of winning it and because the Western peoples are being slowly conditioned to desire peace at almost any price.

The Summit

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 16, 1959

Mr. BOSCH. Mr. Speaker, under leave to extend my remarks, I include, from

the July issue of The American Mercury, an article entitled "The Summit." The author of this article, which is the first of a series, is Maj. Gen. Charles A. Willoughby, U.S. Army—retired. General Willoughby was closely associated with General of the Army Douglas MacArthur from 1939 until 1951.

THE SUMMIT

(By Gen. Charles A. Willoughby)

PART I: A DEMILITARIZED MID-EUROPEAN BUFFER ZONE

Khrushchev's drive for a summit meeting has succeeded, with Macmillan acting as the honest broker. Russian declarations, however, show no palpable concessions—indeed, they were more conciliatory in 1952.

The intrinsic value of summit meetings can be ascertained by simple, historical recollections. In the last 25 years, the United States has had 3,400 meetings with the Communists, including Teheran, Yalta, Potsdam, Panmunjom, and Geneva. The negotiators spoke 106 million words (about 700 volumes in print). These talkfests led to 52 major agreements—and Soviet Russia has broken 50 of them. It is almost boring to quote Lenin: "Promises are like piecrusts—made to be broken."

The Communist philosophy of diplomatic negotiations was stated in 1931 by Dmitri Manuilski who, at one time, presided over the U.N. Security Council—telltale index of the quality of that overrated body. Manuilski's time table is interesting: "War to the hilt between communism and capitalism is inevitable. Today, we are not strong enough. Our time will come in 20 or 30 years (i.e., in 1951 or in 1961). The bourgeoisie will have to be put to sleep. So we will launch the most spectacular peace movement on record. The capitalists, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends." We suppose this coldblooded forecast has escaped men like Cyrus Eaton and his Pugwash coterie of tax-exempt brainwashers.

The Russians precipitated the Berlin crisis for well-known, well-defined objectives in the framework of their ruthless but brilliant strategy; conversely, a study of cause and effect will place responsibility for a critical situation almost entirely on the West: (1) Panicky demobilization in 1945 while Russia armed to the teeth; (2) fatuous reliance on a supposedly exclusive deterrent; (3) failure of Western Europe to maintain even peacetime armaments; (4) silence of NATO commanders on a visibly weakening shield.

Against this background of military fumbling, the Russians seek to retain the loot acquired with the help of Hitler, plus the loot handed over to them at Yalta and Potsdam. They want acceptance of the status quo at the highest level—the summit. Behind this acquiescence, the Russians anticipate even more important gains: the resulting collapse of resistance by captive millions whose only hope has been the West.

The smiling farce of hobnobbing with the Kremlin as at Geneva, reverberates from Warsaw to Sinkiang, England, which precipitated World War II over the Polish corridor (loot of Versailles), acquiesced in the Russian seizure of eastern Poland. Russia, in turn, assuaged the Poles by throwing them the consolation of East Germany from the Oder-Neisse line.

The Czechs went unchallenged in the brutal expulsion of 3 million Sudeten Germans in 1948 and the confiscation of every stick and stone of Sudeten properties. Poles and Czechs are proposed as members of the meetings. The division of Germany (and of Korea) is expected to be legalized and become permanent.

The summit is expected to devise some sort of face-saving formula. Fantastic as the cynical conditions of the Kremlin appear, there is plenty of support for them by the habitual appeasers in New York, Washington, London, and even in Bonn; viz: Germany: Carlo Schmidt, Debates in the Bundestag; "Disengagement"; England: Denis Healey, Labor Party, "European Neutral Belt"; United States: Professor Brecht in American Political Science Review, "Cordon Sanitaire."

There were other proposals by the Belgian Van Zeeland, the British Eden and Liddell Hart, the American Kennan, the Hungarian refugee Auer, and others. Their proposals are variations of the same theme—the formation of a mid-European buffer zone, a neutralized central Europe. Macmillan has carried this scheme (among other proposals) to Washington. These proposals are based on the naive theory that current international tensions can be relaxed by reciprocal disarmament (disengagement) along a mid-European corridor of buffer zone. The fallacy lies in ignoring the fact that these tensions have been largely generated by the Russians, themselves.

These proposals, dating back to the 1950's, are a repetition of the cordon sanitaire which the ebulient victors of Versailles attempted to build around Bolshevik Russia * * * except that the Russians have developed this time a sort of satellite cordon in reverse.

The Kremlin often picks up gems of Western thought and improves upon them. The Russian variant involves the neutralization of Germany, i.e., Germany's eventual withdrawal from the North Atlantic Treaty Organization and the perpetuation of a divided Germany (and a divided Korea). We expect some sort of package "deal," along similar lines, in the forthcoming summit deliberations.

Over recent years, there have been four or five proposals for a demilitarized mid-European zone, viz, the Pfleiderer Plan 1952. Map 1; the First Eden Plan 1955. Map 2; the Second Eden Plan 1955. Map 3, the Bulganin Plan 1956. Map 4, the Rapacki Plan 1957. Maps 4 and 5.

At first glance these plans appear deceptively alike, which normally would afford a promising start for diplomatic action. However, there are critical differences—in the "line of departure" or "basis" and in the width of the zone. Eden and Pfleiderer (maps 1 and 2) initially fixed the "basis" along the current provisional Potsdam division between West and East Germany.

Eden and General Heusinger (speaking for Adenauer) then proposed a modified "basis" (map 3), the prewar German-Polish border, on the assumption that the eventual reunification of Germany would be within the old German borders. Somehow the "Oder-Neisse line" crept into this scheme and raised a specter that has haunted the West ever since—and may become the single, crucial issue of the summit meeting. That line spells the occupation and retention, under Polish control, of a substantial area of East Germany, territory in German hands for centuries.

The width of the proposed zones became a factor of immediate tactical significance; it varied from 150 to 300 miles initially, which was a concession to conventional, obsolescent infantry but rather pointless with jet-propelled aviation or midrange ballistic missiles. Then Bulganin came up with something rather startling. He enlarged the disengagement zone to 1,000 miles.

The buffer zone proposals were initially intramural and intergovernmental, but they were tossed around violently by the tides of public opinion. The fellow-traveling scientists moved in to flash the specter of nuclear fallout, carefully masking the fact that Russia was exploding the dirtiest bombs in the world. It was inescapable that the West would come to grips with the problem since they are directly under the Russian guns.

More exposed than any other nation, German authorities were quoted: "* * * it is possible that a demilitarized zone in Central Europe will again be presented to the interested powers. Indeed, it has been under study (by Germany) since 1953 * * *." This was a reference to General Heusinger's views.

The German studies were predicted uniformly on the prewar frontiers of a reunited Germany. The zone ran from the North Sea to the Adriatic. It was linked to a favorite theme of Adenauer, the European Defense Community (EDC), a fairly practical inter-European security system. EDC was promptly torpedoed by Mendes-France with the assistance of the solid voting bloc of the French Communist Party. Europe lost valuable years of potential preparedness through that maneuver.

Rapacki, the Polish Foreign Minister (under instructions from Moscow) expanded on Bulganin with a neutralization plan of his own that would pull interior countries from both the Warsaw and NATO Pacts, suggesting vaguely a neutral third force wedged between Russia and the West, atom free and with a progressive thinning out of conventional forces.

PART II: NATO AND A MID-EUROPEAN BUFFER ZONE

We have traced certain proposals for a mid-European buffer zone from Pfleiderer (1952) to Bulganin-Rapacki (1956–57); hence, the Berlin crisis did not precipitate an unknown dilemma. It has been in the making or a long time; it is covered by a phony label, "disengagement"; and it runs through the evasive verbiage of the current Washington conferences.

The tongue-in-cheek quality of the Bulganin proposals would disengage (i.e., demilitarize) all of Germany, the Benelux countries, and almost half of France. It would push (disengage) the present American garrisons in Germany to a line roughly west of Paris (where they are probably not wanted) while leaving the bulk of Russian troops in the eastern half of pre-Stalin Poland with normal Russian border garrisons stationed in the Minsk-Pinsk-Kiev triangle ready to march, with 50 to 60 divisions.

It could be argued that the displaced divisions of the North Atlantic Treaty Organization are free to countermarch from new garrisons in Western Europe or wherever ultimate buffer zones are permitted by the Russians. The catch is that we will have to accept abandonment of the enormously costly American installations in Germany—airfields, barracks, depots, and warehouses—that have been built since 1945 at a cost running into billions of dollars.

The real purpose in all Russian proposals—indeed the essence of their calculated foreign policy—is the ultimate retention of their war loot since 1939, the Baltic countries, a mutilated Poland, a divided Germany, and so forth. They demand the acceptance of the status quo. They seek the legalization of the Potsdam territorial crimes (equally chargeable to the Allies) in a form of political genocide that drove millions from their homes and properties, which had been in their possession for centuries. This is the cancer of Europe, from which it has ailed since Versailles (1918), and American intervention in Europe created the conditions for the bacteria to flourish.

Disengagement and demilitarized buffer zones are no remedy. They are a psychological hoax, a military-political sham. They would separate the contending forces by a few hundred miles—a matter of 3 or 4 truck-days for motorized and armored

units, a matter of minutes for midrange ballistic missiles from present Russian and Czech bases (the threat of which urged Macmillan on his road to appeasement), a matter of hours for a thorough raking-over of jet-propelled aircraft. General de Gaulle has commented wryly on schemes of disengagement in the era of intercontinental missiles, that he "would not be satisfied until the Russians disengaged as far eastward as the Urals."

We accept, of course, the fact that retaliatory action is still possible for the West through the highly efficient SAC and that a "balance of nuclear terror" is still within our hands—and will be for some time to come. But what an index of "statesmanship," after expenditures of $50 billion on "mutual security" and an annual budget of around $70 billion! The cynical, hardheaded Russians naturally count on the humanitarian feelings of America to prevent or delay the nuclear destruction of French, British, or German areas, though the Russian satellites in Warsaw, Prague, and Budapest will be equally vulnerable.

While it is too late to cry over spilled milk, as regards the immediacy of the Berlin ultimatum, the weakness of NATO in conventional armies ought to be exposed relentlessly and something done about it, instead of the "one-shot" gamble on nuclear deterrents. We have said before that the balance of nuclear terror must be paralleled by an appropriate balance of conventional forces with special emphasis on the crucial front: Denmark-Switzerland. The weakness of the NATO "shield" is a constant bait for the Russians to get tough. The story is plain to see in a comparison of military performance, over the years, viz:

The weakening shield of NATO

	1928	1950	1956	1959	Remarks
Benelux	18	3	4	4	(1).
United States of America	12	6	5	5	(2).
Great Britain	23	4.5	4	3	(3).
France	30	6	2	2	(4).
Germany	10	------	3	7	(5).
Aggregates	93	18.5	18	21	(6).
Russia-central Europe	105	65	65	65	(7).
Russia-overall	105	195	175	175	(8).

The column, 1928, is significant as a yardstick of normal military capacity, the product of European annual conscription operating without American foreign aid. Emphasis is on the countries immediately adjacent to the crucial NATO front: Denmark-Berlin-Switzerland, the front where basic issues may force actual fighting—not the spurious fronts of an evasive neutralism, as in India, Yugoslavia, or Indonesia. There are certain collateral factors that have a bearing on this historical tabulation, listed under "remarks" viz:

1. The heart of Benelux is the Netherlands. This faithful wartime ally has been dispossessed from Indonesia (1948) and is still plagued with wholesale confiscation of private properties (1959). The instrument of expropriation was developed by the United Nations, the United States collaborating (1947). The Communist parallel is found in the barbarous expulsion of 3 million Sudetan Germans from Czechoslovakia (1948).

2. Since 1945, the American contingents have been the mainstay of NATO conventional defenses along the decisive front: Denmark-Berlin-Switzerland. Casual mention should be made of the presence of 100,000 women and children dependents of these Armed Forces. They ought to be withdrawn from a dangerous trap.

3. Great Britain is reducing progressively, as the welfare state cannot support the armed services. Incidentally, the present precarious situation is the result of World Wars I and II, largely brought about by British diplomatic maneuvers and intrigues; they triggered World War I through the creation of the entente cordiale; they precipitated World War II by backing the Poles on the corridor, a creation of Versailles, 1918.

(4) France has been compelled to withdraw her best divisions for employment in Algiers—a war largely engineered by Russia, utilizing Mediterranean stooges like Nasser of Egypt.

(5) Germany has increased her NATO contributions from "zero" to currently seven divisions and will increase to 12 divisions. (Currently the New York brainwashers are distributing anti-German literary and theatrical material dating back to the Hitler period.)

(6) NATO commanders Ridgeway, Eisenhower, Gruenther and Norstad have made successive estimates of required strength to balance the visibly growing Russian forces. They considered 90 divisions necessary in 1950, about what the Europeans turned out in 1928; thereafter, they scaled down their estimates to 65, 45—and now 30—divisions, though the Russian threat is no less in 1959 than it was in 1949. Until recently, largely due to increased German contributions, NATO never produced more than 18 conventional divisions in Central Europe at a cumulative aggregate cost (foreign aid-mutual security) of approximately $14 billion, or $770 million annually; this amounts to a "unit cost" per division of $77 million each year. In the Mediterranean sector, "mutual security" is less expensive: Greece, Turkey, Italy and Spain have turned out a division for $12.8 million of annual foreign aid; Korea and Formosa have cut this to $8.7 million per division.

(7) Russia, the archenemy, the scourge of the West, uniformly maintains superior conventional strength. On the crucial NATO front, the Russians maintain 22 divisions. (East Germany); 8 divisions (Poland); 25 divisions in the Minsk-Pinsk-Kiev triangle. Satellite divisions like the Czechs (12 armor divisions) are considered reliable; indeed, this showpiece of Wilsonian diplomacy (1918) has turned into the most rabid Communist (sic) of them all. The East German "Vo-Pos" (10 divisions) are probably uncertain. Nevetheless, Russia has the potential of 55 to 75 ready divisions, challenging 21 NATO units in a ratio of 3 to 1, a ratio considered technically sufficient for a blitz offensive. These facts have induced Eisenhower finally to admit (1959) that ground forces are inadequate. He must have known the obvious as early as 1950 while he was still NATO commander; it was an inescapable development coincidental with the Russians' obtaining our nuclear secrets through a British-American-Canadian spy ring.

(8) The Russian standing army, on the conscript pattern, is reported at 175 divisions; it could be stronger. Annual reserves are available to double the current figure within 30 to 60 days. In a central geographical setting, Russia can reinforce any specific front, from Turkey to North Korea, from the Baltic to the Persian Gulf. It should be remembered that Mongolian units appeared in the Hungarian crisis. In the wake of that crisis, Russian reinforcements came in via Czechoslovakia; five Soviet divisions remained there for some time: one armored division, in Moravia, two armed divisions, and two in Slovakia.

These valid considerations have been brushed aside for years in a myopic reliance on the exclusive deterrent, the nuclear bomb, airborne or missile-carried. Today, the Russians are at least equivalent (if not superior) in nuclear armament, deterrent or retaliatory. Where do we go from here?

In the NATO palaver in Washington it is blandly assumed that the Russians will not use their deterrent. Are we to credit Krushchev with a greater moral or humanitarian sense than Truman who did not hesitate in his day, to launch this satanic weapon—and tipped his hand prematurely.

Can NATO afford to fight?

Trinity River Project

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 26, 1959

Mr. GUBSER. Mr. Speaker, on July 7 the Senate Appropriations Committee approved a $39,593,939,000 Defense Department appropriation bill, $746 million higher than the amount approved by the House and $346,139,000 more than the President recommended. The measure included $380 million for a second nuclear-powered aircraft carrier.

No one denies that $380 million is quite a bit of money to spend on anything, anytime. Few will infer that the committee, in its wisdom, having pondered the necessity of the aircraft carrier versus the expenditure of $380 million, at great length and with voluminous testimony, should have concluded otherwise.

I believe it is worth noting, however, that another item entailing this same sum—$380 million—is now going to conference. The House refused to appropriate for Federal construction of the Trinity River power facilities in California because pending bills, providing for joint development with a private utility, were to be considered shortly by the House Interior Subcommittee on Irrigation and Reclamation. The Senate Appropriations Committee, however, chose to ignore the fact that the House Legislative Committee had jurisdiction over the subject matter properly before it for some time, since the Trinity Authorization Act directed the Secretary of the Interior to study and report back to Congress on proposals by non-Federal agencies to construct and operate the powerplants. His recommendations are incorporated in the bills pending in the House Interior Committee. It certainly does not seem to constitute proper legislative procedure for one congressional committee to bypass another by an appropriation before there has been consideration and action by the Legislative Committee. It is to be hoped that the House conferees will firmly maintain their stand, and thereby uphold the dignity, integrity and status of their colleagues on the Interior and Insular Affairs Committee who have scheduled hearings on the Trinity joint development proposal for July 24.

But how is $380 million involved in the Trinity River division? Under the

proposed legislation providing for joint development, or partnership, as recommended by the Secretary of the Interior, the Pacific Gas & Electric Co. would build and operate the Trinity power facilities. There would be an immediate saving to the taxpayers of $60 million, for the company, not the Federal Government, would put up this amount to construct the power features. Contrasted with all-Federal development, there would be $175 million more net surplus revenue in the Central Valley project from the sums the company would pay for the temporary use of the falling water and operating savings over the 50-year project repayment period. And there would be $145 million new tax revenues from the company's facilities, about $83 million of which would be Federal taxes and $62 million for State, county, and local governments.

Three hundred and eighty million dollars—one nuclear-powered aircraft carrier—could be totaled up by the company's outlays in building and operating the Trinity River powerplants: $60 million construction costs, $175 million additional Central Valley project surplus, and $145 million in tax payments. And who would benefit under the joint development proposal? The water users and the taxpayers, the same people who would lose these benefits should the Federal Government itself, build the generators to sell subsidized power at half its production cost to so-called preference customers, who, incidentally, had ample opportunity to come forward with offers to build the plants, but did not do so, preferring to buy half-cost power from the Government.

Over 230 representative and responsible California organizations have actively supported joint development of Trinity, including irrigation districts, farmer groups, city councils and boards of supervisors, labor unions and civic groups. On June 19, 1959, Ronald T. Weakley, business manager of Local 1245 of the International Brotherhood of Electrical Workers, AFL–CIO, told the Senate Appropriations Public Works Subcommittee, in opposing any appropriation for all-Federal construction, that "we believe it is time to reappraise the whole concept of public power. It is understandable," he said, "that when private capital is unable to undertake a given power project, that the Government should do so. We fail, however, to understand why an unfair tax policy should be adopted just because some would like to nationalize the power industry. I make no brief here for the power companies," he continued. "They are regulated on a State and Federal basis and can stand on the record so far as providing the capital and developing the power to meet the needs of California's tremendous post-war expansion. Why they should be singled out for extinction, and all-Federal power development on the Trinity is just another major step toward that goal, is beyond us. We still believe that Congress should act on the Pacific Gas & Electric Co.'s offer to provide private capital and get on with the job, rather than tack on millions of dollars to the project cost out of our already tremendous tax load."

Mr. Weakley also pointed out that "I.B.E.W. members in the private utilities work under collective bargaining agreements covering wages, working conditions, and other benefits," while "legislation to provide for collective bargaining in" municipal utility districts and local agencies "is bitterly opposed by the representatives of these California public power preference agencies."

As business manager of an I.B.E.W. local, Mr. Weakley's prime interest is the economic welfare of the members who have authorized him to speak for them. His concern, and their concern, resolves itself down to the basic question: Are we, as union members in the electric power field, better off regarding working conditions and purchasing power under this private company than we would be under a public power agency? There appears to be no doubt that this union feels strongly that it will profit if the Trinity River power facilities are constructed and operated by the company, not the Federal Government.

To consider the issue in its simplest terms, Federal subsidized power is a great boon to the minority who are receiving it, because the great majority are paying for it through their taxes; but the members of the paying majority are going to have to get along with less food, less comfort, less entertainment, less savings, less schooling for our children, a lower standard of living, and increased taxes so that preference customers can get cheaper power than we receive.

Mr. Weakley has struck at the heart of the issue—the pocketbook—and concludes forcefully:

> Further, underwriting tax-free public power agency bonds as against private tax-paying investment is, we believe, a bad bargain for all of us. After these agencies are set up, we find that instead of Federal power being used to pay for water development, these agencies get power at below cost to the extent that all of the taxpayers are paying for subsidies to a favored few consumers. * * * To sum up, our members, by resolution, have directed me to support the principle of joint development of Trinity for their protection both as free workers and as taxpayers.

The majority of the people surely prefer to see their tax dollars spent on a necessary nuclear-powered aircraft carrier, rather than subsidize the minority's power bills; and no one can deny that this would be the result of needless Government spending for all-Federal construction of the Trinity River powerplants.

Freedom From Bigotry

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 14, 1959

Mr. MULTER. Mr. Speaker, I have frequently voiced my disagreement with President Eisenhower and his policies. There is one very important matter of political principle on which I heartly concur with him and that is that religion has no place in politics. The sooner we root that out of the Amercan scene even a discussion of it, the stronger our country will be.

I commend to the attention of our colleagues the following editorial which appeared in the Washington Post of July 9, 1959:

FREEDOM FROM BIGOTRY

President Eisenhower responded to the question as to whether a Catholic could properly be elected to the Presidency with a salutary swing at religious prejudice. His words may well be emphasized and reemphasized as the country moves into another nominating season for presidential candidates. He said:

"As far as I am concerned, it's a perfectly extraneous question * * * it's like asking a man whether he is a Methodist or a Presbyterian or something of that kind. I do not agree at all with the theory that prejudice, religious prejudice should rule our choice of candidates and officials of this Nation.

"If I saw any man that I thought was really a qualified responsible individual running for office, my vote would never be changed on the basis of his religion."

This is a straightforward statement of a basic principle underlying the American philosophy of government. It is an essential corollary to the separation of church and state required by the Constitution. Every citizen ought to realize that he cannot drag religious bigotry into the political arena without trampling upon rights that all free men ought to respect.

Geneva Outlook: Gloomy

EXTENSION OF REMARKS

OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 30, 1959

Mr. BOSCH. Mr. Speaker, "forewarned is forearmed," and it is my hope that we are sufficiently forearmed on the question of West Berlin which is now the subject of deliberations in Geneva. As far as I am concerned, there is no question of the firmness we must have in our dealings with the representatives of the Kremlin.

Under leave to extend my remarks, I include an article by David M. Nicol which appeared in the Long Island Sunday Press of July 12, 1959, and which I hope each and every Member of Congress will take the time to read.

The article follows:

GENEVA OUTLOOK: GLOOMY

(By David M. Nicol)

GENEVA, SWITZERLAND.—The four-power East-West Foreign Ministers are reassembling in Geneva this weekend in an atmosphere considerably gloomier than that in which they left last month.

It seems clearer than ever that the Soviets are in no mood to make any concession about Berlin or the larger question of German unification. Publicly and privately, Premier Nikita Khrushchev has affirmed beyond any doubt, and in threatening fashion, that he is sticking to the core of his original demands.

In essence, these require that the West weaken its position in West Berlin to the point where the city will fall political and economic prey to the Communist East German Government that has its seat in East Berlin and controls the surrounding territory.

About the only question to be decided in Geneva's new exercise in conference diplomacy is whether the sessions will be followed by a summit meeting.

Even in this the Soviets seemed to have turned the tables until most pressures for such a summit meeting come from members of the Western alliance. The British are keenest for such a conference but among the other delegations there are thoughful men who wonder whether it isn't a last hope.

The Soviets themselves either are playing hard to get or genuinely have lost some of their earlier interest in such a proceeding.

Recent visitors to Khrushchev say he seemed more anxious for bilateral talks with President Eisenhower. The junketing American governors were given this impression, among others.

It appears also to be true that Soviet Foreign Minister Andrei A. Gromyko never once mentioned a possible summit meeting during all of his public and private utterances during the earlier round of Geneva talks.

The end result may well be a situation in which the West almost begs the Soviets to meet them at the summit without even superficial concessions from Moscow.

The argument of those who urged a summit gathering whether the present Geneva talks succeed or fail, is simple. Khrushchev, they insist, is the only man who makes the decisions in Moscow and it therefore is essential to state the Western case directly to him.

As an added incentive, in the eyes of these people, is the fact that Khrushchev seems abysmally ignorant of the strengths and ideas of the West. His closest advisers apparently don't give him an honest count about their own contacts with the West and the impressions they gather.

Khrushchev is portrayed as much more impetuous and much less coldblooded and calculating than his predecessor, Joe Stalin. But even Old Joe went wrong on some notable occasions, including the blockade of Berlin and the Communist attack on South Korea.

How much easier, it is argued, for a war to begin by accident when the decision lies in the hands of a volatile, cocky and hypersensitive man like Khrushchev?

Exponents of this view feel Khrushchev might be impressed by some blunt, straight, private conversation with Ike and a summit meeting might be the backdrop for such a session.

Pessimists fear that it already may be too late for such an effort and that Khrushchev has ceased to be influenced by talk.

The Soviet Premier's own plans seem to be incredibly ambitious; far more sweeping even than the dreams of most of his followers. He is convinced he is right and can succeed; and talk may only increase his impatience.

Bastille Day

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 14, 1959

Mr. MULTER. Man's struggle for his freedom, for liberty and independence, forms the most glorious and praiseworthy part of his long history. Human history is full of glorious deeds, innumerable landmarks. But none of them in the last 170 years is more glorious than the history made in France in the capture of the Bastille by revolutionary forces on July 14, 1789.

For years this historic fortress in Paris had served as the principal prison for French National Governments. All those suspected and charged with some alleged crime were herded there indiscriminately, and detained for a long time, often without trial. This in itself was bad enough, but in the 18th century the Government made the Bastille a political prison house. All those conscientious, freedom-loving, and daring souls who spoke or wrote critically of the Government were imprisoned in the Bastille. Thus, toward the end of the century the name "Bastille" had become synonymous with such odious words as despotism, cruelty, and oppression, while its innocent inmates were looked upon as gallant fighters and martyrs dying for the cause of freedom. It is not, therefore, surprising that when the French Revolution broke out, and long before France and all Europe were clamoring for freedom, one of the first acts of the revolutionary leaders was to attack the Bastille and free the prisoners there.

This was done on July 14, and since that day, that event has become a symbol of freedom. July 14 has also become the national holiday of France. Just as we in this country annually celebrate July 4 as our Independence Day, all Frenchmen celebrate July 14 as Bastille Day, as their liberation and independence day.

In its broader aspect, Bastille Day symbolizes something more. It marks the beginning of a revolutionary era in Europe which has extended far and wide to all parts of the world. Its influence has been tremendous. In one respect, the ideas engendered by the French Revolution differed from those embodied in the American Revolution. Our Founding Fathers established modern democracy, and an orderly process of government under law, while the French revolution made democratic principles, as understood by the revolutionary leaders in this country, into a militant creed, a universal gospel, to be preached and propagated everywhere.

Even with all its excesses and all the setbacks and reverses suffered by the attackers and destroyers of the Bastille, the event of its destruction as man's physical and spiritual prison, and the freeing of its suffering inmates, marks an unforgettable day for all lovers of freedom and independence.

New Life for Civil Defense

EXTENSION OF REMARKS

OF

HON. R. WALTER RIEHLMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 14, 1959

Mr. RIEHLMAN. Mr. Speaker, as a result of my long-time interest in civil defense I have come to realize that it is a field where sincere interest and constructive ideas are at a premium.

Under leave to extend my remarks in the RECORD, I present for my colleagues' consideration an address by a constituent of mine, Bernard F. Hillenbrand, executive director of the National Association of County Officials, entitled "New Life for Civil Defense." The address was recently delivered to the Ohio civil defense directors in Columbus, Ohio.

The address follows:

NEW LIFE FOR CIVIL DEFENSE

(Address by Bernard F. Hillenbrand, executive director, National Association of County Officials, before the Ohio Civil Defense Directors, Columbus, Ohio, June 13, 1959)

One of the most able and conscientious county commissioners we know was recently invited to attend a demonstration of modern weapons at a nearby airbase. He saw rockets that were guided by sensitivity to heat that were so delicate that they could find their way to a man's lighted pipe. He saw jets flash by at 700 miles an hour and was advised that in time of war they could be equipped with nuclear rockets. He and his fellow public officials were also briefed on intercontinental ballistics missile development and were treated to horror stories about the possibility of germ warfare. Most important he was advised by military authorities that to the best of our knowledge the potential enemies of the United States also had similar weapons and capabilities.

The impact of this demonstration upon this public official was not unlike the impact upon the general citizenry. He came back to his home county with a feeling of futility at the very enormity of the defense problem and he resolved in his own mind to vote against further appropriation of funds for civil defense purposes. He reasoned that the problem is so enormous and our efforts to solve it so pitiful, that it seems better to do nothing and at least save taxpayer funds.

IS DEFENSE OF CIVILIANS NECESSARY?

The logical question to ask is, "Civil defense—is it necesary?" Now, at the offset I would like to make it crystal clear to everyone that I know very little about civil defense. With some reservations which I will mention later, I approached this subject with no more factual information than is available to the average citizen. Were you to find yourself in my position I feel sure that you would do what I have done. I have consulted the experts.

Our President, Dwight D. Eisenhower, says that civil defense is most necessary and that it is a vital part of the Nation's total defense. Every impartial study of the problem has concluded that civil defense is vital to national survival.

In going through tons of material on this subject, I have found what seems to me to be a very significant thing. Everyone, with no exceptions at all, is of the opinion that we must defend our civilians, but there is wide disagreement as to whether or not we need civil defense in the ordinary concept of people running around with armbands. The key question seems to be who is to protect the civilian? The regularly constituted civil authorities? A semiautonomous civil defense? Or, the military?

On the latter point there is considerable agreement that the U.S. Military Establishment is not the agency to protect our civil population other than its broad mission of minimizing enemy damage to us and retaliating with destructive force. Let the military speak for itself. Gen. Maxwell D. Taylor, Chief of Staff, on March 1, 1956, testifying before the Holifield com-

mittee of the House of Representatives, noted: "The Department of the Army endorses strongly the necessity for effective civil defense organizations at the local, State and Federal level, equipped and trained to meet the particular requirements of civil defense in the atomic era." And later in the same testimony he said: "You cannot depend upon the Army to perform civil defense of the United States. It is neither organized, trained, nor equipped, nor directed to do that sort of thing."

Thus, it would seem that the question of who is to minimize loss of civil life; care for the wounded; restore vital public and private enterprise and strengthen the total national strength, resolves itself between whether this should be done by the normal units of Government as already established, or if we should have a completely separate civil defense operation. Our county officials in the National Association of County Officials have expressed their overwhelming opinion that civil defense should be integrated within the regular operations of the Federal, State and local governments, and that it should not be to itself. Our American County Platform, which many people have been kind enough to say is one of the most enlightened of our national documents on civil defense, seems to revolve around the following four vitally important concepts.

First, civil defense must be considered a normal function of each unit of government and unfortunately, in view of the international situation, it must be considered a normal permanent part of American life. Federal, State and local governments have the same responsibility for supporting civil defense as they have for other public health and welfare functions. We must understand that it is impossible to keep 175 million Americans at fever pitch on the subject of civil defense over a long period of years. Steps must be taken immediately to make civil defense a part of everyday government operations, just as fire drills are a permanent part of the operation of our educational system.

Second, civil defense leadership must be the responsibility of the popularly elected public officials. If you stop to consider the matter, if any emergency or unusual occurrence takes place in a city the very first person that the citizen contacts would be the mayor. If it happens outside the city the citizen immediately calls his county commissioner. Governors, mayors, and county commissioners are the duly elected leaders of the people and they hold their positions by virtue of being the natural leaders of their respective areas. Any plan, organization chart or concept of civil defense which fails to take into consideration this basic fact is doomed to complete failure.

Thirdly, we cannot provide maximum protection and security for our civil population unless there is complete understanding, cooperation and deep mutual respect between the Federal, State and local governments which must share equally and completely in this responsibility. Frankly, up until very recently, there has been utter confusion as to what level of government should be responsible for the various aspects of civil defense. Until the passage of Public Law 606, defining the teamwork concept of civil defense, we have had the ridiculous idea that civil defense was essentially a State and local responsibility. We had no national direction from the Federal Government, and indeed, during most of the early period we began to wonder if the National Government was even on our side. State and local officials were asked to assume responsibility for adjusting local preparedness to the facts of international tension and radical new concepts of warfare when indeed, they had no access at all to the information upon which they could base sound decisions. The earlier concepts of exclusive State and local responsibility for civil defense were about as sound as a concept that national defense was purely a State and local responsibility and that the National Government had nothing to do with it except act as sort of a chairman of the board to keep order.

We feel strongly that if there is to be real teamwork between the levels of Government, all of us must enter that relationship with sincerity. If the U.S. Congress, by passage of Public Law 606, declares it to be national policy that the Federal Government is to provide the national leadership based upon the facts that are available only to the National Government, then the demand for honest dealing would surely dictate that the U.S. Government should implement this declaration of policy, by providing the organization, finances and real leadership which they have determined to be their share in the total picture.

Again, if this is to be a true partnership then it must be just that. The Federal Government, in developing overall national policy that does effect State and local governments, must make adequate provision to consult with State and local government people. Speaking now for county officials we have no stomach whatsoever for having either Federal or State people come and present us with an accomplished fact in the form of policies in which we had no hand in formulating or were not asked to contribute. More specifically, I would point out that our 3,047 counties employ 668,000 Americans and spend annually $5.5 billion, and yet the Advisory Council on Civil Defense which is meant to help formulate national civil defense policy does not have a single county official represented.

We do not profess to know very much about civil defense but we do pride ourselves on knowing something about elected officials. In all our experience we have found that if we approach elected officials sincerely, with a sound program and ask their help, in no instance has that help ever been denied.

The fourth concept that seems to run through most county officials thinking on the subject of civil defense is perhaps the most difficult to identify. You might say that our officials like the county commissioner I mentioned previously, feel that in many respects this problem is so overwhelming that it is difficult to identify specific steps that can be decisive in a national emergency. There is a tendency to feel that a national emergency in the future would be of such a magnitude that it would be difficult to determine the relative merits of a combat ready soldier and a little old lady in Pocatello, Idaho, who is a welder at a local defense industry. In other words, future wars will be waged with the total resources of the Nation, both public and private.

This line of reasoning leads logically to the idea that anything that public officials do at the local level to increase community facilities such as roads, schools, water systems, and public buildings, all contribute significantly to the Nation's total defense. These facilities and services, of course, are urgently needed above and beyond any civil defense application so perhaps it is slightly in the nature of a rationalization that local officials would rather put public funds into ventures of this nature rather than buying sirens and emergency medical supplies, etc.

For you who are actively engaged in the new profession of civil defense I would think that you should keep this in mind and try to build your program around existing local government needs. Examples: An emergency police and fire street corner telephone alarm system is a necessity in most urban places. Its value to a total civil defense program is obvious. It is only sound public policy to make sure that vital local government records are adequately protected from fire and other damage. Again, the records preservation program of the continuity of local government undertaking therefore makes a great deal of sense to local government officials. You will find that they will support it. Everybody wins.

CIVIL DEFENSE PROGRESS

We have heard it said that the criticism of civil defense has never been more intense than it is right now and that the morale of civil defense people is at the lowest in the history of the program. Let us not let this obscure the fact that we have made some real progress in civil defense under the most capable leadership of Gov. Leo A. Hoegh, Director of the Office of Civil Defense Mobilization. We in county government think that in Governor Hoegh we have a man who has a very sound philosophical base and a deep understanding of the operations of State and local government. In his term of office we have made very great strides to shape civil defense along the lines of some of the concepts we have just mentioned. We now have a reorganization of the program that merges civil defense administration with the office of defense mobilization. We have built a very sound working relationship between the Federal, State, and local governments on the continuity of State and local government program and for the first time, we think that the State and local people are being taken into the councils of the National Government in the formulation of policy. For the first time we do have a national plan for civil defense and defense mobilization and in general, despite criticism, we feel that we are evolving a program of civil preparedness which seems sensible and sound and somewhat in proportion to the urgency of the situation and the resources of the Nation.

ROLE OF PROFESSIONAL CIVIL DEFENSE WORKER

If we are making progress then why are we having so much criticism and lack of action on the part of the U.S. Congress? Frankly, our county officials believe that the major problem is just plain lack of interest of the people at the local level. The Members of the Congress are aware of this and civil defense becomes a good whipping boy for anyone who desires to make a speech on economy or wants to be critical. Civil defense people of course should be criticized. Nobody should have to do his job without the benefit of criticism, but, we maintain that the criticism should be constructive and it should suggest alternatives. It is in this spirit that in preparation for this speech we polled some of our key NACO people and asked for their frank appraisal of what we might do to improve our civil defense program. I repeat these suggestions to you in the same spirit. They are suggestions and ideas which have been gathered from people like yourself who are actually deeply enmeshed in the civil defense program, and we pass them along to you for your critical review.

1. It does not now, nor has it ever, made sense to organize civil defense on a city basis. From the very beginning civil defense should have been organized locally on a county-wide or multi-county basis. City officials have no jurisdiction outside of the city limits but county officials do. If we did receive a nuclear attack, presumably the city would be wiped out and your problems would be out in the rural areas where you would have to find ways of taking care of the injured and taking care of the evacuees from the central city.

In a great number of cases it does not make sense to organize even on a single

county basis, but rather we should look to a multi-county concept, perhaps along the lines of the Fulton County-Atlanta metropolitan area.

2. All civil defense planning should revolve around elected policymaking local government officials. We have said this several times, now, and you will perhaps get the impression that we think it is important. We say it again because restating it brings up the question then, what is the role of the professional full-time civil defense person?

If the elected official is to be the boss man then it follows logically that the civil defense person is an assistant to the elected official and issues orders, etc., only in the name of the Chief Executive. While varying local conditions will require different setups, it would appear that most generally the civil person will act in a staff or advisory capacity to the elected officials. His duties would probably include drawing up emergency plans which fully utilize local employees and all local government facilities; coordinate with the various local government departments; prepare overall plans; establish training programs, and keep the entire civil defense effort in constant review; develop plans that fully utilize privately owned facilities; serve as a liaison with other local civil defense directors, State directors, Governor's office, and other public and private agencies; coordinate publicity, public information, and citizen education programs; maintain current inventories of equipment for emergency use, and in cooperation with the other members of the local government family discharge the other numerous responsibilities of civil defense.

3. In all too many cases civil defense offices seem to be operating as independent units with a great number of volunteers attached directly to them. This gives the elected political official the impression of an independent bureau and perhaps may give rise to the erroneous impression that civil defense is out to build an independent structure of its own. Civil defense offices must be a part of the total local government picture as are other departments, and the volunteers assigned to the appropriate regular department as indicated in our own Policy Statement. This lack of understanding of the role of civil defense often leads to conflict and confusion. For instance, auxiliary police trained by the civil defense office will get ambitious for activity and will appear on the scene of an auto accident, much to the consternation of the local police force. A civil defense office should not get into action until a CD emergency is declared by the Chief Executive. Normal local government department work should be left to the regular personnel. This type of conflict at the local level gets back to the Congress and produces negative thinking on the matter of providing Federal funds to assist in the bearing of the cost of local administration.

4. There should be more emphasis on the role of civil defense in natural disaster. It is my understanding that right here in Ohio that the 1927 floods left nearly 600,000 homeless. I understand that more recently, in January of this year, you also had the most widespread and intense floods you have experienced since 1913. It would be senseless therefore, for me to continue emphasizing the natural preparedness aspects of civil defense. Many of our county officials are of the opinion that even if the international situation changed and we became internationally nations of lambs, we would still need civil defense programs to protect against natural disaster.

5. Too many civil defense offices are operated as merchandising offices. This type of office is merely established to comply with the requirements to secure Federal contributions such as matching funds for radios and surplus property for civil defense use. Usually this type of office has no plan or program and not too much activity. This particular type of operation was pointed out during one of our civil defense panel sessions at our NACO Urban County Congress held in Washington last spring. As a matter of fact, it was an Ohio county commissioner who identified this type of problem. Several of our county officials also believe that the abuse of surplus property regulations has harmed civil defense. The regulations state that property acquired from surplus shall not be used for normal governmental activity. It appears, however, that much road-building machinery and other heavy equipment has been acquired for no apparent civil defense use. This is not to suggest that bulldozers and other civil defense equipment should be allowed to rust and not be used for governmental purposes. The equipment, however, should be incorporated in the overall civil defense plan of the community.

6. The problem of getting adequate participation and understanding on the part of the public is a continuing one. It has been suggested that about once every quarter civil defense must stage some sort of public exercise to focus attention on civil defense. Such items as rescue demonstrations, feeding exercises, evacuation of some segments of the population, are all essential if the people are to know that the civil defense in their community is in business. It has also been suggested that every civil defense office should issue a bulletin to its key people at regular intervals and let them know what is going on. Periodic meetings should also be held. It is a bad situation to have individuals assigned to a task or responsibility in civil defense and never receive any contact or information on the subject. It has been suggested that cvil defense committees be appointed by the PTA, Lions, and other community groups.

7. Finally, this might be the most important suggestion of all. When someone criticizes you, or worse still, completely ignores your existence, perhaps the best course of action is to meet the problem head on and invite the critics and those who are indifferent to sit down with you and review your entire program. We have in mind a Hoover Commission type thing on the civil defense program. You might consider inviting newspaper editors, members of the bar, members of the service clubs, clergy, representatives of business and labor, local public officials, State officials and other key community leaders. This type of operation takes courage and imagination and absolutely should not be undertaken unless you are completely sincere in trying to accomplish a job.

Our county officials out in the State of Washington tried this approach to the general problems of county government and were spectactularly successful. On one hand their critics had a chance to air their grievances against county government and came up with a lot of very valuable suggestions to help the counties get their houses in order. By the same token, and of equal importance, these very same critics came to understand some of the problems facing the county officials and went away with a far more understanding and cooperative attitude.

This is democracy in action. It is a healthy approach to our problems and if all parties undertake it with good will it could be a tremendous force for good.

The Rivers Are Our Strength

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 14, 1959

Mr. MUNDT. Mr. President, one of the greatest programs of development that has ever occurred in this country, is now in progress along the Mississippi Valley River system, which includes the Missouri River running through my home State of South Dakota.

Never before in American history has the dynamic effort and enterprise of our citizens been devoted to such a monumental task—that of taming not one river, or one stream, but bringing under control the great inland waterway that is the Mississippi River and its tributaries.

Part of the job has been accomplished. In the Upper Valley States of the Missouri River—South Dakota and North Dakota—huge dams and reservoirs are completed or nearing the completion stage. Already electric power is being generated at these flood-control dams. And manmade lakes have been created from the once "Muddy Mo," developing new recreation opportunities never envisaged by our pioneer forefathers.

However, much remains to be done. An excellent address on the new challenges and responsibilities to utilize the basin program wisely has been given by Mr. Donald O'Toole, president of the Mississippi Valley Association. One of Mr. O'Toole's most constructive points is his recommendation for a special research and development program, which, as he states, can be a positive, dynamic program working for the good of all.

I ask unanimous consent to have printed in the Appendix of the RECORD the excellent address by Mr. O'Toole.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE MISSISSIPPI VALLEY RIVER SYSTEM AND THE MISSOURI RIVER BASIN

(By Donald O'Toole at 40th annual North Central Electric Association Executive Council, Breezy Point Lodge, Pequot Lakes, Minn., June 14–17, 1959)

The Mississippi Valley River system is the greatest inland waterway system in the world. It is one of the most magnificant resources possessed by any nation, yet it is scarcely known by Americans beyond its geographical location.

This system is a network of navigable streams made up of a main stem or aorta—the mighty Mississippi River itself—and its many arteries—the Illinois, the Ohio, the Missouri, the Arkansas, the Ouachita, the Gulf Intracoastral Waterway, the Tennessee, the Cumberland, the Monongahela Rivers, and others.

All of these streams flow toward the center of our country—from the east and the west and the north—thence into the Mississippi River and down to the Gulf of Mexico. The system contacts two deepwater ports—the port of Chicago at the north end, just opened up, through which barge cargoes are trans-

shipped to ocean steamers headed for north European, Mediterranean and South American ports via the St. Lawrence Seaway; and the port of New Orleans at the southern end, through which cargoes pass to Mediterranean, South American, and Pacific ports.

Our economic future, particularly the future of the Middle West, rests in a large measure upon what we do to conserve and develop this great water system. For in an industrial economy, water holds the control on industrial expansion. And water is getting shorter in supply every day.

Industry, agriculture, and cities—the hallmarks of our great Middle Western economy—all have ravenous appetites for water. They must have it constantly, every day of every month of every year, to cool hot industrial coils, to carry off industrial and municipal wastes, to transport fuels and raw materials and finished products, to provide water for irrigation when nature denies water and to slake the thirsts of men and animals. The Mississippi River system does all of these things for the Middle West, our area, and it does them well when it is controlled and disciplined.

The conservation and control of the Mississippi River system began to be undertaken by the Federal Government at the turn of the century. An enterprise of truly staggering proportions, it has, in the short space of some 50 years, provided protection from ravaging floods to thousands of river cities and towns and millions of acres of farmlands. It has given us 7,500 miles of commercially navigable streams.

This development has also given us billions of kilowatt-hours of electric power. Some comes from harnessing the flows of the rivers themselves as they descend downstream but most has been derived from low-cost transportation of fuels found throughout the system to huge thermoelectric generating plans. River control also means pollution abatement.

What about the mighty Missouri in all these river developments? Greatest of all the rivers in the system except the Mississippi itself, the Missouri in 1957 handled one-fourth million tons and in 1958, six-tenths million tons. These figures compare very poorly with the 81½ million tons of the Ohio and the 20¼ million tons of the Illinois. Why should this be?

The Missouri River, rising at Three Forks, Mont., flows 2,475 miles to its mouth on the Mississippi, 17 miles above St. Louis. It drains a basin constituting one-sixth of the United States, rich in agricultural and mineral resources and low in population. Its basin contains 13 billion kilowatt-hours of hydroelectric power in the fall of the river and a very great many more kilowatt-hours in the thermoelectric potentials in its lignite resources in the Dakotas and its petroleum resources in the Williston Basin.

Here is a huge river—one of the longest and widest in the whole world—carrying millions of gallons of water through or past seven great States.

The development of each section of the Mississippi River system has come about through the vigorous efforts of its own group of determined men. Seeing the possibilities in their valleys and tasting the profits and other benefits to be realized, they have set upon carefully organized and reinforced programs to get improvements needed to bring their river valley to full fruitation. Their efforts have been coordinated and supported, since 1919, by the Mississippi Valley Association.

During the initial construction period of the Missouri Basin program, businessmen, farmers, and public servants marshaled their strength and coordinated their efforts to secure construction of the physical features of the Pick-Sloan plan. The valley association has tried, and I think successfully, to be a major vehicle through which the citizens of the States in the valley could foster the control of the region's magnificent water resources.

Now that some of the benefits of that construction program are becoming available, a new responsibility must begin to supplant the task of getting the program built. The task now is to utilize the basin program wisely to improve and expand the area's economy. The region must secure new industry and the agricultural economy must be stabilized. Without proper exploitation, the magnificent structures now under construction cannot serve their full purpose.

It is to do this job that the Missouri Basin, particularly the upper and middle valley, seems to lack a sponsoring group. There appears to be a tendency on the part of business leaders in the area to "let George do it."

The tremendous floods, which as recently as 1951 and 1952 caused billions of dollars in flood damage, cannot happen again. Dams to hold back these floodwaters have been built from Gavins Point, near Yankton, S. Dak., upstream to Fort Peck, Mont. Big Bend Dam, last of the six major structures, is finally under construction.

Above five of the dams lies a huge and beautiful lake of sparkling blue water such as you would never expect to see on the muddy Missouri. The lake above the Oahe Dam, for example, will be longer than Lake Erie.

A tremendous interest in water sports has developed. Big fish are being caught, boat and motor sales exceed automobiles sold locally. Beaches and vacation cottages are being constructed. Hydroelectric power is being generated at the dams and is being sold mainly to cooperatives.

Where are the sponsors of industrial development of this unreplaceable resource? What will happen if they don't appear, organize, and make themselves heard?

What will happen is best demonstrated by what is already happening. This basin is being cut into huge lakes, each separated from the other by a high dam wall which no barge can cross or get around. There are no provisions for locks, or otherwise lifting barges over the dams, which are absolute essentials to free movement of traffic on the river.

True, it is said that locks or marine railways can be installed later. But later may mean after a whole new philosophy has taken over this basin, a philosophy dedicated solely to the use of the river for recreation and for Government-owned, Government-babied, untaxed hydroelectric power.

We must not let this happen. I speak for all Americans in saying that you who live and operate in this area have a serious responsibility to develop and conserve this enormous resource for us, according to the American tradition of development by private enterprise. You hold within the earth here billions of dollars of minérals and agricultural products, and it is up to you to develop them and the facilities needed to get them to markets at proper costs and prices.

River transportation has provided the answers to the other valleys and river transportation is a major part of the answer to the future of the Missouri Basin. Here are some of the truly great possibilities inherent in the development of the Missouri for barge transportation as far upstream as economically feasible:

1. The outshipment of your great lignite deposits, 350 billion tons of them in the Dakotas, to other points along the Missouri or elsewhere in the Mississippi Valley.

2. The inshipments of ores to the mills to be constructed at the lignite fields. Is there any reason why Venezuelan or Texan alumina cannot be processed on the Missouri as well as on the Ohio River?

3. The construction of huge thermoelectric plants, to provide the additional electric energy that will be needed when the Missouri Basin is fully developed. These plants can utilize the basin's own lignite and oil.

4. The outshipment of the petroleum resources at Williston. Petroleum products constitute principal cargoes on the Mississippi River system.

5. The outshipment of other minerals in the area, such as manganese, which may not be worth mining now because of total costs of delivery to points of usage. These costs now need to be resurveyed in relation to their shipment via a canalized river system and modern barges and towboats.

6. The outshipment of grain and other agricultural products via cheap transportation to the great ports of New Orleans and Chicago.

7. The inshipment of grain to range areas, for complete cattle and hog raising, feeding, and slaughtering there. This is now underway in Texas and substitutes for the older and clumsier method of shipping live cattle from place to place to be fed and slaughtered. Following the construction of local slaughtering houses, there will be the outshipment of meat products.

Overriding all of the foregoing is the enormous growth of population being felt in the United States. The Missouri Basin contains land—good land and lots of it—and land is what we'll need for our millions of additional citizens.

Growth will come to the basin, whether it is ready or not. That growth will be orderly and profitable only if business and industrial leaders take steps now to plan programs of development and then fight for their programs.

The electric utility industry of the upper Middle West has an especially great opportunity in the industrial development of the Missouri Basin. With this opportunity, there is the usual correlative responsibility—responsibility for the proper initiation of that development, to insure that it will be organized and carried out properly.

The Mississippi Valley Association would be pleased to incorporate a sound development program for the Missouri into its general program.

We believe that the proper industrial and agricultural expansion of the Missouri Basin must be accomplished primarily through the resources of privately capitalized industry.

What is needed is a program of special research and development for the Missouri with the following objectives:

1. To coordinate current research now being done on piecemeal bases by other agencies and to procure additional economic research as needed.

2. To analyze and compare the economic and industrial and development factors at work in other river valleys and relate those findings to the economic and industrial advantages of the Missouri Basin.

3. To create task forces of leading businessmen, farmers, educators, and professional persons to explore and create ideas for economic and industrial development of the basin.

4. To organize a program of education and publicity on a nationwide basis to inform business and industry of the commercial and industrial advantages of the basin.

5. To cooperate with the existing organizations, public and private, which are engaged in similar activities on more restricted bases.

Here is a positive dynamic program, which will make use of enormous and energetic forces now at work. It is in direct contrast with the negative program of simply complaining about the tax and other advantages of others who are moving into a void left by inactive business and industry.

The Missouri River Basin—one-sixth of the United States—is our greatest undevel-

oped resource area. It has within itself the water supply, minerals, fuels, and potential for low-cost transportation which can enable it to produce products at lower costs than elsewhere in the world. It connects directly to the great Mississippi Valley River system, and can thus take in its raw materials and ship out its products over the greatest inland waterway system in the world and out through the great ports of Chicago and New Orleans to all of the nations of the world.

The development of the Missouri River Basin awaits the initiative, the imagination, and the vigorous action of its industrial leaders. It will repay them—and their children—far beyond their fondest dreams. This is what has happened in every other river basin on the Mississippi system which has been developed to date.

Freedom of Information

EXTENSION OF REMARKS
OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 14, 1959

Mr. HUMPHREY. Mr. President, in view of the widespread interest and concern over secrecy in Government, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I presented last month to the Special House Subcommittee on Government Information in which I related experiences of the Senate Foreign Relations Subcommittee on Disarmament, of which I am chairman, on the declassification of information by the executive branch of the Government.

In this statement I called attention to six specific instances in which Government agencies mistakenly classified information and denied it to the public.

Under our system of government, the withholding of information from the public should be permitted only in the interest of the Nation's security, not to cover up for errors which may have been committed or legitimate criticism of governmental actions.

Congress has an obligation to see to it that the right to classify information is not abused by the executive branch of the Government.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

EXPERIENCE OF THE SENATE SUBCOMMITTEE ON DISARMAMENT ON THE DECLASSIFICATION OF GOVERNMENT DOCUMENTS

(Statement of Senator HUBERT H. HUMPHREY, chairman, to the Special House Subcommittee on Government Information)

Achieving a balance between informing the public and preventing the dissemination of information which would be injurious to the Nation's security is one of the great problems that confronts our Government at the present time. In this effort both the executive and legislative branches have a responsibility.

The Congress has been wise to establish special committees to study this problem and to take or recommend action when agencies of the executive branch appear to be restricting unduly the availability of information to the public. In addition to these special committees the other committees of the Congress must also be alert constantly to guard against the deliberate or inadvertent suppression of important data when national security is not involved.

The purpose of this testimony is to share with the Special Government Information Subcommittee of the House Committee on Government Operations the experience of the Senate Foreign Relations Subcommittee on Disarmament with the declassification of information by the executive branch. I am presenting this statement in response to a request from the distinguished chairman of the subcommittee, JOHN E. MOSS.

It is not my intention to suggest that the specific cases I cite be investigated further. Rather, it is to show that information is withheld for reasons that cannot be justified in the name of national security and to stress the need for vigilance on this matter by all congressional committees.

Over the past year the Subcommittee on Disarmament held a number of hearings, many of them in executive session. In all cases the executive session was held because the witness requested it. Usually, after such a session the transcript of the hearing was submitted to the executive agency or agencies involved for review. The executive agency then marked those parts of the testimony that, in its opinion, should remain classified. In order to determine whether this classification was justified, the subcommittee and its staff reviewed carefully the testimony after it was returned by the executive officials. When the reason for the classification was not self-evident, the executive officials were questioned about it. Frequently a reason other than security was given for restricting the information. When these erroneous reasons were pointed out the executive officials often lifted the classification label.

The experience of the Subcommittee on Disarmament suggests that in a great many cases the executive branch censors testimony for insufficient reason. In order to correct this practice the committees of the Congress and their staffs ought to review carefully all testimony which executive departments ask to have classified. The review should seek to determine the reasons for continued classification and whether they are valid. Such a procedure would redound to the benefit of the electorate by providing our citizens with an opportunity to become better informed. Members of Congress would also be in a much better position to perform their constitutional responsibilities.

The cases which follow illustrate the various points I wish to bring out.

1. The Central Intelligence Agency, in reviewing testimony given by a noted scientist, had classified a passage of testimony. When questioned as to why, the CIA official indicated he did not agree with the conclusion of the scientist and incorrect information should not be given out. When challenged further on the point, the CIA representative agreed to let the scientist's conclusion stand.[1]

2. The Atomic Energy Commission at first classified portions of testimony given by one of its chiefs of division that there was no evidence the Soviet Union was developing, testing, or producing so-called clean nuclear weapons; that is, weapons with reduced radioactive fallout. The Commission was asked whether it was not in the interest of the United States to have this information brought out. The Commission reviewed the matter and decided that the information was of interest and agreed to leave in that portion of the testimony.[2]

3. The Department of State had struck out of testimony questions by the chairman and answers by a witness regarding a study being made by the Government on U.S. oversea bases. When it was pointed out by the subcommittee that this information was contained in a news conference of the Secretary of State, the Department officials then said the testimony had been deleted because it seemed irrelevant. It was suggested that it was not the function of the Deparment in reviewing testimony for publication to rule on the relevancy of the discussion, particularly questions the chairman considered sufficiently relevant to raise in the first place. The Department then agreed to leave in the discussion on the overseas base problem.[3]

4. The Department of the Army and the Department of Defense classified testimony relating to the results of Operation Sagebrush, simulated war maneuvers of the Armed Forces using tactical nuclear weapons. The Army refused to remove the classification even after it was pointed out that at the time of the maneuvers in October 1955, a reporter wrote extensive stories about them and that these news accounts could only have been written as a result of considerable background briefing on the part of military officers. Part of the reason why the Army wished to continue to classify the information, according to one officer, was that the results indicated the Army didn't know quite what it was doing in the maneuvers. Even if this were true, said the officer, the information should not be released.[4]

5. The Department of the Army requested the elimination from the record to be published several portions of testimony submitted by Army Chief of Staff, Gen. Maxwell Taylor. When challenged on the classification, over 90 percent of what had been taken out was restored. Among the passages finally declassified were those containing general discussions of new nuclear weapons development and the tactical uses of these weapons. They also put back statements the General had made on the necessity of improving our nonatomic or conventional weapons capabilities if a nuclear weapons test ban should go into effect, general information on the fabrication of nuclear weapons, expressions of opinion regarding the reliability of agreements with the U.S.S.R., views on the psychological impact of a nuclear test suspension on people around the world, and the effects of nuclear fallout.[5]

6. The Government continues to classify significant information dealing with seismology, the study of earthquakes and movements in the interior of the earth. This includes testimony given before the Disarmament Subcommittee and documents submitted to the subcommittee by executive agencies. The subcommittee has never received a satisfactory explanation as to why such studies should be kept secret.[6]

The reason that such studies should be made available is that advances in the science of seismology are needed and necessary to improve our knowledge about the detection and identification of underground nuclear explosions. It is to the interest of the United States to speed up our work in this field so that we may have a better conception of the capabilities of a control system for the cessation of nuclear weapons tests. An expanded research program in seismology is essential and a number of well-qualified and prominent seismologists and geophysicists have recommended specific projects; yet, the detailed description of these projects and the estimates given for the workability of certain theories for the detection and identification of nuclear weapons tests remain closed to the public and to scientists throughout the country. What is particularly of concern

Footnotes at end of speech.

is that some of our scientists who have visited the Soviet Union within the past year report that in some fields in seismology the Soviet Union is much more advanced than the United States and that in many respects more money is being spent on fundamental research in seismology in the Soviet Union than is being spent in the United States.

This suggests to me that the Department of Defense should not be the primary agency responsible for developing programs in the field of seismology and related scientific fields. Perhaps if this work were lodged in the Coast and Geodetic Survey of the Department of Commerce or the National Academy of Science, the scientists of the country would have access to the results of studies made and experiments conducted.

The six cases discussed briefly illustrate that Government agencies mistakenly classify information and deny it to the public. These are not the only cases that could be cited, but I believe the ones I have submitted amply demonstrate the need for vigilance on the part of congressional committees to review carefully all transcripts which contain classified information. If this is done then perhaps executive agencies, too, will exhibit greater awareness of the public's need to know and will exercise greater care in the future in the classification of testimony.

I would not want to end this statement without emphasizing that in most cases overclassification of information is not a deliberate effort to deceive the people or to protect the Government from criticism. Generally I think it is due to a habit of being overcautious, in other words to follow the rule to classify when in doubt.

---

[6] Since preparing this statement I am pleased to report that some of this information has been released. Some material contained in the Berkner Report on Seismic Improvement was released on June 12. There is the possibility that more of such information will be forthcoming.

Address of Hon. Hugh G. Grant, Former U.S. Minister to Albania and Thailand

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 8, 1959

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks, I include a copy of an address delivered by Hon. Hugh G. Grant, of Augusta, Ga., before the Citizens' Council of Lowndes County, at Valdosta, Ga., on June 27, 1959.

Mr. Grant is a former member of the State Department, and has served as U.S. Minister to Albania and Thailand, and I commend his address to the attention of all who believe in the preservation of constitutional Government:

ADDRESS BY HUGH G. GRANT, OF AUGUSTA, GA., FORMER MEMBER OF THE STATE DEPARTMENT AND U.S. MINISTER TO ALBANIA AND THAILAND, BEFORE THE CITIZENS' COUNCIL OF LOWNDES COUNTY, GA., INC., AT VALDOSTA, GA., SATURDAY EVENING, JUNE 27, 1959

Mr. Chairman, ladies, and gentlemen, in an address before the law students of the University of Georgia at Athens in February 1956, I stated that "a war is on in the United States of America—a racial revolution involving our whole social structure." I said this racial revolution was spearheaded by the National Association for the Advancement of Colored People, whose Negro leaders have as their goal the mongrelization of the white and Negro people in the United States. I pointed out further that the goal of the racial revolutionists is a leveling off of our American society into a common racial mold, eliminating all racial distinctions on the false theory that this constitutes democracy. I said also that never in all the history of these United States has there been such a widespread and insidious propaganda campaign. I made these statements publicly more than 3 years ago.

Triggered by the black Monday decision of the U.S. Supreme Court on May 17, 1954, declaring segregation in the public schools unconstitutional, this racial revolution has resulted in mounting racial conflicts and violence, not restricted to the South, and grave disunity among the people of the United States at a time of international crisis when unity is imperative for the safety and security of the Nation. The clock has been turned back to the evil days of reconstruction following the tragic War Between the States.

One of the major battlefronts in the cold war with Russia is right here at home. From the 1958 report of the House Un-American Activities Committee come shocking revelations of Communist activities through the enlistment of more than a million American citizens in some 200 organizations in a nationwide campaign of political subversion. "Many of these Americans," according to the committee, "would be aghast if they understood the full import of their activities and the extent to which they benefit the Communist conspiracy. * * * The Communist operation today presents a menace more serious than ever before. * * * The objectives of the campaign for political subversion is the destruction of the entire security system of the United States.

In a hearing in Atlanta, Ga., last July on Communist infiltration and activities in the South, Representative FRANCIS E. WALTER, chairman of the House Un-American Activities Committee, declared that "most of the Communist Party operations in the United States today consists of underground-behind-the-scene manipulations * * * that there is a "pattern of (Communist) operation * * * operations in the United States of worldwide conspiracy which is determined to destroy us."

Let us take a brief look at the NAACP. It was founded in New York City, 50 years ago, by four white persons, including a Russian-trained revolutionary, William E. Walling, and one Negro, W. E. B. DuBois, honorary chairman of the NAACP. DuBois has a long list of citations of Communist, Communist-front and subversive activities, according to the files of the House Un-American Activities Committee. The files of the committee show further, according to an investigation by the staffs of Senator James O. Eastland, of Mississippi; Representative James C. Davis, of Georgia; and Attorney General Eugene Cook, of Georgia, that as of 1955 the president of the NAACP, the chairman of the board, the honorary chairman, 11 vice presidents and 39 other top officials have records of affiliation or participation in Communist, Communist-front, fellow traveling or subversive organizations or activities.

Among those listed in the files of the House Un-American Activities Committee, according to the investigation, were Roy Wilkins, present executive secretary of the NAACP; Thurgood Marshall, chief counsel for the NAACP court attack on segregation in the public schools; and Henry Lee Moon, director of public relations.

Only 3 weeks ago, on June 6, 1959, a Florida legislative investigating committee declared that whether the NAACP has been infiltrated and influenced by Communists on the national level or in the State of Florida is not open to question. It definitely has been.

The whole story of the background of the decision of the Supreme Court of May 17, 1954, outlawing segregation in the public schools, has not yet been revealed. One Supreme Court Justice, Felix Frankfurter, who participated in the segregation decision, has admitted that he was a legal adviser to the NAACP before he became a member of the Court. Certainly this infamous decree played right into the hands of the Communist conspirators in the plot designed to create racial tension, strife, and violence in the United States. The Court overturned numerous Federal and State court decisions covering a period of three-quarters of a century and in effect actually amended the Constitution. Here was a major victory for the Communist plotters in the United States.

William Z. Foster, longtime head of American communism, pointed out in his book, "The Negro People in American History," that Lenin, leader of the Bolshevik revolution of 1917, advocated racial warfare as a means to revolution. Like Karl Marx, Lenin seized upon the idea of using the Negro as a dupe for revolutionary purposes for the destruction of capitalistic power.

Henry Lee Moon, mentioned above, high Negro official in the NAACP, back in 1948 in his book, "The Balance of Power, the Negro Vote," echoed this Marx-Lenin philosophy. Moon, who during New Deal days was assistant to the late Sidney Hillman, in the Political Action Committee of the CIO, wrote that "The Communist Party sees in the Negro an important ally in the struggle for the revolutionary upheaval and redistribution of wealth and power—there is every reason why Negroes should oppose any attempt to purge Communists from American life."

Having rung up a big victory through the Supreme Court segregation decision, the Communist plotters, seeking to stir up race tension, strife, and discord in the United States, scored again through the civil rights legislation enacted by the Congress in August 1957. A month later, in September 1957, there was another important Communist gain through President Eisenhower's unprecedented troop invasion of Little Rock.

It is significant that immediately following the Eisenhower troop invasion of Little Rock, the Communist Daily Worker, on September 30, 1957, commented as follows: "The action of the Government at Little Rock must not become a single-shot expedient. Little Rock cannot be half-way house for Government to rest its case against the insurrectionary southern segregationists. As Faubus' infamy was no isolated stunt of a wild man, so Eisenhower's counteraction at

Little Rock must not be an isolated deed, but the first of a series of measures that the Government must be compelled to undertake to put down the southern racists' revolt and secure the rights of the millions of Negroes to exercise their full rights as citizens."

Now this comment by the Communist Daily Worker is indicative of Soviet global pressure tactics, designed to create the impression throughout the country and the world that the South is a center of public disorder and mob violence by Negro-hating white citizens. Nothing is further from the truth. I am of the opinion that if and when the truth ever comes out, it will be revealed that certain acts of mob violence in the South, such as the bombing of synagogues and schools, were actually designed and carried out by Communist-front agents from outside the South.

The battle for more far-reaching so-called civil rights legislation, aimed at the South, is now underway in the present 86th Congress. As Senator STROM THURMOND declared recently before the Senate Subcommittee on Constitutional Rights, this legislation "would in effect treat the South as a conqured province to be ruled over, insofar as race relations are concerned, by a czar in the person of the Attorney General of the United States."

The Attorney General's czarism would not be restricted to the South. If you analyze this trend of Federal authority in the United States, there is only one conclusion—unless the movement is checked, we are headed for an all-out Federal police state (which is a Communist state) centralized in Washington, with the power to control the individual acts and thoughts of all the citizens of all the States, North, South, East and West.

History repeats itself. As in the Reconstruction era, following the War Between the States, a vicious struggle for political power through public office, inimical to the welfare of the Nation, is going on today in this country. As I read the civil rights bills which are now pending in the Congress, in preparation for testimony before the Senate Subcommittee on Constitutional Rights, my thoughts went back to the political activities of Thad Stevens and Charles Sumner, the radical political leaders of the Reconstruction era. Surely if Stevens and Sumner could rise up out of their graves and see what is going on today they would freely admit they were pikers. These men and their followers, in the quest for political power, were oblivious to the welfare of their country. They instigated and forced the adoption of the 14th amendment to the Constitution through fraud and corruption and at the point of Federal bayonets directed at the people of the prostrate South.

Let us not overlook the fact today that it is this 14th amendment that is cited as the only legal basis for the Supreme Court decision ordering race mixing in the public schools and elsewhere. This 14th amendment is a colossal fraud since it was illegally incorporated in the Constitution of the United States.

Today some of our topflight political leaders in both major parties are following in the footsteps of Stevens and Sumner. They appear to be utterly oblivious to the fundamental facts in this race mixing campaign in the United States, as well as blind to the Communist global strategy to use this movement as one effective means of destroying the American Republic from within.

At the height of the civil rights battle in the Congress in the fall of 1957, which was featured by Senator THURMOND'S historic filibuster, David Lawrence's U.S. News & World Report, a national magazine which prints facts, published this significant headline:

"Outside the South, It's 4 Million Negro Votes That the Fight's All About—4 Million Negro Votes in 14 States—These Votes Can Decide Elections."

And today the knockdown, drag-out political battle between the national Democratic and Republican Parties for the Negro bloc vote in strategic States, with large electoral votes, where the Negroes hold the balance of power, is underway as the 1960 presidential sweepstakes approach. And so we witness the continuation of the strange and sorry spectacle of white political leaders of the Nation, which was founded and developed by sturdy white pioneers with a racial heritage of thousands of years, groveling for political control through a minority group of primitive Negro people only 95 years removed from slavery.

In this connection, a brief glance at the history of the origin of this American Republic is pertinent. Early America was colonized and developed by white people of northern European stock. These white pioneers, lovers of individual liberty and fearful of central bureaucratic control, wrote the Declaration of Independence; fought and won the American Revolution against great odds; formed a Union of States for mutual protection from outside enemies; and adopted a Constitution with a Bill of Rights to provide a minimum of central control. These white pioneers and their descendants, trekking across the vast North American Continent, expanded the little American Republic into a great Nation.

Now such achievements in a brief period of less than 300 years is no accident. Back of the sturdy determination and physical courage of the American white pioneers, as I have pointed out, was a racial heritage developed through thousands of years of struggle, sacrifice, and war.

And what of the racial heritage of the American Negroes, who under the leadership of the NAACP and its misguided white allies, are now trying to force their way into our white institutions on the basis of full racial equality? The answer is obvious. Their forebears were primitive savages in the dark jungles of Africa. The black chieftains of their ancestors actually aided the avaricious white traders in capturing the slaves for the overseas slave markets. There are today approximately 160 million Negroes still living in a primitive state in Africa. A few native Africans, trained in foreign universities and followng the Communist line, are today the agitators for so-called independent movements in Africa.

In the United States the descendants of the Negro slaves, copying the customs, manners and religion of the white Americans, have made steady progress under the friendly tutelage of the southern white people and through the system of segregation. If these American Negroes, who have many fine qualities, are let alone by the revolutionary leaders of the NAACP and its allies they will continue to make more progress, individually and collectively, as a race of people. It does not follow, however, that the American Negroes as a race can attain equality with the white people as a race through integration. There is a wide gulf between the two races of people, physically, mentally and morally. Race is a fact. That there are superior and inferior races is also a fact. The Negro race has never made the slightest contribution to civilization.

The desegregation of the Washington public schools, following the Supreme Court decision of May 17, 1954, by order of President Eisenhower, to establish a model for the Nation, revealed the gulf existing between the two races. This was made crystal clear in the exhaustive investigation of the Washington schools by a special House committee headed by Representative JAMES C. DAVIS, of Georgia. There was chaos. There was also deterioration in standards, which no special educational devices, such as the so-called four track system, adopted by the Washington school authorities, can eliminate as long as race mixing continues.

Five years have elapsed since the Supreme Court decision of May 17, 1954, declaring segregation in the public schools unconstitutional, and 4 years have passed since the second Court decision of May 31, 1955, ordering desegregation of the public schools "with all deliberate speed."

Well, what is the situation today in the desegregation of the public schools in the 17 States and the District of Columbia, involved in the Court decisions? Is the so-called law of the land to desegregate being carried out with all deliberate speed? What is the outlook?

Southern School News, which is published monthly in Nashville, Tenn., in its June 1959 survey, states that out of a total of 2,875 biracial school districts in the region comprising the 17 States and the District of Columbia, 742 districts are known to have begun or completed the process of desegregation.

Although these statistics indicate that the Supreme Court order to desegregate with all deliberate speed does not appear to be very speedy, I am of the opinion that we should face up to the realities of the situation relating to public school integration, especially since race mixing in the schools stands at the very top of the list of plans formulated by the race mixing conspirators for the complete integration of every phase of American life. As I have pointed out, amalgamation—mongrelization—of the races is the ultimate goal of the master minds directing the conspiracy. In the final analysis, success depends upon the success of school integration.

Make no mistake about it, my friends, we are faced with a sort of creeping paralysis in public school integration. Of the 17 States and the District of Columbia, which prior to the Supreme Court decisions, pursuant to the Constitution of the United States and their own constitutions and laws, exercised complete control of their public schools, operating them on a segregated basis, only six Deep South States remain in this category. These States are Alabama, South Carolina, Georgia, Florida, Louisiana, and Mississippi. In several of these States suits are pending or are in process, designed to break the segregation barricades.

Desegregation of the public schools is proceeding slowly but surely in all of the border States. In Arkansas it looks as though Governor Faubus, backed by the legislature and popular support, may have lost his dramatic fight to prevent the desegregation of the Little Rock high schools unless the Governor can find a way to circumvent recent Federal court edicts.

In the Deep South States of Virginia, North Carolina, and Tennessee there is so far only limited or token integration. The spotlight is on the Old Dominion State where a sharp struggle is underway by segregation leaders to counteract the surrender policy of Governor Almond who in January agreed to the collapse of Virginia's massive resistance program in the face of Federal court edicts.

There is drama in Prince Edward County, Va., where one of the original suits for school desegregation was brought before the Supreme Court. Now ordered to desegregate in September 1959 by the U.S. circuit court of appeals, which reversed a U.S. district court decision granting a 6-year grace period in desegregating, Prince Edward County will abandon its public school system and operate

private schools for white children in churches and other buildings.

Again, my fellow citizens, make no mistake about it—once the bars to race mixing in the public schools come down, through token integration or local option in any community of the State, the stage is set for the pattern to spread throughout the State. In areas heavily populated with Negroes a tiny break in the segregation dykes can easily result in a flood. It is significant that today in Atlanta, the capital city of Georgia, there is much talk of token integration and local option, arising from the recent U.S. district court order to the Atlanta public school officials to end racial segregation.

I was a spectator at the trial in Federal court in Atlanta on June 5, when the injunction suit against the Atlanta Board of Education, brought by 10 Negro parents at the instigation of the NAACP, was heard and acted upon.

This trial, it seemed to me, was a distinct triumph, a sort of Roman holiday, for those seeking racial integration, not only in the public schools of Atlanta, but throughout the State of Georgia. Before the trial ever got underway the die was cast against segregation in a preliminary order, previously agreed upon by U.S. District Judge Frank A. Hooper, and his associate, Federal Judge Boyd Sloan. This preliminary order was announced by Judge Hooper before any arguments were presented. Everything that followed was anticlimax.

This Federal courtroom scene in Atlanta on June 5 seemed unrealistic, but at the same time brutally realistic in its implications to the white people of the sovereign State of Georgia. Here was a large crowd of Negroes, the majority of whom were no doubt members of the NAACP. These people lined the walls and jammed the aisles of the courtroom. The white spectators were a small minority. Here was the chief counsel for the plaintiffs, a Negro woman of New York City, representing the NAACP.

Nearby in the Federal courtroom was an observer of the trial, Georgia's Attorney General Eugene Cook, who had made a speech to the Peace Officers Association of Georgia in Atlanta in 1955, entitled "The Ugly Truth About the NAACP." In this speech, the attorney general said he referred to the subversive design behind the current crusade of the misnamed National Association for the Advancement of Colored People, and its fellow-traveling fronts to force upon the South the Communist-inspired doctrine of racial integration and amalgamation.

Appearing on behalf of the defendants, the Atlanta School Board, was Chief Counsel B. D. Murphy, who has been a special assistant attorney general representing the State in the college segregation cases. Murphy's line of argument seemed to me to be wholly unrealistic, in that it sought to make it appear that there was no intent to segregate the races in the Atlantic public schools. The testimony as a witness, of Miss Ida Jarrell, superintendent of the Atlanta schools, followed the same general trend.

Late in the afternoon of June 5, Judge Hooper indicated the general outline of his final order. In this final order, announced on June 16, Judge Hooper held, in effect, that the Supreme Court decision, in the Brown integration case ruling out racial segregation in the public schools is the law of the land and that he (the U.S. district judge) was bound by it; that the Atlanta public school officials must present to him for approval a plan of desegregation; and finally, that he (the U.S. district judge) would give the Georgia General Assembly time to act on the desegregation plan. There was as an indication that Judge Hooper would look with favor upon some sort of pupil placement plan to provide for screening of school pupils on other than racial lines. In effect, Judge Hooper granted a grace period—a breathing spell—which should allow the schools to continue operating on a segregated basis for at least another year.

In the wake of the U.S. district court ruling in Atlanta there has been widespread discussion of the issue throughout the State and some indications of panic. In some quarters, particularly in the Atlanta newspapers, there were statements to the effect that Judge Hooper had exhibited magnanimity toward the defendants. Said the Atlanta Journal-Constitution, editorially, on June 21, "He (Judge Hooper) showed proper concern for the social welfare of the State and the future of public education * * *. The court has granted Georgia both time and latitude to seek its own solution within the law."

Well, everyone to his own opinion, but I cannot follow this line of reasoning. Judge Hooper's order in effect strikes down the system of segregation of the races in Georgia's public schools whose constitution of 1877, amended in 1945, provides that separate schools shall be provided for the white and colored races. Judge Hooper's order upholds a decision of the U.S. Supreme Court which is regarded by many eminent legal authorities, as well as leading Federal and State public officials, as sociological, illegal and unconstitutional, a direct invasion of certain rights of the sovereign States pursuant to the Constitution of the United States, as set forth particularly in the 10th amendment of the Bill of Rights: "The powers not delegated to the United States by the Constitution nor prohibited by it to the States, are reserved to the States respectively or to the people."

I pose the question: Are Federal judges, including Judge Hooper and Judge Sloan and other judges in other States involved in this school situation, bound by the Supreme Court decisions? Is there no latitude whatsoever, especially in cases involving a dubious Supreme Court decree which, as indicated above, is under strong attack on a wide front? Where these Federal judges took their oaths of office, did they swear to uphold the Supreme Court or the Constitution of the United States?

What if these Federal judges, in the event they upheld the right of the State to separate the races in the public schools, were reversed by the next highest Federal court or by the Supreme Court? Would this constitute a stigma on the record of these judges? I cannot visualize such a course of events.

I pose the further question: Does a Federal judge, called upon to deliver a momentous decision, affecting the welfare of the people of his own native State, have any obligations to uphold the constitution, laws and customs of that State?

When Judge Hooper's final order, banning segregation of the races in the Atlanta public schools was announced, I sent a telegram to Governor Vandiver to the effect that the U.S. district court order constituted a direct challenge to him as the chief executive of Georgia and to the members of the general assembly. I urged the Governor to call a special session of the general assembly at the earliest possible date with a view to asserting the full sovereignty of the State of Georgia in the field of public education, through the adoption of whatever legislation may be necessary to implement the bill to invoke the doctrine of interposition.

This bill of interposition, a copy of which I hold in my hand, was approved by the General Assembly of Georgia on March 9, 1956, by a vote of 218 to 1. The bill provides:

"That said decisions and orders of the Supreme Court of the United States relating to separation of the races in public institutions of a State, as announced and promulgated by said Court on May 17, 1954, and May 31, 1955, are null, void and of no force or effect."

All of the resisting Southern States, except North Carolina, according to my information, 3 years ago adopted resolutions of interposition with a view to maintaining their sovereign right to operate their own school systems without Federal interference. There are numerous historic precedents for the application of the law of interposition and the cases have not been restricted to the South. Georgia has been a leader. Listen to what James Jackson Kilpatrick, editor of the Richmond, Va., News-Leader and author of "The Sovereign States," has to say:

"No State in the Union has more clearly perceived the dangers of judicial encroachment than Georgia, and no State—into our own time—has been more resolute in resisting them."

Citing two famous cases, Editor Kilpatrick referred to Georgia's remarkably successful interposition in the Chisholm case, in which Georgia flatly refused to abide by a decree of the Supreme Court, and the Yazoo Land case, in which Georgia wrathfully denounced the Supreme Court, and her representatives in Congress succeeded, over a period of several years, in frustrating the claims of the Yazoo purchasers.

The Supreme Court has spoken. The U.S. district judge in Atlanta has spoken. The time has come for the State of Georgia to speak.

The paramount issue before the people of Georgia is—who is to control the operation of the public schools, not only in Atlanta, but throughout the State—the legally constituted officials of Georgia or the Federal authorities? This grave question should be resolved without delay. The people of Georgia are entitled to know what lies ahead in the education of their children.

The strategy of defense, which has characterized resistance to the race-mixers in the Southern States, including Georgia, should be abandoned for the strategy of offense. Holding-the-line tactics and delaying-action devices should give way to bold and forthright action. The State of Georgia, through its chief executive and its general assembly, should proclaim that under the Constitution of the United States and pursuant to its own constitution, laws, and customs, it has the right to maintain and operate its public educational institutions as it sees fit, that it intends to keep its schools and colleges open—and on a racially segregated basis. This is interposition.

I am of the opinion that there is a good possibility that several other Southern States would follow Georgia's lead. Such concerted action could not only turn the tide in the battle for race mixing, but it would also go a long way toward forestalling the creation of that powerful, centralized Federal police state in Washington.

My fellow citizens of Georgia, we must meet the crisis that confronts us without delay, for the hour is late. The white people of Georgia, who believe in constitutional government and the right of a sovereign State to control its own internal affairs, must mobilize their forces for positive action. Individual citizens must be willing to stand up publicly and be counted, dedicating themselves to the cause which we believe to be right and just. Individual sacrifices in time and money are required. The race-mixing conspirators are heavily financed. Thorough organization for collective action, in an orderly and lawful manner, at the local level is imperative. Organization should be on a strictly nonpartisan basis, devoid of political tieups. There should be full freedom for independent action on the problem with which we must deal. Each of Georgia's 159 counties should

be organized, functioning through regular meetings. A plan for effective coordinated effort at the State level should be formulated by the people at the local level through their county organizations.

The decisions on this momentous issue will be made at the State capitol in Atlanta by the chief executive and members of the General Assembly of Georgia. I am of the opinion that it is the desire of the great majority of Georgia citizens to retain their public schools and colleges as presently operated on a racially segregated basis, which is not possible through such foot-in-the-door devices as token integration, pupil screening, grade-by-grade gradualism, or local option. As so well expressed recently by Georgia's Representative JAMES C. DAVIS, "We will ultimately have mass integration or no integration. There is no such thing as a middle ground in this problem."

The desire of the great majority of Georgia's citizens to retain their racially segregated public schools and colleges must be crystalized and forcibly expressed by the white citizens of Georgia mobilized for positive action, as indicated above. Let's go into action, fellow citizens.

It's the People's Veto

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 30, 1959

Mr. BOSCH. Mr. Speaker, we have been hearing a great deal recently about government by veto which, in my opinion, is a little ridiculous. If President Eisenhower, or any President, does not reflect the wishes of a majority of the people when he vetoes a bill, the Congress can certainly override it.

Under leave to extend my remarks, I include an editorial from the July 20, 1959, edition of the U.S. News & World Report which gets to the heart of this matter and I commend it to the attention of my colleagues:

IT'S THE PEOPLE'S VETO

(By David Lawrence)

Political discussion lately has centered on the presidential veto. The Democratic National Chairman has urged members of his party in Congress to exercise their power to force vetoes on the theory that it is politically advantageous to do so. President Eisenhower, on the other hand, has been accused of using his authority to negate the will of Congress, and there have been denunciations of this as "government by veto."

What we are witnessing today is the strange phenomenon of irresponsible government because there exists in both houses of Congress a two-thirds majority which is opposite to the party in control of the executive branch of the Government. There have been instances where, even when the same party controlled the White House and two thirds of both houses of Congress, a presidential veto has been overridden. This is a reflection of public opinion—it is, in a sense, the people's veto of a presidential action.

In the 1937 battle between President Roosevelt and Congress on legislation to increase the membership of the Supreme Court from nine to fifteen Justices, he could not muster even a 51 percent majority, though the Democrats actually had elected in 1936 more than two thirds of both houses. The people said, "No."

The truth is, as Woodrow Wilson wrote in his book on "Constitutional Government" 5 years before he became President, the Chief Executive alone is in a position to represent the national interest, and he can derive substantial power and prestige from his hold on public opinion. This is why there is a fallacy in the oft-repeated comment that a President in his second term is a "lame duck" and that the Constitution should not have been amended to prohibit more than two terms in the Presidency.

This amendment was adopted in 1947 to some extent on the theory that a President leads by reason of the patronage or favors he can dispense and that, if eligible continually for reelection, he could win votes in Congress by virtually bribing members with promises of presidential beneficence. But this assumes that an unpopular President could thwart the public will. It ignores the fact that every two years all Members of the House, along with a third of the Senate, must go before the electorate.

A President is as strong as the public opinion that he is able to mobilize. Mr. Eisenhower is in a powerful position today precisely because he is not a candidate for another term. The country feels he is not politically ambitious, and he has announced that he will not attempt to dictate the nominee of the 1960 Republican National Convention.

Whatever influence Mr. Eisenhower has over his own party or over the members of the Democratic Party in Congress comes from his accurate sensing of the national will. He himself, in discussing this point at last week's press conference, said:

"I am trying to do what will, I believe, be good for the country, and I don't enjoy vetoing bills. I don't believe that there is any validity in such expressions as 'government by veto.'

"I am part of the process of legislation and when I am the only official, along with the Vice President, who is voted into office by all the people, I think I have got a special responsibility to all the people. So, I try to tell them and explain to them what I am doing. If they approve, that ought to have some effect."

The argument is sometimes made that a majority of the people are in favor of the Democratic Party because in the 1958 election Democrats carried both the House and the Senate overwhelmingly. It is pointed out that even in 1956, when President Eisenhower was re-elected, the Democrats actually polled more votes for Congress than did the Republicans. The figures, however, present a statistical paradox. For, actually, the votes for Congress are cast in individual districts or States, and, where one congressional candidate is acknowledged to have preponderant support, many citizens do not take the trouble to vote.

Recently another paradox has been noted in the Gallup polls. They show Mr. Eisenhower to have made a gain in popularity from 52 to 62 percent since last year's congressional elections. But the pollsters still find that more people label themselves as Democrats than as Republicans.

This has little bearing on what the nation wants at any particular moment by way of legislation or action by the Executive. Each proposal or national policy has to be judged on its merits. If the President vetoes a bill and public opinion generally is on his side, it would not be good politics for members of the opposite party or of his own party to override the veto.

The President is elected by all the people. He is not supposed to bow to sectional or pressure groups.

Mr. Eisenhower is singularly free from political entanglements. He has no political ambition. He has only a little more than 18 months to serve. If he refuses to sign a bill, it's because he thinks that it what the people want. This is indeed a people's veto.

Statistics Submitted by American Committee on Italian Migration Concerning Petitions for Immigrant Visas

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 14, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter I received from Rev. Caesar Donanzan, executive national secretary of the American Committee on Italian Migration, 5 East 35th Street, New York, N.Y.

The letter follows:

AMERICAN COMMITTEE
ON ITALIAN MIGRATION,
New York, N.Y., July 13, 1959.

The Honorable THOMAS J. LANE,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN LANE: Permit me to acknowledge receipt of and to thank you for copy of the CONGRESSIONAL RECORD, dated June 16, 1959, volume 105, containing your speech on "The Immigration Laws of the United States."

Permit to refer further to my correspondence with you regarding our interest in the solution of the fourth preference quota problem and to draw your attention to the statistics submitted by the U.S. Department of State on June 10, 1959, concerning the number of petitions filed by American citizens and classified under this category of the Immigration and Nationality Act. They are as follows:

Italy	64,453
Greece	4,500
Poland	3,200
Portugal	2,500
Yugoslavia	1,700
Turkey	490
Spain	595
Hungary	785
China	257
Other countries	6,472
Total	84,952

There is no doubt that some of these 84,952 applicants (adult sons and daughters, brothers and sisters of U.S. citizens) are married and have children. We have advocated, you will recall, that, in order not to create a future problem of separated families, they be permitted to bring spouses and children with them.

The index used officially to determine the family unit size is 1.7 which, multiplied by the total number of 84,952, equals 144,418.

Since many of the petitions have been on file for several years, it must be assumed that some of the applicants or their petitioners have either passed away or—the former—have lost the desire to emigrate because they have been absorbed in the economy of their native country or for other reasons. These factors would somewhat reduce the toal number of fourth preference immigrants.

We further recommend that the immigrants be admitted within the next 4- or

5-year period, during which time no additional petitions be accepted.

We believe that it is in the American national interest that these people be admitted and, furthermore, we believe that our Government has a moral responsibility to act favorably upon the petitions since it has accepted and approved them.

Appreciative of your continued interest and support of this vital objective, I am, with kindest regards,

Sincerely yours,

CAESAR DONANZAN

Rev. Caesar Donanzan, P.S.S.C.

P.S.—You will be interested to know that, according to the Department of State, less than 1,500 Italians would receive nonquota visas and thereby benefit by H.R. 5896 out of the 64,453 presently wait listed.

Geneva: Round 2

EXTENSION OF REMARKS

OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 30, 1959

Mr. BOSCH. Mr. Speaker, the free world watches closely the conferences now going on in Geneva. Upon the outcome of these conferences may well rest the future of free nations everywhere.

Under leave to extend my remarks, I include an editorial from the York Daily News of July 13, 1959, which I commend to the attention of my colleagues:

GENEVA: ROUND 2

Following a recess of 3 weeks, the Foreign Ministers' Conference takes up again today at Geneva.

As in round 1, so in round 2 the United States will be represented by Secretary of State Christian A. Herter, Britain by Selwyn Lloyd, France by Maurice Couve de Murville, and Soviet Russia by Andrei Gromyko. Sitting by as observers permitted to talk now and then will be representatives of West Germany and Red-enslaved East Germany.

The conversation, as before, will have to do mainly with West Berlin and Khrushchev's November 27, 1958, bawl that the Western allies had to pull their troops out of there within 6 months, or else.

Khrushchev's May 27 deadline is long past. He modified his ultimatum in advance of that date, when it dawned on him that his bluff was a bust. Now, he is merely saying we've got to get out of West Berlin some time.

Well, what happens in the second round? In our opinion, the Western Foreign Ministers have made all the concessions to Khrushchev that they can make without actually selling West Berlin down the river.

They have offered to reduce the Western garrison, now amounting to about 11,000 men. They have shown a willingness to let East German Communists, instead of Russians, check trucks into and out of West Berlin, as agents of the Russians. And they have offered to cut out what Khrushchev calls subversive activities in West Berlin.

WE'VE ALREADY GONE TOO FAR

In view of Communists' notorious skill at grabbing a mile when given an inch, these concessions would make the Western Allied occupation of West Berlin a good deal more difficult than it has been, and would encourage the Kremlin to step up its efforts to blast us out of there.

We think the Western foreign ministers erred in offering any of these compromise steps, and we are convinced that Khrushchev took them merely as signs of Western allied weakness.

Now, however, it is advance-doped that British Foreign Secretary Selwyn Lloyd will try in the second Geneva round to sell still more concessions to the United States and France for the appeasement of Moscow.

One of these, it is said, will be an offer to set up a four-power commission, including a Soviet representative, for running West Berlin or perhaps all of Berlin.

A moron could see how dangerous it would be to let the Kremlin stick a foot into West Berlin in that way. This commission from the start would be bedeviled and disrupted by the Russian member.

STAND PAT, MR. HERTER

We hope Messrs. Herter and De Murville will stand pat, from first to last.

Khrushchev hasn't offered a single concession to our side, and won't as long as he thinks we're weak willed.

If the West lets West Berlin slide into Khrushchev's Marxist hell, the West will hand the Kremlin its biggest single victory to date in the cold war. The Western alliance will start coming apart, nation after nation will hurry to appease the Red slave empire, and communism will be in sight of its long-planned enslavement of the entire human race.

This conference, then, is, among other things, a test for Herter, which will show whether he has the cold courage and unshakable resolution of the late John Foster Dulles, or whether he is just a nice, high-minded fellow with a fat percentage of rubber in his backbone.

A lot of Mr. Dulles' longtime supporters fear Herter is the latter, while devoutly hoping they will be proved mistaken.

WILL HE PASS IT?

Certainly he delivered a firm, bluntly worded TV and radio report to the Nation on round one at Geneva. But that didn't finish this job.

Herter's next job is to hold out against any further concessions to Moscow on West Berlin, regardless of pressures brought to bear on him by chicken allies, homegrown Russia lovers, Gromyko, or anybody else.

We hope with all our hearts that Herter will pass this test. On his passing it may depend the life or death of Western civilization.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Daily Digest

HIGHLIGHTS

Both Houses cleared D.C. appropriations for White House.

Senate passed defense appropriations and took up D.C. home rule bill.

Senate

Chamber Action

Routine Proceedings, pages 12069–12105, 12165

Bills Introduced: 7 bills and 3 resolutions were introduced, as follows: S. 2378–2384; S.J. Res. 120; and S. Con. Res. 61–62. Pages 12074, 12165–12166

Bills Reported: Reports were made as follows:

Report of Joint Committee on Atomic Energy entitled "Proposed Amendment to Agreement for Cooperation With the United Kingdom, and Proposed Agreements for Cooperation With the Republic of France, Canada, Turkey, the Netherlands, the Federal Republic of Germany, and Greece on the Uses of Atomic Energy for Mutual Defense Purposes" (S. Rept. 513); and

S. 1138, to provide for a readjustment of benefits for post-Korean veterans, with amendments (S. Rept. 514). Page 12074

Bills Referred: Five House-passed bills were referred to appropriate committees. Page 12105

D.C. Appropriations: H.R. 5676, fiscal 1960 appropriations for the D.C., was cleared for President's signature when Senate adopted conference report thereon. Motion to reconsider this action was tabled. Pages 12130–12132

Defense Appropriations: By unanimous vote of 90 yeas (motion to reconsider tabled), Senate passed with amendments H.R. 7454, fiscal 1960 appropriations for the Department of Defense, after taking the following actions on additional amendments thereto:

Adopted: Engle amendment providing that the commercial air transport service authorized shall be from licensed air carriers not holding certificates as supplemental air carriers that have available equipment for the Civil Reserve Air Fleet; and

Rejected: By a tie vote of 46 yeas to 46 nays, modified Thurmond amendment to reduce from $100 million to $80 million funds available for procurement of commercial air transport service from carriers certified by CAB as scheduled or supplemental air carriers; and Proxmire amendment to eliminate $380 million, Shipbuilding and Conversion, Navy (cost of a nuclear-propelled attack aircraft carrier).

Also, the Chair sustained Chavez point of order against Humphrey amendment to add proviso that $500,000 shall be available to Departments of State and Defense, jointly, for special foreign policy studies relating to disarmament and weapons control, and possible technical means of enforcing any reduction-of-arms agreement.

Senate insisted on its amendments, asked for conference with House, and appointed as conferees Senators Chavez, Hayden, Russell, Hill, Ellender, Robertson, Byrd (Virginia), Saltonstall, Bridges, and Young (North Dakota). Pages 12105–12130, 12132–12151

Policy on Communism: Senate adopted (motion to reconsider tabled) S. Res. 115, to authorize studies respecting national policy in contest with world communism ($60,000). Pages 12152–12153

Legislative Program: Majority leader announced that during balance of week Senate will consider S. 1681, D.C. home rule, to be followed by S. 1928, participation of U.S. in Inter-American Development Bank, and probably a call of the calendar. Page 12153

Tariff—Gift Imports: H.R. 7567, to extend for 2 years the privilege of free importation of gifts from members of the Armed Forces of the U.S. on duty abroad, was passed without amendment and cleared for White House. Pages 12153–12154

D.C. Home Rule: Senate made its unfinished business S. 1681, to provide an elected mayor, city council, school board, and nonvoting delegate to the House of Representatives for the D.C. Page 12157

Veterans' Benefits: Authority was granted for filing of individual and minority views on S. 1138, to provide for a readjustment of benefits for post-Korean veterans (reported today). Page 12074

Record Votes: Two record votes were taken during Senate proceedings today, which appear on pages 12130 and 12151.

Treaty Reported: International Wheat Agreement, 1959 (Ex. E, 86th Cong., 1st sess.), was reported (Ex. Rept. 5). Page 12074

Appendix

I Kept Right on Going

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 15, 1959

Mr. RANDOLPH. Mr. President, on Thursday, July 16, Michael L. Benedum will sit quietly in his living room reading congratulatory letters on his 90th birthday anniversary.

M. L. Benedum, an outstanding native West Virginian, has enjoyed a fabulous career as the most successful oil wildcatter in history and is the possessor of that outstanding quality—concern and compassion for the well-being of his fellowman.

Tomorrow's birthday anniversary of the stalwart mountaineer will be the occasion for him to receive greetings and congratulations from the President and the Vice President of the United States, as well as from those of us in the Congress, and, indeed, from just plain folk.

Each year and each decade have been marked by Mr. Benedum testifying, by his good living and genuine serving, to the Longfellow dictum that "Age is opportunity no less than youth itself."

Mike Benedum's responsiveness to the needs of his home community and his country—their recreational, educational, and religious activities and institutions—has been the hallmark of the respect and esteem his deeds have engendered in people of all walks of life.

His countless admirers and coworkers, and those hosts of men and women who call him "blessed," join in the wish that Michael Late Benedum will enjoy more fruitful years to further inspire them, as he has done for so long.

His 90th birthday anniversary recalls an article which I wrote 5 years earlier for a national magazine, Success Unlimited. In the preparation of that article, I ask Mr. Benedum what he did when he met adversity and defeat on his road to success. He replied: "I kept right on going."

Mr. President, that is the title of the story published by Success Unlimited in April 1955, and I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

I KEPT RIGHT ON GOING

(By JENINNGS RANDOLPH)

Henry George, social theorist of the second half of the 19th century, once said that he was disturbed by the spectacle of men whose incomes were derived not from the services they rendered the community, but merely from the fact that they had the good fortune to hold advantageously situated soil.

If George had had the privilege of knowing Michael L. Benedum, probably the world's most celebrated oil wildcatter, he would not have been so disturbed. On the contrary, he would have marveled, even as we who know him today marvel, at M. L. Benedum's talent for deriving his income from making advantageously situated soil render service to the community. For with Benedum's lifetime objective of puncturing the earth's crust in search of the precious, black, flowing liquid which has made him rich, have gone other objectives which have made him great.

On a sultry July day in 1890, a tall hard-muscled young man of 21 boarded a train at the little town of Bridgeport, W. Va. He was headed for Parkersburg, W. Va., and an uncertain future. There was only one empty seat in the crowded car. The young man sat down in it. At the next stop a middle-aged man, laboring with a heavy suitcase got aboard. The young man jumped to his feet. "Won't you take this seat, sir?" he asked.

"Oh, no. Keep your seat, son," the man said.

But the young man insisted. The stranger smiled, "All right, I'll sit down—but only if you sit on the arm and talk to me."

The man, impressed with the youth's going out of his way to help a stranger, asked some questions. He soon learned something of the history of the young man at his side. "So you want a job?" he asked. "Well, I'm John Worthington, general superintendent of the South Penn Oil Co. How about working for me?"

Thus began the fabulous career of Michael Late Benedum—a career founded on perhaps his most outstanding quality—concern for the well-being of his fellowmen.

Today—at 85—Mike Benedum, erect and almost wrinkle-free, with a youthful appearance to match his frame of mind, ranks as the most successful oil wildcatter in history, as the discoverer of more oil than any other single individual who ever lived. In the past 35 years, his discoveries have added more oil to the world's known reserves than the world has consumed. They have included every State in the Union where rigs have gone to work. Royalties from his discoveries have made the University of Texas a wealthy institution. The wells he drilled in Rumania proved both a blessing and, during World War II, a curse to that nation. His discovery and development of Colombia's vast oil wealth has raised the standard of living of the entire country. He played an important role in discovering Mexico's seemingly inexhaustible reserves. And as recently as 1950, Mike Benedum, at 81, sent geophysicists by helicopter over a million acres of leased wasteland in Canada to make recordings of the terrain. Subsequent discoveries there show notable promise of developments in both gas and oil. It is more than likely that if you asked Mike what was the best oilfield (he never thought merely in terms of wells) he ever brought in, he would probably exclaim, "The next one."

Today, Mike Benedum's fortune ranges upward of about $100 million, probably putting him among the Nation's dozen richest men. It also places him in the ranks of one of the largest payers of income tax in the United States.

What qualities go to make up such a man? What did Mike Benedum do that you can do in your life—perhaps not to create a $100 million fortune—but to make living a richer, more regarding experience for you?

If you will but appropriate only two of the many principles followed by Benedum in his achievements, you will go a long way toward achieving success.

Benedum has based his life on giving—always doing more than was expected of him without expecting return. This habit of going the extra mile got him started. How was he to know that the stranger to whom he offered his train seat was in a position to give him a job? By always doing more than was expected, by always giving with no thought of immediate getting, Benedum simply put the law of increasing returns to work for him, and as it always will, the law repaid him handsomely.

Think thoughts of giving instead of getting and you, too, can reap the effects of this law.

Mike Benedum has had reverses in fortune which might have broken another man. Shortly after making his first fortune, he lost it—as a result of a tip from his brother to get out of the oil business and play it conservative.

What did Mike do when he lost his fortune—when everything was at its blackest? He kept right on going. He returned to his first love—oil—and soon his faith in what he knew he could do best was paying off in yet a greater fortune. Through believing by doing he turned yesterday's losses into today's fortune. As he says:

"I've had no ulcers because I've had confidence, faith, and patience to carry me through. If halfway up an obstacle I'd meet a streak of bad luck, I kept right on going 'til I was over the top."

In 1920 his attempt to tap oil in the Philippines in productive quantities failed; again adversity hit. Did Mike abandon all hope? Did his econversation reveal that he was defeated by this setback? No. His optimism rang through his every word as he said, "That is part of the game. You can't expect to find deposits of oil everywhere you look. If you did, there wouldn't be any fun wildcatting."

If you, like Benedum, can stand tall when misfortune strikes, if you can learn to look for the seed of an equivalent benefit in every adversity, you will have put into effect another priceless principle of successful living.

Mike Benedum's recipe for success is compellingly put: The first step to success, he explains, is to be doing what you like. Then work. He says:

"Work yourself, drive yourself, make sacrifices, or you'll never achieve anything worthwhile."

Mike Benedum's philosophy about money goes something like this: "I'm just a trustee for it—and will be held accountable for the good I can accomplish with it—both in the community as a whole and in behalf of opportunities for people coming up—even as I was given an opportunity, back when."

Opportunities for investment within the vast complex of his numerous enterprises have always been made available to his associates.

His fortune will play many great parts. He built a million dollar Methodist church in Bridgeport, W. Va. Smaller colleges in West Virginia and Pennsylvania share his interest and the public will benefit from his Claude Worthington Benedum Foundation (in

memory of his son who was lost in World War I and also the name of the man who gave Mike his start).

How does Mike stay young?

On his 85th birthday, he said, "I have been asked how I keep going at my age. My formula is to keep busy so that the years go by unnoticed. To despise nothing except selfishness, meanness, and corruption; fear nothing except cowardice, disloyalty, and indifference; covet nothing that is my neighbor's except his kindness of heart and his gentleness of spirit; think many, many times of my friends and, if possible, seldom of my enemies. As I see it, age is not a question of years. It is a state of mind. You are as young as your faith, and today I think I have more faith in my fellow man, in my country, and in my God than I have ever had."

And while he sees vast opportunities for the future, he is realistic in appraising them:

"It takes a combination of character and assets to get started—and you don't come upon either easily. It takes lots of sacrifice, curtailment of first impulses, and patience to succeed."

Speaking of patience, Mike is most impatient with those who intone the old saw about opportunity being a thing of the past, that it was all parceled out to our grandfathers.

"Sheer nonsense," says Mike Benedum. "They told me that too, when I was a kid. All the good farmland is gone—there's no more opportunity. What they didn't realize was that the times were to unfold new opportunities for pioneering. Oil, steel, and other fields were waiting for explorers to discover and develop them.

"The same is true today—if a person looks hard enough and has sufficient drive, those with pioneering blood in their veins will find an outlet for their energy."

Because he is still such a person, today, as he approaches the age of 86—and who knows what new venture in a life of endless possibilities—Mike Benedum, still standing tall, is keeping right on going.

Adequate Representation Allowance One Key To Insuring That Qualified Persons Head U.S. Embassies

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, July 15, 1959

Mr. NEUBERGER. Mr. President, on June 24, 1959, I submitted a resolution which would put the Senate on record as favoring the selection to head our embassies and legations overseas of career diplomats with a useful knowledge of the language and culture of the countries involved.

At that time I pointed out that establishment of such a standard must be accompanied by congressional support for adequate representation allowances. Otherwise, experienced American diplomats would be eliminated from consideration for posts for which they are well qualified merely because they lack a personal private income sufficient to cover the costs of social responsibilities inherent in the positions.

In the July 5, 1959, issue of the Oregonian of Portland, Oreg., there appeared an excellent editorial commenting on this relationship between wealth and diplomacy in American foreign relations. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Oregonian, July 5, 1959]

SHORT RATIONS

After a promising start, Congress has decided against making it possible for other than wealthy persons to serve as ambassadors to the world's major nations. Senator J. WILLIAM FULBRIGHT, Democrat, Arkansas, who, as chairman of the Senate Foreign Relations Committee, has been promoting appointment of trained diplomats to important ambassadorial posts, has, at the same time, urged an increase in allowances to prevent out-of-pocket costs to those representing the United States abroad. But House delegates in conference committee have refused to accept this idea.

This means that appropriations will not, in some cases, cover the official expenditures required of ambassadors in such posts as Paris and London, and that the state of a man's pocketbook must still be among the considerations in selecting such envoys.

Oregon Senator RICHARD L. NEUBERGER recently inserted in the CONGRESSIONAL RECORD a table showing that, of the two of of three U.S. ambassadorial and ministerial posts filled by foreign service personnel, virtually all are qualified in the language of the country to which they are assigned. But when he asked for the language qualifications of ambasadors and ministers outside the professional corps, the State Department responded that it did not have that information.

Ridiculous. The State Department surely knows what languages its envoys speak. It must be assumed that it is embarrassed to make the information public. Circumstances are likely to remain embarrassing so long as wealth and politics are retained as major criteria in the selection of our representatives abroad.

A Challenge to All Americans

EXTENSION OF REMARKS

OF

HON. HENRY DWORSHAK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Wednesday, July 15, 1959

Mr. DWORSHAK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address delivered by Preston J. Moore, national commander of the American Legion.

It was my pleasure and privilege, on June 26, 1959, to attend the department of Idaho convention at Twin Falls and to hear Commander Moore deliver this dynamic message.

I call the attention of Senators to the pertinent points which the national commander makes concerning current legislation, an accelerated program of Americanism, renewed activity on behalf of veterans, and national security.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

You active Idaho Legionnaires who are attending this convention—any many of your hard working comrades back home—are doing your part to help build a new spirit of progress and achievement.

At the beginning of this year I said that "community service is the answer to the future of the American Legion." In community after community where you have put effort and initiative into fine community service programs, you have proved the accuracy of that statement.

Rehabilitation, Americanism, national security, child welfare, these are the foundation stones of the American Legion. You have been building the American Legion of the future through your renewed emphasis on these four basic programs.

I have no doubt that the solid progress made during the past year will be reflected into Idaho's membership strength. My congratulations to you for a job well done.

I am indebted to each of you individually. I also want to pay my respects to your department leaders—the Legionnaires with whom I have been permitted to work very closely during these past months.

To Department Commander Pete Wilson, to your national executive committeeman Hawley Atkinson, to Adjutant Lou Babb, and to all of the Idaho Legionnaires who ably filled positions on our national committees, my sincere thanks.

However, neither they, nor you, nor I serve the American Legion with the hope of personal credit. We work for and in the Legion because we believe in it—because it is our way of meeting an obligation to our Nation and to our fellow veteran.

According to a book that made the rounds a few years ago, life begins at 40. The record I will review briefly today indicates that in its 40th anniversary year, the American Legion has definitely taken on new vigor. It is virtually certain that this year, for the first time in 6 years, we will score a membership gain.

Membership as you know, is our powerplant. It provides the push and prestige that make all our programs go. The increase at this particular time has a deeper significance. It means that the American Legion creed of service is attracting new believers. And it means that we shall have new hands to carry on the work of the many devoted Legionnaires who have answered their last rollcall.

As national commander, I share your sense of achievement over this reversal of the membership trend. I also recognize that the credit belongs primarily to you—to the blue-capped Legionnaire who gives his time and effort to his post and asks only the satisfaction of serving.

Heading the list of 36 departments which already have topped their membership totals of 1958 are North Dakota, South Dakota, and Nebraska. The entire American Legion will benefit from their pace-setting performances. My own department of Oklahoma is near the top—and while there's nothing unusual about Oklahoma turning in a championship job in any kind of competition, the records show that very seldom has a department increased its enrollment while one of its members occupied this office.

So the accent once again is on growth—on a renewal of strength not only in members but in purpose.

The current year has seen that strength of purpose tested and affirmed on every major front of American Legion activity.

In rehabilitation, we have long advocated a realistic revision of the veterans' pension program. I am happy to report that the Congress is well on the way to providing one.

The object of our concern here is a large group of war veterans and their survivors who are prevented by age or other circumstances beyond their control from caring adequately for themselves. A generous Government long ago recognized their plight in the form of a limited program of modest disability and death pension awards. The cost has been small—the return in human dignity enormous. And yet, antiveteran forces have chosen to subject this program and its beneficiaries to an almost constant rain of pressure and abuse.

The administration recently proposed legislation that would have sharply reduce the rates and numbers of those on the disability pension rolls. We found it to be a "bill of wrongs"—and said so. We urged the Congress instead to enact changes to meet these fundamental goals: (1) Higher pension awards, particularly at the lowest income level; (2) the same eligiblity requirements for death pension to the widows and orphans of World War II and Korea as are now applied to World War I cases; (3) reasonable increases in the income limitations that determine pension eligibility; and (4) assurance that the awards will continue to go only to beneficiaries actually in financial need.

Under the leadership of Chairman TEAGUE, the Veterans' Affairs Committee approved a bill that is consistent with all four of these recommendations.

On June 15, the House passed the bill and Senate approval is expected without substantial change.

Here, in practical terms, is what enactment of H.R. 7650 will mean:

As of July 1, 1960, 7 out of every 10 veterans, widows, and orphans now on the rolls will receive increased awards. In addition, more than 275,000 not eligible under existing law will go on the rolls. A total of approximately 1,132,00 veterans and survivors will gain either increases in their present rates or a place on the rolls for the first time.

Now I want to make it clear that the bill does not contain everything we recommended. Some features fall short of our estimate of the need; some will require careful evaluation in practice. In my judgment, it is a good bill; compared with the plan submitted by the administration, it's a great bill. It guarantees that the Congress will continue to recognize the Nation's obligation and the veteran's need.

I only hope that the people who tried to destroy the program will take this latest defeat to heart, and will turn their attention to something more constructive than the harassment of war veterans and their families for whom life itself has become a battle.

The child welfare and youth training activities of our combined American Legion posts and units add up, I believe, to the greatest investment made by any organization in the future of America. This year we've upped the ante.

By year's end we will have spent roughly $7 million on child welfare and related services.

An additional 100 Boy Scout units have been organized under American Legion sponsorship, bringing the total to 4,333.

Forty-nine departments this summer are training 18,000 high school juniors to know and respect good government at 49 American Legion Boys States.

When it first became a national program in 1926, American Legion junior baseball was played by 26 teams. The competition now getting underway will feature 18,000 teams—with about 1 million boys participating in some phase of the program.

This is the type of work we were organized to do. We are doing more of it for the benefit of more young Americans than ever before, and still there's plenty of room for expansion.

Again, the important thing is that we're on the move. At the post level where all our achievements begin, both the spirit and the flesh are willing.

Building for the future has also claimed our best efforts in another area of traditional concern—national security.

In this 13th year of the cold war, we face a far greater challenge abroad and at home than ever before. The Soviets hold the initiative militarily and psychologically. Their drive for world domination has registered vital new gains in the Middle and Far East, and there's a definite possibility that in Cuba they will capture a vital stronghold at our very doorstep.

We believe that strong military forces, armed and organized according to modern standards, represent a minimum answer to this threat. That is why we have emphasized the importance of balanced forces, of strength in being as against strength on paper, and of reserve forces adequate to assure defense in depth. With one ominous exception, the defense appropriation bill now pending in the Congress recognizes these needs.

The exception relates to missile power—the new first line of our defense. A year ago, there were official denials that a missile gap really existed. Now the gap is acknowledged, but we're told it's nothing to worry about—that the Soviet lead is only a year or two long, and perhaps we can keep it from growing.

The disturbing thing to us is that most of the arguments supporting a limited missile program fall back sooner or later on the element of cost and the desirability of balancing the budget. We're concerned about the budget, too. But we're more concerned—and I think most Americans share our concern—about building the kind of military preparedness that will enable us to uphold America's honor and advance America's cause in the world struggle with communism.

Frankly, a second place finish in the nuclear arms race doesn't impress us as a national objective. The Communists have not lowered their sights; they mean to conquer us. We ought to rely more on our readiness to win a fight than on their reluctance to start one.

The Army Chief of Staff, Gen. Maxwell Taylor, recently stated: "If we looked into the books of the Soviet leaders where they list our national assets and liabilities, I am sure we would find that they count heavily upon American unwillingness to bear for long the discomforts and hardships which are the price of world leadership."

Have we reached that point already? Do we value our freedom and sovereignty so little that we will do only what can be done conveniently and with comfort?

The real issue is more than survival. We can survive, if that is all we want, by quitting the fight—and coexisting the way hundreds of millions of people are coexisting today in Russia and China and in all the captive lands behind the Iron and Bamboo Curtains.

Americans, historically, have aspired to something more. Our richest and greatest resources are to be found not in military or industrial might but in our tradition of faith in America—of dedication to the sanctity of human freedom and of confidence in the destiny of our country. This is the spirit—the positive purpose—that should motivate and control our national policy.

Love of soft living is not among the ideals for which we fought. Perhaps the time has come when we must choose between luxury and liberty.

Winston Churchill, in the dark summer of 1941, reminded us that "the destiny of mankind is not decided by material computation. When great causes are on the move," he said, "we learn that we are spirits, not animals; and that something is going on in space and time which, whether we like it or not, spells duty."

Our great cause is human freedom. Our plain duty, I believe, is to launch a freedom offensive that will utilize the full potential of our power—economic, psychological, and moral. The patriots who fathered our cause deemed it worthy of their fortunes, their lives, and their sacred honor. Let us act in their image. Let us demonstrate by deed as well as word that we are resolute and united—that our single purpose is peace with justice—and that neither favor nor fear will persuade us to take less.

If we do this, we will command the respect and confidence of peoples the world over who are waiting to see on which side the real power lies. We will put an end to doubts about our capacity to lead. And we will finally be in a position where we can make the moves and leave the checkmating to the Kremlin.

I have reviewed here today just a few of the ways in which we, the American Legion, are serving—and can serve—our common heritage. To help the veteran who needs help, to encourage youngsters to grow straight and our country strong are obligations that we cherish as Legionnaires. May God grant us the will and the way to continue to meet them.

Independence Day for Courts

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, July 15, 1959

Mr. JAVITS. Mr. President, on May 28, 1959, the Senate Subcommittee on Constitutional Amendments, under the distinguished chairmanship of Senator ESTES KEFAUVER held an opening hearing on Senate Joint Resolution 57, introduced by myself and Senators CLARK, HENNINGS, HUMPHREY, LANGER, MORSE, NEUBERGER, and PROXMIRE. This resolution proposes an amendment to the Constitution to protect the jurisdiction of the Supreme Court as final authority in all cases involving constitutional issues. The proposed amendment was introduced because, although the Supreme Court has by tradition, historical acceptance and continuity of court decisions exercised authority to declare any Act of Congress or law of a State unconstitutional, nowhere has that authority been expressly stated in the Federal Constitution.

In view of the interpretation given a number of resolutions adopted by the American Bar Association in February, 1959, dealing with specific issues in the internal security field on which the Supreme Court had handed down decisions, I am most gratified that the president of the American Bar Association, Mr. Ross Malone has, on a number of recent occasions, reiterated the special responsibility of the bar in maintaining the independence of the courts and the judiciary. He pointed out, in addressing the Judicial Conferences of the Fourth Judicial Circuit in Asheville, N.C., on June 30, and of the 10th Judicial Circuit on July 3, that when the

independence of the Courts is endangered by attacks arising from decisions in controversial cases, this special responsibility of the bar assumes vital importance. In doing so, Mr. Malone endorsed and urged adoption of the constitutional amendment which I had proposed.

I ask unanimous consent that there may be printed in the Appendix of the RECORD Mr. Malone's remarks before the Judicial Conference of the 10th Circuit.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

INDEPENDENCE DAY FOR COURTS

(Address by Ross L. Malone, president, American Bar Association, before the Annual Judicial Conference of the 10th Judicial Circuit of the United States, Santa Fe, N. Mex., July 3, 1959)

The indictment returned against George III by the Continental Congress at Philadelphia on July 4, 186 years ago, contained as two of its specifications:

"He has obstructed the administration of justice by refusing his assent to laws for establishing judiciary powers.

"He has made judges dependent on his will alone, for the tenure of their offices, and the amount and payment of their salaries."

That this aspect of the tyranny of the English monarch had so outraged the Colonists, that it was included in the Declaration of Independence, is of special significance as a backdrop for the subsequent history of the courts of this country.

The original concept of justice having been that it was the beneficence of the sovereign, and the judges who administered it having been the agents of the Crown, it is understandable that the concept of independent courts was slow to develop.

In 1776, the concept of an independent judiciary was of comparatively recent origin. It had received its first formal recognition in England in the Act of Settlement of 1701, which for the first time provided that judges should be appointed for the period of their good behavior and prevented the removal of judges except on an address from Parliament to the Crown. Throughout the early stages of English history, judges had combined the performance of administrative duties for the Crown with the administration of justice and frequently had confused the two functions.

In the 14th century, some steps had been taken to bring about a gradual separation of the administrative functions of courts from their judicial functions, but progress was intermittent and retrogression was not unusual. Throughout this period, and even until the Act of Settlement various English kings thought nothing of polling and manipulating the judiciary to insure a favorable outcome in any matter in which the Crown had an interest, whether direct or incidental.

A typical example was the attempt of James II to secure judicial recognition of the power of dispensation. This resulted in his discharge of a number of judges who would not bend to his will and give judicial sanction to the doctrine that this was within the royal prerogative. It was this purge which led one of the ousted judges to warn the king, "Your Majesty may find 12 judges of your mind, but hardly 12 lawyers."

James and his successors were not deterred, however, and judges continued to occupy the bench at the king's pleasure, until the Act of Settlement in 1701. It was inevitable that history during this period should provide frequent examples of the monarch coercing favorable rulings from judges dependent upon him for their tenure.

The Act of Settlement was of no assistance to the American Colonists, however, in spite of the fact that they also had been the victims of the system which subjected judges to the whim of the Crown. Its provisions did not extend to the colonial judges. Some of the colonists and colonial assemblies had sought to obtain this protection, but the Tory argument prevailed that to create an independent colonial judiciary might "lessen the joint dependence which the colonies ought to have upon the government of the Mother Country."

The lack of this protection and the resulting dependence of the judiciary upon the pleasure of the sovereign was frequently brought to the attention of the colonists. The historic trial of John Peter Zenger in 1735 for seditious libel was upon charges among others, that he had published articles critical of the removal of a colonial judge by the Royal Governor as the result of the failure of the judge to decide a case in accordance with the interest of the Governor.

The second specification of the Declaration of Independence with reference to judicial abuses referred to making the judges dependent upon his will alone, not only for their tenure, but also for "the amount and payment of their salaries." This specification no doubt resulted, at least in part, from the royal plan announced in 1772 under which judicial salaries in the Colonies would be paid by the Crown, rather than by the Colonial Assembly or other local source. This proposed change, at a time when the Colonies were becoming increasingly restive, was a rather obvious attempt to insure control of the courts by the Crown, and was, of course, in direct opposition to the growing demand that justice be administered in the Colonies by judges who were independent of the influence of the Crown.

It is interesting to speculate whether the recognition of the importance of independent courts which was included in the Declaration of Independence is primarily attributable to Thomas Jefferson, whom we recognize as its principal author. There were two signers of the Declaration of Independence who, in all probability, had personally experienced the attempted imposition of the sovereign's will upon a dependent court. They were Sam Huntington, a judge of the Superior Court of Connecticut by appointment of George III, and Richard Stockton, a judge of the Supreme Court of New Jersey.

Regardless of the immediate occasion for including these provisions in the Declaration of Independence, however, it is apparent that concern as to the lack of independence of the courts extended throughout the Colonies. Thus the Declarations of Rights adopted in 1776 by Maryland and Delaware, in almost identical language, provided:

"That the independence and uprightness of judges are essential to the impartial administration of justice, and a great security to the rights and liberties of the people."

Having experienced the vices inherent in subservient courts, it would seem that the colonists would make independence of the courts a major objective of their new regime, but surprisingly, they failed to achieve such independence in establishing their own government.

Probably as a result of distrust, engendered by the fact that the courts had been considered instrumentalities of the King, and also because the legislative branch of the Government was the branch considered most responsive to the popular will, the first courts established in the States of the new Republic were also denied independence. They were made subservient, not to the executive, but to the legislative branch of the Government. The legislatures were empowered to make rules governing the courts, vacate and annul judgments, grant new trials and otherwise completely dominate the administration of justice.

Whether it can be said that the situation of the courts had been improved by this change in the dominant branch to which the courts were the subservient estate is debatable. If it can be said that in a democracy the will of the majority is the will of the sovereign, then actually little change had occurred since the will of the majority of the members of the legislative body had merely been substituted for the will of the Crown.

The courts had gained in one respect, however. In effect, they now had the benefit of an act of settlement which made them secure in their tenure, at least for the terms for which they were appointed.

There seems to be little doubt, however, that the weaknesses in this system were soon apparent. Thus, Madison discussing the proposed Constitution in the "Federalist," No. 22, said:

"Complaints are everywhere heard from our most considerate and virtuous citizens, equally the friends of public and private faith, and of public and personal liberty * * * that the public good is disregarded in the conflicts of rival parties, and that measures are too often decided, not according to the rules of justice and the rights of the minor party, but by the superior force of an interested and overbearing majority. However anxiously we may wish that these complaints had no foundation, the evidence of known facts will not permit us to deny that they are in some degree true."

It thus becomes apparent that while July 4, 1776, was Independence Day for the country, it was far less than that for the courts. Perhaps it was an emancipation day that was needed. In any event, the substitution of the legislative branch for the executive as the "dominant estate" merely substituted one evil for another. With the passage of time, however, it did serve to demonstrate the absolute necessity that courts in a democracy such as ours must be independent equally of the executive and the legislative branches, if they are to perform their vital function.

The recognition of that necessity, as the product of sad experience, resulted in the independent judiciary created by our Constitution, as a third, equal, and coordinate branch of Government. To help preserve that independence, "good behavior" was established as the tenure of their offices, and an express provision was included in the Constitution that the judges of the United States "shall at stated times receive for their services a compensation which shall not be diminished during their continuance in office."

No thinking citizen of our democracy today would knowingly destroy the independence of our courts which has been gained through such travail. Whether or not he has ever had recourse to them he must realize that the law, and the courts which administer it, are his final hope for the vindication of his individual rights as a citizen. He may have the utmost confidence in the President and the executive branch of the Government. He may feel that the legislative branch should be paramount because it reflects the views and wishes of the majority of our citizens and is responsive to them through the elective process. Nonetheless, if he thinks, he realizes that it is to the judicial branch of the Government that he will turn in the final analysis for the protection of his rights, regardless of who may threaten them. He must realize also that the enforcement and protection of his rights provided by the courts is not going to be dependent upon whether he is in the majority or in the minority in the assertion of his rights. Whether the opposing party be the Govern-

ment of the United States, a tremendous corporation, or all of his neighbors he knows that his opponent or opponents must meet him on equal terms at the courthouse.

I wish that any citizen who entertains doubts as to the importance of the independence of the courts could see the legal system and courts of the U.S.S.R. in operation as a group of American Bar Association officials did last summer.

We were particularly interested in the system of justice of the U.S.S.R., the functioning of their courts, and in the status of lawyers in the Russian society. We found to our surprise that there are in Russia today some 16,000 lawyers who make their living in the private practice of law. Two thousand of them are located in Moscow, a city of 5 million people. These private practitioners are not working for the government, as is everyone else in Russia, but are still employed by their clients and dependent upon the fees paid by their clients for their livelihood. The system of peoples courts which exists, with appellate courts leading finally to the Supreme Court of the U.S.S.R., was a more complete judicial system than we had anticipated finding. The trials which we observed were conducted reasonably well, and the judges to whom we talked appeared to be conscientious in their desire to administer justice fairly.

While in Russia I purchased a copy of the Constitution of the U.S.S.R. Interestingly enough, it is for sale in all of the cities in Russia, not only in the Russian language, but in English and every other language that can be found in that country. A person reading that constitution, who had no knowledge of life in the U.S.S.R. today, might well conclude that the rights of Russian citizens are recognized and protected to a greater extent than anywhere else in the world. The Russian Constitution so provides. It spells out in detail the rights of their citizens and the protection to be afforded to them. It reads beautifully. Yet the world knows today that no one has fewer rights or less protection against the government of its country than the citizens of the U.S.S.R.

Why is this true? What makes the difference between a country where citizens' rights guaranteed by their constitution are protected and a country where citizens' rights guaranteed by their constitution are nonexistent? It is not just the existence of courts. Courts exist in Russia. Courts function in Russia. Lawyers represent clients in Russia. Cases are decided by courts in Russia. But in the U.S.S.R. the courts and judges are under the complete domination of the Communist Party, which means the Government of Russia, just as is every other facet of Russian life. The army is controlled by the political commissar assigned to its units. Industry is controlled by the plant representative of the Communist Party who sits at the elbow of the plant manager (both employees of the Government) and second-guesses him in the operation of the plant. Agriculture is controlled in the same manner. This same domination extends to every aspect of Russian life, and it is true of the courts as well. True, we did not find a political commissar assigned to the staff of the court, although I should not be surprised if some exist. We did find adequate proof that if the party, or the Government, is interested in a particular result in a certain case, the party chairman contacts the judge before whom the case is pending and instructs him as to what the outcome of the case shall be. When such an instruction is received, there is no question but that it will be followed by the court, just as the direction of the Communist Party is followed in everything that occurs in Russian life today. This is so-called "socialist legality." A citizen seeking to protect himself, his family, or his property in the courts of the U.S.S.R. receives only the protection which the Government, by sufferance, elects to grant him. In this respect, Russia today is where England was in the 15th century. Both are graphic illustrations of the necessity for complete independence of the courts.

The bar of the United States has a special responsibility for the maintenance of the independence of our courts. The bar more readily than the public, appreciates this necessity for independent courts if the Constitution and the Bill of Rights are to be more than exercises in rhetoric. When the independence of our courts is imperiled by public clamor resulting from decisions in controversial areas, this special responsibility of the bar assumes vital importance. I am glad to be able to say that its discharge of this responsibility has reflected credit upon the profession.

The two principal attacks which have been made upon the independence of the Supreme Court of the United States within our day, have resulted from decisions which are in areas of intense controversy. Any decision inevitably would have incurred the dissatisfaction of a large segment of our population. The first attack occurred in 1937 in the form of the Court packing plan. It came from the Executive and from the left. The second occurred in 1958 in the form of the Jenner bill and came from the legislative branch and from the right. In both instances, the legal profession of the United States led by the American Bar Association opposed the attacks upon the Court, and assisted in preserving its independence.

Because the decisions involved in both attacks were quite controversial, there was no unanimity of opinion within the legal profession—or even within the Court itself—as to the correctness of the decisions. It is to the credit of the bar that its position was not predicated upon agreement or disagreement with the decisions. Recognizing its overriding responsibility for the maintenance of the independence of the judiciary, the bar, through the American Bar Association, rallied to the defense of the Court, and was a major factor in the defeat of the measures which threatened its independence.

The attack of 1958, which would have deprived the Court of appellate jurisdiction in certain areas, pointed up the importance of insuring the continued independence of the Court by establishing its appellate jurisdiction in the Constitution of the United States. The house of delegates of the American Bar Association considered this question prior to the controversial decisions which resulted in introduction of the Jenner bill in the 85th Congress. After extensive debates on the subject, which included an appearance of retired Justice Owen Roberts before the house of delegates, the house, in 1950, adopted the following resolution:

"*Resolved*, That the American Bar Association approves the submission to the Congress of the United States of an amendment to article III, section 2 of the Constitution of the United States of America establishing in the Supreme Court of the United States appellate jurisdiction in all cases arising under the Constitution of the United States, both as to law and fact."

Several implementing resolutions proposing such an amendment have been introduced in Congress and supported by the association but have not been adopted. Senator JAVITS of New York and other Senators have introduced in the 86th Congress, Senate Joint Resolution 57, which would amend the Constitution to establish therein the Court's appellate jurisdiction. Hearings upon the proposed resolution have begun, and consideration of the resolution by the present session of the Congress seems likely. Its adoption by the Congress and ratification by the States would constitute effective action to insure the independence of courts. In urging such adoption the bar is acting once more in the highest tradition of the profession, and in support of the independence of the judiciary.

In each instance which I have mentioned, as in the case of almost all problems facing the legal profession, the questions presented affect both the bench and the bar. Their cooperation with each other in meeting these problems is dictated by their mutual interest and their common responsibility to the public for the functioning of our system of justice. In the final analysis, every threat to the independence of the courts is a threat to the existence of the courts, for only so long as their independence is retained can our legal system survive.

The celebration of the Fourth of July annually reminds us of the sources of our liberty, and invites our rededication to the principles enunciated by the Declaration of Independence. It should also remind the legal profession, bench and bar alike, of the vital importance of the independence of the courts of this country, as well as of our joint responsibility that this independence be exercised in such a manner as to merit the respect and confidence of our citizens, without which no judicial system can long endure.

Water Resource Development and National Security

EXTENSION OF REMARKS

OF

HON. SPESSARD L. HOLLAND

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 15, 1959

Mr. HOLLAND. Mr. President, the last major address by Brig. Gen. John L. Person, Assistant Chief of Engineers for Civil Works, prior to his retirement was delivered on May 14, 1959, before the 46th national convention of the Rivers and Harbors Congress in Washington, D.C. This address, entitled "Water Resource Development and National Security," is well worth reading by everyone who has an interest in our vast but endangered water resources, and in order that Senators may have an opportunity to read the address, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WATER RESOURCE DEVELOPMENT AND NATIONAL SECURITY

Mr. Chairman and members of the National Rivers and Harbors Congress, I feel greatly honored in having been asked to address this 46th national convention of the Rivers and Harbors Congress. Your consideration is especially important to me as this will probably be my last appearance before you as a representative of the Corps of Engineers.

I am quite aware of the important role which for 57 years this Congress has played in the development of the water resources of our country. I also recognize your interest in the specific works which have been authorized as Federal improvements. Since I know that you will consider these projects

in detail during your deliberations I feel that I can be of greatest assistance by speaking very frankly about the nature of our civil works program for water resources development, its value to our country, and its future.

My experience with water resource development is not as long as that of your organization, but I have had the good fortune to be involved in the planning and construction of civil works improvements for the major part of my 30 years service with the Army. The span of my service, therefore, has covered the period of the greatest expansion of Federal activity in this field, since by far the greatest progress on a nationwide basis has taken place since 1936 when the first general flood control legislation was enacted by Congress.

First I'm going to talk today for a little while about my pet hate—the term "pork barrel" which so many people, including some sincere and honest individuals, are so fond of applying to river and harbor and flood control projects. The term implies just what it is used to imply—that projects for water resource development are wasteful, boondoggling, political raids on the Treasury. This is simply not true, as I intend to demonstrate by citing a few facts.

The corps has been in the so-called pork barrel business since 1824, when Congress appropriated $75,000 for the removal of snags in the Ohio River. Since that time we have spent a total of about $11 billion in planning, constructing and operating river and harbor improvements. What have the American people bought with this $11 billion?

The list is a long one, and I will try not to bore you with too many details. But we have, on the navigation side, produced 22,600 miles of improved inland waterways, over 400 improved commercial harbors, and of course the Great Lakes navigation system. In 1957 the total waterborne commerce of the United States reached a record high of over 1.1 billion tons. The inland waterway commerce amounted to about 232 billion ton-miles, made up by 117 billion ton-miles in the Great Lakes and 115 billion ton-miles on the rest of the inland system. This latter segment has shown a remarkable rate of growth, from about 8 billion ton-miles in 1929 to 115 billion in 1957, an increase of over 1,300 percent in less than 30 years. The ratio of the annual benefits to the annual costs of our overall navigation system is estimated at about 3 to 1—in other words, we are getting $3 in benefits for every dollar we are spending. Of even greater importance—incalculable importance—is the effect of navigation on our national economy. For example, without our pork barrel program our great seaports could not handle our vast world trade, our steel industry would starve for lack of the ore that comes through the Soo locks, and the Ohio Valley would not have earned its nicknames of Atom Valley and the Ruhr of America without its adequate water supply and its free water transportation.

In 1950 President Truman appointed a Water Resources Policy Commission to study the entire field of water resource development. In its report of December 11, 1950, that Commission gave exhaustive consideration to navigation improvements, including their military and defense value, and quoted the following statement of the Office of Defense Transportation:

"If our waterways rendered no service beyond that of transporting petroleum and its products during the war they would have amply justified their improved existence."

In flood control, the first major activity of the Federal Government began in 1928 when Congress authorized the project for flood control in the alluvial valley of the Mississippi. Flood control on a nationwide basis had its beginning some 8 years later when, in 1936, Congress passed the first general flood control act. During the intervening period about 500 projects have been completed or placed in partial operation for flood control purposes. On the average this group of projects has been in operation for a period of less than 15 years, yet they have already prevented flood damages totaling about $9 billion, which is almost three times the Federal cost of flood control from those improvements.

This is a part of the story the public hears too little about. Maybe it is not as spectacular for a reporter to tell of the damage that is prevented, the many lives that are saved, and the human suffering that is avoided because projects operate effectively, as it is to tell of the ravages and havoc caused by major floods such as those that occurred in the Northeast and on the west coast in 1955, in the Southwest in 1957, and in the Ohio Basin this year.

The fact that such disasters still occur is not an indictment of the effectiveness of projects that are in operation. On the other hand, they emphasize the fact that we are not progressing fast enough with our flood control plans. The results obtained through operation of flood control projects have proven that most of the flood damage now experienced can be prevented by comprehensive river basin development of our water resources. Gentlemen, if that is "pork barrel," I say let us have more pork.

Navigation and flood control alone do not represent the total benefits realized from the civil works program. Significant additional values also accrue through conservation and the use of our water resources through multiple-purpose development. These include development of hydroelectric power, storage of water for industrial, municipal, and agricultural uses, and the numerous benefits which result from improvement of low river flows. In many cases the projects also provide large public recreational values and opportunities for the preservation and enhancement of fish and wildlife resources. To mention but a few figures showing the impact of these important collateral functions:

Hydroelectric power: 27 billion kilowatthours were generated at Corps of Engineers installations during fiscal year 1958, representing 20 percent of the hydroelectric power produced and 4.3 percent of the total production by all sources of the Nation's utility systems. This hydropower has been of vital importance to industry and development generally in many parts of our country. This is particularly true in the Pacific Northwest which is almost wholly dependent upon water power.

Water supply: The Corps of Engineers is providing about 1.2 million acre-feet of storage space in the interest of domestic and industrial water supply, and almost 4 million acre-feet is being operated either exclusively or jointly for irrigation and other uses. In addition, conservation and power Corps of Engineers have in many cases releases from reservoirs operated by the proved the quantity and quality of water available for downstream supplies. These releases in fiscal year 1958 amounted to about 33 million acre-feet (about 11 trillion gallons).

Public recreation: Land and water areas at Corps of Engineers projects provide abundant recreational opportunities to the general public for such activities as boating, swimming, camping, fishing, and hunting. In 1958 about 95 million visitor-days of recreational use was counted at Corps of Engineers reservoirs. The importance of this use can be seen when it is realized that it is in the same order of magnitude as the attendance at all of our national parks. This public recreational resource, nationwide in scope, has been provided at a Federal cost of only $10 million for basic access and public use facilities; while States and other non-Federal agencies have spent more than 10 times as much in developing the recreational potential.

I have tried in brief to give you some concept of what the civil works program has accomplished. The solid facts of the record speak for themselves. They are the main reason why I detest this term "pork-barrel" which is tossed around by critics who are uninformed or who willfully choose to ignore that record.

So much for what has been accomplished. Next, I would like to pay a sincere tribute to the committees of the Congress of the United States which over the years have developed and guided the legislation that is the legal basis of this great program.

All too often we hear the term "pork barrel" applied to river and harbor and flood control legislation. The fact is overlooked or ignored that over the past half century this legislation, in addition to authorizing specific projects, has provided most of the important authorities under which the Federal Government participates in water resources development. We still use the terminology river and harbor and flood control law, whereas I believe it would be much more accurate to characterize these acts as Federal water resources law.

I believe that this country owes a real debt of gratitude to the legislators who have developed this body of law in an evolutionary and practical way to meet the needs that have arisen.

Now I would like to say a few words about the Corps of Engineers—which it has been my privilege to serve for 30 years. We are as you know, a rather unique outfit as we have both military and civil functions. The latter are my concern here, as they are the administration of this program of water resource development.

A major reason why the term "pork barrel" irritates me is that I know how carefully the Corps of Engineers studies the plans which are presented to Congress for authorization. Before any of these are recommended by the Chief of Engineers they must meet severe tests of engineering feasibility and economic justification. They must also run the gantlet of reviews within our own service, by other Federal agencies, and the Bureau of the Budget, and by the affected States. I do not believe that any other plans and projects—Federal or non-Federal—are subjected to such exhaustive study and scrutiny.

Moreover, the Corps of Engineers has played a leading role in the development of Federal procedures for the planning and evaluation of water resources projects. In particular we have supported and fostered the concept of multiple purpose planning. As our country has grown and developed during the past half century it has become apparent that our rivers must be developed to serve as fully as possible all needs of the present and foreseeable future. This has been one of the most significant changes in the field of water resource development—the shift in emphasis from single-purpose to multiple-purpose planning.

We welcome healthy and constructive criticism. I know that any agency which handles a large public works program and which deals with a controversial resource like water must expect criticism. But I do strongly object to attacks which mislead the public as to the value of a large Federal program and reflect upon the ability and integrity of the Corps of Engineers. On this latter point I can refer you to the findings of the second Hoover Commission (an agency certainly not biased in favor of the corps and not benefiting from "pork") which stated:

"The Corps of Engineers has an enviable record for safe and adequate engineering

design, that it has demonstrated its ability to carry out very large engineering projects, and that it has been signally free of any taint of fraud or dishonesty in the administration of the vast construction program with which it has been entrusted. And this applies to 131 years during which it has had those great responsibilities.

"The Commission wishes no sentence in the report to be construed as a reflection upon the Corps."

Now let's look for a minute at the Russian version of pork barrel activities. Theirs is not a pork barrel, it's a caviar jar. We have invested a total of $11 billion over a period of 135 years. Just one of their bond issues, about 6 years ago, was for $7 billion for increasing their water resource development program. Let us consider briefly what they have accomplished in this program. Comprehensive development on the Volga, which has pushed forward largely since World War II, already has provided the 3,000-mile main stem of an integrated inland waterway system extending from the Black and the Caspian Seas, now interconnected by a canal, on the south, to the Baltic and the Arctic White Sea on the north. East to west it stretches from the foothills of the Urals far across the European Russian plains. Construction is well advanced, and vessels of 11.5-foot draft regularly travel the approximately 1,000 miles between Moscow and the Black and Caspian Seas. Each of the 17 dams has or will have good-sized navigation locks which we estimate to be possibly as large as 100 by 1,000 feet with minimum depth of 18 feet over the sills.

Impressive hydroelectric plants are being built at the Russian dams. The largest on the Volga, at Stalingrad, scheduled for operation next year, will have 2.3 million kilowatts capacity, about 18 percent greater than that of our largest hydro plant, Grand Coulee. Project development is underway or planned in other river basins, including three mammoth hydroelectric plants in Siberia with capacities in the order of 3 million to 5 million kilowatts each.

If development of water resources is a wasteful, pork barrel or caviar jar program, why are our Russian friends proceeding with this program at a rate far ahead of ours?

In 1939, Sir Winston Churchill said that "Soviet policy is a riddle wrapped in a mystery inside an enigma, but perhaps there is a key. That key is Russian national interest." I am sure that you have seen popular magazine articles, and comments in the press, which join the chorus of many who combine the term "pork barrel" with "logrolling" and "political backscratching." Gentlemen, Mr. Khrushchev does not need to roll any logs. Mr. Khrushchev does not need to scratch any political backs. And Mr. Khrushchev has repeatedly said that Russia does not need to defeat us in a war—she will defeat us on the economic front.

I don't mean that Russia would not defeat us in a war if we dropped our guard, and I certainly don't mean to belittle the vital urgency of maintaining and improving our armed strength. But I do not believe that we can afford to neglect our economic strength and our economic growth. Certainly, in these days of tremendous demands on the Federal Treasury we must look ever more critically at the economics of all projects, and must concentrate on those which are most urgently needed. Certainly we must continue to encourage the increasing assumption of responsibility by local and State governments. But if we neglect the development of our water resources we jeopardize the development of our national economy. This we cannot afford if we mean to maintain our position of strength, on which rests the future of the free world.

In closing, I should like to express my very real appreciation of the friendly relations I have had in the past with the membership of this Congress, and my belief that organizations such as yours can and will exert a powerful and beneficial influence on the course of water resource development over the years to come.

Last Speech by a Great Lady

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Wednesday, July 15, 1959

Mr. CHURCH. Mr. President, I would like to take this opportunity to pay tribute to the late Mrs. Ruth Moon, the State treasurer of Idaho, who for many years was an outstanding public figure in the State—and, indeed, one of the remarkable women of our country.

Ruth Moon was reelected last November to her third term, with the most decisive majority in her long and brilliant political career. At one time she was the only Democratic office holder in an all-Republican State government.

Although defeated, she first ran for this particular office in 1938. Born in Colorado, she moved to Idaho as a small child, and lived in many towns throughout the State—a background that became invaluable as she campaigned for public office.

Ruth Moon was generous of herself and her great talents, both to her friends—and I considered myself fortunate in being one—and to her constituents. Idaho appreciated her as that political rarity, a gifted woman in politics who asked no quarter from her counterparts of the opposite sex, and spoke out on important issues with a courage and honesty that even her most rigorous political foes could not belittle or impugn.

At McCall, Idaho, only a few hours before her death last month, Mrs. Moon addressed the Ladies Auxiliary of the Idaho Municipal League. The address was printed in the Idaho Democrat for July. It was an informal, friendly discussion of her political experiences and what it means to be a woman in politics.

Because I consider it a true memorial to this great and wonderful lady, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

[From the Idaho Democrat, July 1959]

LAST SPEECH BY A GREAT LADY

It is indeed an honor to be asked to talk with the Ladies Auxiliary of the Idaho Municipal League, but when Mr. Smith wrote me, the subject he assigned was, to say the least, an ambitious one. To quote him, "I was to tell you of some of my experiences and your ability and responsibility in taking an active interest in local and State government." * * * Now I am sure he didn't mean that exactly as it sounds. * * *

I have lived up to now a long and hectic life and some of my experiences * * * well, I simply will plead the fifth amendment, I refuse to let down my hair to that extent * * * however, if he meant for me to tell you how I got into politics and government, that is quite a different story, and I will be glad to hand out the lurid details, for I agree with Mr. Smith, that all of you women should be actively interested in local and State government, and going a step further, in politics in its broadest sense.

So * * * starting with how I got this way, I have to look a long way back * * * isn't it fortunate I am farsighted so I can manage that * * * back to the time when I was finishing high school and getting ready to start out on my own. You see, in those prehistoric days, women were not so active in governmental affairs, nor for that matter, in business generally, as they are today. For instance, my mother insisted that there was no work suitable for a lady to engage in except teaching.

Since I had to make a living, teaching was what I had to do, whether I wanted to or not. I was a young woman from a refined home, my mother had taught school, my sisters had taught school and therefore I taught school. Naturally I attended a normal school and prepared myself first. * * * I even hold a life certificate—at least that's what it says. I can teach forever if I just keep on breathing, but my heart wasn't in schoolteaching Oh, I got by all right, and I have always hoped that I gave those poor children something worth while.

Now it is my theory that when all you look forward to is Friday and payday, there is something wrong about the job you are doing. But I was still a lady and there wasn't a thing I could do about it until fate stepped in and took a hand. I was teaching up in north Idaho, a one-room rural deal not far from St. Maries * * * a beautiful place to be, all pine trees and gorgeous scenery.

At that time politics and Government to me were things you read about; you knew they existed but they didn't come close to your daily living. Well, I was hearing a class in reading * * * Jane, see Jane * * * see Jane run * * * you know the line, when suddenly Jane's activities were interrupted by a knock at the door. It was the mail carrier and my landlord who breathlessly announced "You have got to go down to St. Maries, you've just been appointed the county superintendent of schools for the new county.

Now I hate to tell you this, but up to then I didn't know a new county was expected * * * and knowing as I do now how such things are done now, I can't imagine how it happened that I was handed a job I didn't know even existed. * * * But I went to St. Maries after school was out Friday * * * end of week, end of school teaching * * * yes, it was true, I was it.

So I took the oath of office, got somebody to take over my school and I plunged right in as the first county school superintendent of Benewah County and I loved it. Not just being an executive, that was nice of course, but the office work, which I had to do myself, it was heaven, especially the bookkeeping. Then politics became real, too, and Government was the most interesting thing in the whole world.

I read everything I could find on taxes, budgets, government, the works, and I studied office procedure and bookkeeping, never did get typing mastered, but I'm about the fastest hunt-and-peck artist you ever saw. It was all so fascinating. No longer were the days just something to get through and each morning was the beginning of a new adventure and people became

the most interesting of all—I loved working with them.

Then fate again took a hand. I married a public accountant who specialized in audits of cities, counties, school districts—all types of taxing units. Naturally this work took him all over the State and I tagged along working for the pure fun of it, I didn't know I was even on the payroll at first and my first paycheck almost floored me. I was being paid for having fun, wasn't that something?

My husband became recognized as an expert on the legal phases of government and governmental procedure. Together we worked all over Idaho, getting to know and understand people, helping them with their tax problems and pioneering in making the accounting systems more or less uniform throughout the State. Then after the sudden death of my husband, I continued auditing, getting so I could take a county or city to pieces and put it together again so it ticked.

Also, shortly after my husband's death, came my plunge into real honest-to-goodness politics. I was tossed into the primary race for State treasurer by a very able Governor who was trying to do something or other, and of course I lost out to a most efficient incumbent officer. Now wouldn't you think that would finish me on politics? Well, it didn't. I ran again and this time was lucky enough to be elected and served as your State treasurer in 1945 and 1946, the last 2-year term, now it is 4, you know.

That was a most worthwhile experience, and when I lost out in the 1946 elections, I didn't give up, I had things started I felt imoprtant to State government, and wanted a chance to finish them, so I ran again, and again I lost out * * * my party was in sort of an eclipse, shall we say * * * anyhow, my head was bloody but unbowed. I ran once more and this time I made it, only by a 351-vote majority, but I was in * * * and the 56,000 majority I received last fall leads me to hope that I've been doing my work to the satisfaction of most of the people of Idaho.

I could go on and on telling you experiences, but I won't, I couldn't be that mean to you * * * however, at the risk of boring you I do want to get to the second part of my subject—women in politics and government.

Before I go any further, let me assure you I am not making a political or campaign talk * * * but since government and politics are closely related, I must deal with both, if I want to help you realize the part you can play in governmental affairs.

There was a time, and you don't have to be done up in lavender and old lace to remember it, when women used to say, "I don't know anything about politics or business. I leave all that to my husband."

I am happy to say that this attitude pretty much went out of style with the bustle and beaded lampshade. Like most other pursuits today, politics is definitely coeducational * * * and is becoming more so all the time. American women are well equipped to face this new political age, for life has taught them not to give up. You see, politics is not a game like golf or bridge and you cannot turn it on or off like television. You cannot take it or leave it.

Politics, as Mr. Webster put it, is the business of government—and the quality, ability, perception and integrity of its management affect every facet of our life. Take a minute to think this through.

Let us look at a typical day, you "gals." Of course, my days are on a somewhat different schedule. You mothers drive your children to school in the morning. That trip is safe only if the traffic laws are conscientiously enforced by your city government.

The school you take your youngsters to may be a good structure or it may be a firetrap long ago condemned but never replaced * * * thanks to a chain of indifference or inability to cope that starts with the White House in Washington and reaches down to your own school district. The education available to the schoolroom is going to affect your children, for better or worse, all their lives. And whether there are enough teachers, whether these teachers are qualified, whether your courses of study are adequate, depends on politics and politicians.

Moving on in that typical day * * * you do your marketing on the way home from taking the "kids" to school. You have been told that inflation has been or is being controlled. The administration puts out what it calls a "cost of living" index. That probably doesn't mean a thing to you but there is something that every woman does know about the cost of living and that is, the amount you have to pay for things like bread and milk keeps going up and up, and the increase in your income, if there is one, still doesn't keep up with the prices marked on the shelves.

Now we are taking the groceries home. Once there and unpacking the grocery bags, no need to stop and think whether the cans of food are pure and contain exactly what the labels say they do. You don't have to worry because you know that the Government's Food and Drug Administration sees to it that this is so.

Yet not too long ago, in Washington, as an economy measure it was proposed to cut funds for that agency to a point where a citizens' committee reported that it didn't have staff enough to inspect our food processing plants more than once in 60 years. Fortunately, the Democratic Congress woke up people and they appropriated more rather than less for this vital service. * * *

These are only samples of the many, many ways that politics is woven into the fabric of our lives. But they are enough, for this occasion, to prove to you that politics is your own personal business.

Women in politics are nothing new in Idaho history. We have Gracie Pfost, the first woman to go to Congress from Idaho, and we've had Myrtle Enking, first woman to become State treasurer, and now since 1933, over a quarter of a century, we have kept women in that position. We have had women, many of them, at county and State levels for years, and there are also the mothers of the PTA who are working for better schools, the League of Women Voters striving to bring government and its problems closer home and give women an understanding of their part in this great Government of ours.

The women in our State legislature have been most effective too, and here is a place where mothers of grown children could be most helpful in getting legislation that would meet the current needs. Men are very like children and it wouldn't be a new thing for a mother to see through the shenanigans of some of the legislative procedure * * * a well informed woman would be a tremendous power and influence in getting the right things done at the right time.

But you needn't run for office to make yourselves felt in government. As I said before, you can help through your PTA, your League of Women Voters, your political party organization, or even by becoming more aware of the issues and problems of State and local government so that you can make your vote effective. Women are people, not rubber stamps of their husbands or of each other.

The average woman today is in business whether she is one of the 21 million who hold down jobs or not. She knows what the interest on the mortgage is, how much the payments on the car are, what the doctor bill for Johnnie's broken leg was, and whether or not the family has enough to enable them to snatch a little vacation somewhere. She reads with horror the fate of the little girl selling Girl Scout cookies in Spokane and is therefore competent to help make things right in her community.

She can help clean up the news stands * * * ridding them of the reading material detrimental to our young people * * * there is so much that can be done to make this a better place to live in. How to go about it? You can find books, magazine articles, any amount of information on what is going on in the world and what is bothering your lawmakers and elective officials. You can help by keeping these people informed of your ideas and wishes on vital questions. I know, that I for one, am always grateful for letters of the folks all over the State.

Those of us in our offices are sometimes out of touch with you all by the very fact that we are sitting under the capitol domes and quite often we hear only that which people think we want to hear, so write your Congressman, write your State officials, write your legislators, and if you wish, write your editor.

There is only one thing, however; get your facts before you yell about something * * * it is important that you know what you are talking about, so read, listen, and, above all, think for yourselves. You see, the first step in solving any problem is to get the facts, organize and analyze them, and then use one's experience and judgment to work out as intelligent an answer as possible.

Perhaps the thing that is worrying you is the matter of taxes. Well, what about taxes? There are two things to remember: First, all taxes are paid by the people, and, second, all governmental expenditures are ultimately met by taxes. The subject of taxation is so broad, so complicated, and so technical that the average person has little idea of the impact of the various methods of raising money through taxation. * * * There is no quick and easy solution to the tax problem other than the old story * * * that anything you ask for has to be paid for, so the simple thing to do would be to cut your pattern to fit your cloth. However, that isn't the way things are done, although that is what you do at home. I know I do. If I can't pay for a thing, desirable as it might be to have it, I go without it. * * *

In government, the thinking is different, but how far one should go along that way of planning is up to you people to decide, and you should make your wishes known. Read and study all you can about proposed tax plans and see if you really want some of the items proposed.

There are so many things confronting us, we need more and better roads, we need more and better schools, we have had a bad situation in some parts of our State as a result of unemployment. Women can help by getting into the game, either as a participant in government through holding office, or indirectly by talking things over with your husbands, and others interested in good government; for an informed citizen is the first step toward good government.

So, summing all this up, I repeat, women everywhere are accepting new responsibilities, meeting new challenges. I am sure politics would be a far sorrier affair if it were not for women who work for good government at the grassroots with no thought of personal or political gain. There are many such women now, for I know women who, either through their political party or service club affiliations, are stirring apathetic communities to action on improvements of school boards, bond issues for civic improvement, or much needed reforms.

These women are motivated by a sense of idealism, and they are endowed with a

special sense of patience, perseverance and courage which enables them to overcome almost any obstacle. For women are uniquely qualified to fuse their idealism into the serious business of government. For that reason, I am glad that Mr. Smith asked me to give you all a pep talk on this subject and I hope you'll all jump in, the water's fine.

Beauty and Grandeur of the U.S. National Forests

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, July 15, 1959

Mr. NEUBERGER. Mr. President, the July 20 issue of Time magazine pays deserved tribute to the beauties of our U.S. national forests and to the dedicated men and women of the career ranks of the Forest Service who supervise and operate them. They are outstanding Government employees.

These magnificent reserves of timber, mountains, lakes, rivers, uplands, shoreline and meadow owe their protection to the foresight of two great Americans—President Theodore Roosevelt and his forester, Glifford Pinchot. They dedicated the national forests to the enduring maxim of "the greatest good of the greatest number in the long run."

I wish it were possible to reproduce in the pages of the CONGRESSIONAL RECORD the series of magnificent colored photographs with which Time magazine has heralded the scenic workers and rich fecundity of the national forests. In the absence of such a possibility, I ask unanimous consent to have printed in the Appendix of the RECORD the accompanying article, entitled, "U.S. National Forests," from Time magazine of July 20, 1959.

These forests contain some of the grandest scenry in the Western States, including lordly mountains such as Mount Hood and Mount Jefferson in Oregon, Mount St. Helens and Mount Adams in Washington State and many other great peaks. The National forests also encompass majestic areas like the Lochsa Fork of the Clearwater River in Idaho, where Lewis and Clark at last accomplished the first crossing of the Rocky Mountain region.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Time magazine, July 20, 1959]

THE U.S. NATIONAL FORESTS: THE GREATEST GOOD OF THE GREATEST NUMBER IN THE LONG RUN

In the cool green depths of upper Michigan's 800,000-acre Hiawatha National Forest, amid the fragrance of sweet fern and venerable hemlock, U.S. Forest Ranger Edwin Youngblood, 38, eased his pickup truck along a sand-soft logging road one day last week. He sang out a warning to a gang of pulp cutters to take only the jack pine that rangers had paint-striped for cutting, told them to heave dead branches 50 feet back from the roadway, out of cigarette-throw range.

In the quiet blue haze of North Carolina's high Pisgah National Forest, Ranger Ted Seely, 51, brier pipe in mouth, tramped through tree-darkened groves where waterfalls trickled down slopes and an occasional deer or groundhog darted into a clearing. His top worry of the day was checking the waters of the Pigeon, Hominy, Davidson, and other rivers to be sure that they were flowing silt free; miles below three North Carolina communities and some of the State's biggest paper, cellophane, rayon, and nylon plants were depending on a steady 100 million gallons daily.

In New Mexico's rugged Taos County, Ranger George E. Engstrom, 47, prowled through one of Carson National Forest's 22 picnic and campgrounds. The campsite was spotless. One reason was that Ranger Engstrom has a reputation for taking litterbugs to court.

In Colorado's jagged San Juan Mountains, Ranger Steve Yurich, 34, flew off in a Cessna for a quick fire-spotting swing around his Piedra district, switched to a pickup truck to check the campsites and flag down a logging truck, then saddled up his horse, "Buck," to inspect the grassy uplands where ranchers will graze 2,800 head of cattle and 7,000 sheep this summer under permit from the Forest Service.

Across the United States last week, thousands of green-uniformed forest rangers and staffers (12,000 permanent, 10,000 temporary) were patrolling and supervising the 181 million acres of national forests that add up to one of the U.S. taxpayers greatest assets. The 148 national forests, ranging in size and style from Alaska's 16-million-acre Tongass to California's 367-acre Calaveras Big Trees National Forest (sequoias), stretch across 39 States, occupy a massive one-twelfth of the continental U.S. land space, one-fifth of the land area of the Western States. Last year they drew 68.5 million campers and tourists, but few tourists realized that the amiable, green-clad rangers probably also had responsibility for controlled lumbering, watershed protection, grazing, wildlife control, mining, fighting forest fires (firefighting mascot: Smokey the Bear), and possibly dealing with friendly Indians.

The national forests, administered by Agriculture Secretary Ezra Taft Benson, are also one of the few Government operations to turn a profit. In fiscal 1960 the Forest Service will spend $116,575,800 on its forests—including $38 million for roads and trails—but the forests will take in $129 million from timber sales, grazing fees, and other items ranging down to rentals of 18,000 private summer homes on national forest land. The national forests land, timber, and forage alone are appraised at $7 billion.

The U.S. national forests grew, along with the Interior Department's national parks, out of the U.S. late 19th century realization that its clear-the-wilderness drive was depleting the Nation's basic resources. The National Park Service (now running 23 million acres) was set up in 1916 to conserve recreation grounds and scenic splendors. The national forests were intended for controlled development and use.

Conservation got rolling in 1891 under President Benjamin Harrison, who got broad powers from Congress to close off forest reserves from exploitation by timber barons, set up the first reserve in Wyoming (now Shoshone National Forest in the soaring Absaroka and Wind River Mountains); in all, set aside 13 million acres under the Interior Department. Theodore Roosevelt gave conservation an evangelist's fire: "Conservation is a great moral issue, for it involves the patriotic duty of insuring the safety and continuance of the Nation." Roosevelt, in 1905, transferred the forest reserves to the Agriculture Department, created the Forest Service under his brilliant conservationist friend, Gifford Pinchot of Pennsylvania. Controlled cutting and sale of timber, and systematic reforestation of the national forests were authorized. Roosevelt's Agriculture Secretary James Wilson gave the U.S. Forest Rangers the enduring directive to run the forests for "the greatest good of the greatest number in the long run."

The greatest fear of U.S. fervent conservationists is that too much multiple use of the national forests might threaten the natural splendors. On the urgings of conservationists, the Forest Service, by administrative order, has set aside 82 Wilderness, Primitive, Roadless and Wild Areas, where roads and resorts are prohibited and a man can come and go only on horseback, on foot or by boat. Now Illinois' Senator PAUL DOUGLAS, Oregon's DICK NEUBERGER and Minnesota's HUBERT HUMPHREY are trying to get these wilderness areas made by law into a new and inviolable National Wilderness Preservation System. Says Chief Forester (since 1952) Richard E. McArdle, a rugged (6 feet 1 inch, 206 pounds) Forest Service pro since 1924: "I am taking no sides. This country needs to maintain and preserve some of primitive America, and this we intend to do. Ninety-nine percent of the people who hunt, fish, camp, picnic, or just ride around enjoying the scenery in the national forests don't use our wilderness areas. Many of them don't have the time or money to get there. There is a steadily growing demand to make more recreational areas accessible to motor transportation."

Thus, in a direct way that pioneer conservationists would have wondered at—and some might have shuddered at—millions of Americans in whose name the forests were saved from the timber barons are now pouring into the national forests. The millions of U.S. citizens today want not only to coown and coprofit from the forests, but to harvest the personal dividends of their heritage by browsing through the ferns of upper Michigan or drowsing to the trickle of waterfalls in North Carolina or pitching the tent far from crowded camp sits and far, far from the urban world.

Letter by Representative Albert on the Farm Bill Veto

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 15, 1959

Mr. ENGLE. Mr. President, the Letters to the Times columns of the July 10 New York Times included a letter by the Honorable CARL ALBERT, of Oklahoma, in response to a Times editorial of June 27 on the President's veto of the wheat bill.

This is one of the clearest and most concise comments I have seen on the present farm situation and on the farm bill which the Congress recently passed and the President vetoed. Representative ALBERT is an outstanding Member of the House of Representatives, the Democratic whip, a member of the House Committee on Agriculture, and a leading spokesman for a sensible and progressive farm program.

I ask unanimous consent that his statement be printed in the RECORD, for the information of my colleagues.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the New York Times, July 10, 1959]

LETTERS TO THE TIMES—WHEAT LEGISLATION UPHELD—VETOED BILL SAID TO REDUCE COSTS, REVERSE SURPLUS BUILDUP

To the EDITOR OF THE NEW YORK TIMES:

Bernard Baruch once said, "Every man has a right to his opinion but no man has a right to be wrong in his facts." That sums up my reaction to your June 27 editorial on the President's veto of the wheat bill.

Leaders of wheat legislation accepted compromise after compromise in an effort to get acceptable legislation that would reverse the recent buildup in Government surpluses in wheat, reduce the Government's skyrocketing costs for the program, and prevent a sharp decline in wheat producers' income.

The bill passed by Congress would have achieved these objectives. If allowed to become law, wheat program costs would have been reduced an estimated $260 million a year. Present surpluses would have been drawn down at the rate of 100 million bushels or more a year. These are not my conclusions, but are opinions expressed by competent, impartial, agricultural economists.

CORRECTING EXCESSES

Let no one blame Congress further for the excessive Government cost and excessive stocks of wheat. Congress passed legislation which, if signed by the President, would have corrected these excesses. And Congress would have passed wheat legislation even more satisfactory to the administration if the Secretary of Agriculture had not been more interested in abolishing farm price support programs than in correcting their weaknesses.

I respectfully urge you to consider that we have today the Benson program—not the farm program which was in effect prior to 1953.

At the beginning of 1953 we had a farm program under which for 11 consecutive years farm prices generally had averaged 100 percent of parity or higher. The Commodity Credit Corporation price support program for 20 years had cost only $1.064 billion and this included subsidies during the war years. Programs for the 90 percent of parity supported basic crops actually showed a 20-year profit to the Government of $13 million.

In contrast, during the last 6 years net farm income has been almost $20 billion less than in the previous 6 years. CCC losses on price supports in these 6 years have been five times the total of the previous 20 years. CCC commodities in inventory and on loan have increased from $2,452 billion on January 1, 1953, to $8,716 billion on January 1, 1959. Expenditures of the Department of Agriculture have skyrocketed from $1.8 billion in 1952 to around $7 billion for fiscal 1959.

PER CAPITA INCOME

People on farms now have per capita incomes of only one-half the incomes of nonfarm people. Farm workers receive hourly one-third the average wage of factory workers. Average farm prices in 1958 were down 13 percent from 1952. In contrast, the hourly earnings of industrial workers in 1958 were up 28 percent from 1952 and corporation dividend payments in 1958 were up 37 percent since 1952.

Your editorial is eminently right in condemning the farm program as now being operated. No one can defend it.

But we must have a farm program. We cannot tell the farmer to find his solutions only in the raw competition of the market places, usually in auction markets, while other areas of our economy rely upon Government protections, or upon concentrations of economic power, to assure reasonable levels of wages or profits.

The Government has given labor the minimum wage and the collective bargaining law. It has given industry the corporate structure, the tariff and the many statutes that soften the perils of unregulated, unrestrained competitive enterprise. How, then, can the modern, highly mechanized farmer survive, ever selling in a free market and buying in a protected market?

We must have a farm program, and it must be fair to consumers as well as to farmers. The Times would merit the gratitude of consumers and taxpayers, as well as farmers, if it would encourage sound policies.

CARL ALBERT,
Member of Congress, Third District, Oklahoma.
WASHINGTON, *July 2, 1959.*

Reserve Unit Participation in CAMG Training Objectives and Means

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, July 15, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an extremely able address delivered by Col. Charles H. Kraus, USAR, before the 12th Annual Conference of the Military Government Association, in Washington, D.C., on June 13, 1959.

Colonel Kraus, who is commanding officer of the 352d CAMG, Area Headquarters A, has prepared an excellent analysis of the vital role to be played by civil affairs units in the event of total war.

The observations of Colonel Kraus as to the economic and political aspects of waging war merit the careful attention of the general public, as well as Members of Congress.

There being no objection, the addresss was ordered to be printed in the RECORD, as follows:

RESERVE UNIT PARTICIPATION IN CAMG TRAINING OBJECTIVES AND MEANS

(Address by Charles H. Kraus, colonel, USAR, delivered at the 12th Annual Conference of the Military Government Association, Washington, D.C., June 13, 1959)

The objective of unit training, whether it is a Regular or a Reserve unit, is the same. That objective is to make the unit ready to do its job wherever it is and whenever it comes.

It used to be that the Reserve unit could go slower in its training than the Regular unit. But the facts of today's world show clearly that the traditional period to get ready after M-Day, if it has not disappeared altogether at least has been drastically curtailed. Reserve training, therefore, like Regular training in today's tension-filled and atomic world must be directed to the objective not only of being ready, but, also, of being ready now.

This means that time is at a greater premium than ever before. Those of us who have military careers as an avocation have to cover virtually the same ground as the regulars to whom the military career is a full time matter.

One of the first jobs of the Reserve unit commander is to make sure that the members of his unit have this avocation of military service and are dedicated to it. The day of the reservist who attends training sessions with everything but his head is over.

I suspect that most members of Reserve units will agree that the day is also over when an adequate job can be done merely by working hard during the regular training meetings.

The atomic age, however, has done much more than to contract the time in which the training mission may be accomplished. It also has had major effects on the kind of training we must undergo. We may not agree with the famous British military writer, General Fuller, who has said that the atomic weapon has made the old rules of war obsolete, but at least we will have to concede that the training which was adequate to make us ready for World War II or the Korean action will not be adequate for the war of tomorrow.

If we know what the job is that we must be ready to do, what we need to learn in order to do it should be apparent.

The Minister of Defense of Great Britain, Duncan Sandys, speaking of disarmament said: "We must aim at nothing less than total peace. For only in that way shall we ultimately remove the danger of total war."

As yet, the goal of peace, total or otherwise, is a long way off and the danger of total war remains ever present. Obviously, therefore, the job we must be ready to do is to perform our missions, CAMG or otherwise, in the conditions of total war.

Larger and larger military forces and the increased fire power of conventional weapons, so enlarged the battlefield and expanded the war demands upon the civilian economy that war in the first half of our century became a conflict between nations rather than sovereigns or armies.

But the total war of the second half of the 20th Century has two new aspects, each of which radically changes the situation.

One is the atomic weapon. On the tactical side it has resulted in the drastic revisions of tactics involved in the pentomic concept. Clearly it requires equally drastic changes in civil affairs operations.

The other new aspect is the introduction of the ideological issue. The effect of this issue on the civil affairs task is, I believe, obvious. But it cannot be overlooked that it can be as important as atomic and CBR weapons in adding new problems on the tactical side.

The introduction of these issues broadens the hostilities to include a struggle over the very fundamentals of life. We see the basic nature of this struggle if we visualize a war between us and a Marxist enemy. The American idea, as the Declaration of Independence told us long ago, is that man is a creature of God, to whom man owes both reverence and adoration, and that as a creature of God man is endowed with dignity and rights, among them the right to be free. With the right to be free there is also the right to private property, the latter being both a natural and necessary support of individual freedom. These are things which in our view governments do not give. Further, they are things which governments cannot take away.

Each of these three fundamentals the Marxist rejects. He is atheistic, as indeed he must be with his claim of all power in the state. Dignity, freedom, and the other rights, under Marxism come only from the state, and, as we know, usually do not come at all, with the result that the Marxist man is not free. Because under Marxism,

it is not intended that man be free, naturally enough, the right to private property which supports individual freedom, is denied.

Marxism, moreover, claims that it is a universal and exclusive doctrine which explains history and provides the technique of historical changes. It is therefore inherently aggressive and considers itself to be the ultimate and sole survivor in a struggle for world control which it insists must come.

Because it denies morality and rests solely on force, such matters as honor, honesty, regard for the rules, including the rule of law, have no place unless it is advantageous. All and any means may be used to gain the end.

Vicious and erroneous as Marxism is, we must nevertheless accept the fact that it has skilled, dedicated, and effective leadership and devoted followers. We must also accept the fact that it creates an illusion which appeals to altogether too many of the men on the street over the world.

In war with such an enemy his obvious objective would be to establish the Marxist all-powerful state in any area he conquers with the inevitable enslavement of the people. Necessarily, therefore, his objective is to destroy freedom and our types of limited government. If our own objective is less than the destruction of the enemy government, it will mean that we will be content to stop his immediate aggression, but that we will permit him to fall back and reorganize for another try, which we know will come because of his policy of aggression.

In such a war actually the ultimate issue is over a way of life—the alternatives are freedom or slavery. It seems that our objectives in such a war must involve the destruction of the enemy government rather than to impose our will on a government which will continue to exist.

In our civil affairs training we must prepare ourselves to do the civil affairs job in such a war. It is the maximum situation. There may be limited wars in which only conventional weapons are used and there may be a variety of brush fires. If, however, we are prepared for total war we will be ready for such lesser jobs.

If we visualize a total war situation involving the ideological issue and the employment of atomic and CBR weapons in a densely populated, heavily industrial region, we perhaps can most graphically illustrate the problems we must meet.

1. The battlefield is no longer on a front a few miles in depth. The front may extend backwards 200 miles or more.

2. If this expanded battlefield is in a densely populated area the battlefield spectators will outnumber the troops from 30 to 1 upward.

3. The normal desire of the civilian to get away from the fighting will cause civilians to move. But the battlefield areas are all over so we must expect refugees in the hundreds of thousands, and even millions.

4. Mass numbers of people in movement immediately cause problems of order and of shelter and feeding. Even if native supplies are adequate the inevitable dislocations will create immediate and drastic local shortages.

5. Atomic strikes, particularly in urban areas, will create enormous problems of sanitation and medical care, as well as of food and shelter.

6. Radiation may increase substantially the casualty problem and in addition may seriously affect food and water supplies and the use of evacuation routes.

These are the battlefield conditions. If this battlefield is on the land of an ally we will, of course, call on the allied government for all the help it can give. But we must expect that its resources will be overtaxed and that it will require assistance. We must also expect that while it will be cooperative it will insist on the maintenance of its sovereignty and status. Perhaps more so because of its peril. Persuasion, rather than command, will be our means of working with it.

If the battlefield is on the territory of the enemy, whether or not we can use the governmental machinery or personnel depends upon whether or not our needs are so critical that we must take the chance of using officials of governments which are dedicated to our destruction.

The full picture also requires consideration of what the enemy will try to do and his means of doing it.

We must first assume that he will have a complete disregard for human life and suffering. We can not expect him to do more for other people than he does for his own. Thus if the sacrifice of people will achieve his aim, we must expect it just as we would expect the enemy to use any other material if it is advantageous to him.

If his attack is on our own or allied territory, we must expect him to make every effort to disrupt governmental operations and to impair the confidence of the people in the government. If the government is an enemy government, on the other hand, we must expect that it will be used in every way to impede our efforts.

Finally, we must expect that the enemy will make every effort to disrupt economic activity, not only to deny our forces the support of local resources, but also to throw upon our commander the burden of providing for the native people.

Infiltration, subversion, sabotage, terrorism, and propaganda, are among the means that the enemy will employ.

The net result is that our commander in modern total war besides being faced with all the new tactical problems, is also confronted with political and economic battles taking place on the same battlefield.

Unfortunately the evidence is strong that if he loses any one of these battles he may therefore lose the other two.

Certainly a major reason for the German defeat in Russia was the political decision of the Nazis to treat the Russian people as subhuman. This brought on the guerrilla and supply line problems which the Germans actually never were able to overcome. (Cf. Dallin, "German Occupation of Russia.")

If the enemy succeeds in totally disrupting the economy in the situation I have described, it could mean that our commander would be confronted with feeding and caring for millions of civilians in order to prevent disease and unrest. It is not necessary to describe the effect of such a burden upon combat operations.

I believe we must conclude that in the total war of the future, the commanding general's civil affairs responsibility has been greatly increased because of the changes in tactical operations resulting from the new weapons, and also that he has acquired great new civil affairs burdens because of the political and economic phases of modern total war.

It is our job as civil affairs people to advise and assist our commander in the discharge of this responsibility. Our Reserve training program is directed to preparing us for this job.

There are some parts of this training program that can well be emphasized.

1. It is true that whether or not a CAMG unit is worthwhile primarily depends on whether it can do its CAMG job. On the other hand, it is quite clear that in the future not even a high headquarters will be immune from combat problems. Hence our CAMG training should include sufficient tactical training so that as the need arises we can take care of ourselves in any situation.

2. In CAMG company training I think the tactical requirements may have so increased that some reorganization of the company structure may be desirable. In pentomic operations the mobility of the combat units is such that in a period of a few days there may be three different sets of civil affairs problems for the mobile unit, namely those in the place it was, those in the place it is, and those in the place it is about to go. It seems to me that civil affairs platoons, and perhaps companies, will have to be able to operate independently and if this is so, they will have to have some combat capabilities.

In the area of functional training of the CAMG unit, modern total war I think requires emphasis of the following subjects:

1. Ideological: Much as the average American dislikes the subject, a dislike which is perhaps greatest in the American soldier, there seems to be no alternative but to acquire a knowledge of political philosophy. We must know what we stand for, what we mean when we talk about limited government, and the dignity and rights of man, the rule of law, etc.

We must also know the ideology of the enemy, what it is and why it is diametrically opposed to our beliefs. We must also know the enemy's aims and how they operate.

The reason is the simple one, in CAMG, as in tactics, we must know our enemy.

2. Government: There are two phases in our study of government. First we should know our own so that we can at least appreciate our system for protecting the rights and dignity of man.

Second, we should know other governments. First in order to realize that there are different systems based on the experience and traditions of other peoples. We must understand that because they are different does not mean necessarily that they are wrong, and above all we must uproot the common American impression that all we need to do is to translate our Constitution into a native language in order to have solved the governmental problems of any area anywhere.

We also must know other governments because it is through governments that so much of our civil affairs work will have to be done. Necessarily, therefore, we must know how these governments operate, their powers and the limitations of those powers.

3. International organizations: In the wars of the future we will have allies and inevitably there will be international organizations involved. These will range all the way from the United Nations to the International Red Cross. We will have to work with these organizations. It is common sense that we should understand them and know how they operate.

4. International law: Here I refer to the international law of war. We, of course, have the manuals and our lawyers will have the treaties. It is important, however, that we know the principles of international law of war, not only those that have been codified but also those which are found only in the unconventional or common law of war. With a full knowledge of this subject we will be better able to come to the right decisions on the application of these principles to new situations.

It is a matter of national honor that we observe these principles, even in war against an enemy who disregards them. If we do not do so we can hardly claim the enemy to be worse than we are. There is, however, a practical advantage in observing principles. In the long run it is the best means of obtaining the support of world opinion and of local people. If we need an illustration we need only to cite the Nazi experiences in Russia in which unprincipled and harsh treatment of a native population turned the people against the invader.

I wish to conclude by mentioning our special training program in the Second United States Army—the Trapline exer-

cises. These have served as a means of bringing out the problems of modern total war operations and pointing to the specific knowledge that we should have if we are to do the job we want to do. The Trapline exercises as played by the 2d U.S. Army, in my opinion, have been the finest CAMG training that I have experienced since I first became acquainted with this field in 1942. Members of every CAMG unit in the 2d U.S. Army area participate.

In these exercises we work with the tactical people and they work with us. We each learn from the other.

The tactical people have assisted us greatly in developing staff and operation procedures to coordinate CAMG with tactical operations. Through our tactical teachers we have come to a better understanding of the tactical situation and the limitations which tactical operations necessarily impose on civil affairs operations. We have also learned how best the civil affairs operation can support the tactical mission, both in the sense of what kind of support is most desirable and of how it can most effectively be provided.

On the CAMG side we have not lost the opportunity to stress that the civil affairs responsibility is a command responsibility, that the civil affairs sections and units are only one of the means of discharging it, and that every member of the command from the commanding general to the latest rifleman replacement also has duties in connection with the civil affairs responsibility. The result has been increased agreement on the importance of proper troop instructions on the CAMG mission. We also have emphasized that the civil affairs obligation can be more than a burden. The burden exists, but we have tried to demonstrate that civilian resources also can lawfully be a means of affirmative assistance to tactical operations. The reaction of our tactical opposite numbers leads us to believe that we can claim some success in our own teaching efforts.

We have both found that with a better understanding of each others problems, the necessity of a cooperative attack on these problems becomes apparent. As is to be expected, understanding, recognition of the need for cooperation, and working together benefit the execution of both tactical and CAMG plans.

In Trapline, we began with a careful and intensive CAMG survey of the situation involved in the exercise, a typical total war situation, and we have come up with an analysis which in our considered judgment presents the CAMG problems of the war of the future not as we would like them to be but as they will be.

In the 3 years that we have been working on these exercises we have developed some practices and procedures which we believe will help us to do the job if the job is required to be done.

There are three lessons of the many we have learned in Trapline which should be mentioned here.

1. The first is the vital importance of planning. Improvisation is at best a poor substitute and it may be entirely inadequate when the problems are immense. In preparation for a total war situation, and probably any other except those involving uninhabited areas, tactical operations conceived without regard to the civil affairs aspects are as ill founded as those which ignore the terrain. Civil affairs operations in future war are a necessary part of tactical operations, or to put it another way, a tactical plan which lacks its civil affairs annex is incomplete.

2. There is a need for political and economic intelligence which the normal intelligence sections are not yet in a position to give. This need, in particular, concerns current intelligence. Either the capabilities of the existing intelligence sections have to be expanded or a separate political and economic intelligence section seems to be required.

3. We perhaps think too much of the civil affairs job as a necessary evil. We only recently have begun to realize the full extent of the support, as for example, through the supply of labor and other resources, which the civil affairs section can provide for tactical operations. It may be that this support can be expanded far beyond anything now contemplated. The battlefield we have described earlier is the battlefield on our side of the line. This battlefield can be extended as deeply on the enemy side if we are prepared to extend it. It seems that we should explore the possibilities, particularly in the political and economic phases of total war, to utilize civil affairs activities as an offensive operation on the other side of that battleline.

It would seem to be a mistake to limit the civil affairs weapon to defense. In modern total war we may find it gives us many opportunities to exploit the enemy's weaknesses in the territory it controls. These opportunities must not be lost. It is significant that in all the pictures we see of refugees in flight none show a flight from the free world. A well organized program, based on the American fundamentals, which after all only express the aspirations of free men everywhere, if that program is executed with resolution and sincerity, I believe could have a major impact on the citizens of a slave state, and quite possibly on many of such citizens who are in uniform.

Senate Action Properly Rejects Trinity Partnership

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 15, 1959

Mr. ENGLE. Mr. President, the Senate's action last week in voting funds for Federal construction of the power features of the Trinity River project is being widely acclaimed in California. I have received many letters of commendation. A good editorial on the subject appeared in the July 11 issues of the Sacramento Bee, the Modesto Bee, and the Fresno Bee.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD; and I especially commend it to the Senate and House conferees on the public works appropriations bill.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Sacramento Bee, the Modesto Bee, and the Fresno Bee, July 11, 1959]

SENATE ACTION PROPERLY REJECTS PARTNERSHIP

The 5-year fight by the Eisenhower administration to turn over the valuable power resources of the Trinity River project to the Pacific Gas & Electric Co. for private exploitation on a so-called partnership plan appears doomed at long last.

And if doomed, the public will have won a vital and fundamental victory.

The U.S. Senate has voted against the partnership plan by appropriating money for exclusive Government construction and operation of the dam's power facilities.

The legislation, a many-sided public works appropriation bill, now goes to a House-Senate conference committee which will seek to adjust differences between the Senate and House versions.

Public power advocates express hope the House conferees will go along with the Senate and approve the $2,415,000 appropriation voted by the upper House for the public development of Trinity's power resources.

The power to be generated at the Trinity project is intended largely to operate the pumps to lift water into the San Luis Reservoir. It makes no sense, however viewed, for the Federal Government to farm out the power facilities to a private corporation, then to buy that power back at the utility company's rates.

Yet for 5 years the Eisenhower administration has been trying to force the partnership idea on Congress.

It is to be hoped, with favorable action now taken by the Senate and with expectation the House will go along, that Federal construction can be got underway quickly. Too much time already has been lost.

U.S. Senators CLAIR ENGLE and THOMAS H. KUCHEL, of California, who spearheaded the drive of the Senate public power advocates in this matter, deserve the congratulations of every person who embraces the truth that public development of natural resources for public use is only commonsense.

Their victory is particularly significant because the partnership plan offered by Pacific Gas & Electric represents an effort by a new tactic to put into private hands the control of power from publicly built dams, a proposal by the company that it buy the falling water, build the hydro plants, and generate the power.

Adoption of this plan would overturn, to the public harm, the whole procedure employed in Federal water and power projects. The Government now sells power it develops at its dams and that revenue helps defray the costs of the projects. Under the proposed Pacific Gas & Electric-Trinity partnership, this arrangement would be wrecked. The Government, instead of realizing revenue from the hydro output, would have to buy back the power made possible by its own development of the river's potential.

Failure of this falling-water tactic in the present instance will mean no precedent will be set to impede public production and distribution of hydroelectric energy elsewhere.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 15, 1959

Mr. THURMOND. Mr. President, we are well aware that the vociferous demands for Federal aid to education originate primarily with the National Education Association. In leading this drive, the NEA is doing a substantial disservice to the country. The newspapers of South Carolina recognize the source of this propaganda as well as the fallacies on which it is based. I ask unanimous consent that an editorial entitled "Worn Record," which was published in the State, a newspaper published in Columbia, S.C., on July 12, 1959; an editorial entitled "Education

Is Cheaper This Way," published in the Greenville News, a newspaper published in Greenville, S.C., on July 7, 1959; and an editorial entitled "Welfare Staters Still Control NEA," appearing in the Greenville News on July 6, 1959, be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the State, Columbia, S.C., July 12, 1959]

WORN RECORD

A branch of the National Education Association has again called for a vast program of Federal aid to education as the only way possible to give schools the needed financial support.

There is no question but that expenditures for education will soon have to be increased rather sharply. First of all, there is the rising tide of youngsters ready for schools, and even if per capita expenditures remained constant, the total would go up substantially each year in the foreseeable future. However, schools are afflicted with inflation, just as the individual household, and this will also mean an increase in gross spending.

Federal aid programs, however, are not the answer. These programs would merely remove responsibility for operation of schools to Washington. The Federal Government would create a vast bureaucracy, and more and more tax money would stay in the National Capital.

It was interesting to note that the educational policies commission of the NEA, at the same meeting, also discussed the need for a national curriculum. Reduced to simple terminology, this means that everyone would get precisely the kind of education that a few Washington bureaucrats deemed advisable. Local needs and considerations would receive only passing attention.
